Because—first, you get things cheaper. The merchant can't afford to go without interest on his money while waiting for you to pay, so he adds it to your bill in a higher price. He must add a premium too on the risk he runs that some may not be able to pay their bills. Then, you will be less likely to spend money foolishly. A hard dollar means something—even a paper dollar is a check on needless expenditure if it must leave your purse every time a dollars worth of goods comes into your house. If you run up a bill, you get the feeling that you can spend your money and keep it in your pocket The most unpleasant time for correcting that mistake is settling day. Then the large bill comes in and you have perhaps nothing to show for your money. It goes hard to pay for what is eaten up or worn out. Then too it is more honest. You don't know that you will be able to pay that long reckoning Better pay as you go, cash down.

HOW TO EAT MUSK-MELONS.—A Southern paper thus discusses the preparation of the musk-melons for the table: "Put it in the refrigerator until the next day at breakfast or dinner, cut it two, lengthwise, take out all the seeds, into each half put a tablespoonful of strained honey, and scoop it out with a spoon, dipping each spoonful into the honey, and eat. If, after eating a little you do not wish your throat was a mile long, and every inch of it a palate, then we can only say that you are wanting in taste and our advice is wasted."

THE Germantown (Pa.) *Telegraph* is authority for the following recipe for making a washing-fluid: "Take one third ounce of gum camphor dissolved in one-half pint of alcohol; also one-third pound of borax and one-half pound of sal soda, and dissolve in one gallon of hot rain water, and the fluid is ready; after stirring all the ingredients together add one gallon of cold rain-water before adding the gum camphor and alcohol. In using, add about four tablespoonfuls to a pint of soft soap, apply to the parts of clothing most soiled, and soak in warm water half an hour or while doing up the breakfast dishes; then proceed with your washing as usual, not boiling over five minutes. I have used this for one year and know it is good and does not rot the clothes; they wash with half the labor and it makes the clothes white. Table-cloths that are stained with tea or fruit stains should be thrown into clear boiling water a few minutes, when they will be found free from stains, while soap or suds when dry will set the stains permanently."

SOME OF MRS. HENRY WARD BEECHER'S RECEIPTS.

CENTENNIAL BISCUIT.—Make a good hasty pudding; boil till the meal is well cooked. Set aside to cool. When milk warm, to every quart of the pudding work in flour sufficient to make a stiff dough. Then make into biscuits, put in the bake-pan and let them stand in a warm place over night. Bake for breakfast in a hot oven and eat while hot.

MARYLAND BISCUITS.—Three parts flour; one tablespoonful of lard; one pint of cold water; salt to taste; make into a stiff dough, and work until the dough cracks, then bake.

FRENCH TOAST.—Beat four eggs very light and stir them into a pint of cold, rich milk. Slice some nice baker's bread; dip the slices into the egg and milk; then lay them carefully into a skillet of hot lard and fry brown. Sprinkle a little powdered sugar over each slice when taken out, with a little cinnamon, if that spice is liked Serve hot. If nicely prepared this is an excellent dish for breakfast or tea—almost equal to waffles, and much less expensive.

DYSPEPSIA.

Americans are particularly subject to this disease and its effects: such as Sour Stomach, Sick Headache, Habitual Costiveness, Heart-burn, Water-brash, coming up of the food, coated tongue, disagreeable taste in the mouth, palpitation of the Heart and all diseases of the Stomach and Liver. Two doses of GREEN'S AUGUST FLOWER will relieve you at once, and there positively is not a case in the United States it will not cure. If you doubt this go to your Druggist and get a Sample Bottle for 10 cents and try it. Regular size 75 cents. 6-1y

THE CHILDREN'S PIC-NIC.

"No one need come who doesn't want to," said the minister, and from the looks of things in our picture, every one who came did want to. What a good time the little ones are having. Even the little dog is glad he came, I think. The boys have brought their boat. That little fellow finds the water rather cold to his toes, don't you think so? And what *do* you suppose there is in those baskets under the tent? Every child who will look at this picture can guess perhaps, and remembers as pleasant a pic-nic as this. But in the great city of New York are *hundreds* of little children who hardly know what green grass looks like. They have only the hot streets to play in, and crowded, dirty rooms to sleep in, and in the heat of summer they get faint and sick. Some good people in the city have now for several summers made great pic-nic parties for these poor little ones, and carried them and their mothers on steamboats down the Bay and out into the breezy, green country, hundreds every week. Some who are sick they keep out in the country a week at a time. Are you not glad? I think the Lord of little children who used to

THE PIC-NIC.

walk through the fields and preach sermons about the lilies and the birds and the grass and corn, must smile on these friends and all friends of the children.

How long do you think it took to write the Bible? Fifteen hundred years. How many people helped to write it? More than thirty. There were Matthew, Mark, Luke, John, Paul, and Peter. There were Moses, and Ezra, and David, and Daniel, and Samuel. Some were shepherds, some farmers, some fishermen, some were unlearned; and yet they all agree in what they write. There is not so much as a word of disagreement in the whole book. How could that be? Because God did all the thinking in the Bible. The thoughts in the Bible are all God's thoughts. Those thirty men only did the writing. They wrote just what God told them. How many different sections or books are there in the Bible? Sixty-five, all bound together, making one beautiful whole. It is a precious book. Prize it above all other books in the wide, wide world. Make it the man of your counsel and guide of your life. Your life can never be a failure if you follow its instructions.

THE CENTENNIAL DOG SHOW.

The fine picture, for which we are indebted to the New York *Christian Weekly*, was *not* "taken by our own artist on the spot," and may, perhaps, have been originally intended to represent the beauties of some of the World's Fairs of Europe. It may well serve, however, to illustrate a description of one of the most curious and attractive shows in the Centennial Exhibition at Philadelphia, and it would not be difficult to pick out apparent originals of all the portraits from the six hundred specimens of canine perfection collected here.

For here are all sorts and conditions of dogs, from bull-dogs to poodles, from Liberian blood-hounds to toy lap-dogs, pocket size; setters and pointers; English fox-hounds and Chesapeake Bay duck-dogs; Scotch collies and English mastiffs; Italian greyhounds of ideal grace and fleetness, and the bow-legged pugs in which British fine ladies delight; terriers of all names and natures, Scotch and Skye, Irish and black and tan; curly water spaniels and skinny Mexican hounds devoid of a hair.

The dog is such an old and well-tried friend of man, there is such a bond of sympathy, a fellow feeling, shall we say, between the canine and the human race, that it might be well for Mr. Darwin to consider whether the "*missing link*" between man and beast, the long lost brother of creation, was not some sort of a jolly dog, instead of a gorilla. Who would not "rather be a dog and bay the moon" than find an ape in the lower branches of his ancestral tree? And this theory might explain the irresistible attraction of a dog fight to a street crowd, and account for the proverbial figure of speech in which we say of a man who has returned to his lower nature, that he has gone to the bow-wows.

At any rate, no one will be surprised that the Centennial dog show draws a daily throng of admiring visitors. The dogs are exhibited in nine, long, double rows of stalls in which they are chained in solitude, or not very happy family groups, and in which they do not seem to feel exactly at home, notwithstanding a bountiful supply of straw, and food and water.

It is a happy thought to the visitor that "barking dogs seldom bite," as the distracting chorus of yelps and whines assails his startled ear from the yet unseen pack, with now and then a deep mouthed musical bay like an organ tone, suggestive of a dewy country side where the fox has broken cover and the huntsmen are in full pursuit.

Among the hunting dogs are some setters valued at a thousand dollars each. Two of them from England are dogs of high degree whose pedigree is shown for nine generations, and has been as carefully kept for the last fifty years as that of a racing horse.

The first of American dog shows is certainly a success.

CENTENNIAL VIEWS.

THE HAWAIIAN EXHIBIT.

The recent consummation of a treaty with Hawaii, by which its sugars are admitted free of duty to our shores, reawakens an interest in those far away islands of the Pacific, which, civilized by American missionaries and fostered by American legislation, may possibly, some day, send representatives to the United States Congress. Whether or no we ever grow into such an extra colossal Colossus of Rhodes, and stride half way across the sea to Asia to plant the stars and stripes on Kilauea, the dream of it may serve to gild with an added charm those delicious bits of the tropics basking in their summer seas, our western "Islands of the Blest."

The visit of King Kalakaua, a year ago, on this treaty business, our first visit from royalty—we had not received the Emperor then—made us take down our Encyclopædias and old numbers of missionary magazines, and read over again the marvelous story of the elevation of an entire people, within fifty years, from barbarism to civilization and a place among the nations of the world.

The Hawaiian exhibit at the Centennial show in Philadelphia does still more to instruct and interest us in the condition of the Islands. It is quite ample; showing the natural products, agricultural and mineral, the manufactures, native relics and modern improvements, all tastefully arranged conveniently for inspection, in a large, well lighted room screened off from one side of the Main Building by a light, open structure of varnished pine. Above the arched entrance is this inscription in the Hawaiian language,—

"Ua mau ke ea o ka aina i ka pono," which, rendered into English, is, "Righteousness is the life of the nation."

To follow the order of exhibits we have enumerated, the agricultural products show are sugar—the chief staple of the islands,—rice and coffee of good quality; a fine collection of ferns, shells and corals and stuffed birds. One pretty wreath of fine shells and pink corals surrounds the graceful Hawaiian salutation, "Aloha America;" "Love to America." There are two or three cases of volcanic minerals; among them, the curious production of the crater, known as "Pelé's hair," a fine, fibrous substance wonderfully like human hair of a golden brown, which, blown about by the wind, was thought by the superstitious islanders to be the stray locks from the head of the goddess Pelé who presided over the great volcano of Kilauea.

Among the native relics and manufactures, many of them contributed by the Dowager Queen Emma, are royal sceptres that look like grenadier's plumes or feather window brushes; ancient stone implements and savage ornaments; a cloak made of the bark of the bread-fruit tree and trimmed with a gay yellow fringe made of another kind of bark, and a cape made of black and yellow feathers, valued at $600, and worn only by the royal family. There are, also, some curious aprons made of a felt manufactured by pounding the fibres of the bread-fruit tree.

In a drawer, hidden from the common gaze, are some genuine specimens of Hawaiian idols which have become rather difficult to obtain since the general destruction of idol worship on the islands. They are carved of wood and hideous to behold.

A graphic representation of the native manner of worship, with monotonous chanting and genuflections, given by two American gentlemen from the islands for the benefit of their friends and the sake of

auld lang-syne, soon attracted around them an admiring crowd who evidently looked upon it as a part of the regular exhibition.

The most striking and beautiful of the modern specimens of manufacture are tables and curious round jars of all sizes, turned from the richly veined and colored Koa wood, that takes a polish almost like Chinese lacquer. There are also fans and bats of the delicate straw of the arrow-root, and a few small paintings of Island views.

A very nice description of the royal feather-robes, written by the daughter of one of the American missionaries to Hawaii, we copy below, as a fitting sequel to this letter. The missionaries' children, scattered as they are to all the quarters of the globe, many of them themselves missionaries, must certainly be considered as some of the most valuable of Hawaiian productions.

A KING'S ROBE OF GOLDEN FEATHERS.

BY SARAH COAN.

I want to tell you about one of the most remarkable garments ever worn by royalty. It is a feather robe worth one hundred and fifty thousand dollars.

Rather costly, is it not? but let me tell you why it is valued so highly and was nine reigns making.

Many years ago the natives of the Hawaiian Islands (far out in the Pacific, you know) were very expert bird-catchers—not bird-killers—the object of their pursuit being a small, black bird called the *Oo*. This pretty little creature had, under each wing, a single golden feather about an inch long; and these feathers the natives made into leis (wreaths), capes and robes for the *alii* or chiefs.

To catch the oo without inflicting any injury was necessary, or the birds would soon be exterminated; hence, to entrap them successfully was considered a great accomplishment.

With the gum of the bread-fruit tree, which is very sticky, the bird-catcher smeared the twig of a tree near some tempting fruit; across this twig he laid a light string slip-noose, and holding the line, concealed himself in the thick foliage. Now came the unsuspecting oo for his mango or guava dessert, and alighted on the smeared twig. Finding it an unpleasant standing place he fluttered and struggled to extricate his feet, but instantly the slip-noose closed tightly around both little legs and he was a prisoner; his two beautiful golden feathers were pulled out, which, I am sure, made him very unhappy, and then he was given his freedom.

I think the wise birds did not get caught a second time, though many of them no doubt were foolish, and lost the new feathers as soon as they were grown.

In this way thousands and thousands of birds were caught to furnish kings with a coronation robe. It is said three hundred birds were caught for feathers to make a lei half a yard long; and the robe is four feet wide and eleven and a half feet long! This *mamo* (war-cloak) of Kamehameha the Great is as sacred a relic as the famous Scottish stone in Westminster Abbey, upon which English kings have been crowned for more than five hundred years.

The Hawaiian "throne" is nothing but a chair covered with the *mamo*.

Until within a few years, there was a similar feather-robe, which belonged to King Lunalilo; but, as he was the last of his family, it was wrapped around his dead body and buried with him.

Very few of the old bird-catchers are living, and, as the young generation does not follow the pursuits of the old, the present *mamo* is considered the last specimen of a lost art. In the Hawaiian department of the Centennial are some fine oo leis and capes, loaned by Queen Emma, which are well worth examining. They are very beautiful, and show great skill of workmanship.

HOW WE WENT WHALING OFF THE CAPE

(From Dicken's Household Words.)

Where one whale is now seen off the southeastern coast of Africa, twenty were seen in former times when the inhabitants of the country were few. It is the same in New Zealand, and on every whale frequented coast. Whale fishery in the Arctics has been in a declining state for many years, a result which the introduction of gas for illumination made no small importance as far as that purpose is concerned; but an increased demand for oil for machinery and other manufacturing uses has kept up the price, and fisheries would still have been profitable, for *one* whale a year would have paid all the expenses of the voyage, and all beyond that were clear profit.

The whaling establishment at Algoa Bay in the eastern province of Cape Colony consisted of a stone-built house for the residence of the foreman, with boiling houses attached; a wooden boat-house in which were kept three whale-boats, lines and tackle, javelins, harpoons, and implements for cutting up the whale's carcass. The boat's crew is four picked men besides the coxswain and harpooner.

The appearance of a whale in the bay was known at once and caused great excitement in the little town of Port Elizabeth close to which the whaling establishment was situated.

Tackle-boats and men are ready in a twinkling. We jump into the stern sheets of the boat—four weather-beaten, muscular tars are at work at the oars, and there, in the bows, stands the harpooner preparing his tackle; a boy is by his side. Coils of line lie at their feet with harpoons attached to them and two or three spears or javelins.

"Pull away boys! There she blows again!" cries the coxswain, and at each stroke the strong men almost lift the little craft out of the water. The harpooner says nothing; he is a very silent fellow: but woe to the whale that comes within the whirl of his unerring harpoon!

Meantime, our fat friend of the ocean is rolling himself about as if such a thing as harpoons never existed. A dozen more strokes and we shall be within aim. Yet the harpooner seems cool and unmoved as ever. He holds the harpoon but seems to grasp it no tighter. He knows the whale better than we do. He has been a harpooner for thirty years and once harpooned twenty-six whales in one year with his own hand. The whale has caught sight of us at last and plunges below the surface.

Now the harpooner makes a sign to the coxswain. The coxswain says, "Give way, boys," scarcely above his breath, and the boat skims faster than ever over the waves. The harpooner's hand clutches the weapon more tightly, and he slowly raises his arm; his mouth is compressed, but his face is as calm as ever. A few yards ahead of us, a wave seems to swell above the others—Whiz—at the very moment you catch sight of the whale's back again above the water, the harpoon is in it eighteen inches deep.

The red blood of the monster gushes forth. "Back water!" shouts the harpooner, as the writhing whale flings his huge body about with force enough to sink twenty boats like ours at one blow. He plunges again under the surface, diving with a rapidity of which you may judge by the swiftness with which the line runs over the bows of the boat. In two minutes it would be on fire but for the constant efforts of the boy who bails water from the sea and pours it over the edge where the line runs.

But it runs more slowly every instant, and then lies slack. He is coming up exhausted, to breathe again. The harpooner is getting ready and pointing a javelin. It is longer, lighter and sharper than the harpoon, but it has no line attached to it. The harpoon is to catch—the javelin to kill. Slowly the whale rises but not within aim. "Pull again, boys!"—while the boy is hauling in the line as fast as he can. Again a whiz—another—and the harpooner has sent two javelins deep into the creature's body, while the blood flows fast. Suddenly the whale dashes forward,—we give him fresh line as fast as we can. Yet he is taking us through the water at the rate of twenty miles an hour at least. One would fancy that the harpoons and javelins have only enraged him and that the blood he has lost has diminished nothing of his strength. Not so however, his pace slackens.

"Pull again boys," and we approach. Another deadly javelin pierces him. This time he seeks revenge. He dashes right toward us—what can save us?

"Back water!" cries the harpooner; with a sweep of the oar, the little boat glances aside and the monster has shot by us, with another javelin hurled deep into him. The harpooner smiles half pityingly at the impotent rage which he knows bodes an end of the contest. The red blood is spouting from four wounds. He rolls over heavily and slowly; a few convulsive movements shake his mighty frame; then he floats motionless on the water—the whale is dead.

Ropes are made fast round him and he is slowly towed away to shore. A crowd is collected to see his huge body hauled up the beach. In two days his blubber—the oil bearing fat which encases his body—is cut away and melting in the copper kettles. Vultures are feeding on his flesh and men are cleaning his bones. In two months barrels of his oil are waiting shipment. An average sized whale produces twenty tons of oil. The fringe work which lined his mouth—horny plates fringed with something like long, coarse hair in which the small marine animals which form his food are entangled—is split up into "whalebone." Or if he is not of the whalebone species—the *Balaena*—his beautiful ivory teeth are fashioned into ornaments. His immense ribs are used as landmarks on the few farms about the country. Meanwhile, our friend the harpooner is looking about for fresh luck; while the proprietor of the establishment is two thousand dollars the richer for this catch.

CAMPING OUT.

If you want to see autumnal scenery unsurpassed by any the world over, and hear the music of the hounds in full cry after that noblest of all games for dogs, the antlered buck in swift career, go to the Adirondacks during the month of September, and remain until snow and the cold drive you out.

"PULL AWAY BOYS!"

The Adirondack Wilderness or North Woods lies between the Lakes, George and Champlain on the east and the river St. Lawrence. It reaches northward as far as the Canada line, and southward to Boonville. Its area is about that of the state of Connecticut. It is estimated that a thousand lakes, many yet unvisited, lie embedded in this vast forest of pine and hemlock. No axe has sounded along its mountainsides, or echoed across its peaceful waters. The forest stands as it stood from the beginning of time in all its majesty of growth, in all the beauty of its unshorn foliage. Ah me, the nights I have passed in the woods. What restful slumber was mine, as I stretched myself upon my bed of balsam boughs with Rover at my side.

"Mr. Murray, wake up! the pan-cakes are ready!" shouted John.

Aroused by the familiar cry, I arose and walking down to the shore of the lake waded out into its tide, and, plunging my head under water held it there for a moment, while the delicious sense of coolness ran through my system; then I raised it, turning my dripping face straight toward the bright warm sun. Oh luxury of luxuries, to have a lake of crystal water for your wash-bowl, the morning zephyr for a towel, the whitest sand for soap, and the odors of aromatic trees for perfumes. What millionaire can boast of such surroundings?

Fresh as an athlete in training, I returned to camp and to breakfast. Breakfast in the wilderness means something. No muttering about "those miserable rolls" no yawning over a small strip of steak an inch and a half by three. No! but in the woods you take a pan cake twelve inches across and one inch thick and go conscientiously to work to surround it. You seize a trout ten or fourteen inches long and send it speedily to that bourne from which no trout returns. You lay hold of a quart pan full of liquid which has the smack of real Java to it and the first you know you see your face in the bottom of the dish.

Over the remnants of what had been a feast we sat in council.

"John, what shall we do to-day?"

"Well, I think," said John, "we'll take some trout. I know a little lake, hidden away back of that hard-wood ridge yonder, which is one huge spring-hole, and when scouting through here on my own account, some six years ago, I took some fish from it such as you seldom see. I doubt if there has been a fly on it since; and if the breeze will freshen a little, you'll have rare sport."

Soon after, John shouldered the boat and we started. Some forty minutes' tramp, and we reached the shore and made our camp. From it the scene was delightful. The lake was nearly circular, some half a mile across, its waters deep and clear. Into it, so far as we could see, no water came; out of it no water went. It was, as John had called it one huge spring-hole, mirroring the surrounding hills in its cool depths. We stepped into our boat and glided out toward the centre of the pool.

"Now," said John, "if the fish haven't all drowned since I was here, you'll see 'em soon." When one rises I'll put you within casting distance of the wake, and if he likes it, he'll take the fly. If one takes, strike hard, for their jaws are stout and bony and you must hook them well or you'll lose them.

We sat and watched. "There!" suddenly shouted John; "one is n't dead yet." And whirling the boat about, he sent it flying toward a swirl in the water, some twenty rods away, made by a rising fish. All alert I sat, holding the coil and flies between my fingers, ready for a cast, when, as we shot along, a bright vermilion flash gleamed for an instant far below us, and a broad yellow sided beauty broke the surface barely the length of my rod from the boat. The swoop of a swallow is scarcely swifter than was the motion of the boat as John shied it one side, and with a stroke which would have snapped a less elastic paddle, sent it circling round the ripples where the fish went down. Twice did I trail the flies across the circle and meet with no response, but hardly had the feathers touched the water at the third cast when the trout came up with a rush. He took the fly boldly, as a bunter might take a fence. I struck even as he hung in mid-air, and down he went. After a sharp fight of ten minutes the trout yielded, the

fatal net enclosed him and he lay flapping within the boat. Thus five were captured in little more than an hour's time—good two and a half pound fish each of them.

At last a magnificent fish shot up out of the water after a butterfly, and fell back with a splash.

"Now!" shonted John, as he sent the light boat skimmiug over the water.

I pitched the coil into the air. The huge fly had not reached the surface by a yard, when the water parted and out came the tront, his mouth wide open, quivering from head to tail with the energy of the leap, missed and fell back flat on his side.

"Quick, quick! cast away!" shouted John, as with a stroke of the paddle he sent the boat sheering off.

The tuft of gray plumes alighted amid the ripples, the huge head of the tront came out of water, his mouth opened, and as the feathers disappeared between his teeth I struck with all my might. Not one rod in twenty would have stood that blow. The fieh was too heavy to be turned an inch. The liue sang, and water flew ont of the compressed braids as though I had snnk the hook into an oak beam. Then came a strife for the mastery snch as I had never waged before with any thing that swims. Words should have *life* in them to depict the sceue. Qnick as a flash the tront started and before I could get a pressure on the lline not tweuty yards were left on the reel. A quick stroke from John and the boat shot one side. After a few short sweeps he doubled on the line and shot straight for the boat, John shied the boat to oue side. Failing in his attempt to run under us, he dove to the bottom. "Let him rest a momeut," said John; "recover your line; yon'll need it all when he risee. He's big and ngly and his next rush will be like lightning."

After I had stowed awny some forty yards of line on the reel I begun to feel of the fish. He acted ugly, I felt that when the rush came, it would try nerve and tackle alike. I gave a qnick sharp jerk. My arm was still in the air and the rod uustraightened, when I caught a gleam far below me, and before I had time to wink, the huge fellow parted the water almost within reach of my arm, and when high up in mld air he shook himself, the crystal drops were flung lnto my very face. Perhaps I may live long enongh to forget that picture, as that trout for an instant, hung in the air, his blue back and azure sides spotted with gold and agate, his fins edged with snowy white, his eyes protruding, gills distended, the leader hanging from his jaws while a shower of pearly drops were shaken from his qnivering sides. He fell; bnt while still in air, the boat glided backward, when he touched the water I was thirty feet away, and ready for his rush. It came. And as he passed us forty feet off, he clove the water as a bolt from a cross bow might cleave the air. Possibly for five minutes the frenzy lasted. Not a word was uttered. The whiz of the line throngh the water, the whir of the flying reel, and an occasional grunt from John as the fish doubled on the boat were the ouly sounds to be heard. But why repeat? Why tell of flights and rushes which followed. The heavy fish and pliant rod were pitted one against the other. Three days later in another struggle the old rod parted but this time it triumphed. For a moment the qnivering tip rattled upon the bars of the reel. The fish struggled and shook himself, ceased to battle, came panting to the surface and rolled over upon his side. The boat shot toward him, and as it glided by John passed the landing-net beneath him, and the brave fighter lay upon the bottom board. His tail, across lts base, measured five inches; and his length from tip to tip was *seventeen inches and three quarters!*

John turned the boat about, and we headed toward the camp. That afternoon, we lay on the beach, and watched the leaping trout sporting before us. The sun at last withdrew his beams. One moment, and the pines that crested the western slope were all ablaze. The next, gloomy and dark they stood, their dense and sombre foliage unlighted by a ray. The shadows deepened. The ripple left the lake. One by one the stars came out, and every star which shone in heaveu above shoue in the depths below. Suddenly, breaking the profound silence, the solumn hoot of an owl echoed through the forest. It was answered in a moment by the prolouged howl of a wolf, hunting among the hills far to the north.

Throwing some hnge logs on the fire, and wrapping our blankets around us we stretched beside the blaze, and sank to rest on our conch of fragrant balsam bonghs, lulled by the whispering pines above us and the ripples playing coyly with the sand.—*Murray's Adventuree in the Wilderness.*

The Teachers' Table.

HAMPTON INSTITUTE LECTURES ON TEACHINO.

BY PROF. F. A. ALLEN.

LECTURE 2.

THA TRUE ORDER OF STUDIES.

All studies you will heve to teach, I group uuder three heads.

1st, Language { Reeding end Spelling, Languege Lessons, Grammer, Literature aud Rhetoric, etc.

2d, Mathematics { Arithmetic, Ment'l & Writ. Algehra, Geometry, etc.

3d, Physical Scieuce { Physiology, Botany, Geography, (with Hist.) Zoology, Philosophy, Natural Chemistry.

Of these, some branches ere required by law. Others are incidental hut useful eud dellghtful. Such are most of the Physical Sciences: Botany, Physiology, etc.

"But," you ask, "how cau I teach what I have uot studied myself?" Well, if a teacher will anpply himself with a work on Physiology, even though he has uot leared it before, he can teach it to his pupils. It will he easy for him to thoroughly inform himself ou each lesson, end give to his pupils iu the form of n lecture. In this way he can do great good. What good is it? All childreu should be taught something shout their own bodies, to reverence end take care of them. A great amount of disease and suffering may be avoided by this.

The chief reasou for teachiug childreu botany is to open their eyes to the world of nature about them. Let them learn the names and habits of the plants aud flowers and trees. They will be greatly interested in this, and you could soon have your school room beautifully decorated with their collectious. I heve my pupils collect specimens of each tree and plant in the ueighbor—a leaf, a hit of the wood and hark, a flower and a cone or unt or fruit and seed of each. These are fasteued to cards or sheets of paper, with the uame and description of each specimen, and the name of the pupil who collected them writteu ou it. These cards are fasteued up ou the school room wall. The pupils are very proud of them, and so am I. A vistor, lookiug round your school-room so adorned will say, "That teacher has been at work." Theu I have little hottles filled with the differeut grains we have and the flour made from them. It is a greet education to your children and need not interfere with their other work, and you will get interested in it yourself.

Once in e while, you can bring in e speclmen, an orange for instance, or banana, and tell them where it grows, end why it does n't grow here.

So you cau teach Zoology to some exteut—the nature and hehits of different animels.

HOW TO TEACH READINO WITUOUT TEACHINO THE ALPHABET.

This will strike you as strange if yeu have never heard of it. But it is the latest and most succeseful plan of teaching reading. Remember that the child can connect uo idea at all with a letter elone. It means uothing to him. No wouder he gets tired out learning tweuty-six of them before he can feel that he can even begiu to learn to read. It is just as easy for him to learn a whole word at once as to learn oue letter. See now. I write up on the hlack-board iu large letters so ell the childreu cau see it, the word BOY. There childreu look at that. That's BOY. It does n't look much like a boy does it. Well, see here. Theu I draw the picture of a boy beside the word. No matter how rude it is. It will ouly make the childreu laugh. Thero, what's that? A Boy. Oh, that's a hoy is it? Come here Johnny Stand up here by the desk." Then I put my hand on his head, "What's this children." "A Boy,"—Oh, hut you said that up on the hlack-board is a boy,—"No—that's a picture of a boy," oh, that's only a picture of a boy, is it? *This* is the real *boy*. Well, what's *that?* That is the *word* Boy. Now will you remember that word?—that they will; you have fixed it lu their minds. Then you can say—"But when we talk about Johnny and Georgie both we don't call them hoy—what do we call them? Boys—so uow we'll put one little crooked letter on this word, and we have BOYS. Now whet do boys like to do?—"Play"—well, we'll write BOYS PLAY, Whet's that children? Can you read that? "Oh yes—BOYS PLAY." "Why—you cau reed cau't you!" How perfectly delighted they will be to find they cen read already, though it is only two words. Another time you cau teech them more—Boys pley hall. You will be surprised to see how they will remember the looks of the words—of course you must fix them in their minds in every way you can.

A good way is to have them pick out the words iu their reading books, and merk it, or prick it with e piu, or show it to you—every place they can find it.

It is proved hy experimeut thet childreu learn to read much quicker in this wey then hy the alphabet.

Later on, there is a method of teaching the children to make sentences hy taking a reeder or a story-book and cutting it up into words. Theu put the words in a box and sometimes giving the childreu the box sud let them meke up sentences.

Words give ideas, while letters give uone. We can be sure of a word when we have seen it, but not hy hearing it pronounced. Therefore let the childreu write all the new words you give them, just as soon as they can. If you cen't get sletes get some hlank paper and a gross of leed pencils; cut them in helf and distribute them iu the class aud collect them when the recitation is over, iu order to keep them.

You can teach any child of thrce or four years so, and in a week or two he will read a page iu the First Readcr without haviug learned a letter. First teach them all the words that occur in the lesson you wish them to read, till they can name them et sight, without the least hesitation. Then wheu they turn to the reading lesson, they will read it right off without any difficulty. The first lesson will take trouble end patience, hut the rapidity with which they will learn efter this, will be your reward. And you will also find that they heve found out the uames of the letters themselves.

Have them, leter, take their sletes and readers, end print or write their reeding lesson on their sletes, when they come to the class, let them bring their sletes, not their readers. It is hetter to begin hy teaching them to write, not to print. It is just about as easy, and saves time.

HOW TO TEACH SPELLINO.

Have the children write all their spelling and review every week. Let them write all the words with which they are familiar; words they use daily; names of differeut kiuds of food they eat, of vegetahles, animels, furniture, &c. This is more useful than a lesson in the spelling book which is often half make up of words they have uo use for.

Prououuce no words for spelliug to your pupils, without giving them its definition.

Correspondence.

Northern and Southern Views of

WHAT EMANCIPATION HAS ACCOMPLISHED.

To the Editor of the Southern Workman:

It is now more than ten years since slavery was abolished in the United States. The friends of the colored race In this country are anxious to know what have been the results thus far of emancipation.

By *results* they mean to include the whole question in every phase: its effects upon the hlack race, its effects upon the productions of the South, and its effects upon the whites.

The writer is not a resident of the South hnt has traveled there somewhat, and as opportunlty offered has made special inquiries with reference to these questions. Within a very few weeks It was his good fortune, accidentally, to make the acquaintance of an Intelligent gentleman residing in the state of Texas, and who was practically familiar with the whole subject. He had been for three years in the Southern army, and his family lost one hundred slaves hy the Act of Emancipation. Unable to procnre berths in a sleeping car, we occupied during an entire night and parts of two days seats adjacent. In this way what otherwise would have been an exceedingly unpleasany ride proved a most agreeable and pleasant one. With your permission I will state what has thus been gathered.

1st. What has heen the effects upon the colored race?

Emancipation suddenly set et liberty 4,000,000 human beings. They were unnsed to self-care—many were improvident—all were poor and ignorant—and some, of course, were degraded and vicious. When they were emancipated the indnstries of the South were deranged by the war, and very few opportunities for labor or employment were found. In addition to this, the whites who owned the property of the Sonth, and who formerly employed the labor of the section, as well as provided means for its snpport, were themselves rendered poor from the same cause, and in a large degree made nnfriendly to the hlack race in consequence of the changed relation of the two classes which emancipation had produced. Now let any Northerner imagine 4,000,000 poor and ignorant whites—with the nsual proportion of bad men and women ameug them—let loose snddenly at the North, under precisely similar circumstances, end say what would be the result. Of course there would be much real suffering for the necessaries of life—such as food, clothing and shelter—and could it be otherwise than that vice, theft and frequently flagrant crime would abound? So it has been at the South; so it would be at the North. Precisely the same results in this regard heve appeared at the South as would appear nnder similar circumstances at the North or elsewhere. Besides these *actual* difficulties at the South, they have in many cases been largely aggravated hy bad and designing men, who, for various reasons, have used these people to advance their own purposes.

But among these liherated people there were many, perhaps a majority, or more, who were industrions, economical, and naturally thrifty. Adapting themselves to circumstances they have bent their energies to improve their own condition and that of their race. As a resnlt, many have elready made large progress in education, many are now land owners, and on every hand unmistakehle evidences are beginning to eppear of prosperity and comfort. To the race, as a whole, freedom has already proved a hlessing. Upon this subject the gentleman above referred to, said, "I think the hlacks deserve great credit for what, nnder such adverse circumstances, they really have accomplished. I do not believe any race of people could, if similarly situated, accomplish more, and most would be likely to do less."

2d. What effect has emancipetion had npon the productions of the Sonth?

The enswer to this question will, perhaps, cause greatest surprise of all. Instead of diminishing the productions of the Sonth it has resulted in largely increasing the *quantity* produced, and in a decided improvement in the *quality* of the staple prodncts sent to market. The colored people have largely in various ways obtained possession of a piece of land and from this raise many of the necessaries of life, so that the amount required for food is much more generally raised than formerly. But the great prodncts of the Sonth—cotton and rice—are not only produced in larger quantities than formerly hut of much better quality. Under the slave labor plen the producers were few and the labor for its culture was the forced labor of sleves. Cotton, perhaps more than any other product, is largely improved in quality by clean end careful harvesting. Under the system of master and slave, the latter was required to pick so many *pounds* each day. As pounds were the only thing that interested the cotton gatherer, his whole energies of conse were directed to thnt point, not infrequently at the expense of cleanly picking that no after process could remedy. To-day the cotton growers are more in number and no single prodncer raises as many bales as formerly. Many of the cotton growers now do their own picking and of course have an interest in getting all the money possihle for the crop They fully realize that a bale of cotton is valued quite as mnch for the quality of the cotton as for the number of pounds it contains. As a resnlt great care is exercised at every stage of its culture, and efforts are as constantly and persistently made to increase the quality as the weight. The gatherer is the owner and directly interested in every stage of its growth. Any one can readily see what the result would be. Statistics fully show that the amount raised is not only greater than ever before, but the quality is generally improved, and of course the crop in the aggregate more valnehle. The same remarks will also apply to the rice crop. In general then, the crop grown et the Sonth to-day is larger in quanity and better in quality and worth more money than ever before. In each of these respects we may natnrally look for still greater improvements in the future.

3d. What has been the effect upon the whites?

I answer, Good in every respect. The gentleman above referred to also said, "That the change from slave to hired help—in many cases to doing their own work—was at first very hard, but to-day there was not an intelligent, fair-minded Sontherner hut would say they were better off without than with slave labor; that both master and slave had been benefited hy emancipation."

The old family mansion, erected when slaves were kept, wes huilt with kitchen detached and very few of the modern conveniences for saving labor. Every family had more help than work and consequently thoughts of convenience occnpied little of the architect's mind. When slavery was abolished the daily housework was thrown upon hands nnused to work; and in these houses ill adapted for lightening toil. But they, too, have adapted themselves, and hy degrees are adapting their houses, to the new order of things. "Time makes all things even," and gradnally a better feeling is springing up toward the hlacks which will soon aid in promoting the comfort and prosperity of both classes.

My paper is already too long and I must stop, simply adding that while the transitiou from slavery to freedom worked very great changes to both classes—calling forth from all, qualities that for many years had been dormant, and throwing upon all burdens to which they were nnused and, in many cases poorly adapted,—still we can hnt feel that the result has been, in every respect, such that all may rejolce at what has been accomplished and look hopefully to the future. D. G. F.

OSWEGO, N. Y., *September* 1, 1876.

PHOSPHATIC DEPOSITS IN SOUTH CAROLINA.

Most readers of the "Southern Workman," have, uo douht, heard of the "Phosphatic De-

posits" on the coast of South Carolina. Yet, I apprehend that not many are aware of the extent of the foreign demand for them, or of the means used to prepare them for market. As I am conversant with the operations of the three companies located on St. Helena Sound, I shall write from personal knowledge in regard to them, viz.: The Coosaw Mining Co., on Coosaw River, The Oak Point Mining Co., and The Pacific Mining Co., on Bull River. Both these rivers form a part of St. Helena Sound.

At Coosaw Mines, the Phosphatic Rock is dug from the bottom of the river, by powerful Steam Dredges; thence it goes immediately into the "Cone Washer," a perforated, cone-shaped iron cylinder, six feet in diameter at the large end, revolving by steam power and through which a stream of water is constantly passing. Here the rock is cleansed from the mud adhering to it, then it is carried into the hopper of a powerful "Crusher," worked by steam, also, where it is reduced to a size capable of easy handling with a shovel. The rock thus crushed and washed is taken up the river by steam Tugs on "Lighters" carrying 80 tons each to the company's wharves.

At the shore end of these wharves, are three large drying sheds, each capable of containing 2500 tons of rock.

The rock is hoisted by steam into cars, and conveyed on an elevated rail-road into these sheds, where it is dried by means of large fire-brick furnaces which burn pine wood.

The heat from these furnaces is forced into large perforated iron pipes laid on the rock from one end to the other of the sheds about three feet from the floor; the rock being piled above them also, to the height of eight feet.

Large iron fans or blowers, operated by steam, drive the heat from the furnaces into these perforated pipes for five or six days in succession, by which time the rock is sufficiently dry for market.

It is then hoisted by steam into cars, which run on an elevated rail-road to the other end of the wharf, where a ship is moored, waiting for her cargo. By means of a "shute" it is then discharged into the "hold" of the vessel.

The "works" at Oak Point Mines are similar to those above described, but they are not so extensive, neither can they load ships at their wharves. All vessels for Oak Point and Pacific Mines are loaded from "lighters," while they are at anchor from one to two miles down Bull River.

The Pacific Mining Co. digs the rock out of the "marsh," (ground overflowed at times by the tide) an embankment being necessary to keep the water off in order that the men may work without interruption. The rock is loaded in large cars and taken up by "locomotive" on a good rail-road, a mile and a half to the works on Bull River, to be washed, crushed and dried as before described.

These three companies give constant employment to hundreds of colored men, whom they pay promptly, and with whom they have less difficulty than would be possible with any other people. They pay to these labores more than half a million of dollars in a year.

It is owing to this fact that the failure of the "Freedman's Bank," in Beaufort, caused so little distress, notwithstanding the great amount lost by the people in that Institution.

The daily disbursment by these Phosphatic Mining Companies has kept "hard times" from the Sea Islands around Port Royal, and enabled the people to get along comfortably, as compared with the laboring classes elsewhere.

Our "Phosphatic Deposits" are supposed to be the petrified remains of inhabitants of the sea; but sometimes we find petrified wood also.

The strata are very irregular—varying from one to five feet in depth.

On the "marsh" the rock is found under a bed of clay, from one to three feet beneath the surface. During last year 73 foreign vessels cleared from the port of St. Helena Sound with 48,000 tons of dried crude Phosphate Rock for European ports.

During the first six months of this year 68 foreign vessels have cleared for foreign ports with 40,000 tons of dried crude Phosphate Rock.

The demand is rapidly increasing as the value of this fertilizer becomes known; and these companies are increasing their facilities for production, particularly at the Coosaw and Pacific Mines. As yet no indication is given of any failure in the supply.

There are several companies engaged in "mining phosphates" near Charleston; of these I cannot write from personal knowledge. I suppose their production is at least equal to that of the companies here. Some of the companies, I think, are supplying the Home Trade exclusively.

"Phosphate Rock" is not considered to be first quality unless it yields by analysis at least 55 per cent. of Pure Bone Phosphate of Lime.

ST. HELENA SOUND, *Aug.* 10, 1876. JNO. HUNN, *Beaufort, S. C.*

THE above interesting letter will, we hope, be followed by others from our instructive correspondent whose opportunities for observation, and great experience, render his statements of especial value. "Inside" facts regarding the South from a reliable source are in demand.

We may add from recent personal investigation that "Phosphate Rock" is sold at the wharves in the Ashley River, and elsewhere in South Carolina, for about $6.00 per ton, and that freight to Baltimore and Philadelphia are from $2.00 to $2.50 per ton. When ground up into meal or powder the rock is worth about $25.00 per ton.

It has no manurial value until "acidulated" by treatment with sulphuric acid. It is often sold to farmers in this condition and they add to it potash, ammonia or other elements required by the character of the soil. [Ed. S. W.]

VIRGINIA AND SOUTH CAROLINA.

The following private letters from graduates, not intended for publication, illustrate different phases of experience and teach that Southerners are not all filled with negro hate, and that yet it is hardly safe to believe, that in every case, they are the "best friends" of the colored men. The tone of the letter from Old Church prevails in all our Virginia correspondence, which is quite extensive.

OLD CHURCH, HANOVER COUNTY, VA., *September* 12, 1876.

Dear Teacher:—I am still posted here at Old Church where I have taught three sessions in the one school and expect to teach again this present season. I have reason to believe that I have given the most general satisfaction to the county superintendent and all connected in any way with the Board of Trustees. Many of my scholars have advanced to the Fifth Reader and seem to understand their studies quite well. I have made many good friends among the most respectable white people of this vicinity. They all seem to appreciate the school, and say the scholars are making rapid advancement. Also, I have many respectable and reasonable colored friends; but there are some who don't see as they should see into the importance of certain matters and thus become prejudiced, and will really oppose what they don't understand. It is said that "prejudice hinds reason and produces hate." Comparatively speaking, I can say that I have met with no opposition here except among the colored people, a few of whom have acted the part of a perfect Judas.

But, with all that, I still love the work of teaching, though it is more than likely that I shall not teach here after this season; I think I will have been in one place long enough. If there be any extreme front to our field of labor it must be here, for I have not met with a single Hampton student since I left school, June 13, '73. But I have promised myself a visit to Hampton on Christmas, if possible, which I hope will be so fraught with pleasure as to compensate for all the privations in the wilderness.

Yours, with respect, &c., W. P. B.

AIKEN, S. C. *August*, 1876.

Dear Teacher:—I guess you have heard of the troubles at Hamburg through the newspapers. I went to "Dark Corner" a week after I came home and was gladly welcomed by my old patrons, who insisted on my staying with them; so I consented, and they went down and brought up my trunk. The white people said that it was very strange that I, calling myself a graduate, would content myself to sit down there with thirty-four scholars at a dollar each, when, in Augusta, they would pay me from forty to fifty dollars per month. They said I must be a spy, and sent there by the leaders of the Republican party at Edgefield to communicate political intelligence to the people. The party men have failed to go around canvassing because of their threats, and it was natural for them to be suspicious. After the Hamburg riot they became so audacious as to come to my school by twos and threes, using the most abusive language, until on the 18th of July they began to form a mob for my destruction. Of this I was apprised by a colored man, about 2 o'clock P. M. I hid myself until 8 o'clock, when I departed. They spoke of their intention to cut out my tongue, as they did that man's in Hamburg; but, feeling that there was a better use to be made of it, I safely landed it on the other side of the Savannah. When they went that night the fox was gone. My books and clothes were captured, so my head was all I dared call my own. Everybody wondered how I stayed there last year with such a neighbor as Gen. M. C. Butler.

Here in Aiken there is more freedom. I have applied for a school which, if I get it, will pay me well. Anna and Mat. were baptized and joined the Baptist Church in Augusta. The colored people say I have white folks' religion and was so presumptuous that I couldn't come home and join them as the girls did. Your pupil, D. F.

NEWS OF THE MONTH.

POLITICAL.

THE State election in Vermont gives 28,000 majority for Horace Fairbanks, (Republican) Governor.

THE Maine election gave a Republican majority of 15,459 for Governor.

THE New York Republican State Convention has nominated Hon. E. D. Morgan for Governor and Sherman Rogers for Lieut. Governor.

THE New York Democratic State Convention at Saratoga, after pushing through the nomination of ex-Governor Seymour against his repeated refusal to accept it, adjourned under the impression that he had reconsidered his decision, and finding it had been deceived, was obliged to reassemble. The second nomination is Hon. Lucius Robinson, who has accepted.

THE Massachusets Democratic Convention has nominated Charles Francis Adams for Governor.

THE Connecticut Democratic Convention has nominated Richard D. Hubbard.

THE Republican State Convention of South Carolina has renominated Governor, Lt.-Governor, Controller General, Treasurer, and Secretary of State. R. B. Elliott (colored) has been nominated Attorney-General.

A STATE Convention of colored Republicans was held at Utica, N. Y., September 17.

PERSONAL.

BISHOP JANES, the senior bishop of the Methodist Episcopal Church in America, and president of its Board of Education, died September 18th at his residence in New York City, in his seventieth year.

Bishop Janes was a man of fearless spirit and indefatigable energy. He labored as bishop in New York, New Jersey and Pennsylvania principally, but traveled also in all the states but Florida, and in most of the Territories. In 1865 he visited England as delegate of the American Bible Society to the British and Foreign Society. At Bremen, he delivered an address on the death of President Lincoln which was widely distributed, and had a marked effect on the sentiment of Northern Europe favorable to the Union cause. A strong Abolitionist, he was unflinching in his support of his principles and regardless of personal danger. He was called the Working Bishop, and ranks with Asbury and the noble line of apostolic leaders who have made the Methodist Episcopal Church, North and South, the strongest in the United States. His death will be a great loss to that church.

MOODY AND SANKEY, the evangelists, have been working in Brattleboro, and Northfield, Mass., during September. They begin their fall work in Chicago, October 1st. A large building, seating 8,000 people, has been erected there for them.

EX-GOVERNOR HENRY A. WISE of Virginia died at his residence in Richmond, September 12th.

GENERAL.

THE Atlantic coast has been swept by a terrific hurricane, which, first striking the West India Islands, washed on, strewing our eastern shores with wrecks from Florida to Canada. At Norfolk the wind blew at the rate of seventy-two miles an hour, and the Custom House and other buildings were unroofed. Two hotels were unroofed at Cape May. All the coast cities suffered damage to houses and shipping. The windows of some of the Centennial buildings were more or less injured, but fortunately the damage there was slight.

TWEED is caught at last, though that he will stay so we shall know better when he lands in America. He was captured in Spain, whither he had fled from Cuba on learning the discovery of his retreat. He was identified by caricatures in American papers sent over for that purpose. We have no extradition treaty with Spain, but the Spanish government seems to be willing to give him up, and he is to be sent back to Cuba on the 21st of September, to be there delivered to the American authorities.

ON SEPTEMBER 6TH a riot occured in Charleston, S. C., growing out of a street attack by colored Republicans upon some colored men who have been taking a conspicuous part in the Democratic canvass. A large number of persons were injured, mostly whites. Governor Chamberlain has issued a proclamation calling on citizens to observe peace, and promising protection.

THE great distress from yellow fever in Savannah has called forth generous responces of relief from Charleston, Baltimore, Memphis, Atlanta, Philadelphia, New York and other cities. It is not probable that the ravages of the pestilence will be stayed until the appearance of frost. One-third of the population remaining in the city are sick and three quarters are destitute. The suffering is largely among the negroes.

THE Indian Campaign is over for the winter. General Terry's troops have been disbanded and returned half starved to camp. Twenty-nine of Sitting Bull's command who were engaged in the Custer massacre have surrendered to General Carlin. The inhabitants of Deadwood in the Black Hills are troubled by bands of Indians who stampede their horses. Several skirmishes have taken place.

A FINE statue of Lafayette, by Bartholdi, presented by the French Republic to the city of New York, was unveiled with ceremonies and in presence of an applauding multitude, on Union Square, September 6th.

THE visitors to the Centennial exhibition have greatly increased in numbers. On one of the cheap days 104,000 paid admission, and 12,000 free ones are reported.

THE Annual Cotton Crop report for the year ending September 1st is very encouraging and hopeful. The total crop of the year just past is reported as reaching 4,669,288 bales. The exports were 3,252,994 bales, and the stock on hand at the close of the year 120,380. The year's consumption of cotton in the United States was as follows: By Northern mills, 1,211,598 bales; by Southern mills, 145,000; total, 1,356,598 bales. The report declares that the industrial prospect for the coming year is extremely encouraging.

MASSACHUSETTS, Connecticut, New York and New Jersey and Pennsylvania have all had their special days of celebration at the Centennial exhibition. The rest of the thirteen original states are to follow in October. The Virginia day was postponed, Governor Kemper having been unable to attend earlier.

THE camp meetings do not cease with the summer. The Cape May grove meeting at South Seaville, N. J., which began August 29th, continued until September 9th. A temperance camp meeting was begun at Clear Lake, Iowa, September 1st, to continue until September 8th.

THERE has been a riot in Charleston, which at one time threatened to assume serious proportions, owing to the unwillingness of the Republican negroes to let some Democratic negroes hold a meeting. It is well known that there is a good deal of intimidation of black Democrats among the negroes themselves, going to the extent, in some places, of expelling them from the church. This is not unnatural, or very awful. To the negroes, politics is not yet a matter of differing opinions, and will not be for some time, and in nine cases out of ten, of course, a man's voting the Democratic ticket has the air of his deserting his own race from selfish motives. The feeling will die out after a while; probably die out rapidly after Mr. Hayes has reformed the civil service down there. The riot is somewhat of a help to the Democrats, as going to show that the intimidation is not all on one side.—*The Nation.*

The Golden Chain and Union Station Lodges, Nos. 22 and 23, Grand United Order of True Reformers, had a jolly time in the County of Matthews to-day. The former was marshalled by Wm. H. Brooks, D. G. M.; the latter by Thomas White, P. W. M. Music furnished by the lodges. They were admired by all who saw them. At 8 o'clock P. M., they assembled at the colored church near Hicks' wharf, where an able address by Rev. J. E. Raymond, (Worthy Chief Templar), upon the principles of the Order, was listened to with marked attention. His text may be found in the thirteenth chapter of 1st Corrinthians, thirteenth verse. Mr. Boswell White, a Hampton Normal cadet, then followed in the same strain. His address was short, but it made a deep impression upon all who heard him. The sisters then furnished a nice supper for the visitors, after which a play took place and continued until 9 o'clock P. M., when they all retired for their homes.

Please to publish this in the SOUTHERN WORKMAN. W. B.

AUGUST FLOWER.

The most miserable beings in the world are those suffering from Dyspepsia and Liver Complaint.

More than seventy-five per cent. of the people in the United States are afflicted with these two diseases and their effects, such as Sour Stomach, Sick Headache, Habitual Costiveness, Palpitation of the Heart, Heart-burn, Waterbrash, gnawing and burning pains at the pit of the Stomach, Yellow Skin, Coated Tongue and disagreeable taste in the month, coming up of food after eating, low spirits, &c. Go to the Drug Store and get a 75 cent bottle, or a Sample Bottle for 10 cents. Try it. Two doses will relieve you. For Sale in Hampton by Messrs. Selden & Co., and Druggists generally.

BALTIMORE AND NORFOLK.

PEOPLE'S LINE.

The swift and reliable iron steamer Sue leaves foot of Gay St., Baltimore, Mondays, Wednesdays and Fridays, at 4 P. M., for Norfolk, touching at Old Point. Returning, leaves Norfolk Tuesdays, Thursdays and Saturdays, for Baltimore, at 4 P. M., and Old Point at 5 P. M., thereby affording travelers a delightful view of Chesapeake Bay by daylight.

Fare: Baltimore to Norfolk $2.00.
Round trip 3.00.
Don't buy through tickets. 3.

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

H. PHOEBUS, PROPRIETOR.

TERMS: Transient $4.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from the Old Bay Line. Passengers by this line can avoid both transfer and detention in the cities of Baltimore and Philadelphia.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or walk.

The climate during the winter months is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as shown by the records of the Meteorological Observatory, shows an average of 60°, 74°, 76°, for Summer; 70°, 56°, 46°, for Autumn; 45°, 46°, 42°, for Winter; and 48°, 58°, 68°, for the Spring months. —Open for guests all the year.

DEVLIN & CO.,
LEADING
CLOTHING
HOUSE.

THE
Leading Clothing House
OF THE
UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing
FOR MEN'S WEAR,
FOR YOUTH'S WEAR,
FOR BOY'S WEAR.

Our stock is always
THE NEWEST,
THE LARGEST,
THE FINEST,
THE CHEAPEST.

When visiting New York do not fail to examine our goods.

THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNE'S BRIEF U. S. HISTORY.
BARNE'S SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NORTHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
BOYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BEER'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY.
PORTER'S CHEMISTRY.
JARVIS' PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBER'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEARING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,
In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

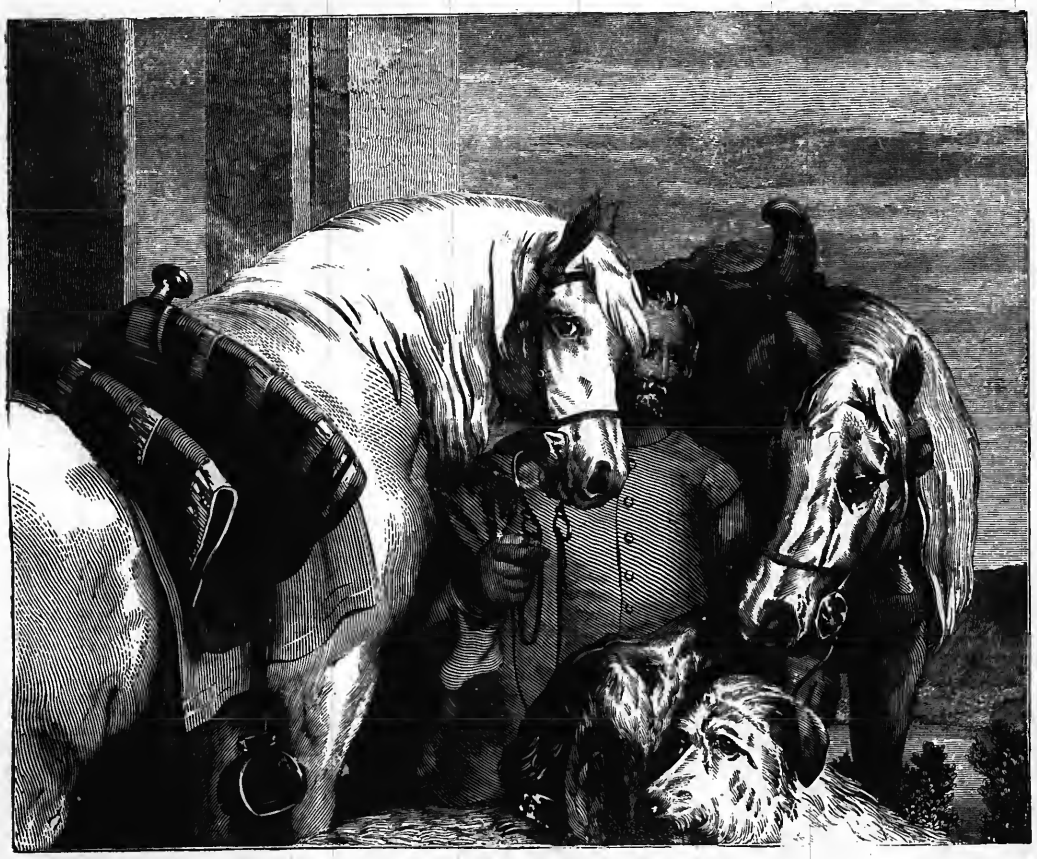
VOL. V. HAMPTON, VA., NOVEMBER, 1876. NO. 11.

CENTENNIAL VIEWS.

THE HORSE SHOW.

There can hardly be any lover of the beautiful who does not like to look at a fine horse, the perfection of united strength and grace. It is no wonder that men have always been proud of their power over these noble animals, who, if they only knew their own strength, could never be held in by bit or bridle.

And so we think our readers will enjoy looking at the beautiful picture of this four-footed friend, given us this month by our friends of the *Christian Weekly*, and to hear something of the horse show at the great Exhibition. President Grant has visited it with great pleasure we are told.



THE HORSE SHOW.

It is an outside show, though connected with the main one. The grounds lie about half a mile from the chief entrance to the Exhibition. Here in comfortable stalls, well drained and cared for, are the pampered beauties, all of "blood" and pedigree.

There are some fine American animals, of Morgan breed and others, but far the greater part are of imported stock. Here is a beautiful Arabian, brought direct from the desert. He is nearly white, fifteen hands high, and one enthusiast declares that he "has an eye gentle as that of a good-natured woman." It is not likely that his Bedouin master would ever have thought of that comparison, though if he wished to delicately compliment his beloved, he might tell her that her eye was as gentle as his favorite steed's.

In strong contrast to this Arab grace are the heavy Canadian stallions of Scotch breed for draft horses, one of them seventeen hands high and weighing 2,260 pounds. His name is Donald Dinnie. They are immense animals, with thick necks and legs, and luxuriant manes and tails, like the lamented Lion of the Normal School Farm. Young Simon Pure and Lord Dufferin, from Ontario are fine specimens of the English cart horse.

A card over one of the stalls tells us that the handsome roadster within was bred by the Emperor Napoleon III.

Among the racing horses is Sharpeatcher, a grandson of the famous Kentucky Lexington.

The little French Percherons with sweeping manes and tails are general favorites. Among them is an infant of three years old, weighing 1,200 pounds.

We have by no means exhausted the list, but no such list can give much idea of the beautiful creatures. It seems as if such a display must have a softening effect upon the hard hearts of some hack drivers, and all who abuse these patient, much-enduring, four-footed friends of man. When we see to what perfection of form and docility and usefulness they can be brought by kind treatment and wise training, and think of the depths of suffering and degradation they are often forced to by cruel or careless masters, we wish for hundreds of Mr. Berghs instead of one. Just watch the faces of all the horses you meet on the streets, and see how few have a happy expression. Patient and hopeless suffering is written on almost all. Then look at the few petted and kindly treated ones, if you fancy a horse cannot look happy. And remember where it is written that "the merciful man is merciful to his beast."

NEW ZEALAND AT THE CENTENNIAL.

BY WILLIAM E. GRIFFIS.

"Surely the isles shall wait for thee"

Fifty years ago the New-Zealanders were so busily eating each other up, that their two islands, which face each other like two cats, both with their backs and one with its tail "up," would have been picked clean. The Kilkenny combat would have repeated itself on a national scale. Incessant war, cannibalism and female infanticide were already depopulating the islands, before the white man came.

What a change of diet! What a metamorphosis! Here in Main Hall is a miricle of divine providence in history. New Zealand startles us as when the glutton grub that to-day incessantly devours, to-morrow soars in the sunshine, a miracle of dazzling color and ethereal life. It is like the resurrection of the mulberry-leaf into satin.

Down in the Southern Pacific, at the antipodes, in fact the very foot of the world, and very properly shaped like a boot, but of course, upside down, lies New Zealand. It is about 10,000 miles from Philadelphia. The 40° parallel of south latitude intersects it near New Plymouth; where the more modern "Pilgrim Fathers" first landed in 1841. Its area is about 100,000 square miles, nearly that of Great Britain and Ireland. The colonist here, 12,000 miles from Old England, sees at night, not the familiar North Star and Great Bear, the Pleiades and Orion, but fewer stars in strange constellations, amid great voids of black space. This at first chills his heart with a sense of loneliness, until he becomes used to it. Then he knows that New Zealand is the finest spot of earth, and he would live nowhere else.

Wonderful climate, plethoric soil, marvalous possibilities of development belong to New Zealand. Here, God in geology carries on his marvels of creation. Processes long since finished in other lands, may here be studied in full activity. One hundred miles of snow-crowned mountains give sublimity to the landscape, and silent blessing to the soil. Their peaks snatch the moisture from the breezes of ocean fourteen thousand feet above its level. Dense forests clothe their flanks, colossal glaciers crawl down their sides, giving birth to rivers. The twelve hundred miles lineal measurement, with nearly triple that of well indented and accessible seacoast is bisected by Cook's Straits, a natural canal which saves ships a detour of over 1,000 miles. The face of the Southern Pacific is tattooed with islands, atolls, and young continents. Australia is as large as the United States. Some scholars believe that at the time of Christ's birth, these were uninhabited of man. Certainly the peopling of New Zealand is very recent, only a few years before the discovery of America by Columbus. Even the names of their chiefs and the canoes they came in are preserved. They are most probably a Malay race from Sumatra. Sanskrit, Hindi, and other continental words are found in their degenerate Malay dialect. They call themselves Maories. They tattooed their faces and bodies, even to lips and eyelids. A shipwrecked English sailor, who was given a chief's daughter to wife, was refused by the imperious black-eyed beauty, because he was not handsome, i. e., not tattooed. The sailor thereupon submitted to be punctured with charcoal, until he rivalled a New Zealand dandy.

HAMPTON, NOVEMBER, 1876.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

NEGRO EDUCATION finds two classes of opponents. One is the illiterate colored preachers who know their influence is great in proportion to the ignorance of their hearers. The second class comprizes many good men among the whites who fear that when the colored man has education, his knowledge will not be joined with wisdom, and will therefore be a power for evil. For those damaging apprehensions no one is more to blame than the negro politician. We do not mean to denounce as such every colored man who takes part in politics; but only those who have yielded to the temptation to abuse their superior knowledge for their own selfish ends, instead of keeping their eye single to the welfare of their race. It is an encouraging sign to true friends of the negro that office seekers, white and black, are losing their influence. This is the case not merely because opposing factions are forming, but because a great many negroes are finding out how selfish have been the aims of their leaders. That education will tend more and more to enable the average voter to distinguish a demagogue from a patriot is evident from the fact that when intelligent they can be reached by newspapers and written appeals, instead of taking every scrap of information at second hand. Heretofore there have been offices enough for all the educated blacks. Let education be general and it will soon be discovered that all the able men cannot hold office. Self-seeking will be countermined by self-seeking and the balance of power will remain with those who have no hope of office for themselves and therefore are not tempted aside from their duties as citizens by personal ambition.

As the case stands now, there is a mass of ignorance and prejudice in which no appeal to reason can make itself understood or even listened to. The votes of negroes have enabled some of the worst men who ever figured in American politics to hold high places of honor and trust. Such votes marshalled by cunning knavery are dangerous to the country in proportion to their numbers. Education would forever put an end to machine voting, and turn the political slave into a man able to give expression to those ideas of justice and fairness which are now silenced by the authority of the few who can read. From the beginning of history, ignorance has proved a congenial soil for despotism. More light must be admitted into our dark places, or a form of despotism may become necessary to the existence of a civilized government.

THE EIGHTH SESSION of the Hampton Normal and Agricultural Institute opened September 28th.

On the 31th of October, 1875, the attendance was 158 boarders; and 36 day scholars. A total of 194.

On the 31th of October, 1876, the attendance was 197 boarders; and 52 day scholars. A total of 249. The necessity of making the most of situations obtained in summer, delays the coming of many till November or December.

The aggregate of last year was 250.

This year it is likely to be over 280.

Students have entered with unusual promptness. The new class is much larger and passed better examinations than usual. In respect to material, it is as encouraging as could be wished.

Individuals in the North and South who have been interested in colored youth have sent a considerable number. These have had special advantages. On the other hand, men and women over twenty years of age who never studied at all, are in the preparatory class learning to read and write.

It was hoped, originally, to admit only those who were prepared elsewhere, but the necessity of providing educators for districts where there were no schools, led to the admission of youths from those regions, since they would be more likely than others to work among their old friends. Some of them are full-grown men.

A FEW WEEKS ago a mulatto in ragged clothes and of woe-begone looks, appeared on the school grounds asking for work, showing by his accent, that he was not a native. He said that in his youth he had been sold from Richmond to a Cuban and had been working most of his life on a sugar plantation in that island. He had only dreamed of freedom until recently when he resolved to escape. By making trinkets, selling rare birds, and collecting shells, he had saved some gold. This with the bribe of six bottles of wine had induced an American Captain to bring him to the United States.

His master's initials are branded on his head.

The mission to the Sandwich Islands, so grand in its wide spread influence over Polynesia, was suggested by the appearance of a forlorn Hawaiian sailor on the steps of a church in New Haven, Connecticut. Perhaps this abject looking Cuban slave will inspire a new movement in behalf of West Indian negroes.

AFTER A MEETING held last summer in Saratoga, N. Y. with the hotel waiters, in which the Principal of the Hampton Institute spoke of the need of more men for the Christian work of the South and of the world, a fine appearing negro from the "ever faithful isle" requested to know particulars about this school. He returned, promising to bring his sister and perhaps others from their island home to Hampton for an education. Circulars have been translated into the Spanish language, and it is felt that a great work may, in the Providence of God, be done in that field.

A friend of the lowly everywhere has made special provision for the instruction of Cuban negroes at Hampton. A teacher well versed in the Spanish language is engaged to come when required.

POLITICALLY the negro has received an abundant inheritance; educationally it is most meagre. Of power he has a maximum, of wisdom a minimum. He was provided with the ballot confessedly in self-defence, but the power that bestowed it has refused to aid him in getting the knowledge requisite to use it well under all circumstances. The results of a debased suffrage will yet cause mourning among those who are responsible for it, and who have cared much more to control and use than to enlighten it. In caring for its "wards," the government has ignored the noble example set by Northern benevolence and by such efforts as Virginia is making for universal education.

There is a fine irony in the use of the word "ward" as applied to the negro under government protection. As voters and as objects of suffering and of persecution, they have been cared for. As men with deep mental and moral needs, they have been neglected. Was this course unavoidable on the part of a government that is based on intelligence and morality? We believe not.

MOST UNFORTUNATELY there is, in politics, a united South versus a united North.

By political trickery war questions have been forced in with the new issues; the old battle flags are (figuratively) out, the old lines are drawn, and on either side nothing counts for more than a good record as a soldier.

We regard the war as having decided not only certain facts in our political system, but as having created great opportunities and corresponding duties, chiefly the diffusion of intelligence among the illiterates of the South. To the attainment of this end the present condition of things is most unfavorable. No administration has, as yet, taken up the Southern question except from the standpoint of the professional politician. Public offices are sold for political services. The men who hold office, as a class, have not commanded respect; the irritation inevitable at the close of a civil war, after the ruin of an aristocracy and untold losses, has been needlessly increased. The vital matter has been neglected.

The government may well give its careful attention to the condition of the South. Questions of finance are likely to settle themselves, but the Southern question will never settle itself if its management is to be forever entrusted to successful wire-pullers, who cling to the "spoils" system and whose aid in civil service reform is like a physician's in cutting off his own leg and one that he hates to lose.

The problem is full of difficulties; it requires an understanding of the obligations imposed by victory, a perception of moral forces, appreciation of the methods by which men are made better, such as has not been manifested by the government whose fabric of reconstruction appears like a bridge of wood over a river of fire. Politicians are impatient of the distant but far-reaching results of education, preferring to "stamp out" the Ku Klux miscreants and to take their chances of power to use the bayonet should the liberties of the freedmen at any future time be threatened, rather than lend their aid to the best known means for the promotion of Peace on earth.

THE SOUTHERN BRANCH of the National Soldiers Home at Hampton has had of late an unusual mortality, resulting, it is supposed, from imperfect drainage and over crowding of inmates.

Capt. P. T Woodfin, Deputy Governor, has called in the aid of the best medical men in the neighborhood and given them every opportunity to investigate. He has adopted their suggestions and is doing all in his power to make the situation of the men as favorable as possible to health.

Every month improvements are being made, the grounds already are the most attractive in this section of Virginia, and the situation of the veterans appears to be as comfortable as it can be made with the means at the disposal of the Governor.

In view of certain anonymous articles in the papers making complaints, a number of prominent citizens of Hampton have recently visited the "Home" and published a card expressing their entire confidence in the management.

THE DEATH of the Rev. Geo. Whipple, D. D., Secretary of the American Missionary Association, and President of the Board of Trustees of the Hampton Institute, creates a vacancy in the ranks of laborers for the spread of Christian truth that is not easily filled. We hope at an early day to give some account of his life which was one devoted to duty and to humanity, to the neglect of personal interests.

THE Reports of the Principal, Treasurer and other officers of the Hampton Normal and Agricultural Institute, for the year ending June 30, 1876, now in the Normal School printer's hands, will be sent early in November to all contributors. The considerable labor and expense involved is no more than is required of good stewardship.

The most serious item is the balance of $5,194.07 against the "Hampton Singers," the past year, in final settlement of all accounts. While this is more than offset by credits of previous years, it is fair to state, in correction of impressions that may have been made, that the whole direct avails of the Singers' campaigns failed to meet the entire expenses. This is due to the panic of 1873–4, during which most of the concerts were given. On the other hand, the indirect results, the interest kindled through the songs, the appearance of the Students and the information circulated, has brought many thousands of dollars to the school treasury, including a legacy of $5,000 from a colored woman of New Bedford, Mass. The concerts were an "advertisement," and, properly, were discontinued when the object was accomplished. With their aid the school has made a new departure.

The officers of the Institute have, from the beginning, felt called upon to render annually as complete account as possible of all receipts and disbursements, giving to those who have contributed an opportunity of criticising their financial transactions, judging of their investments and of deciding intelligently whether the Institute is a proper channel of their charities.

WE PUBLISH another Home letter from the Hawaiian Islands, to be continued in the next number.

The writer is a lady over seventy years of age who has experienced hardships unknown in modern missionary life.

In common with many of her associates in that once remote and arduous field of labor, her strength, though for years overtaxed, has not yet failed, and though in the midst of comforts and free from responsibility, she yet works as one who enlisted for life.

WE CALL special attention to the advertisement in another column, of the Hampton Bar Oyster Company. No better oysters than the Hampton Bars are to be found in oyster beds, and the success of this company under Mr. George Dixon's management, demonstrates the advantage of cooperative association in business.

THE President of the United States has appointed Thursday, November 30th as a day of national thanksgiving.

GUESTS FROM JAPAN.

The Hampton Normal School has had the pleasure of a visit from Mr. Fugimaro Tanaka, Chief Centennial Commissioner of Education from the Empire of Japan, accompanied by Mr. Taizo Abe and Mr. Tanetaro Megada, interpreter. At home Mr. Tanaka is Senior Vice-Minister of Education, his office being to superintend and advise the Government upon all matters concerning public instruction. Arriving October 24th, they spent two days in inspecting the school in its various departments, and the neighboring objects of importance.

The interest in peculiar phases of educational enterprise, which induced these gentlemen from the other side of the world to gladly accept an invitation to Hampton, will be appreciated by those of us who had an opportunity at the Centennial Exhibition of observing the rapid strides Japan is making in popular education, and who noticed the zeal of the Japanese reporters flitting about from one Educational exhibit to another, marking every new point with eyes that let nothing escape, and filling their notebooks with the crazy looking columns of dots and dashes which are to interpret Yankee notions to the Celestials.

Introduced to the school at its morning assembly, Mr. Tanaka made a short speech in his own language, interpreted by Mr. Megada. He said:

"Young ladies and gentlemen: it gives me much pleasure to meet you here.

"As I hear that you are accustomed to have the news of the world read to you every morning, I think it may interest you to hear some news of Japan. Five or six years ago, we passed through a time of war and insurrection something like that which, as you have just been hearing, is now troubling Turkey; but all that is over. The country is now at peace, and we are trying to develop it in all ways, especially in education. We have no schools exactly like yours. It will be very good for us to have some. But we have schools: 30,000 of them. About 15,000 of these are Normal schools; and out of our population of 33,000,000, there are 5,000,000 children in school.

"We shall take great interest in inspecting your school and seeing in what we can improve our own."

The classes, farm, industrial departments and buildings of the school were carefully and closely examined by the visitors, who took an especial interest in the working of the labor system, expressing the conviction that it could be adapted with advantage to the school system of Japan.

The Butler School and the colored schools in Hampton, the Soldiers' Home, and Fortress Monroe, were also visited by the gentlemen with great interest, and the acute and intelligent observation which they bring to bear on all their inspection of our country.

A few friends of the school from Fortress Monroe and Hampton, with Admiral Trenchard, commanding North Atlantic fleet, Captain Luce and several officers of the *Hartford*, and Captain Bishop of the *Shawmut* were invited to meet the oriental visitors in the evening, and they were entertained by the songs of the Hampton Students.

By the kind invitation of Captain Luce, the Japanese gentlemen, with some of the officers and teachers of the school, visited the flag-ship *Hartford* on the following day, were politely shown over the ship by the officers and had the opportunity of seeing the exercise of some of the finest guns in the service, the largest of which, an 11 inch Dahlgren, closed the contest triumphantly by demolishing the target, distant twelve hundred yards.

That evening the visitors said their *Sayonara* (good-bye) with expressions of regret that were heartily reciprocated by their hosts, to whom the ends of the earth seem brought nearer by this pleasant visit.

NEWS OF THE MONTH.

Political.

October 3rd, Colorado's first State election. The entire Republican State ticket elected and a large Republican majority in the Legislature.

October 4th, Georgia State election. Democratic by a majority of 70,918 votes out of a total of 135,000

October 10th, Electione in Ohio, Indiana and West Virginia. Ohio Republican for the entire State ticket by a majority of from 5000 to 9,000, with a Republican majority in Congressmen.

Indiana elected the Democratic State ticket, by a majority of 2 to 3000. A Republican gain of Congressemen. Republicans 8, Democrats 4.

West Virginia elected a Democratic Governor and two-thirds of her Legislature are Democratic.

October 15th, Arkansas Democratic.

On October, 7th Governor Chamberlain, of South Carolina, issued a proclamation ordering the armed rifle clubs in that state to disband. His request for Federal troops to protect citizens of the state from intimidation has been granted.

Personal.

Mr. Levi Coffin, the energetic conductor on the famous underground railway of slavebolding times has a serious illness which is thought to be the result of overwork in preparing his book on that great thoroughfare.

Sojourner Truth was in Chicago recently trying to sell some of her books to raise means to visit the Centennial. When questioned in regard to her age, she said: "I don't know my age exactly. I judge it by events. I was a slave in the State of New-York, and was sold a good many times. When too old I was made younger, and when too young I was made older. I am between 80 and 90."

Religious.

The Annual Meeting of the American Board of Foreign Missions, was held at Hartford, Ct. October 4th. It was densely crowded and interesting. Dr. Clark, Foreign Secretary, read an interesting paper on the Christian progress of half a century, and the meeting was addressed by Rev. Dr. Chamberlain of Mudnipilly, India, and others.

The Moody and Sankey meetings in Chicago are very successful. They are held in the Tabernacle, seating 8000 persons. Fifteen thousand have gone away unable to enter. The meetings will be continued three months. Simultaneous meetings will be held in other of the largest cities of the West, under direction of the International Young Men's Christian Commission.

The statue of Religious Liberty, which the Jews in the United States intend to present to the National Government, has been completed. America in the design, stands with her right arm extended over a youth who typifies religion; her left hand rests upon the laws of the country. Around her brow is a circlet of thirteen stars, and at her feet an eagle holds in his talons the serpent of intolerance. The presentation of the statue will shortly be made in Washington.

Educational.

Manliness is not one of the elective studies at Brown University, but it seems to come in the course sometime before senior year. Three years ago Inman E. Page, a colored student, entered the Freshman Class after spending a year at a Virginia college. During junior year he won the highest honors in oratory and scholarship. His classmates have now done a manly thing. They have forgotten that his face was black and have elected him class-day orator. This is the great prize of class politics, and a popular man usually wins it. The case is respectfully referred to some of the young gentlemen in the College of New Jersey.

In the Mann High School at Toledo an excellent innovation is the introduction of a current magazine as a reading-book.

After much discussion by the Boston School Committee it has decided that the salaries of the city teachers shall not be reduced. The committee has honored itself in its decision.

While the school population of California is increasing largely, the number of absentees is also increasing. There is accordingly a demand for compulsory education begining to be heard.

It is asserted by *The Chicago Post* that the fault with our collegiate system is that it does not teach young men the things they are obliged to know to make their way in the world they must live and struggle in.

Dr. Sears says that the majority of the Southern States have made slow but steady progress in education; two or three have manifested renewed interest and energy. The conviction of the necessity of public schools is gaining ground everywhere.

Foreign.

The chances of a general war in Europe are becoming serious. Turkey refusing the conciliatory propositions of the Great Powers, proposes a six months' armistice on conditions, which will undoubtedly be rejected by Servia, guided and supported by Russia. Russia is buying rifles and calling out her reserves, and Italy is demanding a share in the prospective division of the Empire. The English Government has a difficult position between her policy to support Turkey, to maintain the balance of power in Europe and the general sentiment of indignation roused in the nation by the Turkish atrocities in Bulgaria.

In Cuba the Winter campaign is opening with fair prospects for the insurgents, who were recently so daring as to enter the city of Las Tunas, and hold possession of part of it.

Spain announces her regular semi-annual determination to crush the Cuban rebellion at any cost.

A despatch from Madrid says it is stated that all differences between Spain and the United States have been arranged, and a friendly feeling now prevails between the two governments.

Centennial.

Americans have royally supported the Centennial Exhibition. They have paid at its gates $2,210,262 24—a sum greater than that received at any previous world's fair. The total attendance—6,200,215—does not reach the figures of several exhibitions, although the attendance on Pennsylvania day (274,919), surpassed the maximum for one day at the other fairs.

Richmond, Va., Oct. 9.—Gov. Kemper, in reply to an invitation to name a Virginia day at the Centennial by proclamation, has written a letter declining to do so. His chief reasons are the poverty of the people to respond in an appropriate manner, and that it is not customary in Virginia to use official proclamations for such purposes.

A deputation of Polish gentlemen in Paris have presented to the American Minister to forward to President Grant a Commemorative, Centennial medal, bearing on one side the effigy of Washington and on the other those of Kosciusko and Pulaski the two Polish heroes who fought in the American army of the Revolution.

A monument to Columbus presented by Italy to America was unveiled in Philadelphia Oct. 12. The pedestal is 12 feet high, the statue 10 feet.

General.

The yellow fever is abating in Savannah with the approach of frost.

The great enterprise of blowing up the obstructing rocks in the entrance to Long Island Sound, known as Hell Gate, has been a complete success and a great triumph to the engineering skill of General Newton who planned and carried it through.

TRAINING COLTS.

It is impossible to lay down rules adequate for the trainer's guidance and direction in the management of vicious or irritable colts; for very likely no two cases require the same treatment. These points may, however, be made: keep your temper. No matter how provoked; put a severe curb upon the rising of passion. A cool head, and calm and steady nerves, with a quick eye, will go far towards success in conflicts with even the most irritating animals. Moreover, never forget that the law of kindness is stronger in its influence on the animal creation than the law of force. Remember this also: do not make much noise when having a contest with a colt. Say little to him, and nothing to any one else. Do not be shouting, "Get up!" "Whoa!" "Look out there!" and the like. Silence is a great virtue in a horse-trainer. A low-voiced groom is worth his weight in gold about the stables.

A horse cannot understand sounds like a human being; and the less said to him, for the most part, the better. A few sounds, of course, are necessary; the word "whoa" being one of these. This word should mean *stop*; it should never mean anything else in the colt's ears. It should be pronounced in a quick, sharp, imperative tone. It should never be drawled out or prolonged, as if there were a dozen *a*'s, instead of one, after the o, as is often the case. *Whoa* means *stop*, and when a colt hears it, he should stop, and stop in his tracks, too. It is not a word to be frequently used, therefore, but to be saved for emergencies; as when some strap or bolt gives way, a bit parts in the mouth or an upset occurs. At such a time you can say "*Whoa!*" and if it has always meant *stop* to your horse, if he was broken to so understand it when young, he will so understand it then, and stop; thereby saving, perhaps, your limbs, or even life. The common fault is to use the word to steady the horse when speeding, or to slow him up. For this purpose take some other word or words; as, "Steady, boy; steady!" but let the word "whoa" mean but one thing to your horse; viz., to stop, and stop instantly. The horse of ordinary intelligence can be made to understand this with very little trouble, and in less than a dozen lessons. We have seen horse trained in less than a week's time, so that, when streaming around the exercise-lot at a swinging gate, they would stop at the word sent forth from the mouth of the trainer, so quickly as to actually throw themselves upon their haunches.

The method is simple. Put your bridle on to your colt, buckle in a pair of long lines, and, taking position in the rear, start him along. After he has taken a few steps, say "Whoa!" and at the same time give him a slight twitch on the bit sufficient to cause him to stop. Do not be rude or harsh, but gentle and firm. Start him now again, and repeat the sound and the movement of the hand. The colt will soon catch the idea, and learn what the sound means. Then you can go on, and teach him that it not only means *stop*, but that it means to stop *instantly*. A few days of this simple treatment will suffice to teach him thoroughly the lesson, which, when well learned, he never forgets, and the real value of which can scarcely be overestimated. If the colt is worth five hundred dollars when broken in the ordinary way, he is certainly worth six hundred when instructed fully in the manner here sets forth. Any sensible man, in purchasing a horse for family service or for fast driving on the road, will gladly pay a hundred dollars extra if the breeder can show to him that the colt will stop short in his tracks at the word; for he sees that, amid even the average risks and hazards of driving, such a power over the animal may prove of supreme importance.

—*Golden Rule.*

HONEST AND TRUTHFUL.

Boys and girls, be honest and open-hearted. Tell the truth even if it hurts you. If you have done wrong, if mischief comes of your conduct, and offense is given your parents or teachers, or employers, come right out with an honest face and tell the whole truth. You may be censured for your wrong, but you will be respected for your manliness in acknowledging your error. Honesty is the best policy, but let policy alone, and do right. Tell the truth always about your bad actions, and let it hurt. That is the way to heal the wrong. I have learned this by experience.

THE CONSTITUTION.

"Old Ironsides."—The frigate Constitution "Old Ironsides," as she was familiarly called, the most glorious and honored name on the list of our old navy, was built at Hart's ship-yard in Boston, where Constitution wharf now is, at a cost of over $300,000. She was was made very strong. Her frame was of live-oak, and her planks were bent on without steam, as it was thought that process weakened and softened the wood. She was launched on the 21st of October, 1797, in the presence of a great gathering of people, but did not start upon a cruise till July 1798, when she went to sea under the command of Capt. James Nicholson. The Constitution was so staunch a ship that she received the name of "Ironsides." She always had excellent commanders, and performed gallant service against the Algerins pirates and the British.

The Constitution was the flag-ship of Commodore Preble in 1804, when Tripoli was bombarded. In the gallant action of the 20th of August of that year she was run into within a short distance of the castle and batteries, and by her destructive fire of round and grape-shot silenced the guns of the fortifications and spread devastation among the Bashaw's fleet.

The next great action in which the Constitution was engaged was the engagement with the British frigate Guerriere, of thirty-eight guns, commanded by Capt. Dacres. It took place on the 19th of August, 1812, off the American coasts, in the present track of ships to England. The Constitution carried forty-four guns, and was commanded by Capt. Isaac Hull. After much manœuvering to obtain the weather gauge the hostile vessels, at six o'clock in the evening, came within half-pistol shot of each other, and engaged in deadly conflict with the entire force of each vessel. The guns of the Constitution were double-shotted with round and grape, and their execution was terrible. The rigging of the two vessels finally became entangled, and both parties prepared to board. The fire from small arms became exceedingly severe, and Lieut. Morris of the Constitution endeavored to lash the vessels together. At this moment the sails of the Constitution filled and she shot ahead instantly exposing the shattered condition of her antagonist. The foremast of the Guerriere fell, carrying with it her mainmast. She was thus left a helpless wreck upon a rough sea.

The combat had continued for an hour, and the Constitution was about to pour a raking fire into her disabled antagonist when the latter discharged a gun to the leeward in token of surrender. At daylight the Guerriere was found to be sinking. The prisoners and some movables were soon transferred to the Constitution, and at three o'clock in the afternoon, the battered hulk having been fired, blew up. The Constitution carried the intelligence of her own triumph to Boston. Her next exploit, under the command of Commodore Bainbridge, was the capture of the Java, a British frigate of thirty-eight guns, commanded by Capt. Lambert. This engagement took place on the 29th of December, 1812, off the coast of Brazil. The action lasted about three hours. The Java was entirely dismasted, a large number of her guns were disabled, her bowsprit was shot away. The Constitution did not lose a spar. The Java was one of the best ships in the British service. Her officers and crew numbered over four hundred; twenty-two were killed and a hundred and two wounded, her commander fatally. The Constitution lost nine killed and twenty-five wounded.

On the 20th of February, 1814, while on her way from Bermuda to Madeira on a cruise, the Constitution, then under command of Captain Chas. Stewart, captured two important prizes, the Cyane, thirty-six guns, and the Levant, twenty. The action began about five o'clock in the afternoon. The evening was pleasant, the moon shining brightly. The British vessels manœuvered so as to attack the Constitution simultaneously. At half-cable's length of each other they awaited their antagonist. She came up in gallant style, and managed so skilfully as to pour tremendous broadsides into both of them. A little before seven the Cyane surrendered. An hour later the Constitution started in pursuit of the Levant, which was endeavoring to escape, engaged her at a quarter to nine o'clock, and after an hour's action compelled her to strike. The loss of the Constitution was three killed and twelve wounded; the two British vessels lost thirty-five killed and forty wounded.

During the long period of peace which preceded the outbreak of the southern rebellion the Constitution was used as a school-ship at Annapolis, Maryland, whence she was removed temporarily to Newport, and was there employed in the same service. The figure-head of the Constitution was a carved wooden statue of Gen. Jackson. It is proposed to set it up in the Naval Academy grounds at Annapolis.—*Harper's Weekly.*

He won his wife. Even the idols are tattooed. The Maories used weapons of stone; made their women beasts of burden, and lived on a diet of fern-root, flour, sweet potatoes, rats, eels, fish, sharks, and human sirloins, chops, and cutlets. They were not always particular how it was cooked. They often ate it raw. Their codes of laws, or rather superstitions, were expressed by the word "Taboo," a word that has passed into our language.

On these islands, no quadrupeds but rats, and few fauna of any kind, existed except the hairy birds called "kiwi" and "moe." The moe stood ten feet high. One, in the Main Hall, has taken off his flesh, and now stands in his bones, as suits the hot weather. In full life dress, and with digestive engines at work, he seems quite able to digest a missionary.

Tasman, the bold Dutch sailor, whose monument is in the name Tasmania, first saw the Maori country. Like a true Hollander, he named it New Zealand, just as an Irish governor afterwards divided it into Ulster, Connaught, etc. That "beat the Dutch." Captain Cook, on his expedition to observe the transit of Venus, arrived in Poverty Bay in 1769, and afterwards visited the islands three times. Our Benjamin Franklin was so interested in Cook's account, that he proposed a scheme for their colonization. Cook, among other good things, introduced a few hogs which increased with marvellous rapidity. In 1839, when colonization began, there was at hand a providential supply of surplus food for them. Here, in Main Hall, we find soap, candles, oil, lard, buns, sausages, tongues, etc., the centennial fruit of Cook's benevolence. When the New-Zealanders first saw soap, they baked it in their ovens, and ate it. The effect may be imagined. Now, the New-Zealander makes the detergent himself. There is a profound significance in a heathen making soap, and using it. China, for instance, is sadly in national need of this wholesome article. The whole heathen world needs it. Long before colonists came, the missionary was on the ground. In 1814, the Rev. Samuel Marsden visited the Islands, and with others established a mission under the auspices of "The Church Missionary Society." Earnestly they began to teach, preach, and translate the Bible into Maori. Gradually the work spread, and other missionaries joined in the labor, until in 1860, the entire native population were nominally Christianized, and thousands lived pure lives of faith and good practice. The introduction of firearms—at first the cause of frightful slaughter—finally tended to abolish the intertribal wars. Even when the Maories and whites met each other in bloody battle, as was sometimes the case, the Christian Maori did not renounce his faith. Many a native with a bullet in his body has been found with the New Testament in his bosom.

Yet far less fighting, proportionally, was done in New Zealand, than in the United States during its early colonization. Now, whites and Maories dwell peaceably side by side.

Years ago, the natives disinterred the bones of the slaughtered whites, and, as a proof that their feud was over, built a memorial church over them. There are now many congregations of Maories, with their native pastors. Men who have eaten at a hundred cannibal feasts, now partake of the symbols of a saviour's love. The converted man, with changed heart, but inefface able tattoo, follows the plough and tills the soil for his family, who, clean and well-dressed, welcome him round a family altar. Maories also hold offices of government, sit in the legislature, teach, carry on business, and labor to elevate the mass of their fellow Maories.

Thus, in sixty years, a nation has been rescued from cannibalism and impending extinction, and Christianized. In thirty-six years, a powerful, free, Christian state has sprung up in the Pacific. There is now in New Zealand, a population of nearly 400,000 souls, of whom 40,000 are Maories, and 5,000 Chinese, (who are to be found all over the Pacific islands.) The Americans number 575. Of the total, 123,000 were born in the colony—an item which proves that New Zealand is a permanent home, and not a wild venture. There are over 250 miles of railroad in operation, 930 miles being built, and 1,048 miles authorized, besides roads, watercourses, splendid cities and buildings, paved streets, and rich stores with plate-glass fronts. There are rich farms, herds of cattle, mines of gold and other metals, and telegraphs connecting the chief towns. A submarine cable will soon join New Zealand to the capitals of the world. Schools, colleges, a university, museums, mechanics' institutes, and book-clubs, under a free government, diffuse education and information. Churches are found in every town. Newspapers already number scores. These are results grander even than the wonderful crops of grain, flax, wool, timber, live stock, metals, or the $3,000,000 of gold represented by the gilded shaft in Main Hall.

Let the visitor study the photographs of scenery, cities, and natives; the statistics, the Maori weapons and utensils, and see how the world is moving on—even at the antipodes. Here are great lumps of kauri gum. Once the infuriate cannibal pierced his vanquished enemy with red-hot ramrods, and poured the boiling, blazing gum into his wounds. To-day, Philadelphia refineries make carriage-varnish of it. From the timber of the majestic kauri-forests, the same Maories, now regenerated men, build their temples for the worship of God in Christ. Out of Christian civilization has sprung this new empire under the Southern Cross. By the power of the gospel, has the tattooed cannibal savage become a man, a brother, and a son of God. When "the broken arches of London Bridge," and "the ruins of St. Paul," and the forgotten writings of the brilliant Macaulay, have alike passed into oblivion, the labor and their fruits of the christian missionaries in New Zealand will shine in remembrance, "as the stars in the firmament for ever and ever."—*Christian Weekly.*

THE ST. BERNARD DOGS.

At the top of one of the rugged mountain passes which cross the Alps between Switzerland and Italy, stands the ancient convent of St. Bernard. This pass is a very old and famous one. A hundred years before Christ, it was used by the Romans as a military road by which their conquering legions poured into Gaul. Some of the original Roman mile stones are still to be seen. In modern times, it is famous for the wonderful passage of Napoleon who in 1800 crossed it with a large army to surprise the Austrians, dragging the heavy artillery and ammunition over heights that had been thought accessible only to men on foot or mule-back.

THE ST. BERNARD DOGS.

The convent of St. Bernard is the highest winter habitation in the Alps. The men who have chosen this life of solitude and separation from their kind, must find it a dreary one indeed through the long months of winter, when the pass blocked up by deep snows is entirely inaccessible, and they are shut up in their howling wilderness, with the frowning mountain peak towering above their roof, and only the awful voice of the storm and the avalanche for company.

The snowy season lasts nine months in the year, and long before the summer tourists start on their pleasure journeys, travelers of an humbler sort, peddlers and silk merchants from Italy, or emigrants with their families are passing one way or the other over the Grand St. Bernard. It is a very dangerous season; a sudden snow storm may overtake and bewilder the travelers, or an avalanche bury them in its fall. The monks of St. Bernard regard it as their special mission, to rescue such needy or perishing travelers. To aid them in this work of benevolence, they have for many years kept and trained a peculiar breed of dogs, the Alpine spaniel, and the fame of the noble St. Bernard dogs is wider spread than Napoleon's. Their sagacity and courage, their keen scent, and docility, and the evident pride they take in their work raise them to a high rank among dogs. They are noble looking fellows, as large as a large English mastiff, with short tawny hair and a remarkably intelligent and gentle expression of countenance. One look in their faces destroys all fear in the visitor around whom they come bounding in ponderous playfulness. In the stormy season of travel several are sent out every night, and are always eager to go. A flask of spirits is fastened round the neck of one, and a cloak to the back of another.

Thus equipped, they rush forth into the darkness, snuff the wintry air, and if a scent is discovered it is tracked unerringly. Even though the perishing man lies ten or twenty feet under the snow, he has a chance for life. If they cannot dig him out themselves scratching up the snow with their feet, their deep solemn bark gives warning to the convent, and the monks hasten to the rescue. If a traveller is able to help himself at all, a drink from the flask around his preserver's neck rouses his benumbed senses, and guided by the faithful dog, or if need be, supported by him, he finds a hospitable shelter.

Our picture represents a St. Bernard dog carrying a rescued child on his back to the convent. One of these noble animals was once decorated with a medal in commemoration of having saved the lives of twenty-two travellers, who but for him would have perished in the snows.

At Home.

PEOPLE WILL TALK.

You may get through the world, but 'twill be very slow
If you listen to all that is said as you go;
You'll be hurried and fretted, and kept in a stew—
For meddlesome tongues must have something to do.
And people will talk,

If quiet and modest, you'll have it presumed
That your humble position is only assumed—
You're a wolf in sheep's clothing, or else you're a fool,
But don't get excited—keep perfectly cool—
For people will talk.

And then, if you show the least boldness of heart,
Or a slight inclination to take your own part,
They will call you an upstart, conceited and vain,
But keep straight ahead—don't stop to explain—
For people will talk.

If threadbare your dress, and old-fashioned your hat,
Some one will surely take notice of that,
And hint rather strongly you can't pay your way,
But don't get excited whatever they say—
For people will talk.

If your dress is in fashion, don't think to escape,
For they criticise then in a different shape;
You're ahead of your means, or your tailor's unpaid,
But mind your own business—there's naught to be made—
For people will talk.

Now the best way to do is to do as you please;
For your mind, if you have one, will then be at ease,
Of course you will meet with all sorts of abuse;
But don't think to stop them—it ain't any use—
For people will talk.

HOUSEHOLD HINTS BY MRS. BEECHER.

THERE is nothing more refreshing than plain, white Swiss muslin curtains open in the middle, looped back on either side with a broad band of insertion, over blue, green or cherry ribbon. Or a strip of well glazed paper muslin looks as well as ribbon, is much less expensive, and can be purchased in any delicate color. Or the curtain may be simply tied back with ribbon. There should be a broad hem on each curtain, with ribbon or paper muslin laid inside the hem. By joining the hem to the curtain with a handsome insertion, and sewing a ruffle on the outer edge of the broad hem neatly fluted, one secures a charming effect from the parlor curtains. Lace curtains are very elegant, but difficult to do up so as to look like new, and somewhat expensive to hire them cleaned by a French cleaner, and when one has them they are no more beautiful than these Swiss curtains, which can be easily cleaned, and fluted, and look like new curtains each time.

LOUNGES.—Very pretty and comfortable lounges can be manufactured at home with very little trouble or expense. If the husband or sons have any spare hours, or skill with saw, hammer and nails, they can snatch leisure moments, now and then, and make the frame; or if they are not skillful, a carpenter, in an hour or two, could make it and give it a proper shape to suit the part of the room where it will be put. After the slats are nailed on, if there is any place near by where a few springs can be obtained, they will make the lounge much more comfortable. Over the springs cotton batting, hair or moss should be laid, then a thick, strong canvas or lagging (but the springs may not wear the outside cover. When this is nailed down smooth and tight, taking care that the stuffing is spread on evenly without lumps or hard spots, put on the cretonne, chintz or woolen outside cover, and nail it down strong. Finish by nailing with brass or, black nails, a gimp and fringe plaiting or ruffle to cover the edge and you have a neat lounge, quite as comfortable as most that you buy. Three large square pillows, filled with feathers, hair, moss or "Excelsior" (a kind of poplar shaving made expressly to pack furniture in), and covered to match the lounge are a great convenience for a straight lounge placed as it should be close to the wall.

TIMELY RECEIPTS.

FLAXSEED LEMONADE (*good for colds*).—Pour one quart boiling water over four tablespoonsful of flaxseed. Steep—not boil—three hours; cover closely while steeping; then strain, sweeten to taste, and add the juice of two lemons, putting in more water if too thick to be agreeable.

ICELAND MOSS JELLY (*good for colds, and very nutritious in convalescence*).—Soak for an hour four tablespoonsful of the moss in cold water enough to cover it. Then stir it into a quart of boiling water, and simmer gently till it dissolves; strain, sweeten to taste, flavor with the juice of two lemons, and a little cinnamon if agreeable, and a glass of wine; strain into molds, and cool before using.

CHICKEN JELLY (*for convalescence*).—Skin the chicken, remove all fat, break and pound the bones and meat, cover with cold water, and heat slowly in a steam-tight kettle. Let it simmer till like a pulp; then strain through a sieve or cloth, season to taste, and put over the fire again, but now without a cover. Simmer till the liquid is reduced one half. Be sure and skim off all fat. Set it to cool until it becomes a jelly. If one has no steamer, a cloth laid between the lid and any kettle that it will fit closely, answers the same purpose.

LITTLE THINGS.

Little masteries achieved,
Little wants with care relieved,
Little words in love expressed,
Little wrongs at once confessed,
Little graces meekly worn,
Little slights with patience borne;
These are treasures that shall rise
Far above the shining skies.

GOD'S CARE.

Two little girls were walking homeward one moonlight evening. I overheard one of them say: "Sister Annie, it don't make any difference how fast we walk, the moon keeps up with us every step of the way; it don't move at all, and yet it is always going along with us." So it is with the dear God in heaven; though he seems far away, he is keeping step with us always in the march of life.

THE FLIGHT INTO EGYPT.

Warned by the angel's whisper in the night,

them find out whether all these streams are running in the same direction. Set them thinking out why they run in one direction rather than

dle states, with their history and geography. It is to give the children a picture, a vivid, interesting, practical notion of the countries, instead

classes are through with the first recitation, which is about ten o'clock, the books are laid aside, and each class passes out in order for

THE FLIGHT INTO EGYPT.

Warned by the angel's whisper in the night,
Joseph with Mary mother undefiled
Now hasten into Egypt's land their flight,
To save from Herod's search the Holy Child.

So peacefully they journey o'er the plain,
Naught knowing of the strife in Bethlehem's street,
Of Rachel weeping o'er her children slain;
No sound of fear startles the slumber sweet

Of the Young Child, or troubles Mary's breast—
Unpierced yet with sword of coming woe—
Beneath the watching stars soft lulled to rest
By Nature's voices mingling in the flow

Of purling brooks, and drone of insect throng,
And stir of leaves, and sigh of summer breeze,
Soft chirp of nesting birds and rapturous song
Of hidden nightingales among the trees.

Sweeter the chorus of the angelic guard
Encamped about the noontide's calm repose,
The Holy Family, in watch and ward,
Keeping from haunting fears and hating foes.

And well-nigh sweet as song of cherubim,
Beneath the palm-tree's shade at set of sun
Is heard the Mother's evening cradle hymn,
Soothing upon her breast her Holy One.

So, kept by angel warders night and day,—
What peaceful day, serenely peaceful night!—
The travelers pursue their quiet way,
Till fair, Nile-watered valleys greet their sight.

There safe they rest, remote from scenes of strife,
When all the peaceful pilgrimage is done,
Till they ere deed who sought the Young Child's life,
And out of Egypt God hath called His Son.

So, even to the soul of man is given
Sometimes to rest apart in quiet space,
To grow and strengthen for the call from Heaven,
"Come forth O son, and fill thy destined place."

And so these children of our heart's desire,
God's infant souls on human breasts laid down,
Are ours to nurture for His summons higher,
To bear the cross, to win and wear the crown.

H. W. L.

The Teachers' Table.

HAMPTON INSTITUTE LECTURES ON TEACHING.

BY PROF. F. A. ALLEN.

LECTURE III.

HOW TO TEACH GEOGRAPHY WITHOUT A BOOK.

In teaching Primary Geography, we have to give the children some ideas of

1st. Direction.
  1st, Cardinal points of compass.
  2d, Semi-cardinal points of compass.
2d. Distance. (By actual measurement.)
3d. A General View of the Country.
4th. Its Trees and Plants.
5th. Hills, Valleys, Capes, Promontories, Sounds, &c.
6th Land and Water Divisions.

It is well to condense your classes as much as you can. Put the a-b-c-darians—the primary scholars—of 1st, 2d and 3d classes, all into one class of Primary Geography. Teach them first the points of the compass. Practice two or three days on nothing but this, starting, of course, with the East, where the sun rises. Make them stand with their right hand pointing to the East; then they will be looking North. They will be then much interested in making out the points of compass around the schoolhouse; in what direction from it their different homes lie, &c.

For learning to appreciate distance, have the children take a line of the proper length; get some tin pegs, and some day take your pupils and start out to measure a mile or a quarter of a mile, so that the children may learn from actual measurement the number of rods in a mile. Thus they will always have an idea of distance. Again; take them to an upper room, or the roof—or up a tree—where they can look off. From this they can judge, with your assistance, of the shape of the land, and the way in which it is laid out into towns and villages, &c. Explain boundary lines to them, so that they may not think, as some children have, that they are lines ploughed into the earth to separate states and counties.

For a general view of the country, take them out some evening and teach them about the nature of things they see about them; of the trees—deciduous or evergreen,—about climate and mountains, &c.

You can make a sort of map by throwing a dipper of water on the floor and tracing lakes, rivers, branches, &c.

Begin at the school-house and work out. Teach them the direction of their homes from it. Set them to noticing the streams in the neighborhood, and which way they run. Let them find out whether all these streams are running in the same direction. Set them thinking out why they run in one direction rather than another, and what that proves about the general shape of the land. Then teach them about water-sheds, and where all the streams are running to: all on their way at last to the oceans.

As you are teaching them the geography of a country, tell them what sort of people, of animals, and plants, and minerals, are found there.

All this is Physical Geography; the natural characteristics of the countries.

Then, as for Political Geography, which treats of the divisions man has made of the earth, begin also at home.

1st. Lay out your School grounds;
2d. Your village.
3d. Your township, or whatever answers to that division in your part of the country;

Thus: your village or township will have for your consideration,—

1st. Boundaries.
2d. Officers.

THE FLIGHT INTO EGYPT.

3d. Elections.
4th. Salaries.
5th. Taxes.

The officers will be, say,

Magistrates;
Constable;
Clerk;
Collector;
Town Commissioner;

Tell them officers are created by election. When they ask you what that is, have an election in your school to show them. If, at the time, there happens to be one in the town or state, all the better. All these things will be fixed in their minds by being made interesting. You should not depend on the book alone, but use illustrations of your own that will please and instruct the children.

History should always go with Geography. They are twin sisters.

Again begin at home; the home of the children. Then go on to the township, county, state, United States, North America. Then South America, Europe, Asia, Africa, Oceanica.

Of course you will not have time to go much into detail. Take, for example, for one lesson, the six New England states; then the four Middle states, with their history and geography. It is to give the children a picture, a vivid, interesting, practical notion of the countries, instead of the bare, half comprehended lesson in the book.

Our next lecture will be on Study: what it is for. Its objects, requisites and means.

AN ESSAY ON SCHOOL DISCIPLINE.

Read Before the Teachers' Institute, held at Charlotte Court House, May 31st and June 1st 1876, by

HENRY C. EDMUNDS, A HAMPTON GRADUATE.

My specified time for opening school, is eight o'clock Winter and Summer, close at four P. M.

Where the illiterates are numerous, I find that it requires from eight o'clock A. M. to four P. M. to give each class its due, allowing two recesses which take an hour and a quarter of the time. My rule to attain regularity is that if any scholar comes and finds the door barred, he, or she goes back for the day. Should they miss two successive days, their names are dropped from the roll. As they are all eager to attend, I have never had a single name to erase on account of being late.

1st Recitation in the morning is Arithmetic, by all who are competent of studying it. This exercise I commence by a review of the previous day's lesson, which is heard alternately by the class. The next day's lesson is then assigned by a brief explanation, each scholar answering when he, or she can. By this means the lesson for the next day, is pretty well mastered.

I go through in the same way with the entire Arithmetic class. It generally takes about thirty or forty minutes for this exercise; when over, I require the classes to retire to their seats without whispering, and there remain, until the proper time for communication.

2nd Recitation is reading and spelling, This I conduct with a review of the last day's lesson, as I before stated, only I give permission to go up in this exercise. When all the classes are through with the first recitation, which is about ten o'clock, the books are laid aside, and each class passes out in order for refreshment of about fifteen minutes. The bell is rung at the expiration of the time, and each class passes in to its proper seat as before. Here is very little confusion, through the whole exercise of the day.

3rd Recitation, is reading, orthography and dictation exercise. I teach Orthography by calling off the words, giving the head scholar the first and so on. Here each pupil has a chance to correct any error that may occur above, and take the one down who made it. As they are all eager for the head, there are few errors made. As soon as the spelling is called off, I give out verses from the New Testament to be written by all. The slates are passed as soon as this is over, and corrected, passed back to the scholars, each one calling off the mistakes, and advancing accordingly. This exercise is then ended for the day. Afternoon exercises begin with writing, but I have observed that this is not the proper time to begin the writing lesson, as the nerves are affected by play. I require all who are able to write to take part in this exercise. Those who are not writing in the copy-books, rule their slates for set copies by me. These are given according to abilities of scholars. After writing: the Alphabet class is called to recite by pronunciation of certain words, such as ah, ha, be, hi, ho, &c. I teach them their letters, spelling and reading at the same time. In this way, they learn their letters, and read in about eight or ten weeks. They are then put in 1st Reader, which they read right off at sight without the sing-song, which so frequently is the trouble with beginners. Last hour, is for Geography and Grammar. The former being Murry's and the Grammar, Bullion's. I teach first steps in Geography by reading the lesson for each day, questioning the class and explaining as they read. By this they learn the definitions &c., and very soon learn the use of the maps, I require them to study first steps in Geography when they enter the third Reader. My rule for teaching Grammar is, that the class learn first the definitions thoroughly, and give examples to each one, in

this process they are better able to get an idea of Grammar. The classes find their Grammar lessons, to be most complicated. This being the last lesson of the day, I give carriage, I rode out to *Mollili's* where were gathered together about seventy persons, a large proportion children and young people. The leaf which was turning yellow on the islature having recently discussed the liquor question, I took that for my subject, selected appropriate Scripture, had it read, talked about it and asked and answered questions and Love, Good Will to Men, unfurled, for the first missionary ship rounded old "Diamond Head." There is knowledge in that old head, but who shall fathom it? I am often reminded

this process they are better able to get an idea of Grammar. The classes find their Grammar lessons, to be most complicated. This being the last lesson of the day, I give more time to it.

Friday the last day of the school week; No new lesson is assigned to that day, a general review from Monday's lesson is required of each class. I close then by a spelling match and amusement in singing. My present school has fifty one pupils on the roll, and only four are in their alphabet.

CORRESPONDENCE FROM THE HAWAIIAN ISLANDS.

Extracts from a private letter-journal.

ROYAL BATHS. AN ANCIENT TEMPLE.

Yesterday I took your old college friend, Mr. H., to see the old dilapidated place of refuge beyond Punchou. A part of the walls remain, though broken. A portion of it had been carted off for ship ballast in the days of Kaahumanu. Under a sheltering rock is a spring of excellent water, *kabu* in the days of yore to all but chiefs. The old warrior Kamehameha I. has quaffed his thirst here, besides many others of rank, before end after his day. The roof of the rock is decorated with maiden hair, which grows and adheres to the rock on the inside. A short distance off is a larger basin of water, from the same spring, covered by shelving rock grown over with diminutive maiden-hair on the inner side. This is where royalty used to bathe. Gold fish have been put into this bath-tub, beautiful in their frisking brightness. It is several feet in depth and extends back out of sight under the rock. Then the water passes under ground and empties into marshy ground covered with tall rushes which used to be made into mats.

Within the enclosure, which is not more than two acres in extent, perhaps less, stones are scattered in profusion. I have asked several natives about the spot, but they seem ignorant of what it was, only that it was sacred to chiefs: perhaps it was a place where human sacrifices were offered—more likely a place of refuge from the avenger of blood, as in the Mosaic dispensation. It has no written history. Such places are found on the other islands. Tradition says that on each island there used to be a city of refuge where fugitives were safe.

THE LEGISLATURE. HAWAIIAN POLITICS.

The Legislature is in full blast. There is a strong feeling of prejudice existing among natives toward whites; they do not seem to discriminate between friends and foes. Sometimes I can hardly regret that this nation is diminishing. "A little learning is a dangerous thing" is fully verified in the natives. It makes them so self-conceited, so lifted up when they get a little knowledge! Several of the native ministry have proved unworthy. They seem to long to go to the Legislature. Natives elected to that position are inflated with vanity and often fail in decent common sense. All are well dressed, many in broadcloth, but are minus a shamefacedness. They will keep the House hours in discussing the horse and dog tax, about a supply for themselves of letter stamps, luncheon, ice, &c., to the exclusion of important business. Political life is more desirable to them than anything else at present—like many white people, perhaps.

HOME NEWS.

Grandmother Judd was buried May 15th, aged ninety-four. Mrs. Thurston, the last of the first missionaries who came to these shores in 1819, is nearing the "Shining Shore." Others of us who came in after years will ere long follow. My remaining time is short. Surely, life seems in retrospect "like a swift cloud, like the early dew."

Lizzie Bingham (daughter of the pioneer missionary) continues her boarding school for native girls in the old mission house where we used to live. You will, I think, remember how the roof of the house was lifted up by pulleys and suspended in the air till a second story was added by piling up adobies; how the kind Captain of the British Sloop of War, *Juno*, sent his sailors ashore and manned the ropes, and, at the signal given by the fife and drum, they all heaved away together, and the roof went up. The old mission building and printing-office are both occupied by scholars, except the lower part which is the the residence of Hiram Bingham and his wife.

May 22d. Mr. H. sits just now on the newly painted front verandah, curtained from the sun and bright light by the ever-green vines, reading "Sevenoaks" by Dr. Holland. Yesterday he preached at the Bethel and in the evening a temperance sermon at Fort Street Church. The liquor traffic has recently been discussed in the Legislature, and, after all the voluminous speeches, is left just where they started with it. So the curse will roll on its consuming flood and destroy lives and happiness.

REJECT TEACHING.

Yesterday afternoon, with a large fading *ape* leaf and a young, small and bright one in the carriage, I rode out to *Moiliili* where were gathered together about seventy persons, a large proportion children and young people. The leaf which was turning yellow on the edges, and its spots, was my subject, with the young leaf to start upon. A man read "We all do fade as a leaf," besides other Scripture which I named. Object teaching can be made impressive to natives when it can be brought in. You will perhaps remember the upland *kolo* or *apt*, as having a leaf stem of some five or six feet and a width of about thirty inches, —the leaf is heart formed.

May 23d. Last eve I went with Mr. H. to hear a free lecture on Poland by a Polish Count who is here with his daughter. It was very interesting. Poor oppressed Poland! Overbearing Russia! The lecture was in the Lyceum, a nice place, fitted up and owned by Mr. Waterhouse; it once was the Methodist Church. While there, a storm blew to report the steamer from Australia as near, so I close my letter before breakfast.

June 5th. The drives grow increasingly pleasant, with constant improvements on the plains and the increase in size and number of the algeroba trees. King and Beritanie streets have recently been widened and improved, and cross roads cut from one to the other on the plains, so that with cultivation, houses and gardens, there will soon be more delightful drives.

We rode yesterday to the old crossing over what was once a marshy peth, now a nice road. A rocky foundation covers several acres in that vicinity, with frequent algerobe trees lifting their crested heads of bright green where there is soil enough for the roots to cling and spread. They might be called very temperate trees, requiring little drink or nourishment. On the left of this herd path are numerous tall, dark-green rushes which ever have a cooling look. Formerly they were much used in making mats for floors, being spread on the ground in thatched houses. They were nourished by the quiet waters of the spring and bathing places of the old temple of refuge. Somewhere the water from these fountains oozes out and keeps the marshy grounds moist. Near by is a small pond whose waters are only rippled by the trade winds. Ducks swim and bathe there as tho' in Elysian waters. A few geese may sometimes be seen, with elongated necks, squawking and waddling on in haste to bathe. I always stop to listen to these rare, strange sounds, pleased to be reminded of early days on Hempden County hills. The scene comes vividly before me of permission given by my now sainted mother to go and see a neighbor "pick geese." They were driven into a small enclosure; then one was caught amid the general squalling, and an old stocking drawn over the head to prevent the use of the bill in self-defence, while the pure white or gray robe was taken off in pitiless jerks, and the poor, frightened bird was made as destitute of covering as many cannibals I have since seen in the South Sea islands. The shrill sound of the goose's voice awakens many pleasant recollections of early childhood and thus is more charming to my ear then a musical concert. Then, to see their seeming delight as they plunge into the pond whose waters are like a sea of glass.

A HAWAIIAN MEETING HOUSE.

Now on toward the church, is the hill, not steep or long, but rough with many stones. We drive slowly as the carriage jerks and shakes; near by are several graves—over one or two are dilapidated frames; we jolt along to the east side of the house, so that Bessie would think she was tied as she stood quietly with her head to the coral wall of the house. The two doors are on the south side. We entered; the door sill being two and a half feet from the ground, but a projecting stone from the foundation made a step. First sat a class of men and women studying the Bible. We passed over a tide-worn floor and time-worn dingy benches to where some thirty rather untidy boys and girls were answering questions by their S. S. teacher. I have long since ceased to be moved by their incongruous wardrobes. A new comer might be amused. There was a girl with a gay calico dress hanging loosely, with hare feet, and a gay cotton handkerchief tied around her shoulders by two corners, and, over a bushy head of hair, a jaunty white hat trimmed with white satin ribbon and white feather. Pretty hats are numerous here, imported from Europe and the States. Now and then one is dressed in very good taste. Taste in dress is much more chaste than formerly. You can imagine the scene, with bright, laughing faces. I visited the different classes. The church seems so dingy, so empty, so barn-like. One window was out for repairs, the next was half gone; all were more or less broken. On the north side the trade wind rushed through, so for shelter I sat on an old rough bench in front of the *Koa* pulpit. The walls were lavishly decorated with wasp nests, while "yellow jackets" flew about over our heads. The teacher tapped a small bell, signal for closing. A boy of some fourteen years took some music books from the table, and passed them around. A tap of the bell and all stood up: another tap and all sang quite nicely. Through with that, and the way was clear for me. The Legislature having recently discussed the liquor question, I took that for my subject, selected appropriate Scripture, had it read, talked about it and asked and answered questions. Then followed remarks from men and women, for I always wish to make such meetings a kind of family gathering, which natives like. There was praying and very good singing. A native called for monthly collections, which amounted to some six dollars. Then a general hand-shaking, and we turned our faces toward home.

STONY GROUND.

The hill around the church is so rocky and so covered with small stones that it often reminds one of the Scripture, which speaks of the stony ground hearers. Weeds and grass flourish there only when rain is abundant, but when dry summer comes they wither and die. So the poor natives will listen to truth for a while and seek earnestly the presence of the Holy Spirit; but some temptation comes, and, like the weeds, they wither away. O what a weight of responsibility rests upon foreigners for the evil, wicked examples, acts and influence they have brought to bear upon these half tutored people!

I have often been reminded of the genuine Christian by the flourishing algerobe tree, which lives and grows, green and bright, in stony, dry soil, bearing fruit for the horse to feed on, fuel for our kitchens, and affording a shade from the hot rays of the sun, besides being a charming resting place for the eye.

THE VIEW.

From the same hill every prospect in nature is pleasing. The rough, beautifully varied shades and forms of numerous hills could scarcely be transferred to canvas or paper, without losing their grandeur or beauty.

Away off in the distance rise the blue hills of *Ewa*, often crested with fleecy clouds, moved on by the trade winds as though hastening to some resting place. Again, they are stretched out on the sides of the mountains beyond or disappear, or descend in showers.

The view is ever attractive, ever changing. Between this hill on to lower *Waikiki* the grounds are covered with a rose of green which never fades, nurtured by the stream which runs east of the church down into the valley and onward to the ocean. Flourishing *kalo* patches, some sugar cane, bananas, mango, *kauhala* and algeroba trees, with other trees and shrubbery, make it a spread of green, beautiful to look at.

THE PACIFIC. WAIKIKI.

The blue ocean seems fringed with *hao* trees which hide the sanded shore. Beyond is the ever restless Pacific, dashing and foaming in a wreath of white spray over the breakers. Out of all this spring the feathery plumes of the cocoanut trees, lifted on their tall trunks above their surroundings, and seemingly rising out of the water. This place (Waikiki) is the great bath-tub of Honolulu. Comfortable cottages are built for families in the summer months. Small shanties are put up near the beach where the bathing dress is donned, and where ladies and children wade out to splash or play or swim, as they are inclined. Royalty has cottages there, and one pretty one built by the late king stands unoccupied—sacred to his memory.

Punahou is nestled down in the green foliage of the algeroba. A bridge spans the stream of water on the way to the beautiful valley of *Palolo*, but the road is suitable only for horseback riding. I do not ride now, although it has been my delight from childhood. My last horseback ride was through the dead, hollow trunk of a prostrate Californian big tree, a distance of some eighty feet, and I sat erect on the saddle. You will remember on this rough *Palolo* road the clusters of cactus here and there; an ugly, ill-shapen, poverty looking plant, yet when one of its clumsy leaves has decayed the fibres left show the skill of its great Author.

OLD DIAMOND HEAD.

Now let us look over to "Diamond Head" (an extinct volcano) which is in full view from Stony Hill. There it stands, firm and unchanged, one of the "everlasting hills." With feet immovably fixed and ever laving in the waters of the ocean, which dash and foam, recede and return in fury against its firm foundations. Beneath its rocky cranium what volumes of history are stored away in language unknown to mortal man. From its first being till now, never young, never old; its brown locks never change, and its bald crown never blooms. Its corrugated, jagged sides never yield to changing fashions, brown is the invariable color of its robe. From beneath its rocky brows what has not its eye beheld! All the convulsions and upturnings of nature when these circling hills came to light, when the island of *Oahu* was formed, and liquid fires long since extinct bubbled and bubbled in its own bosom.

When the first human beings stepped on these shores, ages ago, their customs, habits, their wars and peace, all were seen by this unfailing eye. It beheld the banner of Peace and Love, Good Will to Men, unfurled, for the first missionary ship rounded old "Diemond Head." There is knowledge in that old head, but who shall fathom it! I am often reminded of what the natives exclaimed when I showed them a piece of rock from Mars Hill which Ellen brought from her trip to Greece. We read St. Paul's eloquent, soul stirring words, showed them the bit of rock, perhaps on which he stood; they gathered around to take it and feel it, and then exclaimed "*Awae!*" If it could only speak and tell what it knows. So of old Diemond Head.

(To be continued.)

WE PUBLISH part of a private letter from Judge Abraham Fornander of the Circuit Court of the Sandwich Islands, who for many years was editor of the Government newspaper, and more recently Inspector General of Schools. We think his statements are of general interest.

LAHAINA, MAUI, *August* 31, 1876.

For your kind interest in my projected work on the "Origin and Migrations of the Polynesian Race, &c.," I am glad and grateful. About the year 1860, I commenced to collect whatever remnants of Ancient Folk-lore still lingered on the lips of the old natives. I employed several intelligent Hawaiians at considerable expense for that purpose. I got access to David Malo's and Judge Andrews' Collections and whatever had been previously published on the subject. The result was that I found myself in possession of probably the largest extant collection of Meles, Kanos, Mookanuhaus, Pules and Wenenas of olden time from Hawaii-nei. To this I added all I could lay my hands on of what had been published or written touching the same subjects at the Southern groups of Polynesia, the Marqu, Society, Hervey, Tonga, Samoa and Fiji. In perusing, assorting and comparing this mass of materials, I found that the Polynesian family had a very distinct national record of their own, touching their origin and their migrations. The traditions of one group would supplement those of another. What was obscured by fable or forgotten through lapse of time in one, would stand out clearly and intelligently in another. Thus the desire awoke in me to afford the Polynesians an opportunity to be heard in their own behalf. How I will succeed, remains to be seen. The work has necessarily been long as well as laborious, my time having been so much cut up by official duties and constant travelling, besides having frequently to wait while sending to the United States or Europe for books of reference that could not be obtained here.

That the Polynesian family came immediately from the Indian Archipelago—from the Sunda Islands to Timor and the Moluccas—into the Pacific, their legends and traditions bear ample testimony, and there their kindred still survives in the scattered tribes of Bettas, Dyhas, Buguis and others, from Sumetra to Gilolo; that, so far from being an offshoot of the Malay family, as has been advanced by so many prominent writers, they are an older race by centuries if not milenniums and were in possession of the Indian Archipelago when the Malays and Hindoos first invaded it,—I think can be now established; and there are traces of their having at one time occupied the western coast of Deccan and the northern shore of the Persian Gulf. Many of their myths, legends and remnants of ancient culte indicate a long and protracted intercourse with the Cushite-Dhaldean and Cushite-Arahian peoples of Southwestern Asia, from whom those myths, &c., were undoubtedly derived. Their ferm from uniform complexion, varying from lightest olive to darkest brown; the diversity in the contour of countenance—from the broad-browed, eagle-nosed Roman, and high-browed, hook-nosed Arab, to the low-browed, flat-nosed Celt; the unmistakable connection of the language with the Arian of a pre-Vedic period,—all indicate a mixture of race and—*ex necessitate rei*—a mixture of Arian, Cushite and Dravidian, such as may be witnessed any day in the Punjaub, Bengal and Deccan. Wm. V. Humboldt and Franc. Bopp were the first to discover and acknowledge the relation (verwandtschaft) of what they called the Maleyo-Polynesian tongue to the Sado-European, and my own investigations tend but to confirm their main propositions. Humboldt and Bopp erred, however, in assuming the Polynesian to be a corrupted dialect of the Malay, and both to be corrupted forms of the Sanskrit. My examination of the subject has led me to the conclusion that kindred words in Malay are of Sanskrit or Sanskritoid origin, whereas the same words in Polynesian are of pre-Vedic origin, before the Arian language had fully developed those inflexions, cases, genders and tenses, which characterized it in all its branches when first it entered in the light of history. In short, with old Dr. Rae of Hana, whom perhaps you remember, I hold that the Polynesian is the Avas or Atavus of the Sanskrit, though the language, as well as the people, has suffered greatly from its fusion with the Dravidian.

My work is slowly progressing to comple-

tion. If I could afford six months' constant attention, I would probably finish it by that time.

The following letter from an ex-confederate soldier is, we believe, an index of the sentiment that prevails widely in the South and justifies the belief that, as a class, the men who fought for their convictions have honestly accepted the decisions of war and are to be trusted in the reconstruction of the South far more than those who talked up Secession and violence and, with some exceptions, still live to foment ill feeling.

MEXIA, TEXAS, Sept. 26th 1876.

DEAR SIR:

At the request of a number of colored citizens of this place I write you making enquiries concerning a School-teacher for them. A statement of the location, surroundings, requirements &c. will better enable you to understand their wants and know their ability &c. Enclosed I send you statement of the town and county, taken from our town paper. There are twenty or thirty families of colored people living in this place. Their livelihood is principally porters, draymen, laundrymen and servants. There is a patronage of 25 pupils that will pay $1 per month in cash at the close of each month, besides others, say 25 more who can pay in produce from farm &c. The School will pay about $50 per month if the right kind of a teacher has hold of it. The State Public School fund will pay almost the entire tuition for ten months of all pupils between the ages of 8 and 14 years, which money is paid promptly at the end of each month. The colored people here have a very good house of their own which they have erected during the past year, which they use as a Church and school-room. They want a good steady, pious *Colored* man to come in their midst and teach the school, labor in the Sunday School and assist in dispelling the ignorance, vice and superstition that now envelop them. The predominant religion among them is Baptist.

I feel an interest in the colored race of the South, especially of Texas, though much has been written in the public Journals to excite prejudice and animosity. I am a native "to the manor born"—was raised in the midst of a large slave population. My father's family owned more than 1000 slaves before the war. I myself was a soldier during the whole war in the Confederate Army of TEXAS, and I feel I can say truthfully that no one wishes the prosperity of the colored race more than myself. Politically I am what is termed a Southern Bourbon or Democrat, though I have little to do with politics, and I advise all the colored people to act as I do.

I can assure you that there is not a more law-abiding, civil, quiet community in the South than this. Here, life, liberty and property are *perfectly safe* to all good citizens. I have written you thus lengthily so that you might know the *whole* surroundings.

Should you favor me with the information please address me as below.—

TO HAMPTON GRADUATE TEACHERS.

PHILADELPHIA, *October*, 1876.

My thoughts often turn to you, graduates of the Hempton Institute, who have entered, or who are about to enter, upon the work for which you have been preparing for several years,—your life-work, I trust, it will be; and I picture you to myself in your school-houses, surrounded by adults and children. I see you full of hope and ardor, resolved to benefit your people, and I pray that your efforts may be successful in this good and noble undertaking. I know how to sympathize with you in your various difficulties; I have myself experienced many that you will have to endure, although not the bodily hardship that may fall to your lot. There may be some trials that you have not anticipated; for instance, one will be the want of appreciation on the part of those for whom you are laboring; not only will the children fail to have an adequate conception of the effort you are making, but their parents, who ought to be more sensible, will expect you to accomplish impossibilities, will look for great results in a short time, will accuse you of partiality, and want of method and ability; probably, those whose children give you the most trouble, will find the greatest fault with you.

After diligent labor all day, struggling against the enemy within and without,—rudeness, disobedience and dulness on the part of your pupils, temptation to anger and impatience in yourselves,—you will go home in the evening, weary and dispirited, almost ready to abandon your post. Then, think of Him who came unto His own, and His own received Him not; His own, the people of Israel, the highly favored nation; how little the Lord Jesus Christ was appreciated while He walked among men, healing the sick, opening the eyes of the blind, casting out evil spirits, and bringing the dead to life; think how He was bruised and put to shame for our sake; what indignities He endured, and finally what a painful death He suffered that we might live forever. Should the disciple expect to fare better than his Master, the servant than his Lord?

Such reflections will nerve you to fresh effort, and, relying upon a strength above your own, you will, I trust, be ready for renewed conflict. Pray for meekness, patience and forbearance; you will gain a victory over yourselves, and disarm your adversaries; they may even become your friends. Be especially careful in your intercourse with the parents of your pupils and your acquaintance generally, not to *demand* the respect and consideration to which you feel entitled on account of your superior knowledge; be courteous to all, and particularly respectful to the aged; bear always in mind that if the ignorant and superstitious whom you meet had enjoyed your privileges, they would probably have equalled, perhaps have surpassed, you in your attainments; let humility, therefore, crown your other virtues.

"Now the God of peace, that brought again from the dead our Lord Jesus, that great Shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work to do his will, working in you that which is well pleasing in His sight, through Jesus Christ, to whom be glory forever and ever."

Your sincere friend, M. A. L.

LETTERS FROM GRADUATES.

AMONG the former "Hampton Singers" who are doing a good work for their people; is a young woman of Norfolk, now teaching in the suburbs of that city. She writes thus of her work:—

"My school has opened and I anticipate a happy time. It is a good walk, but I don't mind it. I cleaned it up myself and helped put in the benches. The windows were broken very much; the weeds had grown up fearfully, but I got a hoe and soon found entrance to the door. This begun my school life as teacher.

The little ones were pleased, and I think they thought me rather used to work with my sleeves rolled up.

Yours, very truly, L."

The need of teachers for the colored race is greater than ever. A call has come from Texas, through an ex-confederate soldier, for a teacher from Hampton, for a prosperous colored settlement at Mexia. Four teachers were applied for, a few days since, by a Virginia school officer and could not be sent because the entire available force of graduates and ex-students, nearly two hundred in number, were already engaged in teaching. Some are discouraged at the decrease of wages in certain counties, thirty dollars per month being paid where the salary last year was thirty-five dollars per month. There are now on file calls for nine teachers who cannot be supplied.

WINDSOR STATION, VA. Aug. 15th 1876.

Dear Workman:

Since I have been home I visited Miss T. J. Brown's exhibition and I must say that it was the finest that I have ever seen. I reached the place where Miss Brown had been teaching. She has been there about five months, and the people say that she has done more good and has taught the children more than any teacher they have ever had. They said that she has not only taught them their books, but she has taught them how to conduct themselves in the presence of others and what it is to be honest and truthful. I think that Miss Brown has well represented the Hampton Normal School. She has carried out what she was taught while she was at the school. I could tell when the children would come upon the platform, it seemed as if I could see the presence of Miss Brown in them. They had the very appearances of Miss Brown.

The people of Southampton County are satisfied that Hampton is the place to send their children to make men and women of them. They are very anxious to have their children to learn and more so to have Miss Brown to come back and teach them as she has promised to do. I do hope that all the Hempton teachers will do as well where ever they go as Miss Brown has done in Southempton County. She has brought a name on the school that will not be blotted out. She was thought well of by both white and colored. Every one of us can leave such a name behind us, and I would entreat the teachers of Hampton to try and do as she has, and that is the best we can.

DON'T RUN AWAY.

I know a little boy, named Henry, who is often sent on errands by his parents. Just before leaving the house his mother will say:

"Henry, come right home: don't go off anywhere." But it is often the case that he does not return as soon as he might; he runs away from home, instead of returning to it.

Now, this little boy not only runs off, but he also disobeys his mother, and thus runs away from Jesus: because the Bible says, "Children, obey your parents in the Lord, for it is right."

When Henry comes home he is tempted to tell a falsehood to cover up his wrong-doing, thus adding sin to sin and going further from Jesus.

There are a great many ways by which little boys, and little girls too, can run away from Jesus. For example: by taking that which does not belong to them; by deceiving, or by doing anything that would displease God. I am afraid Henry is not the only one who has formed this habit; and so I write to all the children, Don't run away from Jesus!

Now, why not run away from Jesus? First, because he loves us. When an earthly friend loves us we try to do all in our power to please that friend; but how much more does Jesus love us than any other friend ever could! and he has shown this love by dying to save us. And second, because we should love him, accept him as our Saviour, and so be happy in this world, and live with him in heaven.

WHAT MARY GAVE.

When the contribution is taken up in churches, boys and girls throw in money which their parents have given them for that purpose. The money is not their gift, but that of their father and mother. They have just as much to spend for their pleasure as they had before. And so I once heard a kind-hearted girl complain that she had nothing of her own that she could give. I will tell you what she gave in one day, and you will see that she was mistaken. She gave an hour of patient care to her little baby sister, who was cutting teeth. She gave a string and a crooked pin, and a great deal of advice to her little three-year-old brother, who wanted to play at fishing. She gave Ellen, the help, the precious hour to go and visit her sick baby at home, for Ellen was a widow, and left her child with its grand-mother, while she worked to get bread for both. She could not have seen them very often if our generous Mary had not offered to attend the door and look after the kitchen fire while she was away.

But this was not all that Mary gave. She dressed herself neatly, and looked so bright, and kind, and obliging, that she gave her mother a thrill of pleasure whenever she caught sight of her young, pleasant face. She wrote a letter to her father, who was absent on business, in which she gave him all the news he wanted, in such a frank, artless way that he thanked his daughter in his heart. She gave patient attention to a long, tiresome story from her grand-mother, though she had heard it many times before. She laughed just at the right time, and when it ended, made the old lady happy by a good-night kiss. Thus she had given valuable presents to six people in one day, and yet she had not a cent in the world. She was as good as gold, and she gave something of herself to all who were so happy as to meet her.

DYSPEPSIA.

Americans are particularly subject to this disease and its effects: such as Sour Stomach, Sick Headache, Habitual Costiveness, Heartburn, Water-brash, coming up of the food, coated tongue, disagreeable taste in the mouth, palpitation of the heart and all diseases of the Stomach and Liver. Two doses of GREEN'S AUGUST FLOWER will relieve you at once, and there positively is not a case in the United States it will not cure if you doubt this go to your Druggist and get a Sample Bottle for 10 cents and try it. Regular size 75 cents. 6-1y

AUGUST FLOWER.

The most miserable beings in the world are those suffering from Dyspepsia and Liver Complaint.

More than seventy-five per cent. of the people in the United States are afflicted with these two diseases and their effects, such as Sour Stomach, Sick Headache, Habitual Costiveness, Palpitation of the Heart, Heart-burn, Waterbrash, gnawing and burning pains at the pit of the Stomach, Yellow Skin, Coated Tongue and disagreeable taste in the mouth, coming up of food after eating, low spirits, &c. Go to the Drug Store and get a 75 cent bottle, or a Sample Bottle for 10 cents. Try it. Two doses will relieve you. For Sale in Hampton by Messrs. Selden & Co., and Druggists generally.

HAMPTON BAR OYSTERS.

Parties wanting fine native Oysters, either open or in the shell, can be supplied at very reasonable prices, by applying to George Dixon, Hampton, Va.

Illustrated Christian Weekly

A 12 page Journal well adapted to the wants of the people, being an attractive and highly interesting pictorial and religious and high-toned literary Weekly.

It is the only *illustrated* religious Weekly in the land. The voluntary testimonials of the press and public, and its great success, abundantly attest its merits. Send for sample. Now is the time to subscribe! New subscribers will receive the paper from date of receipt of money to end of Dec., 1877.

PROTECT YOUR BUILDINGS

Which may be done with one-fourth the usual expense, by using our

PATENT SLATE PAINT,

MIXED READY FOR USE.

Fire-proof, Water-proof, Durable, Economical and Ornamental.

A roof may be covered with a very cheap shingle, and by application of this slate be made to last from 20 to 25 years. Old roofs can be patched and coated, looking much better, and lasting longer than new shingles without the slate, for

One-Third the Cost of Reshingling.

The expense of slating new shingles is only about the cost of simply laying them. The paint is FIRE-PROOF against sparks or flying embers, as may be easily tested by any one.

IT STOPS EVERY LEAK,

and for tin or iron has no equal, as it expands by heat, contracts by cold, and never cracks nor scales. Roofs covered with Tar Sheathing Felt can be made water-tight at a small expense, and preserved for many years.

This Slate Paint is

EXTREMELY CHEAP.

Two gallons will cover a hundred square feet of shingle roof, while on tin, iron, felt, matched boards or any smooth surface, from two quarts to one gallon are required to 100 square feet of surface, and although the Paint has a heavy body it is easily applied with a brush.

No Tar is used in this Composition,

therefore it neither cracks in Winter, nor runs in Summer.

On decayed shingles it fills up the holes and pores, and gives a new substantial roof that will last for years. CURLED or WARPED shingles it brings to their places, and keeps them there. It fills up all holes in Felt roofs, stops the leaks—and although a slow dryer, rain does not affect it a few hours after applying. As nearly all paints that are black contain TAR, be sure you obtain our OXONITE article, which (for shingle roofs) is

CHOCOLATE COLOR,

when first applied, changing in about a month to a uniform slate color, and is to all intents and purposes SLATE. Or

TIN ROOFS

our red color is usually preferred, as one coat is equal to five of any ordinary paint. For

BRICK WALLS

our SAMOT RED is the only reliable Slate Paint ever introduced that will effectually prevent dampness from penetrating and discoloring the plaster.

These paints are also largely used on out-houses and fences, or as a priming coat on fine buildings.

Our only colors are CHOCOLATE, RED, BRIGHT RED, and ORANGE.

NEW YORK CASH PRICE LIST.

5 Gallons, can and box.....$5 50
10 " keg.....9 50
20 " half barrel.....18 00
40 " one barrel.....30 00

We have in stock, of our own manufacture, roofing materials, etc., at the following low prices:

100 rolls extra Rubber Roofing at 2 cents per square foot. (Or we will furnish Rubber Roofing, Nails, Caps, and Slate Paint for an entire new roof, at 4½ cents per square foot).

2000 rolls 2-ply Tarred Roofing Felt, at 1¾ cents per square foot.

3000 rolls 2-ply Tarred Roofing Felt, at 2½ cents per square foot.

300 rolls Tarred Sheathing, at ½ cent per square foot.

5000 gallons fine Enamel Paint, mixed ready for use, on inside or outside work, at $2 per gallon.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNE'S BRIEF U. S. HISTORY.
BARNE'S SCHOOL SINGER.

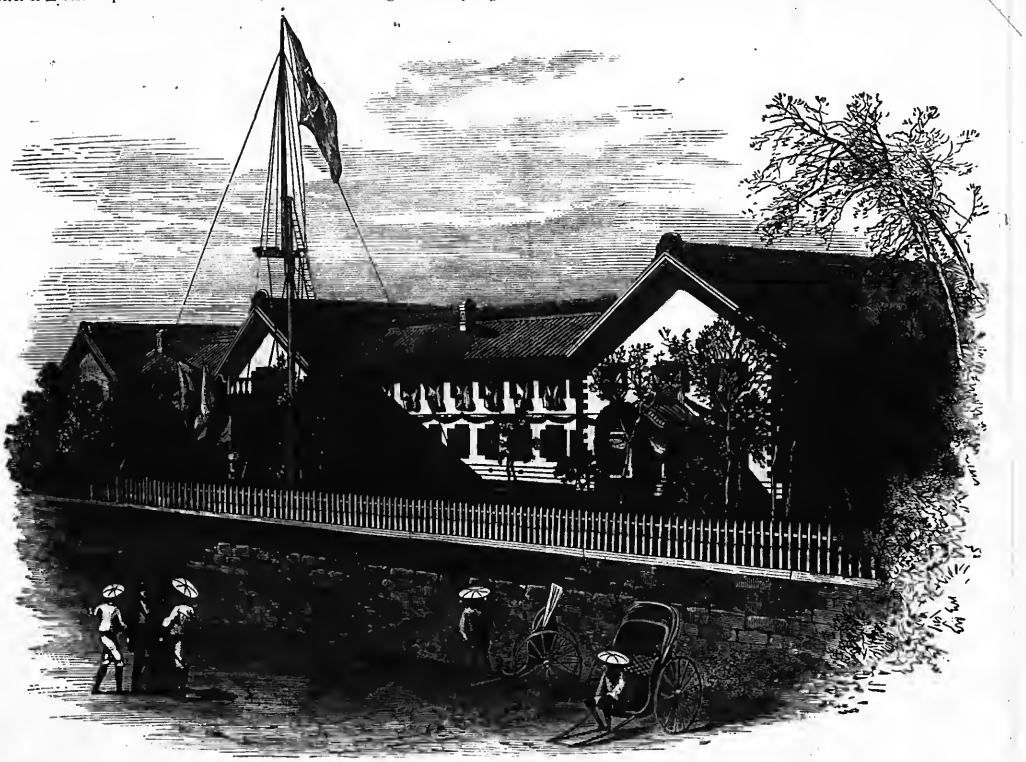
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. V. HAMPTON, VA., DECEMBER, 1876. NO. 12.

THE IMPERIAL COLLEGE OF JAPAN AT TOKIO.

Our readers who were interested in the account of the visit of the Japanese Centennial Commissioners of Education to Hampton Normal School last month, will be pleased to see the picture we give below of the principal educational institution in Japan, the National University of Tokio, Kaisei Gukko, as it is called there; or the School for the Advancement of Civilization.

Our picture, for which we are indebted to the New York *Christian Weekly*, represents it dressed with flags for the festal day of the opening of the present building in 1873, by the Emperor or *Mikado* in person. The odd



THE IMPERIAL COLLEGE OF JAPAN.

little vehicles in front of it that look like baby-carriages are the *Kin-riki-shas* or man-power-carriages, used in several Japanese cities instead of cabs. Two of the coolies, or laborers, in their big hats are trying to get a fare for their passenger, while another sits resting in his chair. It is said that these conveyances were really imitated from the baby-carriages of some of the American residents of Japan.

The University building is of wood like most of the Japanese houses, stuccoed with plaster and roofed with tiles. It is 334 feet long, with three wings 193 feet long and 133 feet high, and contains seventy-nine rooms. The kitchen, bath-houses, (all Japanese bathe daily), dining hall and outbuildings are separate. On the lower floor are recitation and lecture rooms, on the upper floor dormitories. The building cost $11,000. Over three hundred students attend the institution. They wear a uniform, and on the front of their caps is a character meaning "civilization."

Besides a general collegiate course, the University has special departments of law, chemical technology, engineering, polytechnic science and mining. English is the principal foreign language taught. As is remarked in the Outline History of Japanese Education, prepared for the Centennial Exhibition by their Department of Education, "Japanese is deficient in terms to express the ideas of foreign science and learning, and as in the middle ages Latin was the learned language in Europe, so English must be in Japan for some time to come." The Latin and French languages are also taught, and when we consider that in spite of its deficiencies in the terms of modern science, the Japanese language has so many thousands of characters that many years of a schoolboy's life are mainly spent in learning his alphabet, each character of which means not only a letter but a word, and changes its meaning according to its position in a sentence, we must acknowledge that the young collegians have enough of language lessons to employ them. "At the lowest estimate," says the Outline History, "a schoolboy is required to learn one thousand characters, and in the elementary schools about three thousand are taught. A man of any scholarship, however, knows eight or ten thousand, and those who would pass for men of great learning are expected to be acquainted with many tens of thousands.

"As at this rate the cost of copy books would be too great, the school children have to use theirs over and over again, smearing out the letters at the close of the day. As you pass along the streets of a Japanese town, you may see the copy books hung out to dry, and the schoolboy himself you will always know in his home-ward march, by his smooched face and fingers which have received more than their share of the writer's ink."

Students are admitted to the University of Tokio from all parts of the empire, on passing the required examination, and from all classes of society. The course extends through six years, and degrees are bestowed at its close. A museum, library and botanical garden are connected with the University.

Across the street from it stands the Foreign Language School, where German, French, Russian and Chinese are taught, with the geography, history and political economy of the respective countries.

In February, 1872, a female school was opened in Tokio under the charge of the Department of Education. Up to this time the education of women and boys received the same government support as that of men, and therefore this first step in providing better facilities was an important step in the history of education. The school provides instruction in Japanese and English.

In 1874, the Tokio Female Normal School was established for the training of teachers. It has one hundred and fifty students. It was founded by the Empress who gives $5,000 yearly from her own private purse to promote the education of her own sex in the empire. This building was dedicated by the Empress in person.

There is also a male Normal School in Tokio. It has been in operation four years and has sent out between two hundred and three hundred graduates. These schools are modeled after normal schools in foreign countries.

At present there are not less than fifty other normal schools in various parts of the empire, at least 30,000 elementary schools, and at least 2,000,000 pupils under instruction. There are also Military, Naval, Engineering and Musical colleges in successful operation.

It may be news to many of our readers that such progressive ideas exist in a country so long excluding itself from all intercourse with foreign civilization. But, though jealous of outside interference, we find that Japan has from the earliest times respected education. More than nine hundred years ago a Japanese statesman wrote, "The successful government of a country depends upon wisdom and wisdom upon education," asking, therefore, that the educational land-tax be restored. In 662 A. D., political honor was bestowed on scholars, and in 690 the Empress Jito rewarded professors with a revenue. The first national university was founded in 668, in order to educate men for public employments. This education was not, however, universal and open to all classes, and it gradually declined with the decline of the Emperor's power which was usurped for two hundred years by the Military Commanders, the last of whom gave themselves the title of Tycoon, and reduced the Emperor to merely a nominal power, the shadow of a sovereign. In 1868 a revolution took place which restored the Mikado to his rightful throne. Among his first acts was the establishment of a Department of Education and founding of free schools throughout the empire. In 1871 he sent to America and Europe an embassy, one of whose objects was to investigate the educational institutions of these countries. Tanaka Fugimaro, Hampton's guest last month, accompanied this embassy as a special commissioner on this subject. Students carefully selected from the schools, and from noble families, were also sent, and are still sent to foreign countries to be educated. In 1875 nine were sent to America from the University of Tokio, one to France and one to Germany. The General Govt.'s annual appropriation to the Department of Education is $1,700,000. This is raised by taxation.

The Japanese Educational exhibit at the Centennial was one of the most interesting in this department, embracing school work and school reports, and apparatus manufactured at the Department of Arts and Manufactures in the University of Tokio, with books, maps, and newspapers, of which more than a hundred are now published in the empire, though it is but nine years since the first newspaper was issued.

The new Japanese Code of Education proclaims that, "It is designed henceforth that

education shall not be confined to a few, but shall be so diffused that there may not be a village with an ignorant family, nor a family with an ignorant member. Learning is no longer to be considered as belonging to the upper classes but is to be equally the inheritance of nobles and gentry, farmers and artisans, males and females."

With such a spirit it is no longer surprising to find in Japan, as we do, religious liberality, freedom of social life, elevation of woman, and progress in civilization.

HAMPTON, DECEMBER, 1876.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

HARMONY of action by good men for their country's welfare is postponed by blind partizanship. Where the color line is drawn the white man's chief duty is to vote down his negro neighbor, and intelligence is not divided, as it should be, on questions of public policy. The freedmen, ignoring considerations of character and fitness, believe, as one of them told us, "that it is a sin against God to scratch the Republican ticket."

A solid party vote means that every voter shall be a machine. The political significance of the school house, on the contrary, is that every man shall think and act for himself. The two are diametrically opposed as are despotism and freedom, and the final triumph of the school-house will forever break the ranks of party tyranny.

A large part of the Southern whites, and most intelligent colored men would, we believe, gladly divide into free traders and protectionists, or on other than race issues. But a color line on one side necessitates one on the other, and the progress of the South is, in consequence, at a snail's pace.

Under these circumstances, breaking it up becomes one of the most desirable things in American politics. As a means to this end, in the future, the national well-being requires Congressional and State aid of the most liberal character to the public schools of the South. Experience since the war has abundantly proved that the effect of a solid vote on the color line is to quicken the antagonistic instincts of the races, to damage the interests of labor and capital, to prevent immigration, to dishearten Northern settlers by the social consequences of not falling in fully with the "white man's party," and to keep in the background those men best entitled to public confidence and best qualified to promote the welfare of all.

THE PRESIDENTIAL election through which we have just passed, has been the closest ever seen in this country. Each of the two principal parties has had its day of apparent victory followed by doubt and prolonged suspense. The question who is to be our Centennial President is still uncertain, and may continue to be so till the middle of February when the electoral votes are cast, if not till Inauguration Day in March. The situation is remarkable, the administration of our National government for the next four years depending upon the returns from two or three, or probably only one of the smaller and most remote states, whose unsettled condition makes their canvass difficult, and gives rise to suspicion and charges of fraud, on both sides. In ordinary times, the vote of these states would be unimportant, and the result might be announced without waiting for them. In the present circumstances, one of them may give the casting vote, and illustrate the importance of small things to assured success.

As the channels of excitement have narrowed, it has naturally risen higher, but it is already subsiding, and the country is settling down to the hardest of all ordeals, that of waiting. The enforced delay gives a needed pause for deliberation and the cooling of partisan extravagance. The desire of the masses of the people, whatever their politics, is, we believe, for an honest decision of the question, and a law-abiding reception of it. Every true citizen, certainly, must be of this mind, and will heartily endorse the manly declaration of President Grant: "Either party can afford to be disappointed in the result. The country *cannot* afford to have the result tainted by the suspicion of illegal or false returns." Such a spirit prevailing will testify to the safety and permanence of Republican institutions, and prove that the freer a people, the more peacefully it can adapt itself to the needs of the hour.

"The extraordinary size of the vote cast shows a healthy state of interest in the affairs of the country. Too many have been apt to be careless of their political duties. And again, the very closeness of the vote will be an inevitable benefit to the country, however it is finally decided. John Randolph used to say that the best majority is a majority of ONE. Whichever party wins in a close election like this, is put upon its good behavior for the next four years. Their record must be pure and of good report for it to pass another such ordeal.

And finally, it is calming to the fears and the passions of the present hour to contemplate the long history of the ages, and find there that "There is a Providence that shapes our ends, rough-hew them as we may:" that God is King, whoever is president.

URGENT appeals are coming from Africa for colored missionaries. The American Missionary Association must secure a laborer for the proposed reconstruction of its Mendi Mission, and says it would be far more ready to receive a colored man as leader than a white man. In addition to this leader, it desires the services of three colored men and their wives to accompany them. These men must be qualified to teach and preach and must possess all the requisitions of health and heart for the work in Africa. We have also reports of an interesting lecture, which we will give our readers in full next month, by Mr. Gomer, a colored missionary formerly connected with an African mission of the American Board. He represents the great need of the educational work in Africa to be instruction in practical farming, and thinks the best way to meet it would be to establish a Hampton Normal and Agricultural Institute there. He expressed a hope that Hampton graduates might be found to assist in such a work. We have no doubt that some such manual-labor educational system as Hampton's would work as well in Africa as it has in America and the Sandwich Islands. The freedmen need their brethren's help in America, but "there is that giveth and still increaseth," and if any Hampton graduate be fired with a holy zeal for the work in Africa and be found gifted for it, we believe that he would leave a blessing behind him, and we should bid him God-speed.

A RECENT number of the New York *Tribune* devotes an editorial to answering the charge which has been made of a want of interest among the freedmen in the National Exhibition. No one who passed many days in the buildings can fail, we think, to endorse the *Tribune's* testimony to the good proportion of colored people, considering their means as a class, who visited the Centennial, and to their evident appreciation of its use. As some corroboration of this, we may mention that 77 out of the 232 students of the Hampton Institute managed to visit it in the course of the season. Pressure of other matter compelling us to postpone till another month the report of our own inspection of the exhibits representing the colored man at the Centennial—those the *Tribune* enumerates and others,—we are glad, meanwhile, to give our readers in full the *Tribune's* excellent "words of justice":

"One word before the Centennial Exhibition is done and away with, in justice to our colored friends. Several of our leading contemporaries have seen fit to call attention to the 'lack of interest shown by the freedmen in the Exposition,' and the absence of a single exhibit showing their skill in any profession or trade whatever,' and from these facts have drawn the inference of their want of patriotic feeling as well as ability in brain or hand-work. If this had been true it would have been excusable. The freedman has had little time or opportunity to qualify himself to make an exhibition of artistic work, and if not a single colored face had been seen in the Centennial Grounds, the fact could have been accounted for by the omission of any invitation to prominent men of their race to be present on the opening day, an omission which arose from inadvertence, but was not the less likely to offend. But the facts are, that two at least of the most notable and significant exhibits were made by people of color; a statue in the Art Gallery which ranked among the first of those by American sculptors, and the Freedmen's Educational Department, in which the Hampton Normal School, Virginia, set forth its claims to notice. These claims were especially significant, as the school is one in which self-help is taught. The pupils can be not only trained as teachers, but with a good English education fitted to earn their own living as mechanics, seamstresses, domestic servants. There is abundance of means offered to the well-to-do of this race to obtain classical and scientific culture, but this school comes directly home to the present needs of the great needy majority.

It is not true, either, that they showed a lack of interest in the National Exposition. On the contrary, there was not a day when large numbers of colored people did not pass through the gates, and they were among the most orderly and attentive observers, eager to gain the instruction set before them. On one day last week over 20,000 colored people were present, having assembled to witness the unveiling of the statue of an African bishop, which they had erected on the grounds. It is time to have done with these petty sneers against a class of our citizens who have neither the disposition nor power to strike back when attacked. It is certain that no people among us have shown themselves more in earnest in accepting education when offered, and they never showed it more noticeably than during the Exhibition."

OUR Centennial Exhibition is over, and we may congratulate ourselves that it is so well over. From the doubtful venture of an almost empty-handed company, it has grown into a National and International enterprise, the greatest of all the great World's Fairs. Over nine million admissions, and over three and a half million dollars of receipts were registered at the gates. And this vast success has been gained, not by the great influx of foreigners which was expected, but through our own citizens. The Atlantic steamers brought over fewer passengers than usual this summer, and the Cunard and other lines actually took off some of their regular vessels. We would have been glad to welcome more to our shores, but it is all the better showing for us. At least one in twenty of our whole population must have had the benefit of a visit to the great Exhibition. Our commerce will no doubt reap advantage from it. Our manufactures have received an impulse. Our workmen have had a chance to inspect the best products of other countries. American silks, American carpets, American work and invention have been brought into the focus of the world's vision. Philadelphia having tasted the pleasure of such a collection of arts and wonders, is taking measures to keep as many as she can for herself, in a museum and art school on the model of the great Kensington Museum in London. We hope that other cities will follow her example. But the greatest of all the benefits of the Centennial, we believe, and the one which will make all the rest permanent, is its educational influence upon the masses of the people,—the two and a half millions of Americans who have flocked to it from all parts of the land. It is as good almost as a tour to Europe to many who have made perhaps the first pleasure journey of their lives, at some personal sacrifice to themselves, and have got their ideas stretched so they will never be quite the same people they were before. They will have something to talk of, something to think about, beyond their personal interests, for the rest of their lives; something to feed on and grow on. A thing of beauty is a joy forever. The benefits of the great Centennial ought to show in the coming generation and give us a new start for the next hundred years.

THE LAST OF THE PIONEERS OF THE HAWAIIAN MISSION.

Honolulu papers announce the death, at the ripe age of eighty-one years, of the venerable Mrs. Thurston, the last survivor of the band of American missionaries who arrived at the Hawaiian Islands in 1820. The circumstances under which these apostles of the Cross began their labors are among the most dramatic and interesting in the history of missions.

When they left the United States for their long and tedious voyage, the Islanders were a nation of idolaters, and even the King and Chiefs were subject to the cruel and oppressive rule of the heathen priests, whose temples were running with the blood of their human sacrifices. While the frail bark which bore the gospel messengers was battling with the storms of Cape Horn, the King and his followers had risen against the priestly despotism under which the nation had so long groaned, and when the missionaries arrived, uncertain of their reception and their fate, but anticipating the violent opposition of the priesthood, they were greeted with the cheering news "the idols are destroyed and the priests overthrown." They proved a people without a religion and ready to welcome the new faith, and Christianity was soon adopted as the religion of Hawaii. Rev. Asa Thurston and his wife were of this first band, and for nearly fifty years they labored together with success and zeal. He died in 1868.

In 1870, the first half-century of the mission was commemorated by the missionaries and their descendants at the Islands by a Jubilee, which was attended by the venerable Dr. Anderson, Secretary of the American Board, and participated in by the King and his people. A paper prepared and read by Mrs. Thurston, giving her reminiscences of the fifty years of missionary labor, was one of the most interesting features of this occasion. She was a woman of vigorous intellect, and both she and her husband were well fitted for the work to which they had consecrated their lives and which they performed with rare ability, constancy and success.

DEATH OF REV. GEO. WHIPPLE, D. D.

Mr. Whipple entered upon his duties as Corresponding Secretary of the American Missionary Association, then recently formed, at the close of the year 1846. He was in the forty-second year of his age, in the full vigor of his manhood, and he devoted his whole energies to his new position with a success that is well known by the results, but with a faithfulness and spirit of self-sacrifice that few outside of his office ever knew. In those days the resources of the Association were quite limited and came mainly from those who were poor in this world's goods. His salary was very small, and he did not feel at liberty to employ adequate assistance In the outer room of the office there yet stands a long table on which Mr. Whipple was then accustomed to write, often continuing his work till one or two o'clock at night; then wrapping himself in a blanket, he would sleep on the table till four or five o'clock in the morning, and then spring from it to resume his writing. The toil

and care of his position at length impaired his health, and in 1858 he took a short trip to Europe to recruit his health, and to acquire information respecting missions in Africa; and the best mode of extending them. Through the whole course of his thirty years' duties as Secretary, he labored with unceasing diligence. He was a model of punctuality in the regularity of his office hours, and his vigilance and supervision extended to all parts of the work of the Association. He seldom took any time for vacation or relaxation, and even in the hours of conference and consultation he soon became restless if the discussions wandered in the least from the point immediately in hand.

Mr. Whipple's character was so well rounded that it is difficult to single out peculiar traits, yet a sound judgment—a judicial cast of mind—was perhaps the most marked feature.

He was very conscientious—not morbidly but practically. He seemed ever to respect the rights of others, in small as well as great things, and it is doubtful if the man lives who feels that Mr. Whipple ever intended to injure him in any way. The rights of the poor slave were espoused by him when worldly consideration would have told him to "pass by on the other side." Nor was he narrow in his sympathies. He was interested in all classes of men, and in all who sought to benefit man or extend the Redeemer's kingdom.

Those who knew Mr. Whipple most intimately had the highest esteem for his piety and his ripe and well developed Christian character. His humility, his profound reverence for God, his quiet and calm trust in His promises, and love, and the full consecration of all he had and could do to the Master's service were some of the lineaments of that character. His was a busy life. He rests from his labors, and his works do follow him.—*American Missionary Magazine.*

For our pictures we are indebted to the Christian Weekly, and Mr. Shorey of Boston.

Press of matter already in type obliges us to defer till next month two interesting communications from correspondents.

LIBERIA AS A MISSIONARY FIELD.

It is estimated that the American people are giving annually $500,000 for the religious education of British subjects. This sum was thus given before the war, when we were not permitted to teach our negroes, and it is still given now, when we are at liberty to teach negroes, and when the negroes very much need the instruction. Our Liberia Colony has borrowed $500,000 from the British to enable itself to struggle into a healthy interior region from out the deadly malaria of the seacoast, where we Americans have placed it, and where our apathy and indifference keep it; and as Liberians are poor and cannot pay the sum borrowed, having been stripped by us for centuries of the proceeds of their labor, the prospects are that Liberia will have to turn itself over to England to pay her debt. In this way a republican colony may lapse into the possession of a monarchical government. But this consideration, the swallowing up of a republican colony by a monarchy, so full of ill augury to our own Republic, does not seem to waken any concern among us, or cause our missionary action to deviate one iota from the ruts in which it has run for half a century or more. It is not surprising that while we are looking after British subjects, Great Britain should be taking possession of one of our republican colonies. It is plain to be seen that we Americans are helping to educate the inhabitants of Hindostan, but what are we doing for our negroes—our own fellow-citizens? Instead of helping them to the possession of the continent of Africa, their birthright and their land of promise, we are giving them a land of Goshen here in the United States. We are giving them South Carolina, Alabama, Mississippi, and Louisiana. The spirit of the political administration of the country is too mercenary to permit of much attention being paid to objects of benevolence, or to the affairs of a colony founded in philanthropy and benevolence. While the members of our government are making money for themselves, in the same rut that became established during the war, our clergy are sending around the hat, box, or plate for contributions to missionary purposes, but seldom if ever is a word uttered by them in favor of our Liberia colony, the greatest practical religious scheme of the age. It is the doorway opened up to a hundred millions of barbarians of a race whom we have outraged, and to whom we are under greater moral obligations than to any other people. Is it for God's purposes that we keep the negroes here in America, or is it not for our own? Have we brought him here from Africa to be educated, and then to be returned as a missionary to the millions of his race, or have we brought him here merely to increase our store of cotton, strengthen the Republican vote, and aid in opposing the political aggressions of Romanism? Our clergy rarely if ever ask such questions. Their religious action runs in ruts; for it is easier to flow in the smooth channels of habit than to irrigate waste lands with the steam.

Liberia is the germ of the greatest missionary enterprise since the Exodus from Egypt, and nothing stands in the way of its development but a want of attention on the part of the Government and people of the United States. First, there is needed a road from the unhealthy seacoast up into the healthy interior—say 100 miles long; second, a survey of the land, so that every African in the United States can tell before he leaves our shores precisely where he is to be situated, just as European immigrants can tell before leaving home where they are to live in this country; and, third, all our foreign missionary efforts should be centered upon Africa.

We saw not long since, on a cold, raw day in January, a colored clergyman from North Carolina, followed by his little flock of some 12 persons, at one of the docks of New-York on his way to Liberia. The little flock had left their homes against the wishes of neighbors, both black and white and under the influence of a deep religious purpose, were steaming an adverse current of prejudice, interest, and false policy, worse than a Northern Winter itself. There was no road through the jungle for them when they should arrive in Africa, no friendly Castle Garden, no railroad with sleeping cars to the interior, no lot surveyed and ready to receive them; but, on the contrary, poverty, apathy, indifference, malaria, uncertainty, exhausted resources, sickness, heedless efforts perhaps, and hastened death. Would it not be better to encourage the high, devotional spirit of this clergyman and his flock by helping them on to lots of land in the healthy interior, where the clergyman could set the example of tilling the soil with his own hands, preaching the word of God to his flock on Sunday? Would it not be better to sustain such a missionary with our missionary money than to be spending it on the Hindostanese subjects of wealthy England? Would it not be well to divert American sentiment, religious and political, from some of its old ruts?

Agricultural.

TRANSPORTING CATTLE SOUTH.

Mature cattle taken from the North to the South meet with changes that imperil their lives. The risk is less in the fall months than others, since then the contrasts of climate are less. For the South to accept northern cattle in spring or summer, is most unsafe, the chance of their survival being small. There is small risk, on the other hand, in transferring animals from the South to the North at any season, provided the journey is made comfortable to them.

Probably the miscarriages of many attempts to introduce full grown animals of choice breeds in the South, have had much to do in checking their introduction. Purchasers very naturally prefer to secure animals that are mature enough to show the excellences of the breed, and its superiority to the common cattle of the country. They do not know what developments young things may attain to, and feel that in taking such, they incur much risk of their not becoming as handsome as they wish them.

But to incur this risk, which is less in proportion to the excellences of the ancestry of the young things, ancestry that can generally be seen and studied in the large herds of capable breeders, is certainly better than either to remain without improved stock, or to purchase the mature animals, that are more likely to die than to live.

Animals of from four to eight months old, or perhaps a little older, may be transferred South in the cool months of the year, with very little risk of losing them. Indeed, we think the northern breeder would not hesitate to take upon himself the insurance of their lives. Young things of the desirable breeds can be purchased at much lower prices than animals arriving at maturity; and we would advise their selection on both grounds of avoidance of risk, and of economy. Then, too, the new owner is in the way of becoming gradually familiar with the distinctive characteristics, and when they have arrived at the period of profit, will be better able attend to their needs.

WOOL SUGGESTION.

It will always be best for a farmer to produce wool of one sort or the other. Wool that is neither one thing nor the other, neither long nor short, will not usually command a satisfactory price so readily as if it were either the wool clipped from Merino sheep or from the backs of some long-wooled breed. An intelligent dealer in wool assures us that good delaine wool should be at least three inches in length, and be a round, strong staple. The practice of buying wool at an average price per pound, without regard to its quality and condition, is paying a premium for and encouraging the growth of poor and dirty wool, for grease and filth cost but a trifle per pound compared with choice, clean wool. Wool growers who raise wool above the average as to quality and condition can do better than to sell it at an average price by sending it to a reliable commission merchant, where it will be sorted and sold according to its merits. This is a safe and satisfactory way to sell good wool. It is not to be expected that wool buyers will advise farmers to thus dispose of their wool, for it deprives them of all the commission for buying, besides some twelve cents per pound extra in addition for all the delaine wool sorted out by them.—*N. Y. Herald.*

KEEPING EGGS.

Slake 1 lb. stone lime in 2 gallons of water. When cool add one pint of salt. Stir well, and let the mixture thoroughly settle. Place the eggs in a stone jar, pointed end down, and pour over them the clear liquid without disturbing the sediment. Be sure that the lime-water covers them. Close the jar tightly, and do not disturb until wanted for use.—*Mass. Ploughman.*

NEWS OF THE MONTH.

POLITICAL.

THE Presidential election is still uncertain. As far as is yet known, the electoral votes of the States stand as follows:

For HAYES.		*For TILDEN.*	
Maine	7	New York	35
New Hampshire	5	Connecticut	6
Vermont	5	New Jersey	9
Rhode Island	4	Indiana	15
Massachusetts	13	Alabama	10
Pennsylvania	29	Virginia	11
Ohio	22	Tennessee	12
Illinois	21	Missouri	15
Iowa	11	North Carolina	10
Kansas	5	Arkansas	5
Michigan	11	Georgia	11
Minnesota	5	Kentuckey	12
Nebraska	3	Mississippi	8
Colorado	3	Texas	8
California	6	West Virginia	5
Oregon	3	Maryland	8
Nevada	3	Delaware	3
Wisconsin	10		
South Carolina	7	Total	184
Total	173		
IN DOUBT.			
Florida	4	Louisana	8

THE Senate will have a reduced Republican majority, and the House a reduced Democratic majority.

SOUTH Carolina has elected Wade Hampton for Governor.

VIRGINIA gives Tilden a majority of 44,244.

THE Returning Board of Louisiana will admit five witnesses from each party to the counting of the vote.

THE negro vote of the United States numbers about 879,000, and is distributed among the several states as follows:

Alabama	80,400	Nebraska	140
Arkansas	2,100	Nevada	0
California	280	New Hampshire	100
Connecticut	1,700	New Jersey	5,600
Delaware	4,000	New York	9,000
Florida	16,700	North Carolina	74,200
Georgia	91,103	Ohio	11,000
Illinois	8,200	Oregon	60
Indiana	4,400	Pennsylvania	11,000
Iowa	1,100	Rhode Island	850
Kansas	8,100	South Carolina	75,000
Kentuckey	40,400	Tennessee	8,600
Louisiana	66,300	Texas	16,000
Maine	800	Vermont	170
Maryland	31,900	Virginia	93,300
Massachusetts	2,500	Wisconsin	400
Michigan	2,100	West Virginia	3,300
Minnesota	140		
Mississippi	86,700	Total	879,110
Missouri	21,500		

THE President-elect of the United States will take the oath and enter upon his duties at noon on Monday, the 5th of March next.

A NUMBER of Chinamen have been naturalized and will vote in Massachusetts this autumn.

CENTENNIAL.

THE Centennial Exhibition was formally closed on November 10th. A hundred thousand people or more, with a thousand umbrellas or less, bravely withstood the pouring rain till the managers changed the scene of action to Judges' Hall. Thirteen guns at sunrise greeted the day from George's Hill, and were answered from the sloop-of-war *Plymouth* at her moorings. At two o'clock President Grant entered the Hall escorted by General Hawley, and followed by members of the cabinet, foreign commissioners, governors of states, and other invited guests. The music was under the charge of Theodore Thomas. Wagner's Inauguration March opened the exercises. Rev. Joseph Seiss of Philadelphia made the prayer. Addresses were delivered by Hon. D. J. Morrill, Generals Hawley, Goshorn and others, giving a brief history of the exhibition, and thanking the foreign commissioners for their co-operation. During the singing of "America" by the audience, the original American flag first displayed by Paul Jones on the *Bon Homme Richard* was displayed, from a neighboring window by a lady whose grandfather was in the famous engagement with the Serapis, and whose family have ever since preserved the banner. It was loudly cheered. President Grant then gave the signal for stopping the great Corliss engine, and announced the Centennial Exhibition closed. A closing salute of 47 guns for all the states and territories of the Union was fired by the George's Hill battery, and the *Plymouth*. The audience, chorus and orchestra joined in the Doxology, and the ceremony concluded.

THE Main Centennial Hall is to be kept for a permanent exhibition building. Memorial Hall, and two or three of the State and Foreign buildings presented to the city, will soon be all that is left of the Fairy City of Glass.

A STATUE to Bishop Allen, the first bishop of the African Methodist Episcopal Church in the United States, was unveiled on the Centennial Grounds October 25th.

NOVEMBER 7TH, election day, was Woman's Day at the Centennial.

PERSONAL.

A private letter just received from England gives account of a concert of the Jubilees at Whitby recently at which they cleared £150 (about $500), and says they expect to spend another year in Great Britain.

MISS SARAH M. LOGAN, who is said to be the first colored female student who has been graduated from any medical college in the United States, has just received a diploma from the College of Medicine of the Syracuse University, and has begun practice in Washington.

JAMES PRIEST, from Gainsville, Liberia, in West Africa, has honorably reached the last year in the School of Mines of Columbia College, New York City. A friend, pleased with his proficiency in his studies, presented him recently with a microscope worth more than one hundred dollars.

GENERAL.

THE effort to develop an export market for American cottons promises to be successful. The cooperation of mills representing a million and a half of spindles has been secured, and 60 packages of samples will soon be sent to Philadelphia for distribution among the foreign Commissioners, who are to introduce them in their respective countries. The Commissioners of Portugal, Italy, and Australia have ordered five extra packages. The manufacturers have already addressed a petition to Secretary Fish in reference to the protection of American trade-marks.

THE Washington and Lee University, at Lexington, Va., chartered in 1782, was originally endowed by General Washington. During the last years of his life it was under the presidency of Gen. Robert E. Lee. A large number of gentlemen in different States have organized a movement, in connection with the National Centennial at Philadelphia, for the purpose of increasing the endowment of the University.

THE English Wesleyan missionaries on the Gold Coast of Africa have resolved to re-open missions in the King of Dahomey's dominions. They have been welcomed by the kings of some of the states, and Mr. Williams gives a list of twenty towns where he thinks missions might be opened.

THE Japanese Educational Centennial Commissioners have chosen the Boston school system to represent and recommend to their Government, and will carry home specimens of everything used in the schools. A model Boston school-house will be fitted up in Tokio to display the specimens.

THE Bengal coast of India has been visited by a terrible cyclone (or circular tempest). A storm-wave twenty feet deep swept over the islands; over 20,000 persons perished.

A letter from Savannah states that there had been over 1,300 interments in the city since August 21st, four-fifths of which were yellow fever cases. Very few people remain in the city who have not had the fever.

Affairs in Turkey are still critical. Russia is preparing for the chances of war. Turkey has agreed unconditionally to the Conference of the Powers, and on the result of this depends the peace of Europe.

A New York correspondent of the *Journal* writes that in that city the business men are greatly encouraged. Every department of labor is reviving. Capitalists are building. Labor, building material and wages have not been so low since '60. Notwithstanding the shrinkages the mercantile houses are in a good condition. Huge stores are going up in every direction, and real estate, which is the last thing to move, is already starting.

"WHEN A MAN COMES HOME" [illegible] and comes [illegible] but also [illegible] it is [illegible] want to recommend you to use hard [illegible] you must not let your back door be surrounded

"WHEN A MAN COMES HOME."

When a man comes home,
Don't begin to wrangle;
Better far to sleep
In the hungry deep,
'Neath white sheets of foam,
And of sea weed tangle.
Peace, peace, peace;
Cease, cease, cease.
When a man comes home,
Don't begin to wrangle.

When a man comes home,
Let him enter smiling;
Take the children sweet,
Playing round his feet,
Throw off grief and gloom,
And the world's beguiling.
Peace, peace, peace;
Cease, cease, cease.
When a man comes home,
Let him find all smiling.

When a man comes home,
He should still remember
'Tis not always May,
Either work or play—
Sure as June will come,
There will come December.
Peace, peace, peace;
Cease, cease, cease.
Evening brings all home,
And sunshine in December.

—*Dinah Mulock Craik.*

HOUSE AND HOME.

Next in importance to the direct care of the children, comes, for a woman who is at the head of a household, that general personal supervision and labor which, when intelligently done, result in cleanliness, order and comfort for the whole family. Of course it is much easier to write and talk about this kind of work than it is to do it, but, nevertheless, it is a constant surprise to me to find how much can be accomplished through determination and system by women who have much to do and little to do with. These two things, determination and system, which lie at the foundation of all good housekeeping, mean simply that you must always do your work at stated times and in certain places. To take, for example, a very simple but constantly recurring duty, *i. e.*, dish washing; are there not two widely different ways of doing it? One woman will leave her table standing for two or three hours, and then, throwing her dishes all together and unscraped into a dirty pan, will go for hot water, which, as she has forgotten to fill the pot, is not to be had, and at the same time will find that there is no soap in the house, that her dishcloth is lost and her towel wet. Another woman will clear her table as soon as the meal is over, will put her dishes, carefully scraped from all grease, broken bits, etc., into a pan which is used for nothing else, will wash first her silver and glass, then her china and last of all her cooking utensils, will have plenty of boiling water and soap, a clean dishcloth and a dry towel. And of these two women you may be sure that the first will be always in confusion and disorder, while the second, you may be equally sure, is the mistress of a neat and well ordered household.

This comparison may be carried through the whole field of household work, and the advantage will always be found on the side of the woman who systematizes her work, who does it, that is, in a regular and orderly way, who has a time and a place for everything. The details of the life of an ordinary housekeeper who does most of her work herself, are far too numerous and varied to be set down upon paper; but the most important of them are usually much the same from day to day and in all families, and I think that perhaps our best way to get a clear idea of what system and industry can accomplish will be to follow, in imagination, a good housekeeper through the work of one day, from the rising to the setting of the sun. We will give her a house of her own, with kitchen, eating-room and sitting-room downstairs, and three bedrooms upstairs, and her family shall consist of a husband, who is a day laborer, and three children, two of whom are old enough to go to school.

As soon as she herself is dressed in the morning she gives the children such help as they require in washing and dressing, making sure that they begin the day with clean skins if nothing more, and then after thoroughly shaking up the beds and opening the windows, she goes down stairs to get breakfast, her husband having in the meantime made the fire. However simple the breakfast may be, if it should consist only of coffee and cornbread, it should be neatly served in the eating-room, on a clean tablecloth and from clean dishes. To this meal and all others the family should sit down promptly and together, their food should be eaten in a clean and orderly way, and if possible, should not be eaten in the same room in which the cooking, washing, etc., are going on. I have already drawn your attention to the fact that a careless, disorderly habit in respect to serving and eating food should be carefully avoided, not only because it indicates ignorant and coarse tastes, but also because it is injurious to health, and I would once more lay down as a cardinal principle of good housekeeping that the eating room should not be used as a cooking or sleeping room, that the table should be neatly set with a clean cloth, clean china, glass, etc., and that the food should be served and eaten in a neat and orderly way. You will find that there is no one thing which will more affect the comfort of your family than that the meals should be prepared and eaten with regularity and order, and though those of you who have never made the attempt may feel that it is not worth the trouble you think it will cost you, you will find, if you will but make an honest trial, that the trouble is nothing in comparison with the increase of comfort and the satisfaction of feeling that you are educating your children in some very important particulars.

But to return to our diligent housekeeper,—by this time she has, I think, finished her breakfast, cleared her table and washed her dishes in the way I have already described. This accomplished, she will put away the articles used, in their proper places on the cupboard shelves, in drawers, etc., will sweep and dust the room and then go upstairs to the bedrooms which she will proceed to put in order

WHEN A MAN COMES HOME.

for the day. And here I must say a word about the care of the beds and bedsteads, a duty the neglect of which never fails to produce most unpleasant results. If there is one thing in your house about the cleanliness of which you should be absolutely sure, it is the beds, and the only way to obtain such certainty is by constant care. The beds should be thoroughly shaken up every morning as soon as the occupants are out of them, and by this I mean that you should not only take off the coverlids, blankets, sheets, pillows, etc., and spread them out upon chairs in such a way that the air may have free circulation about them, but that you should also take off or throw back the bed or mattress itself, so that the framework of the bedstead will be exposed to the air and light. You should let the beds and bedclothes lie in this way for at least an hour every morning, and in addition to this, you should as often as once a month remove everything from the bedstead and wipe it off carefully with hot soapsuds, going thoroughly into all the cracks where insects are likely to secrete themselves. If you follow this course habitually, you will have little to fear from the bugs whose presence is a disgrace to any housekeeper, and your beds will be always sweet and fresh, a rest and a comfort to those who lie down upon them.

Having thus shaken up her beds before breakfast, (and before I leave the subject, I want to recommend you to use hard beds rather than soft, mattresses in preference to feather beds), our housekeeper finds them well aired on her return and proceeds at once to make them up, spreading the sheets, etc., so carefully that the bed when finished is really an ornament to the room and a temptation to tired limbs. Then she empties the slops, thoroughly washing the basins, pitchers, etc., and refilling the pitchers with fresh water, dusts and arranges the furniture, and leaves the room in such order that she need have no fear of the most critical eye. The children must now be got ready for school and this takes a little time, for their faces and hands must be washed and clean aprons or jackets put on, in order that neither they nor their teacher need have cause to be ashamed of dirt and carelessness for which their mother is responsible.

After they are gone, the special work of the day, whatever it may be, sewing, baking, cleaning or ironing, may begin, (except in the case of washing, which ought to be begun as early in the morning as possible), and this will go on, unless some accidental interruption occurs, until it is time to prepare for the midday meal, which will be dinner or luncheon according as the father and children do or do not return at that hour. In either case, when the meal and its attendant work are done, the mother will again have two or three hours for work in the house or the garden before it is time to cook the evening meal, after which there is again an hour or two after the children are put to bed (and this should be at a regular hour), for rest, amusement, visiting, etc. With a day systematized in this way, it is possible for a woman to do all the work of a small family and to take in work in addition, though it is no doubt more desirable that she should be able to give all her time and energy directly to the care of her own family.

As I have said before, there are innumerable details in housekeeping in regard to which actual instruction from a good housekeeper is almost a necessity; but I am sure that most of you have constant opportunities to see for yourselves how to do your work properly, if you will only take advantage of them. In the matter of cleanliness for example, you must surely have seen enough for yourselves to know that to sweep dirt into nooks and corners where for the moment it is out of sight, or to throw rubbish into a pantry and shut the door, is in no sense cleanliness. If you are going to be clean, you must not keep your cellar unsome with decaying vegetables or refuse of any kind, you must not let your garret be a receptacle for the dusty, mouldy rubbish of years, you must not let your back door be surrounded by the quickly accumulating and foul-smelling dirt of the kitchen; but you must see to it yourself that nowhere within the limits of your responsibility is there anything unclean which your hands can remove. I know that this is no easy task, but at any rate you can do your best, and the advice which I would give to any woman who is too poor or too overworked to do all that more fortunate women are able to do, is, "Rid yourself first of the dirt which is likely to be directly injurious to health; that is, keep your cellar clean even if your windows go unwashed, wash your cooking utensils and keep your beds fresh at the expense of something of less importance, keep your skin clean even if your dress has to go dirty."

But, in truth, a person who really loves cleanliness will be clean everywhere and at all times, and the first step in advance is taken when you begin to feel that dirt in any form is really unpleasant to you, and that to sit down in a dirty room at a dirty table to eat dirty food from dirty dishes (which you know to be only too common a habit) is, to you, actual misery. When you have learned to hate uncleanliness, you will surely learn in one way or another to be clean, and you will never be a good housekeeper until you do hate uncleanliness in every shape and with all your heart. The more closely you examine the work of any woman who is a successful housekeeper, the more evident it will become to you that, like the woman whom we have been following through the duties of a day, she is orderly, systematic and thorough in all her habits. The cleanliness, as we have seen, is not superficial, but includes everything that comes within her province; the work of each day is arranged so that nothing is left to chance; her cooking is done by rule and not by "guess;" she studies to avoid waste, and to make the most of her materials; she knows that the comfort of her household depends mainly upon her thrift and industry, and she takes every means in her power to find out and adopt the best way of doing all that she has to do. And certainly there is no more honorable ambition for most women than the ambition to be a good housekeeper, taking that word always in its broadest and most beautiful sense, the Bible sense, whose inter-retation we find in that wonderful description in the last chapter of Proverbs, a description which should cheer and refresh the heart of every woman who is trying to work well and earnestly:

"The heart of her husband doth safely trust in her, . . . She will do him good and not evil all the days of her life. She seeketh wool and flax and worketh willingly with her hands. Strength and honor are her clothing, and she shall rejoice in time to come. She openeth her mouth with wisdom and in her tongue is the law of kindness. She looketh well to the ways of her household and eateth not the bread of idleness. Her children rise up and call her blessed, her husband also and he praiseth her, . . . A woman that feareth the Lord she shall be praised."

The Teachers' Table.

HAMPTON INSTITUTE LECTURES ON TEACHING.

BY PROF. F. A. ALLEN.

LECTURE IV.

STUDY;

ITS OBJECTS, REQUISITES AND MEANS.

Objects of Study
1. To train the mind.
2. To teach how to think.
3. To enable us to arrange and classify our knowledge.
4. To enable us to converse.

The business of the teacher is to train, develop and discipline the powers by which we obtain knowledge.

As to classification of knowledge, instead of giving the pupil in spelling a book to study his spelling lesson, it would be well often to give him a paper and pencil, and have him put in one column the names of all the trees he can think of, in another the names of the different kinds of fruit-trees; and so on, with the names of things to eat, of things to wear, of furniture, household utensils, flowers, etc. A spelling book made on this plan would be the best kind of spelling book. Besides teaching how to spell words most in use, it would help the pupil classify and arrange his knowledge, making it clearer and more easily retained than a mass of unassorted, unassociated facts can be.

As one object of study is to converse well, require the pupil to give his answers in good, pure English that expresses what he means. Correct his *own* bad grammar and inelegant English, not somebody else's. There will sometimes be found in school books long lists of bad syntax for the pupil to correct. Now if these are not mistakes that he is in the habit of making, they will only put new errors into his head. You want to correct *his* bad grammar, so watch for *his* mistakes, and let him

watch for them himself. Again, make him incorporate your questions in his answers, to show that he understands them. For instance, you ask him, What is the capital of Virginia? His answer should be, The capital of Virginia is Richmond. That will accustom him to the use of the word capital and secure his understanding of it.

Requisites of Study.
1. Health.
2. Pure fresh air.
3. Comfortable seats.
4. Time.
5. Comparative Silence or Regulated Noise.

The first requisite of study is, of course, Health, and for this plenty of good pure air is absolutely necessary. All school-rooms must be ventilated in some way. Arrange your windows to lower from the top. If they won't, make them, by whittling the piece across the lower sash. It is a good plan to have a little stick and string nailed to the side of the window to allow the pure fresh air to sweep through the school-room occasionally.

The children should also be comfortably seated. If the seats are perfectly perpendicular, too high or too low, or the desks flat on the top, the pupils will soon weary and cannot be studious. By cutting off the back legs an inch or two shorter than the front ones, you can make the seats comfortable, and the children will not lounge forward.

Have a time for a study period immediately after each recitation. Then the pupil will have fresh in his mind what you should have told him about studying his lesson for the next day, and can go right at it with interest. Remember a child cannot recite to you what he has not learned. He must have time to learn it. *The smallest amount of time* a child should have for studying a lesson is as much time—or better, twice as much time—as it takes to recite it.

The next requisite is *comparative silence, or regulated noise*. Remember, you cannot have absolute silence, and you don't want it. Where there is life there is motion; where there is motion there is friction; where there is friction there is noise. A silent school is a dead school. The question is not, How still can the school be kept? but how still to get the most study. *It is not the minimum of noise, but the maximum of study that we want.*

Means to secure Study
1. Compulsory study worth little.
2. Study to be valuable must be spontaneous.
3. Appetize.
4. Devices to make study attractive.

Compulsory study is not study. It must be spontaneous to be valuable. Therefore we must make it appetizing, attractive, and sometimes use our best skill to rouse and interest the children.

A dull, warm day can be made more interesting and lively by various little devices which each teacher can best make for himself. Take them out botanizing or show them experiments in natural philosophy. The pressure of the air can be demonstrated in a simple way by a tumbler full of water, covered with a sheet of letter paper, then inverted, when the water will be held up in the tumbler by the upward pressure of the air against the paper. In Hooker's "Child's Book of Nature," Grey's "How Plants Grow," and Miss Youman's "Botany," you will find good suggestions for such devices.

Our next lecture will be on School Regulations

An article in *Schermerhorn's Monthly* contains the following excellent suggestion: "The common faults of declamation can often be avoided by encouraging pupils to take the place of the teacher and explain some interesting topic with which they are familiar. Let it be a description, in familiar language, of something they have seen or read of. 'Tell us about it,' should be the form of invitation. Let them not dream that they are 'speaking pieces.' It is better that very simple narratives should be attempted at first. If necessary, let the more timid pupils retain their seats; at least avoid the cumpliciuity of the platform. A natural manner, the use of original language, and the absence of all the accessories of an exhibition, are indispensable to a right beginning in oratory. Declamation, according to the ordinary method, makes the poorest kind of orators—mere elocutionary machines; but talk, insensibly led, step by step, to assume the dignity of an address to a general audience, develops natural oratory."

THE MOUNT OF THE HOLY CROSS.

An appropriate picture to show our readers in this Christmas month, is that of the lofty Rocky Mountain peak which is known as the Mount of the Holy Cross.

He who set his bow in the heavens has stamped this symbol of the Christian faith in pure, shining snow, upon one of the highest summits of our continent.

Cross-shaped rifts hold the snow long after it has melted and slid from the steep, rocky face of the mountain, and produce the remarkable appearance which the artist has reproduced in the picture, and which, seen for a distance of sixty miles, cannot fail to impress the beholder with wonder and awe.

It was first discovered by the Hayden Exploring Expedition, sent out by the United States Gov't under command of Lieut. F. V. Hayden a few years ago to make a geological and scientific survey of Montana and other Territories.

Mr. W. H. Holmes who accompanied the expedition, gives a vivid description of the discovery.

He says:

"Until the middle of June, the great front range of the Rocky Mountains in the Montana territory had been crowned with an unbroken covering of snow, and the higher peaks looked forbidding enough to cool the ardor of the most ambitious mountaineer. We spent a few months on the plains and pine-covered foothills, watching impatiently the face of the mountains. We marked how the snow line moved gradually upward, how the black rocks began to peep out, making innumerable dark patches, and how the snow finally occupied

THE MOUNT OF THE HOLY CROSS.

only small areas where it had filled depressions and accumulated in deep drifts. Our little party was not slow to take advantage of this growing weakness in our enemy's front, and steadily advanced up the valleys, into dense timber, up long, steep slopes, through swamps and torrents and treacherous snow banks; and long before the grass and flowers of those upper regions had felt the touch of spring, we were there. And many days before winter had finally surrendered the lofty summits, from a peak more than 14,000 feet above the sea we looked around upon one of the grandest panoramas that the world affords. To the east, the great plain gave a horizon entirely unbroken; to the west innumerable mountains notched the sky like saw teeth. From the ramparts of a continent we looked out upon a boundless ocean, calm, motionless, inward; upon a waste of mountains whose heights, and depths, and mystery fairly confounded us.

This was to be the field of our labors, and we summoned our half-bewildered faculties to the task of identifying such great landmarks as would be necessary to guide us in our future wanderings. An indefinite number of high, rugged ranges could be traced by their lines of lofty summits, as far away to the north and south as the eye could reach. But one among all these summits caught the eye and fixed the attention. Far away to the westward, we discovered a peak, a very giant among its fellows, a king amidst a forest of mountains, that bore aloft on its dark face a great white cross, so perfect, so grand in proportions that at a distance of sixty miles we felt ourselves in its very presence."

It was not till two months later that the party were able to make the ascent of the mountain, after a long and painful journey through a rugged "canon" (pronounced *canyon*) or gorge between perpendicular mountain walls. The ascent was made in a pouring rain which so hid the mountain that they were not even sure it was the right one. All the photographic and surveying instruments had to be carried up on the backs of the men. Mr. Jackson, the photographer, was the first to reach the summit in advance of the rest. Mr. Holmes says:

"Two months later we found ourselves approaching the region in which this mountain is located. On the 10th of August, we stood on the ocean divide, from which the waters to the east are carried by the Arkansas down to the Gulf, while those to the west sink away and are lost in the mysterious gorges of the 'great Colorado of the west.' On the one side, a narrow valley stretched away to the south-eastward in a seemingly endless vista, while on the other the streams and valleys were almost immediately obscured by a mass of irregular mountains. The course chosen would lead us first down the Pacific slope into a deep and rugged canon which we would be compelled to descend for some twenty miles or more, thence, by means of one of the great creek valleys that come down from the range to the west, we hoped to be able to ascend to the base of the peak.

For two days we pushed forward.

On the evening of the second day we reached the mouth of a large creek which it was agreed must drain the high region about the Holy Cross. As yet, no one had caught sight of the object of our search, since the first discovery some sixty miles away, for since entering the canon no mountains had been in sight; only the rocky walls, the densely timbered slopes and the sky.

In vain we searched for a trail or passable route up this creek valley. It was pronounced impossible, and we essayed to climb the ridge to the right, but night was upon us and camp must be made.

On the following morning we moved in another direction and with much better success. By noon we emerged from the timber and stood upon a high promontory that overlooked the grand valley. What a remarkable sight! Broad and deep and regular, it looked like a great pasture, dotted with a million white-backed sheep.

On the opposite side of this valley and somewhat further up, there stood a dark mountain that immediately attracted our attention, and seemed certainly to be the object of our search. High and rugged and cold, its scarred granite faces were tattooed by many ragged lines and patches of snow. But there was no cross. We looked in vain for forms that might even suggest a cross; but neither on this mountain nor any of those that lay back of it could the object of our search be found.

But, after all, this must be the one, and the cross, if it had not already melted away, will be found on one of the other faces. It is at least our duty to see, and first this great valley must be crossed. Two thousand feet of weary zigzagging brought us to the creek bed. Turning up this we picked our way among the rocks and fallen trees until within about three miles of the mountain's base. Here we found it necessary to halt, not only because our animals were utterly tired out, but because the way was completely blocked up. So camp was made by the banks of the roaring creek, with no alternative for the morrow but to advance afoot.

By sunrise all hands were stirring, and the start was made almost with a dash, every man for himself and the best man to the front. It was not long before the party was pretty well scattered, but communication was kept up by frequent shouts. The heavy instruments, which weighed some forty pounds, had been carried a mile or so ahead the evening before, so that we scaled the barriers of rock and wood that lay in our way with unusual rapidity, but when the rock on which the heavy instrument-box had been cached was reached, a halt was called and the announcement made that each man must take his turn at the box and carry it a distance proportionate to his strength.

Our party consisted of seven members. Only four had come up, but we decided to move on. Dr. H. was the first to take up the load. It was strapped to his shoulders, and he marched off with an ease and rapidity that did great credit to his prowess as a mountaineer.

There could be no flagging now. The man who, apparently unencumbered, could not keep pace with the doctor must certainly be in disgrace, and the scrambling advance grew more lively than ever. Presently it began to rain and the smooth rock grew slippery and the grass and bushes dripping wet. By the time we had reached the point where the mountain rises abruptly from the valley, we were soaked to the skin, but we must push on.

Meantime the photographic party, much more heavily laden than ourselves, had encountered far greater difficulties. Mr. Jackson and his two associates carried among them upward of one hundred pounds of apparatus, but were not men to yield before ordinary difficulties. The rain, the greatest possible damper on a photographer's enthusiasm, could not make them hesitate; torrents and cliffs and dense forests and prowling beasts were interposed in vain. They had set out to accomplish an object, and success at whatever cost of exertion and hardship, must be attained.

By the middle of the day Mr. Jackson finds himself far in advance of his companions, but in spite of his unusual enthusiasm he begins to fear for his results.

Eight hours of weary climbing have brought him nearly to the summit of the ridge. There is nothing to be seen but the dull, gray clouds which rise and fall, and sweep back and forth, and sink down again oppressively around him. Is this all labor lost? Have the Fates conspired against him, and is the holy cross a myth, an illusion that has led him on through all these weary days, only to deceive him?

He sits down among the rocks to rest and ponder. Meanwhile the winds rise and the dull mists are driven along the cliffs and are torn to tatters on the sharp projections. To the west great billowy passage-ways are opened, and glimpses of the lofty mountains can be had, looking like ghosts through the thin mists. Suddenly the artist glances upward, and beholds a vision exceeding dramatic and beautiful. He is amazed, he is transfixed. There, set in the dark rock, held high among the floating clouds, he beholds the long sought cross, perfect, spotless white, grand in dimensions, at once the sublimest thing in nature and the emblem of heaven."

A poor, wild Irish boy, taught in a mission-school in Ireland, was asked what was meant by saving faith. He replied, "Grasping Christ with the heart."

Without Jesus, the child who is heir to a kingdom is poor; having Jesus, the child who is clothed in rags is unspeakably rich. Choose the Saviour and his inexhaustible riches.

TO HAMPTON GRADUATE TEACHERS. I heard a great many say that it was the hard- | State to be decided by the average attendance? | with it. A letter received from one of his

TO HAMPTON GRADUATE TEACHERS.

Dear Young Teachers:—

Among the various qualifications of a successful teacher, one of the most important is Patience,—everlasting patience,—in the contest with ignorance, dulness, inattention and indolence. It is not easy to say which of these will tax your patience most severely; the trial will depend upon your own temperament. A teacher who is himself quick of apprehension will be inclined to be impatient with dull pupils, while those who have trained their own minds in habits of application and attention will find it difficult to excuse the idle and careless. But you must constantly bear in mind that your pupils come to you because they *are ignorant*, and many of them are ignorant because their mental faculties have not been trained. A bright boy, who is naturally observant and who has clear perceptions, hardly needs the aid of a teacher, if he can obtain books, for, with these and the book of nature spread out before him, he can easily acquire knowledge. Some of the most distinguished mechanics, mathematicians and naturalists have been self-taught. But the dull and sluggish require a teacher to awaken their dormant powers, to show them how to use their eyes and ears, how to compare and discriminate, to follow a train of thought, and, finally, to reason. The idle and inattentive need a teacher to interest them, to fix their attention, and inspire a willingness to work; they must be taught to concentrate their thoughts and to find pleasure in the acquisition of knowledge.

However carefully you may grade your classes, there will always be in every class a considerable difference in the ability of the pupils, and it would not be desirable to have a class composed of only inferior minds, even if this could be arranged. The dull of apprehension need the stimulus of the quick and bright, and the latter need to learn patience by waiting for the slow to grasp new ideas. Pupils who have clear and active minds are apt, during recitation, to become restless and impatient with those who are less gifted; but you must not only set them the example of patience, but teach them by precept to cultivate this important virtue; talk to them about the duty of bearing with the infirmities of others, remembering that, if they have superior abilities, they have received them as a gift from God, to whom they are accountable for their use; the more highly they are favored, the more patient, kind and charitable they ought to be. Show them, also, that the habit of patience, thus acquired, will be useful to them through life. One more thought. Quick scholars are often superficial; they think they understand a subject when they have only a glimpse of it. If they will listen patiently to the drilling given to minds slower to receive an idea, a much clearer, stronger impression will be made on their own. A lasting impression can rarely be made in a moment.

How much of the time during a recitation should be given to the dull minds in a class must be determined by experience. Your time and instruction belong to all the members of the class. Adapt the words you use and the illustrations you employ to the *average* mental capacity. If one method of reasoning or one explanation is not comprehended, try another; but, after having given a fair proportion of time to the dullest, tell them kindly you will take another opportunity to explain the subject to them; they are probably tired and confused, and, when a pupil's mind is in this state, it is useless to continue to talk to him. It is important not to discourage such pupils by word or manner; they are too ready to think themselves stupid without being told so. Especially avoid laughing at them. Let them come to you sometimes in the morning before school-hours, when their minds are fresh; you may, by your patience and cheerfulness, save from utter discouragement a pupil whose faculties will gradually unfold and mature until he becomes an intelligent and well-informed man. Some of the finest scholars and most valuable men in the scientific world have developed slowly, and not early in life.

Be careful to preserve good temper. However tired or impatient you may feel inwardly, control the expression of your feelings, if you speak at all, speak slowly, and in a lower key than your usual one. I have spoken chiefly of patience with the dull, but, as my letter is already very long, I must defer some thoughts about the treatment of the inattentive to a future time.

"Let patience have her perfect work."—"The husbandman waiteth for the precious fruit of the earth and hath long patience for it, until he receive the early and the latter rain."

I am your sincere friend, M. A. L.

LETTERS FROM GRADUATES.

WEST VA., *Oct.* 24, 1876.

Dear Teacher:—I left Suffolk the very day that you mailed your letter to me, and consequently I did not get it. It remained in S. several days before it was forwarded to me, for I did not get it until this morning. I arrived here on the 14th, and when I got to Booker's house I found out that he had gone up to Charleston, but what for I did not know, so as soon as possible I went up to C. on a boat, but, to my surprise on arriving there, I found that he was attending an examination of teachers for public schools, and just as soon as I could get some writing paper I had to go in and be examined also. I have often seen and heard examinations, but this was the hardest I ever saw; everything had to be written. There were only a few colored persons there, but a great many white. I heard a great many say that it was the hardest examination that they ever saw here before Many who received No. 1 certificates last year, could not get but 3, 4 or 5 this. But I did all I could. I was examined in all the branches, excepting one, and that was reading; but I will be examined in it next Saturday.

This is my standing: Art of teaching 100; Penmanship 100; Orthography 100; Geography 80; English Grammar 70; Mathematics 55; History 45.

One of the examiners told me that if I did not get but 60 in reading, it would, with what I have, entitle me to a No. 2 certificate. I was sorry that I could not get a No. 1.

In this county No. 1 pays $45, No. 2 pays $40, No. 3 pays $35, No. 4 pays about $30, No 5 pays about $25. Next Saturday will determine my pay. You see what I was examined on was without previous study.

I am very much obliged to you for interesting yourself so much about getting a school for me. Keiser is teaching somewhere near Southampton, I think. My school only lasts four months, and if I do not succeed in getting another I do not know what I shall do. My school is about two miles from where I board; I am lodging at Booker's. Please give my regards to General Marshall and family.

Hoping to hear from you soon, I am your obedient scholar. R. J.

GA., *Oct.* 21, 1876.

My Dear Teacher:—Your letter of the 13th inst. has been received. When I left Hampton in June I had no idea that the whole summer would pass away without my writing to you at least *once* ere the approach of autumn. The fall is now upon us and since the first of October I've often reverted to Hampton and the busy life which envelops the school—the students going from early dawn until after study-hour and partaking of the general activity of the teachers. These thoughts, coupled with observations gleaned while on a short visit to Washington, Philadelphia, &c., have frequently caused me to compare the busy and active life of the Northerners with the slow and apparently indifferent life of our Southern people; for it really seems sometimes that the people don't care whether they live or not, and if they care they don't seem to have any interest in the maintenance of those principles which seek the amelioration of the general prosperity. This is particularly noticeable among the colored people, for you know that they have not been educated to the standard that will naturally give the proper appreciation. During the last summer I have been teaching in the country, in the very depths of ignorance, where some of the people hardly know that they are free, and as to knowing anything about a school-house—why! that was almost a marvel prior to 1874, when the schools were being opened. They had only had a school three months since the war, and that was taught by a man that could not work an example in long division! Necessity compels the people in a great many such places to accept any teachers that the county commissioner may appoint, though the commissioners would send better teachers if they could be procured.

The county schools of Georgia are not very good, for they last only three months, and are then in part supported by the patrons. The city schools are different, for they last nine months of each year and are established upon a permanent basis, and are the means of effecting much good. The county schools are going down every year because the county Boards of Education are reducing teachers' salaries every year, and the result will be after a while that no *good* teachers can be procured, for just as soon as they can find positions that will pay better they will abandon teaching. It is my desire to remain in the school-room as long as I can make a respectable living. I want my little mite to go toward the elevation of my people, for I feel that they need earnest workers of their own now that the North is gradually withdrawing its aid and teachers from the South.

Well, enough of that, now your letter. I am now teaching a private school in the city. I could not get the Principalship of the public schools again, but was offered a position as first assistant which I refused because they did not offer me enough money. I am anxious to get a permanent place somewhere that will last at least nine months of the year. I don't care very much about going out to Texas, but if it will pay, why, I might go. In the mean time, while the gentleman took a great deal of pains to describe the place, &c., he said nothing about the population of the town or whether or not there was a railroad running through the place. These two things I should like to know, also to get a guarantee that the $50 per month *will be paid* at the end of each month. For, though I am not making that amount now, I have the prospects of making it ere long; this, though, is doubtful, and rather than wait I will accept a certainty. I would not go there, either, depending upon the people, for I know the colored people too well; they will do to start with, but in matters of that kind they won't hold out long. I would like to find out *exactly* how much of the $50 the State Public School Fund will pay. Mr. —— said, "It will pay almost the entire tuition for all children between the ages of eight and fourteen," which, in such a neighborhood as he describes, would admit but a very small number of children to be paid for by the State. I should like to know also how the State pays this tuition. Is the amount to be paid by the State to be decided by the average attendance? or do they simply stipulate to pay a teacher a certain salary regardless of the average attendance so long as a good school is kept in operation?

I have united with the church. I feel now that I ought to have done this long ago. Please give my regards to the teachers. I suppose you remember H. W. Arendell. He died very suddenly in the latter part of September, after an illness of five days, in Jacksonville, Florida.

Yours truly, R. M.

DIED at Jacksonville, Florida, September 24th, of Typho-malarial fever, Henry W. Arendell, formerly a student at Hampton Normal and Agricultural Institute, of the class of '74. The intelligence of the sad event did not reach us in time for our last issue.

Mr. Arendell had been for three years in charge of a school in Magnolia, Florida, and his loss is severely felt in the community in which he lived, and by his former schoolmates and teachers and many friends. He is remembered at Hampton as a very faithful and promising pupil. Obliged to give up his studies in his middle year on account of his eyes, he was heartily recommended by the Faculty to the position he has ever since held in a manner to command the respect of all who knew his course.

His school attracted frequent attention from visitors to Magnolia. He had formed a plan to convert it into an Agricultural and Industrial school, on the model as far as practicable of Hampton, and his project seemed in a fair way to be realized when his labors were interrupted by death.

The high estimate placed upon him by those who watched his course is abundantly shown in letters received from them, out of one of which we take the liberty of making the following extract:

"Henry has made himself so valuable to the colored people and has so fully won my respect and confidence by his efficient and faithful teaching that I feel as if Magnolia had lost its best friend and philanthropist,—all the better for his being so entirely unaware of the importance of his work. Henry was enthusiastic in his anticipations of the new feature of agricultural industry he was to introduce into the school the coming winter, and this reminds me that I will try to find a letter he wrote me in the early summer about it and enclose it to you." (*A portion of this letter we give below.*)

Another friend writes: "He fell in harness at the post of duty while nobly working for the happiness and welfare of his race. He often spoke to me about the proposed establishment of an Industrial School at Magnolia, and knowing me to be a practical horticulturist, desired my coöperation. I suppose Hampton Institute must have been his Alma Mater, judging from the reverence with which he used to speak of it." And still another writes, "He made many friends and was respected by all who knew him."

FROM the letter from Mr. Arendell referred to above, we extract as follows:

MAGNOLIA, *May* 10, '76.

DR. R.,

Dear Friend:—

You cannot imagine how glad I was to hear from you and of your enjoyment at Hampton, my Alma Mater, with my former teachers and friends. You will be pleased to know that the Board of Education unanimously adopted our resolutions pertaining to the Magnolia Industrial, or Manual-Labor School. They think it a capital thing, so much so, that Wm. Long, Chairman, said "That if it proved a success he would use every exertion to have the white schools based upon the same principle." Dr. Colmer said, "If rightly appreciated it would develop both brain and muscle." Judge Boynton, "It is really *the* thing needed." The remainder said all and did all they could to encourage us. Judge Budington is perfectly willing and ready to render his assistance. I shall meet him next week, when I shall take notes of what he says. I have got him appointed Superintendent at last. Now, sir, I await your proposals and plans. The land and muscle are here; all required are implements and brain, industry and good contrivance.

DIED at Danville, Virginia, November 10, of Typho-Malarial fever, Walter Ivy, a graduate of Hampton Normal School of the class of '76.

Mr. Ivy's death will be sincerely mourned by his classmates and friends. Converted while at the school, he was a consistent member of the church connected with it. A letter received from one of his classmates who was with him in his last hours gives the gratifying assurance of his happy Christian death which must comfort the hearts of his afflicted family. We quote it for the benefit of many friends.

The writer says:

"We cannot express our grief at the loss of one so dear and so good, on the one side, and are not able to tell how thankful we are that he now rests "safe in the arms of Jesus." When Jennie was married he looked like a picture of health, but was taken sick the following week with chills, as you have heard, I guess. He was put under the treatment of a doctor immediately, but continued to grow worse all the time. The doctor said he did not gain one day, but was gradually sinking all the while. Last Tuesday he got much worse, and Thursday we received a telegram that he was just alive; and as I wanted to see him once more alive, I gave up my school Friday and went over to Danville. His family thought him much better, in fact he was, and rested easy all day; but I didn't think it any sign of his recovery. The good Lord only permitted him to have one day without pain before he called him home. Friday night about twelve he was taken with violent pains in his chest; they were, however, soon relieved, and then he began to sink away without the least pain, for when he was dying he said no where about him was there any hurt or pain. He died at half past nine o'clock Friday morning. Every one that witnessed his death say they never saw such before—the calmness with which he passed away and the glorious death he died. Every breath, Miss H., was a prayer, and not for himself alone, but for everybody—all of his friends and those who were strangers to him. About ten minutes before he died his mother went to him and said, "Walter, my son, don't exert yourself so; you are willing and ready to die, are you not?" "O, yes, mother! perfectly willing; I want to go; I would not stay in pain when I can go and be at rest with Jesus; but, mother, I want to spend my last breath in prayer to Him who has been so kind and merciful to me. I want to die thanking Him for His kindness." So she said, "Well, my child, do just as you want to," and he died so. A short while before he died he bade us all farewell and asked us to meet him in heaven, and said, "Sister, tell Miss H. that I died in the faith, tell her I am now just waiting for the chariot to swing low and take me home, tell them all goodbye." So, Miss H., I think we ought only to rejoice and be thankful that he has gone to live in heaven forever, "where the wicked cease from troubling and the weary are at rest,"

S. G.

A GENTLEMAN of the highest reliability and of excellent judgment writes from Bennettsville, South Carolina, where he recently passed a few weeks, an interesting account of what he saw, from which we extract as follows:

"This is unquestionably one of the best and most prosperous counties in the state: the whites are sober and thrifty, the colored people quiet and industrious, as a consequence the plantations are well cultivated, well fenced and yield well. In Bennettsville, the county seat, there is neither grog-shop, ten-pin alley, billiard saloon, nor indeed any public loafing place, so that the loafer who goes to make up what may be designated the dangerous class in the Southern States, is almost unknown here. No intoxicating liquor is permitted to be retailed in the county. The fast young man, who drinks, gambles, rides and shoots on the wing as a profession, does not exist here; every man appears to have an occupation or business which he is not ashamed to pursue even laboriously. Heretofore whites and colored have moved on together in peace. The county offices have been so divided, mainly through the influence of Colonel Maxwell, State Senator, (colored), that while in a minority of from three to five hundred the whites have administered their own local affairs. The Judge of the County Court, the County Treasurer, Sheriff, one of the commissioners, the County Solicitor and one member of the State Legislature are white men, South Carolinians, and altogether acceptable to the white people of the county. There has, however, been much dissatisfaction with the administration of the state government. The people complain grievously of the burden of taxation which they say goes to enrich a nest of profligate adventurers at Columbia.

I think there has been a decided improvement in both races, while there seems to be no perceptible change in their positions in relation to each other. One represents the capital while the other represents the labor with all the consequent antagonisms. The blacks do not here seem to accumulate property, although they are industrious and well paid. One reason of this may be found in the fact that it is almost impossible for them to purchase land. The planter who owns the land is rarely pressed for small sums of money and land is only sold in large tracts.

The blacks here smile at the idea of intimidating them by refusing to employ them; the planters is too keenly alive to his own interests to make such an experiment, although it has been spoken of. That weapon is much more potent in the hands of the negro; it would be ruin to a planter were the blacks to refuse to labor for one who had discharged one of their number for political reasons."

CORRESPONDENCE FROM THE HAWAIIAN ISLANDS.

Extracts from a private letter-journal. (*Continued.*)

WOMAN'S WORK. JENNY LIND. CANNIBAL MUSIC.

On our way home I asked Mr. H. if he would not have felt ashamed to have it known that he had attended a meeting which might be called a "woman's rights" meeting because conducted by a woman. He did not seem alarmed at the thought of a woman's trying to do good or of leading people of both sexes to the waters of life, especially when the oldest ones are but children in knowledge.

Last evening we went to hear Dr. H. and Carrie C. play operatic duets on his splendid piano. She bids fair to excel, and is to go abroad to study before long. The strains of such music are sweet, but far sweeter to me is the old tune "Sweet Home" which was played for me expressly. I like a beginning and an end to tunes, but opera music is all the same, with lofty peaks and low valleys until after a long journey it stops short. Never shall I cease to remember the sweet strains of Jenny Lind as she sang "Sweet Home" in Springfield, Mass., in 1850. And as indelibly impressed on my memory, tho' heard years previous to that (in 1832), is the long and doleful groan made by a heathen cannibal at Nunhiva (Marquesas Islands) by blowing a conch shell. The occasion was the death of a chief, whose body was decorated and kept until the flesh was ready to fall from the bones and then laid upon a temple or large pile of stones to bleach in the sun. They did not bury their dead. This conch was blown once in twenty minutes both day and night while the body lay in state, and sounded, with its protracted doleful strains, as tho' it came from the regions of despair. Never can I forget the sound. It seems to ring in my ears as I write and revives many heathenish scenes which almost make me shudder at the remembrance. You have a sketch of this old chief *Vokiema* with a long string of whales' teeth around his neck. His father, old Hoge, I never tried to sketch, as he was sick when we arrived there and never could stand long enough to be drawn. Your father was the only medical man there. Hope told him that if he would cure him then he would believe in our God, if not, he would continue to believe in his idols. The poor old cannibal was suffering from an imported disease, for ships had touched there for water and wood

A CANNIBAL CHILD.

Before I leave what was once my home, I will say that a brother of yours was born there, a beautiful babe, named William Nevins from Dr. Nevins of Baltimore, your father's friend, and whose church supported us for several years as their missionaries. The cannibals were delighted with the babe and said they would call him *Hope*, after their dead chief; whatever we might call him. They asked us to leave him with them when we left, and they would afterward send him in some *vakamis* (ship) to us. I replied, I cannot leave him, but perhaps sometime when a man he will come and tell you of the true God whom you now reject. They jumped up and down, clapped their hands and yelled out, *Motaki!* (good).

BOYS' PLAY.

My small magnalia tree bears several flowers this year. One flower is in the house sending its delightful fragrance into every room. The magnificent night-blooming-cereus was in full bloom last evening. You boys used to open the flowers and spread out the stamens and fasten them on your shoulders for epaulettes; it was quite a good imitation. You have learned the use of genuine epaulettes since wearing those imitation ones in childish glee. I remember well how you had some toy wooden-soldiers to play with, and somehow you had a fancy for disjointing and breaking them. When asked why you did so the reply was "It makes me." You have since had ample opportunity to try what stuff soldiers are made of.

THEOLOGICAL SEMINARY.

June 9th. Last evening I went to the Stone Church to the graduating exercises of the (native) Theological school. The speakers did quite well. Mrs. Lydia Dominis played the organ, and the choir of about twenty of either sex was really good: there were some splendid bass, tenor and soprano singers (Hawaiians). The large organ pealed forth its loud tones, and with the voices the sounds echoed and rolled within the lofty walls so that it was quite inspiring.

Old *Naone* sat near me with his white locks and faded looks and extended his hand to grasp mine with a hearty *aloha*. Such sincere, hearty *alohas* are more of a rarity than in former years. Several ministers go out to preach; but it fills my heart with sadness to think how many may fall away.

HAWAIIAN SUNDAY-SCHOOLS.

June 11th. I walked up to Stone Church to see the gathering of white and native Sunday-schools of Honolulu and vicinity. They all met at Fort Street and marched to the church, each school with an appropriate banner. The brass band played, from the gallery and after the school were all seated, Revds. Messrs. Frear and Forbes and Hon. John Kapena made speeches which alternated with singing. Loud peals from the organ and all the schools combined made the walls of Stone Church ring. It was grand. I sat on the *makai* side of the gallery and had a fine view of the two thousand people: it reminded me of a large flower garden. With few exceptions all were well dressed. It reminded me of the beautiful flowers I saw on distant hill-sides in California on my way to the "Geysers" as we passed over what is called the "hog's back." Civilization was in striking contrast with the heathenism of former years. The music, order, cleanliness and bright faces would compare well with any school in America. If they go to church at all many of the fashionables attend Stone Church, where often are seen very stylish garments, hats, etc., mingled with plain dresses and bare feet.

It is a fine place for Sunday-school gatherings, and its internal appearance and external surroundings are quite imposing. The out-districts are the places to see grotesque doings.

At the close of exercises each school went out to its separate place under the trees (which I planted years ago), where rushes were spread on the ground, plates set along in rows, with dishes of fish, *poi*, bread, cakes, fruit or whatever individuals in each church had provided. All sat on the ground, parents and children, and had a general good time, with plenty of gabble a la *Hawaiian*.

The white Sunday-schools were in a separate place, where children sat on the clean, fresh carpet of scattered rushes. The food was on a table and passed around. The few parents who were there sat on benches or stood. Iced lemonade was most refreshing with cold tongue, turkey and various cakes and pies, with coconut candy. Surely you would have enjoyed it.

OAHU COLLEGE.

12*th*. Yesterday was a wearisome day at Punahou (Oahu College) through all the exercises. The school-room was decorated with ferns, *maile* and flowers. The air was filled with sweet odors. The day was pleasant, the grounds green and bright, shaded by algeroba trees. A fountain plays in front of the college building. The stairways were carpeted with a cocoanut mat, and a large cluster of ferns stood in the window at the head of the stairs. The platform was on the *makai* side, on which sat the Examining Committee; in front of them the scholars. At noon the same old bell called and Mr. Pratt invited us to lunch, and we sat down to a long table of good things in the old dining room, now matted and papered.

Speaking, reading, composition and singing closed up the school year.

Mr. Amasa Pratt has done well as President and is to continue at the school.

This morning I have made cake for the Association at the Fort Street Church lecture room, who are to meet there this eve. Ladies provide. Native and white ministers are to be there with their families. They consult in the native language.

Yesterday came off Miss Bingham's examination in the upper room of Stone Church. Quite a large congregation of people. The King and Prince came for a short time. The girls are neatly and simply clad and appeared well, speaking English quite nicely.

A PICTURESQUE SCENE—THE LAME, THE HALT AND THE BLIND.

Last Sabbath the wife of the captain of the *Morning Star* rode with me to Kokuaka or Fisherman's Point. It was necessary to walk on single planks some hundred feet or more, the outside of a fence over the shore of the Pacific, which was bounded by a stone wall. The water is not deep, but restless, as the tide comes in and recedes; enough motion to affect my head a little unpleasantly. We walked over the planks once and returned through native premises, among houses or shanties hustled together near the sea shore; sheds sheltering canoes, nice pieces of which could be bleach in the sun. Some houses with two stories, the lower one some six and a half feet high. We went to the open door of one, for we often call on hearers. Men, women and children were there, some sprawled out on their backs, some on their stomachs; one smoking a pipe, another reading a Bible aloud or in silence; a woman, with lifted arms, slipping over her head a *holoku*; some with broad, open jaws, yawning. Dogs, with many of the company, seemed to rouse from a Sabbath siesta, with expanded mouths in a satisfactory yawn. I noticed one or two canoes, calabashes, containers with salt in them, some mats rolled up, clothing of various kinds hanging across a small rope of *ahuawa*. I cannot name the variety of articles which my eyes glanced over. Then on the ground outside under the verandah, pigs were resting and grunting, seeming, like those inside, to have their siesta disturbed by our presence. As we entered the door, we called out *Aloha!* and many responses were returned, *Aloha!* We said, "Are you going to meeting?" "*Ae*" was the reply, and we passed on. The room upstairs is hired by a Chinaman, whose wife, half white, and three bright children were in a room matted and papered, with a nice four-posted bedstead, mosquito netting, a few chairs and a table. The woman apologized for what she said was "*Nui nui kalepo.*"

Soon from that lower room issued men and women nicely clad, with Sunday clothes and Sunday faces. A woman with white dress and black lace shawl, a jaunty hat with flowers or feathers, gaiter boots on, and a pretty fan and parasol in her hand—all highly perfumed with fancy perfumery, tho' from a room highly scented with dried salt fish or squid. Surely you will recall their disagreeable odor, as I do the sound of the funeral conch in the land of the cannibals. Men came with white or black suits on, clean and whole, polished shoes or boots and bright neckties.

We went a short distance to the little clean, white-washed church. A man opened the door and board windows, then went out to call the people with a conch shell. Another man went for a chair; I sat on a roughly made bench by the small table. Some twenty gathered in the course of half an hour. Some well dressed, all clean, tho' some feet were bare, which is the most comfortable for them in this climate. Two elderly women came in from some house, both lame and blind, leaning upon their canes, with some one near to guide them. I love to talk with and comfort these poor women by encouraging them to love God. Tho' there is darkness here for them, yet with the love of God in their souls, their spiritual vision need not be dim. Their poor, wrinkled, sad faces brighten when they reply *pela no* (that is so). Rev. Mr. Parker had a union meeting that afternoon, so that the stronger ones had gone to it, not knowing that I would be there. The lame and the halt and the blind were left for my meeting, also some others. On this circuit to the out-districts our subject is on temperance. We have a different set of people at each place. We had a pleasant meeting, even the blind women ventured to speak of God's love.

The outlook on one side from the little church is grounds where salt water is collected and salt is formed. It is the support of some natives there. Beyond is the ever-rolling, blue ocean. Algeroba trees lift their heads here and there, and furnish a refreshing shade from the hot summer sun.

Natives are but children of an older growth and need to be led and influenced. I feel confident that there are some simple, trusting Christians among them. Many have gone astray through the influences of foreigners. Poor Kanakas! they are like sheep without shepherds.

A NEW DRINK to supply the place of gruel or barley-water is recommended by the *Times of India*—"congee water," or the liquor in which rice has been boiled. This drink has three excellent qualities—it becomes impregnated with the properties of the rice boiled in it, and thus satisfies hunger; it quenches thirst, and is a capital draught in fever attacks; and lastly, when taken warm in bed, "congee water" is good for bad colds and influenza.

HAMPTON BAR OYSTERS.

Parties wanting fine native Oysters, either open or in the shell, can be supplied at very reasonable prices, by applying to George Dixon, Hampton, Va.

ZELL'S ENCYCLOPEDIA.

New Revised Edition—150 000 articles. 3,000 engravings, and 18 splendid maps. The BEST BOOK of universal knowledge in the language. Now in course of publication. *SPECIMEN* with map sent for 20cts. *AGENTS WANTED.*

THE

Illustrated Christian Weekly

A 12 page journal well adapted to the wants of the people, being an attractive and highly interesting Pictorial and a reliable and high-toned literary Weekly.

It is the only *illustrated* religious Weekly in the land. The voluntary testimonials of the press and public, and its great success, abundantly attest its merits. Send for sample. Now is the time to subscribe! Now subscribers will receive the paper from date of receipt of money to end of Dec., 1877.

PROTECT YOUR BUILDINGS

Which may be done with one-fourth the usual expense, by using our

PATENT SLATE PAINT,

MIXED READY FOR USE.

Fire-proof, Water-proof, Durable, Economical and Ornamental.

A roof may be covered with a very cheap shingle, and by application of this slate be made to last from 20 to 25 years. Old roofs can be patched and coated, looking much better, and lasting longer than new shingles without the slate, for

One-Third the Cost of Reshingling

The expense of slating new shingles is only about the cost of simply laying them. The paint is WATERPROOF against sparks or flying embers, as may be easily tested by any one.

IT STOPS EVERY LEAK,

and for tin or iron has no equal, as it expands by heat, contracts by cold, and NEVER CRACKS nor scales. Roofs covered with Tar Sheathing Felt can be made water-tight at a small expense, and preserved for many years.

This Slate Paint is

EXTREMELY CHEAP.

Two gallons will cover a hundred square feet of shingle roof, while on tin, iron, felt, matched boards or any smooth surface, from two quarts in one gallon are required to 100 square feet of surface, and although the Paint has a heavy body it is easily applied with a brush.

No Tar is used in this Composition,

therefore it neither cracks in Winter, nor runs in Summer.

On decayed shingles it fills up the holes and pores, and gives a new substantial roof that will last for years. CURLED OR WARPED shingles it brings to their places, and keeps them there. It fills up all holes in Felt roofs, stops the leaks—and although a slow dryer, rain does not affect it a few hours after applying. As nearly all paints that are black contain TAR, be sure you obtain our EXSUDINE article, which (for shingle roofs) is

CHOCOLATE COLOR,

when first applied, changing in about a month to a uniform slate color, and is to all intents and purposes SLATE. Or

TIN ROOFS

our red color is usually preferred, as one coat is equal to five of any ordinary paint. For

BRICK WALLS

our BRIGHT RED is the only reliable Stain Paint ever introduced that will effectually prevent dampness from penetrating and discoloring the plaster.

These paints are also largely used on out-houses and fences, or as a priming coat on fine buildings.

Our only colors are CHOCOLATE, RED, BRIGHT RED, and ORANGE.

NEW YORK CASH PRICE LIST.

5 Gallons, can and box.....$5 50
10 " keg.....9 00
20 " half barrel.....16 00
40 " one barrel.....30 00

We have in stock, of our own manufacture, roofing materials, etc., at the following low prices:

100 rolls extra Rubber Roofing at 3 cents per square foot. (Or we will furnish Rubber Roofing, Nails, Caps, and Slate Paint for so entire new roof, at 4½ cents per square foot).

300 rolls 2-ply Tarred Roofing Felt, at 1¾ cents per square foot.

3000 rolls 3-ply Tarred Roofing Felt, at 2¼ cents per square foot.

200 rolls Tarred Sheathing, at ½ cent per square foot.

5000 gallons fine Enamel Paint, mixed ready for use, on inside or outside work, at $2 per gallon.

Send for sample card of colors. All orders must be accompanied with the money or satisfactory city references. No goods shipped C. O. D., unless express charges are guaranteed.

Sample orders solicited.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.
BARNES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NORTHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
BOYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BEER'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY.
PORTER'S CHEMISTRY.
JARVIS' PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBERS'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEARING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,

In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.
BARNES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.

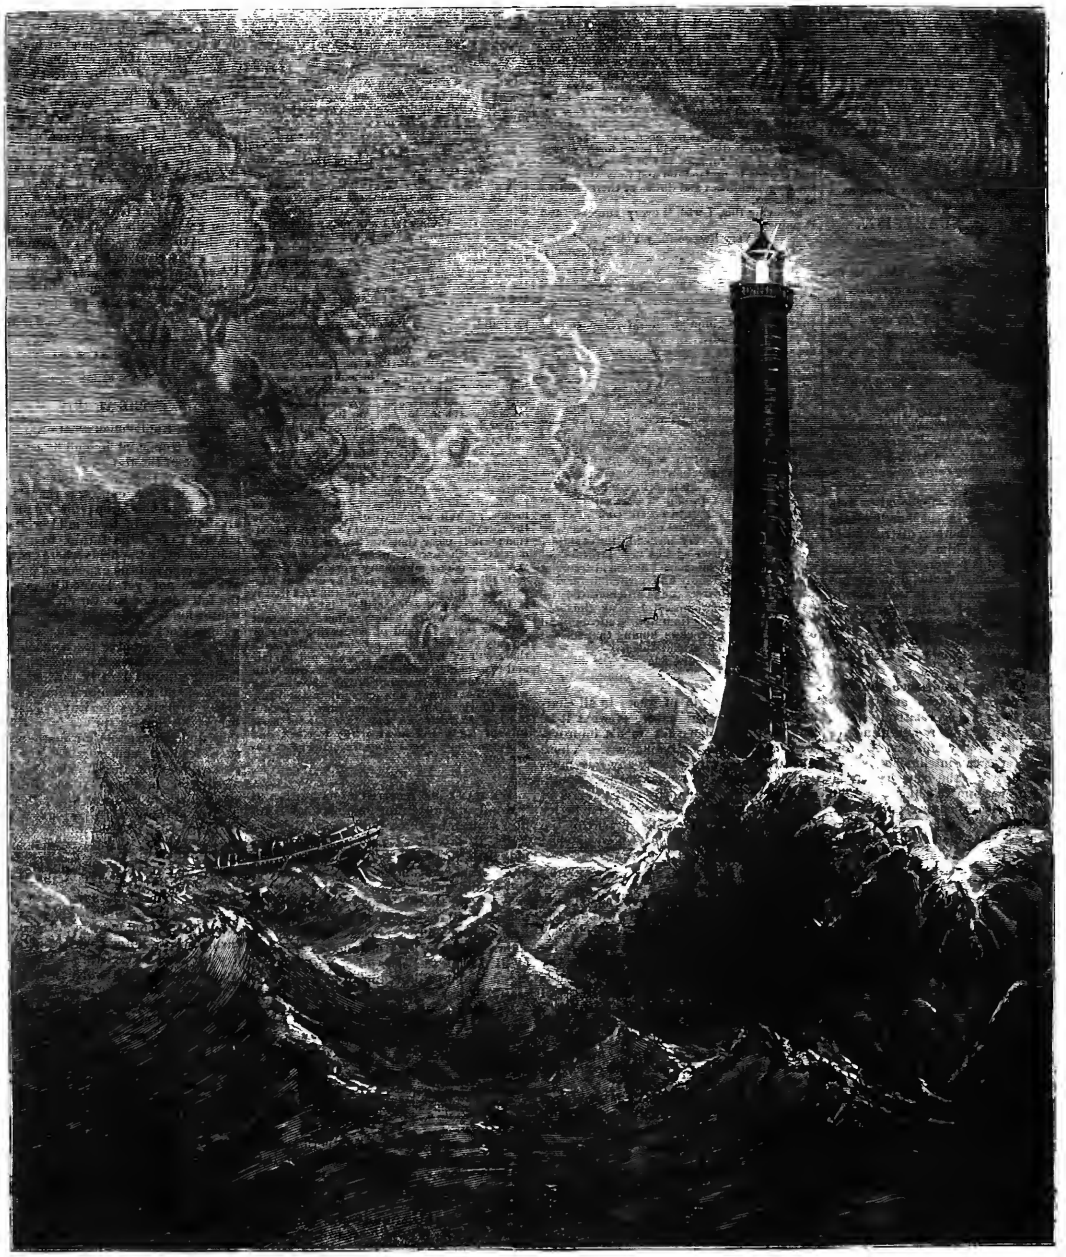
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH

VOL. VI HAMPTON, VA., JANUARY, [illegible] NO. 1.



LIGHT HOUSES.

We [illegible] the sea tossing dark
[illegible] the [illegible] was foul
[illegible] the lights are dark
[illegible] are shining along the shore

[illegible] ships view those towers [illegible] straight.
We [illegible] the [illegible] the angry storm

Light after light [illegible] the [illegible] and length
Of the dangerous reef and the rocks huge
form.

As we [illegible] behind us the fearful spark
Lee from the [illegible] another throws
Its shafts of splendor across the dark
Like the smile of a friend their radiance
grows

When we leave the shore for the wide mid sea,
And traverse the pathless fields afar
When the east and night's [illegible] we see,
And [illegible] ghts of many a [illegible] star

As we sail out into the unknown year
Through the lights are [illegible] red which ruled
the day

And though nights are dark we need not fear.
Light after light will guide our way

And when from the shores of earth and time
We sail out into the wide mid sea,
Surely God's bear in stars sublime
Will guide to the Haven where we would be

HAMPTON, JANUARY, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents aviece.

KNOWLEDGE is power—for good or evil. What will it become in the hands of the negro? asks the Southerner, distrustful of the moral element in him that will determine the use of this power.

That shrewd, half-educated demagogues have made much mischief is well known, but political papers of neither party take any pains to inform the country of the intelligent, thrifty colored men throughout the land who are an honor to their race and country.

Mechanics, farmers, tradesmen, caterers, merchants, lawyers, doctors and clergymen of color form a class relatively small, but numerically large, representing in Louisiana alone twenty millions of property, possessing great intelligence, sound morals and proving the capacity of the negro and the wisdom of educating him.

As with the corresponding white class, they are offset, only in a different ratio, by a worthless class, some of whom are well informed, perhaps college graduates, who bring reproach upon the institutions they represent. One of these advertises himself more than twenty of the better class.

During the three and a half months summer vacation, ending October 1st, the two hundred students of the Hampton Institute scattered as usual throughout the country seeking profitable employment. Eighteen were waiters at the United States Hotel at Saratoga, of whom Mr. John Lucas, head waiter and a well-known caterer of New York, gives a satisfactory account which we print below.

Twenty were employed at the Globe Hotel near the Centennial Grounds, Philadelphia. On one occasion we inquired of the head waiter, Mr. Alexander Miller (white), his opinion, if any, of the advantage of having intelligent waiters. Pointing to a young Hampton student who had never before done waiter duty, he said he was equal to his best professional waiters; that such, as a rule, learned their duties quickly and understood and satisfied people's wants better than routine employes.

Fifteen young men and five young women from this school served as waiters and chamber-maids at the Hygeia Hotel at Fort Monroe, Va. The proprietor, Mr. H. Phœbus, gives the following account of them:

OLD POINT COMFORT, VA., *October 5th*, 1876.

Dear General:—I am in receipt of your note of the 2d inst. asking my opinion of the advantage, if any, of employing educated waiters and chamber-maids in my hotel, particularly with reference to those I had during the past summer, from the students at your institution. It is difficult to estimate the great advantage of having *educated* servants for the discharge of the numerous, arduous and often annoying duties in a house of this kind, because it is so vastly in contrast with the constant apprehension one necessarily feels that *ignorant* servants will prejudice one's interests directly, and prove very objectionable to guests. Of the students at the Normal School who were in service last summer, I cannot speak too highly. Their education seemed not only of the mind, but also of the body, if I may so speak. They were quick in comprehending what was to be done, and prompt in doing it; neat and clean in person and dress; courteous, affable and obliging; quiet and always replying respectfully when spoken to. Of the large majority of them, a well founded complaint never reached my ears, but on the contrary, they demeaned themselves so well that I doubt not every one of them could have obtained, as some of them did, excellent homes in cities, with some of my guests who were attracted by their good qualities. My experience satisfies me that the good seed sown today at your institution will bring forth a rich harvest of faithful men and women, educated and trained to understand and fully appreciate the responsibilities and duties of their position as citizens.

Believing this, I wish it every success, and remain

Very Respectfully Yours,
H. PHOEBUS,

132 West 15th St., NEW YORK, *Oct.* 28, 1876.

GEN. S. C. ARMSTRONG:—

I have received your letter of inquiry in reference to the Hampton students. It affords me great pleasure to say my experience with them has been very pleasant indeed, as waiters in the United States Hotel at Saratoga Springs. So far as my observation has gone I find them all looking forward to something honorable and elevating, not something likely to degrade and demean and lower them in the estimation of the right-minded and well-disposed people, but they aim to attain a position by which they can challange admiration and demand respect. With few exceptions I have found them gentle, peaceable, prompt and faithful in discharging whatever duties were committed to their charge. The effect of the students' education has been very marked; for example, the newspapers have spoken very favorably of them during last summer. I have had frequent inquiries in a friendly and favorable manner about them both from the boarders of the Hotel and the proprietors. I speak thus as a well-wisher of the Hampton students, and bring my letter to a close hoping that success and happiness may attend them.

Sir, I remain yours, &c.,

JOHN LUCAS.

There is a margin of waste in all charity, because human nature is what it is. The best laid plans for men's improvement fail in many individual cases. Those who are helping to elevate any race must expect some sad disappointments. Southerners will find by and by that the risk of giving the negro knowledge is far better than the degradation which is part of the oursed brood that is everywhere hatched out by ignorance.

THERE is need of patience in all mission work. We are likely to die without the sight of a negro civilization. The feverish craving for immediate results that inspired the great efforts and gifts for the first ten years from 1862, was not a working principle, sure of and faithful to its end, but rather a philanthropic dash tending to the re-action which has followed, and to a disappointment, that sprinkling school-houses over the South for a few years did not change the moral condition of the freedmen.

Negro like all civilization, is of a slow growth: it has its periods of action and reaction. Only in the perspective of generations can real progress be seen satisfactorily.

The present period of Anglo-African history is chaotic. There are powerful corrupting influences: morals are suffering while intellect is being sharpened by the discipline of life. Some are saving themselves by hard work; some are being ruined for want of it.

Education is a slowly working leaven in an immense mass whose pervasive directive force cannot be felt generally for many years.

We ought to see, and hope to see the foundations of a negro civilization well laid. It is well for the workers in this cause to remember that they are commencing and not finishing.

The following extract from an essay by the Rev. Dr. 'Maclean, on the "Gradual Conversion of Europe," will interest and instruct many who are asking of the watchmen upon the walls of the Southern Zion, "What of the night?"

"1. The conversion of the old Roman Empire, commenced in Apostolic times, cannot be said to have been in any real degree completed before the year A. D. 395, and even then the single word 'pagan' tells us how much had been left unaccomplished. The winning over of these British Isles, if we commence with the early Missions of the Apostle of Ireland, was marked by a period of wonderful acceleration, followed by a period of no less singular retardation, and cannot be said to have been accomplished before the year A. D. 688. The conversion of central and northern Germany occupied at least two centuries. That of the Scandinavian nations commences in A. D. 800, and does not close before A. D. 1030; that of the Sclavonic family does not begin much before the tenth century, and does not terminate, as we have seen, if it can even be said to terminate then, before the fifteenth or sixteenth.

2. Slow, however, as was the rate of progress, there never was a period during these centuries when the flood was not really rising, though the unobservant eye might not detect it. In the darkest times there were ever some streaks of light, and the heaven destined to quicken the whole lump was never altogether inert or ineffectual. 'Men are impatient and for precipitating things,' but even in the Christianization of the earth it is clear it is not God's way to give at once great results. 'On the contrary,' as has been well said, 'He tries the faith and patience of his people by making them wait for the great day they are longing for; and, indeed, if it were not so, man's love would soon lose itself in the simple gratification of success. And inasmuch as God employs man to convert man, that in the process of conversion, the heart of the converter may be built up in the Faith, it is needful for him that he should wait, and pray, and labor—that he should render himself up in self-sacrifice, still perhaps seeing little, but leaving his labor and his reward with his God.'

3. And if, as is apparent from the retrospect of the period under consideration, the dealings of God's Providence are by graduai steps; if there is 'a plan of things laid out, which, from the nature of it, requires various systems of means, as well as length of time in order to the carrying out of its several parts into execution;' it is clear that we are only deceiving ourselves when we compare sixty or seventy years of modern missionary work with the results that have been achieved by ancient Missions in Europe. We overlook the fact that it is 1,800 years of self-sacrifice, labor, prayer, and devotion which have produced the result we now see. Instead of comparing sixty or seventy years of modern missionary labor with the result of 1,800 years, if we would be fair and reasonable, we should compare them with sixty or seventy years out of the 1,800, during which the Church was engaged in the same work in which she is engaged now. *Revolutions of character in any race cannot come without many influences acting together, and acting not only for a long time, but often imperceptibly.*"

WE HAVE just received a new edition of "Moral Maxims" for schools and families, written by C. C. Baldwin, of Balcony Falls, Rockbridge Co., Va.,—an admirable little pamphlet, original, sensible, pithy, brief, and needed in every school and family in this State.

We hope the little army of Hampton teachers will each of them send for a copy to the above address: price, ten cents. It shows the way to true success in life. M. H. M., of the class of '76, now teaching at Buffalo Forge, thus refers to it in a recent letter:

"I like the country and the people here very much. My school is still flourishing. I have now between thirty and forty pupils and expect a large increase after Christmas. I have introduced into my school a little book called 'Moral Maxims,' written by Mr. Baldwin. I like it very much; it is a kind of moral philosophy on a small scale."

THE WORST elements of Southern society have so long been uncontrolled, that it is scarcely conceivable to a non-resident how large a proportion of the men of property and intelligence are ont of sympathy with their party leadership, and with the Southern press, and take no part in the lawless persecution of negroes in certain states. The existance of this sentiment in favor of law and justice has been alluded to by Mr. Cain, a colored Congressman from South Carolina. In a speech delivered in Congress February 10, 1875, Mr. Cain said: "Take the highest classes, the refined classes, and we have no trouble with them. It is the tar-heels, and the sand-hillers and the dirt-eaters of the South. . . . It is that class who ride at night, who burn school-houses, who drive us from place to place." This testimony of Mr. Cain is corroborated by the common practice of ex-slaves to resort to their former masters for advice and aid. A thousand instances in our own experience go to prove that there is no such race-hatred in ex-slaveholders as there seems to be among Irish toward the negroes. Why, then, do not the wealthy, intelligent, and humane people of the South assert their influence and discourage those "who burn schoolhouses"?

The answer to this question is to be found in that unhappy complication known as the color line in politics. Respectable men are afraid to stir hand or foot for fear of weakening the precarious footing of their party, and falling into the hands of ignorant and incompetent and vicious rulers. It is this fear which has drawn the party lines so sharply that many good men in the South scarcely dare to call their souls their own in political matters. If Providentially the color line should be broken; if it should become safe for good men everywhere to act according to their better judgment, to cultivate genuine liberality, to welcome emigration to every section; then and not till then will terrorism be a thing of the past. Peace for white and black will then be possible, and every man will have a far better chance to rise as high as he deserves.

Agricultural.

THE TURNIP.

Ask an Englishman what crop has been most instrumental in building up the agriculture of the tight little island, and he will answer: "The turnip." American farmers may not expect, perhaps, so great return from this crop; for English farmers, by reason of their mild winters, are enabled to feed the turnip, to a considerable extent, in the fields where grown, thus saving much of the expense of harvesting. We have not yet learned by experience the full value of the turnip as an item of winter fodder, especially for fatting cattle, young stock, horses, and sheep. The writer has in mind a dozen or more prominent sheep raisers, however, who practice feeding turnips largely during the cold months, and with uniform success. Their flocks are always healthy. Their lambs bring the highest prices in spring, and they find the onstom far more profitable than feeding much grain. The famous Scotch beef of the London markets is nearly all produced from turnips and straw; and, so far as we know, the animals mature quite as early as our American, grain-fed beef.

If it pays to feed grain to young and fatting stock, it will certainly pay as well to feed turnips with less grain.

That a partial diet of roots is beneficial to animals none will deny, and this reason, if no other, should direct attention to the turnip crop. After a diet of corn stalks, dry hay, and grain, with what avidity have we all seen the cattle or horses eat a fodder ing of roots! Their craving for green food in winter is akin to that of their master's, and we must supply that craving or experience a loss. In view of the prospective increase of stock fatting, consequent upon the opening of the foreign beef trade, beef producers will do well to investigate the turnip as a fodder crop for extensive use.

We would draw no comparison between turnips and mangolds; for it is the experience of many, that while the mangold is superior for milch cows and swine, the turnip bears off the palm for young stock, horses, fatting cattle and sheep.

Swedes or ruta-bagas may be planted as late as the middle of July with good success, and the flat turnip even in August upon comparatively moist soil. Sown among the corn at the last cultivation, if the corn does not shade the ground too much, or where hills are missing, and in many an open space, the flat turnip will return a good many bushels at a merely nominal cost. In such economies as this are the profits of the farm largely increased. A few littles make up the whole.—*Scientific Farmer.*

PROFITABLE FARMING.—No business occupation, or employment is so sure to be remunerative as farming, if the necessary conditions to success are complied with. Out of nothing nothing comes, and this is as true in agriculture as in any other pursuit. Hundreds of farmers are complaining about poor success; they are expecting something to grow out of nothing. Their fathers and grandfathers have been taking off the cream of the land, and they expect to do the same, when in fact the supply is exhausted. Plant-food has been carried off from the farm so long that there is little if any left to manure crops. Tender plants spring up and grow on air and moisture; they thrive in early spring, but there being no strength in the soil, the scorching sun bakes the ground and dries them up so that there is a small return for all the labor. The soil is not to blame. Nature is not to blame. But the farmer is to blame who expects something to come from nothing. Making the soil rich in plant-food with thorough culture will make farming a remunerative employment.—*Ohio Farmer.*

THE COST OF IDLENESS.

When all the people of the whole country are engaged in productive industry, either directly or indirectly, it must result in general prosperity, whether wages or profits are high or low. If wages are low, capitalists are encouraged, and enterprise and business are pushed forward. If there is a disproportion between capital and labor, and the latter does not get enough, the evil soon regulates itself, by more engaging as managers, and making labor more in demand. This runs up wages. If capitalists and managers make nothing, they cease to hire, wages drop, and many become idle. This is exactly the trouble now; too many persons are out of employment. The evil has been greatly increased by that kind of despotism which has so extensively ruled, known as trades-unions, which are contary to all principles of American freedom, and which the people and their weathercocks, the rulers, would have long ago suppressed, had they not feared losing votes. There are, in the United States, at least 12,000,000 working or producing people. The causes above mentioned have thrown about one-third out of employment, or reduced a larger number to an amount equivalent to one-third; or thrown out 4,000,000 producers. Each of these would earn on an average $300 a year; some more and some less, their food and clothing constituting a part. Multiply the 4,000,000 persons by the $300, and we have a product of no less than $1,200,000,000, the same as actually sunk annually, because those who could earn this sum are idle. A much less sum consumed at the Chicago fire was felt through every State in the Union. It is no wonder then that we have hard times, when so large an amount of what is the same as money is constantly abstracted from the great pile of national prosperity.—*Country Gentleman.*

AGRICULTURE AND SCIENCE.

Agriculture and the world demand more facts, more knowledge, more science. What is already known needs diffusion among farmers, especially among the rising generation. Young men who love the farm and the country have been driven to other pursuits for the greater promise held out to them. And those who advise young men to enter farming as a life pursuit without an education, would place them in the position of a lawyer who knew only law journals and office work, or the clergyman whose only education was his residence in a minister's family.

Farmers need more education to make them better citizens. In their hands rests the well-being of future generations. It is for them to keep the soil productive, that the crops shall meet the requirements of what, at no distant day, may be a superabundant crowd of human beings upon the earth, unless the Malthusian remedies of war and pestilence sweep them off in sufficient numbers to offset the present rapid increase. However much some may decry science, and hold to the sufficiency of practice, they must admit that the practice of the past has greatly deteriorated our farm lands, and even made some districts almost uninhabitable. The sewage of cities is fast piling up on the sea-bottom the fertility of productive soils. This sewage question is one of vast import. China has solved it, but her solution will not answer for our civilization. The guano deposits of Peru, it is said, are already falling, though only thirty-five years have passed since their utilization by other countries. All of the natural fertilizing resources are exhaustible, and what then? Discussion alone might go on forever and not settle a single point. Intelligent investigation is the only means of solving the problem.—*Maine Farmer.*

HAMPTON INSTITUTE LECTURES ON TEACHING.

BY PROF. F. A. ALLEN.

LECTURE V.

SCHOOL REGULATIONS:

1. Their necessity and objects.
2. Characteristics.
3. What they ought to be.

The necessity of school regulations is apparent. It would be impossible to teach without them, as every one who has tried to teach knows. The object of them is not to tyrannize over children, but that we may have order, and secure from the pupils the attention to their studies and recitations that is necessary for their advancement. We may state the case clearly thus:

Necessity and Objects { 1. To secure time for study. 2. To secure time for recitations. 3. To secure time for recesses and interruptions.

All this is so evident that it needs little discussion. A well regulated school, like a well regulated household, moves like clock-work; everything goes smoothly; there is time for everything. An ill regulated one is full of discomfort, and disorder and hurry. A practical and systematic teacher, with tact, can soon find a way to allow some time even for the interruptions that are likely to come. If visitors are likely drop in in the afternoon, you will naturally give that part of the day to the least important, or the least difficult studies—those which will be least affected by an interruption. In any interruption, keep calm yourself; avoid any appearance of excitement and flurry. Your own manner will be reflected in your pupils, whether it be flurried and nervous, or indolent, or wide-awake, and cheerful and self-collected.

Seeing the necessity of school regulations, what then should he their characteristics?

First—they should be founded in justice, and general in their application. A child's sense of justice is very strong. We can all, no doubt, remember how bitterly a wound of it is felt. Make a child feel that he will be treated fairly, and he will submit more cheerfully to strict rules than he would to a less severe discipline from a teacher who did not inspire this confidence. To be just, regulations must be general and impartial in their application. You cannot help loving some pupils better than others, but be very careful not to let your preference become favoritism. Never let your favorites off with poor lessons and poor excuses. And remember that it is the dull child, and the disagreeable child, and the naughty child, who most need your care and patience and love. Your regulations should not be so many or so precise as to interfere with well regulated natural inclinations. No healthy, growing child can or ought to sit still very long at a time, or keep too quiet at play. Pupils themselves have rights that teachers are bound to respect.

School regulations ought, then, to be simple and few; and when made by the teacher should be respected by the pupil. If it is the regulation of the school, for instance, that, at the ringing of a bell, the children shall assemble in the school room after recess, the teacher should expect and demand obedience to that regulation. Nothing is more destructive to discipline than for the pupil to discover that the teachers' rules and their penalties are a dead letter. The teacher will see then, the absolute necessity of making as few rules as possible, and, when made, of requiring strict conformity and prompt obedience. We may say, then, of school regulations:

Characteristics { 1. Founded in justice. 2. Ought not to interfere with well regulated natural inclinations. 3 When made, carried out.

Now as, to what they should be, that will, of course, depend more or less upon circumstances. There are some general principles that may be laid down. As we have said in our first lecture, it is essential to success to have a definite programme of every day's work marked out before hand. This ensures a sense of confidence and composure; you have not to think what to do next, and can give all your time to other things. Do not vary or depart from your programme oftener than is necessary. A little practical experimenting will teach you what the best programme is for your school, better than any rules can. Our first lecture, however, has touched on this point.

It is well to employ signs and signals to control the children in a quiet, unostentatious way. Strokes of the bell, or gentle taps of the ruler, to rise; to march out—and so on. It is not well that the signals should be given too often. In a school where there were nine hundred pupils, at the sound of a bell every child in the building rose in order. At a given signal from the teacher the children marched out in perfect order, and when the boy who sat on the back seat in the fifth story of the building, stepped out of the door, every pupil in the building was out. In other words—it took no longer for the whole school to get out than it took for the boy who sat in the last seat to get out. This shows what can be accomplished by order.

Our next lecture will be on School Books; and, if we have time, Recitations.

Correspondence.

HARRISBURG, VA., *Nov.* 1.

To the Editor of the Southern Workman:

The readers of the Southern Workman accustomed to its tone of charity, and interest in the progress of the world, in the improvement of men everywhere, in every country, and of whatever country they may chance, or rather, by the will of their Father in Heaven may be, will listen with interest to Prof. Gomer's lecture on Africa, its present condition and future prospects. He is a colored man from Michigan, educated in the North; intelligent, manly, and an earnest Christian. Early interested in his own race, and having heard of the darkness and wretchedness of the greater part of them in their native land, he had sought and found an appointment in an American Mission station, on the South-westerly coast, and it was of the tribes with which he came in contact there that he told us, in graphic, interesting style. He had always heard, he said, that the negro was by his nature, by the unchangeable law of his Maker, inferior to the other nations of the earth, and unable to rise above the low standard nature herself ordained. This, his five years among them had utterly disproven. The masses are indeed sunk in the lowest idolatry, devil worship, a pitiable attempt to propitiate the evil genius, some deep instinct taught them to dread—with no one to point to the only way in which we can escape his power, being their only idea of religion. Many of the inferior deities were feared, and to the utmost of their simple means guarded against and appeased. But when circumstances place them in the British schools, under the influence of religion, and the light of the beams of the "Sun of Righteousness," they have become successful and even distinguished ministers, lawyers, doctors, merchants and officers of the English government. Many are very wealthy, and in business capacity, honor and strict integrity show that no quality is wanting to make him the equal of his companions in the same department anywhere in the world. He gave interesting accounts of the British Colony of Sierra Leone, with its fine schools, churches, and manufactories, but showed how the one thing left undone, that of teaching the natives how to cultivate the fertile land, lying in such abundance all around them, in a sensible and scientific manner, left them with all the tastes and habits of civilized people, but with no means of gaining a living that would enable them to be gratified. Teaching and trading are the only "professions" open to them. And to establish in the missions, in connection with the church, such schools as Hampton Agricultural College," where the boys and girls rescued from the wretchedness of their heathen parents, shall be taught useful, active, self-reliant industries, is the work first and most important to be done in the effort to really benefit Africa. To teach men to clear acres of rich land, instead of cutting trees here and there; to use the plow, instead of the little hand-hoe, which is with the axe and a kind of cutlass their only farming implement; to plant the rice in clean, well plowed fields, and to cut with scythe or reaper instead of now cutting each head with the sharpened reed held in one hand while the other holds the poor little crop so wearily planted and harvested; and then to raise, as he so well can on land so fertile, and in climate so mild, abundant crops of rice, cocoa, arrow-root, potatoes, and anything else he may choose, to feed and clothe his family, build his house and live as any man can and ought to do. To go to Africa with the Bible in one hand and the plow in the other. He spoke with great interest of "Hampton," and said he hoped to get graduates from that successful effort to help them in their yet untried attempt in the same direction. Mr. Gomer's lecture is both interesting and instructive, and rouses in the breast of any one who wishes to assist in the great work of spreading the gospel, and improving the heathen places of the world, an earnest desire to give him a plow, a dollar, or an earnest prayer for success in this interesting field of labor. The Rev. Mr. Evans who had also been at an African Mission station, gave an interesting lecture upon the religious, if such it may be called, condition of the country, and of the peculiar societies, and superstitions in which they are from their birth imbued, and showed us many of the gods, charms for and against different things to be feared or desired. An hour could scarcely be better, or more agreeably spent than in listening to these simple, earnest servants of the one true and holy God, as they told of the great need for the knowledge of His love and mercy by the African tribes near the Sherbro Mission.

A letter to the Southern Workman from a Southern Lady.

There is nothing more interesting at the Centennial Exhibition, at least to the young American, than the Government building, where are to be seen guns of all kinds, from the small, light shot gun to the formidable cannon that makes one shiver to look at it, and long for the time when "nations shall not learn war any more." Pape showed me the great improvement in the light and perfect fowling pieces and shot guns we have now, upon the heavy, slow and cumbrous musket and carbine that our forefathers used with so much effect a hundred years ago. There were figures dressed in the uniform of the different branches of our service, naval and army, infantry men with knapsack, canteen, blanket, bayonet and gun; artillery men beside their gun, looking ready to hurry it on or off the field as the moment might require; jolly tars beside their pretty ships whose decks were so clean, and rigging and sails all so complete, and the gay cavalry man with pistol and sabre, canteen and bugle, mounted on the great wooden horse, looked like Gen. Marion himself. Then there were all kinds of animals, stuffed and looking dangerously life-like: buffalo and bison, elk and musk ox, great grizzly and black bears, singly and in families, huge sea-lions and seal, deer of all kinds and sizes—the pretty deer of our own Virginia hills and woods, the mule deer and large deer of the Rocky mountains, the long-wooled sheep and fine goat of the west, the prairie dog, the hungry wolf and the wild-cat, and many others, while near this department were the skins of various animals, beautifully dressed to show the fur our country could furnish, or tanned to show the delicate or immensely strong and thick leather that it could supply. Beautiful cases of stuffed birds, from the tiny humming bird to the stately eagle who perched upon the highest arch of the building, inspired respect and admiration; lovely shells, among them the many kinds used in the manufacture of buttons, inlaid work &c., and valuable cases of minerals, lead, iron, copper, silver, and gold showed the vast resources of our great young nation. We bowed beneath the flag that waved above us and remembered thankfully that the one great stain and sin of slavery had been removed, and prayed that as one country all her citizens might share in her peace and prosperity; and as the blessings of liberty and education were extended to all, she might go on in her great march of glory and honor, and be ever as she is now—a bright and shining light amid the sin and darkness of the world.

At Home.

A HOUSE OF OUR OWN.

Next to being married to the right person, there is nothing so important in one's life as to live under one's own roof. There is something more than a poetical charm in the expression of the wife writing to a friend, who said: "We have our cozy house; it is thrice dear to us because it is our own. We have bought it with the savings of our earnings. Many were the soda fountains, the confectionary saloons and the necessaries of the market we had to pass, many a time my noble husband denied himself of the comfort of tobacco, the refreshing draught of beer, wore his old clothes, and even petched up boots; and I, O me! made my old bonnet do, wore the plainest clothes, did the plainest cooking. Saving was the order of the house, and to have a home of our own had been our united aim. Now we have it. There is no landlord troubling us with raising the rent, and exacting this and that. There is no ear harbored in our bosom that in sickness or old age we will be thrown out of house and home, and the money we have saved which otherwise would have gone to pay rent is sufficient to keep us in comfort in the winter days of life."

WATCH THE CHILDREN'S FEET.—The following advice from the New York *Evening Post* is very important. Let every mother remember it:

"Life-long discomfort and sudden death often come to children through the inattention or carelessness of the parents. A child should never be allowed to go to sleep with cold feet; the thing to be last attended to is to see that the feet are dry and warm. Neglect of this has often resulted in a dangerous attack of croup, diptheria or a fatal sore throat. Always on coming from school, on entering the house from a visit or errand in rainy, muddy or thawy weather, the child should remove its shoes, and the mother should herself ascertain whether the stockings are the least damp. If they are, they should be taken off, the feet held before the fire and rubbed with the hands till perfectly dry, and another pair of stockings and another pair of shoes put on. The reserve shoes and stocking should be kept where they are good and dry, so as to be ready for use on a moment's notice."

CURE FOR LOCKJAW.—A simple remedy for lockjaw is to hold the wounded part in the smoke of burning wool.—*Cin. Enq.*

CHRISTMAS.

BY CHARLOTTE M. PACKARD.

What shall we bring the Stranger.
Born upon Christmas day?
A star, the heavens lend Him,
Angels with songs attend Him,
Turn not, O earth, away.

The souls of men are weary.
On blinding paths they go:
The night hangs murk and dreary,
All sounds are full of woe;
Yet high the herald splendor breaks,
The choral melody awakes,
For in the Christmas morn
Is the Deliverer born!

Draw near, ye sin-defiled,
Look on the Sinless Child!
He comes to such as ye,
Captive, to set you free,
Wounded, to heal your pain;
Lost, to reclaim again.

What shall we bring? Our gold is dust,
His always, ours but in trust.
Our honors to enrich his fame
Who bears o'er all the highest name.
What can these poor hands bring
Unto creation's King?

Love He will own and take
For His most holy sake!
He in whose boundless heart
Love's purest currents start.
Asks of each soul again its store,
Asks the one guerdon meet
Poured at his blessed feet.
Rich—for love's sake
Himself made poor!

THE SECRET DOOR.

(A Christmas Story of Two Hundred Years Ago.)

BY SUSAN COOLIDGE.

Knowle, in Kent, is an ancient manor-house. It stands knee-deep in rich garden and pasture lands, with hay-fields and apple-orchards stretching beyond, and solemn oak woods which whisper and shake their wise heads when the wind blows, as though possessed of secrets which must not be spoken.

Very much as it looks to-day, it looked two hundred and thirty years ago, when Charles the First was king of England. That was the Charles who had his head cut off, you may remember. Blue Christmas smokes curled from the twisted chimneys in 1645, just as they will this year if the world lasts a month longer. The same dinnery fragrance filled the air, for good cheer smells pretty much alike in all ages and the world over. A few changes there may be—thicker trees, beds of gay flowers which were not known in that day; and where once the moat—a ditch-like stream of green water covered with weeds and scum—ran round the walls, is now a trimly cut border of verdant turf. But these changes are improvements, and in all important respects the house keeps its old look, undisturbed by modern times and ways.

In the same nursery where modern boys and girls eat, sleep and learn their A, B, C to-day, two children lived—little Ralph Tresham and his sister Henrietta. Quaint, old-fashioned creatures they would look to us now; but, in spite of their formal dresses and speech, they were bright and merry and happy as any children you can find among your acquaintances. Ralph's name was pronounced "Rafe," and he always called his sister "Hexie."

Christmas did not come to Knowle in its usual bright shape in 1645. Gloom and sadness and anxiety overshadowed the house; and though the little ones did not understand what the cause of the anxiety was, they felt something wrong, and went about quietly whispering to each other in corners, instead of whooping and laughing, as bad been their wont. They had eaten their Christmas beef, and toasted the king in a thimbleful of wine, as usual, but their mother cried when they did so; and Joyce, the old butler, had carried off the pudding with a face like a funeral. So, after dinner, they crept away to the nursery, and there, by the window, began a long whispering talk. Hexie had something very exciting to tell.

"Nurse thought I was asleep," she said, "but I was n't quite; and when they began to talk I woke up. That was n't wrong, was it, Rafe? I could n't sleep when I could n't, could I?"

"I suppose not; but you need n't have listened," said Rafe, whose notions about honor were very strict.

"I did pull the pillow over my ear, but the words would get in," went on Henrietta, piteously. "And it was so interesting. Did you know there were such creatures as Bogies, Rafe? Dorothy thinks we have got one in our house, and that its hole is in the great gallery, because once when she was there dusting the armor, she heard a queer noise in the wall, and what else could it be? It eats a great deal, does the Bogie. That's the reason nurse is sure we have got one. It ate all the cold sheep's-head yesterday, and the day before half the big pasty. No victual is safe in the larder, the Bogie has such a big appetite, nurse says."

"I remember about the sheep's-head," said Rafe, meditatively. "Almost all of it was left, and I looked to see it come in cold; but when I asked, Joyce said there was none. Cold sheep's-head is very good. Do you remember how much Humphrey used to like it?"

"I don't remember exactly, it is so long ago," replied Hexie. "How long is it, brother?—since Humphrey went away, I mean. Won't he ever come back?"

"I asked Winifred once, but she only said, 'God knew,' that nothing had been heard of him since the battle when the king was taken. He might be dead, or he might be escaped into foreign parts—and then she cried, oh, so hard, Hexie! Poor Humphrey! I hope he is n't dead. But, about the Bogie, how curious it must be to meet one! Oh, I say, let us go to the gallery now, and see if we hear any strange noises there. Will you?"

"Oh, Rafe! I'm afraid. I do'nt quite like — —"

"But you can't be afraid if I'm there," said Rafe, valiantly; "besides, I'll put on Humphrey's old sword which he left behind. Then if the Bogie comes—we shall see!"

Rafe spoke like a conquering hero, Hexie thought; so, though she trembled, she made no further objection, but stood by while he lifted down the sword, helped to fasten its belt over his shoulder, and followed along the passage which led to the gallery. The heavy sword clattered and rattled as it dragged on the floor, and the sound was echoed in a ghostly way, which renewed Hexie's fears.

"Rafe! Rafe! let us go back!" she cried.

"Go back yourself if you are afraid," replied Ralph, stoutly; and as going back alone through the dim passage seemed just then worse than staying where she was, Hexie stayed with her valiant brother.

Very softly they unlatched the gallery door, and stole in. It was a long, lofty apartment, paneled with cedar-wood, to which time had given a beautiful light-brown color. The ceiling, of the same wood, was carved, here and there, with shields, coats of arms, and other devices. There was little furniture: one tall cabinet, a few high-backed Dutch chairs, and some portraits hanging on the walls. The sun, not yet quite set, poured a stream of red light across the polished floor, leaving the far corners and the empty spaces formidably dusk. The children had seldom been in the gallery at this hour and it looked to them almost like a strange place, not at all as it did at noonday when they came to jump up and down the slippery floor, and play hide-and-seek in the corners which now seemed so dark and dismal.

Even Rafe felt the difference, and shivered in spite of his bold heart and the big sword by his side. Timidly they went forward, hushing their footsteps and peering furtively into the shadows. Suddenly Hexie stopped with a little scream.

Close to them stood a huge suit of armor, larger and taller than a man. The empty eye-holes of the helmet glared out quite like real eyes, and the whole figure was terrible enough to frighten any little girl. But it was not at the armor that Hexie screamed; the iron man was an old friend of the children's. Many a game of hide-and-seek had they played around, and behind, and even inside him; for Humphrey had contrived a cunning way by which the figure could be taken to pieces and put together again; and more than once Rafe had been popped inside, and had lain shaking with laughter while Hexie vainly searched for him through all the gallery. This had not happened lately, for Rafe was hardly strong enough to manage by himself the screws and hinges which opened the armor; but he knew the iron man too well to scream at him, and so did Hexie. The object which excited her terror was something different, and so strange and surprising that it is no wonder she screamed.

CHRISTMAS.

Close by the armor, half hidden by a curtain of heavy tapestry, was an open door, where never door had been known to be. It stood ajar, and dimly visible inside was a narrow staircase winding upward.

"The hole of the Bogie!" gasped Hexie, clutching at Rafe's arm. He started, and felt for the sword. It rattled fearfully, and the sound completed Hexie's terror. She burst away, flew like a scared lapwing down the gallery, along the passages, and never stopped until she reached the nursery and her own bed, where, with two pillows and the quilt drawn over her head, she lay sobbing bitterly at the thought of Ralph left behind, to be eaten perhaps by the Bogie! Poor little Hexie!

Ralph, meanwhile, stood his ground. His heart beat very fast, but he would not run away,—that was for girls. It must be owned, however, that when a moment later the sound of muffled voices became audible down the stairs, he trembled extremely, and was guilty of the unmanlike act of hiding behind the curtain. He was only ten years old, which must plead his excuse with bigger boys who are confident that they could never, under any circumstances, hide themselves or be afraid.

The voices drew nearer, steps sounded, and two figures came out of the narrow door-way. Could there be two Bogies? No wonder they ate so much. But in another minute all thought of the Bogies vanished from Ralph's mind, for in one of the figures he recognized his own sister Winifred.

Her companion was a man. There was something familiar in his form. It moved forward, and Ralph jumped so that the big sword rattled again. Bogie number two was his brother Humphrey, mourned as dead ever since the summer before, when so many brave gentlemen gave up their lives for King Charles at the battle of Naseby.

"What noise was that?" whispered Winifred, fearfully.

"Some sound from below," replied Humphrey, after listening a moment. "Must you go, Winnie?"

"I must, dear Humphrey. I dare not absent myself longer lest I be missed and suspected. Oh, if to-morrow were but over, and you safe on the French lugger and over the sea! I cannot breathe while this hiding and danger go on."

"I suppose I ought to be glad also," said Humphrey, ruefully; "but to me that French lugger means exile, and loneliness, and poverty, for the rest of my life, perhaps. Better have laid down my life with the rest at Naseby, in striking one last blow for the king."

"Don't, don't speak so!" protested Winifred, tearfully. "You are alive, thank God; and once these wars are over we may rejoin you, and have a happy home somewhere, if not in the land of our fathers. Now, dear Humphrey, have you all you need for the night?"

"Christmas cheer," said Humphrey, in a would-be cheerful voice. "Beef and ale,—what better fare could be? You are a gallant provider, my Winnie, and there is need, for since I have laid in that hole with nothing else to do, my appetite has raged like a wolf. That sheep's-head was wondrous savory. I say though, Winnie, what do the servants think of the famine I create in the larder?"

"Oh, the stupid creatures fancy that a Bogie has taken up his residence here. A very hungry Bogie, Joyce calls the creature!"

The brother and sister laughed; then they kissed each other.

"Good-night, dearest Winifred."

"Good-night, brother;" and Humphrey vanished up the stairs. Winifred lingered a moment; then, as if remembering something, opened the door again and ran after him. Ralph marked that she laid her hand on a particular boss in the carved wainscot, and pressed it in hard, whereon the door sprang open. He stole out, laid his hand on the same boss, and felt the spring give way under his touch. Some undefined idea of stealing in later, to make Humphrey a visit, was in his head; but he heard Winifred returning, and hurried out of the gallery. Putting back the sword in its place, he entered the nursery. No Hexie was visible, but a sobbing sound drew his attention to a heap on the bed.

"Is that you, Hexie? Why, what are you crying about?" pulling away the pillow which she held tight.

"Oh, Rafe! Then the Bogie did n't eat you, after all?" And Hexie buried her tear-stained face in his shoulder.

"Bogie! Nonsense! There are no such things as Bogies!"

"What was it, then, that lived up that dreadful stairs?"

"I can't tell you; only it was nothing at all dreadful. And, Hexie, don't say a word about that door to any one, will you? It might make great trouble if you did."

"I did tell Deborah, when she fetched the candle and asked why I cried, that I saw a strange door in the gallery," faltered Hexie, truthful, though penitent.

"Oh! Hexie, how could you? A don't like Deborah, and her father is a crop-eared knave. Humphrey said so one day. How could you talk to her about the door, Hexie?"

"I—don't know. I was frightened, and she asked me," sobbed Hexie. "Will it do any harm, Rafe?"

"It may," said Rafe, gloomily. "But don't cry, Hexie. You meant no harm, at all events."

"Oh, don't speak so gravely and so like Joyce," said Hexie, much troubled. She cried herself to sleep that night. Deborah, who undressed her, asked many questions about the gallery and the door.

"It was very dark, and perhaps she mistook,"—that was all Hexie could be made to say.

Ralph was disturbed and wekeful, and slept later than usual next morning. He jumped up in a hurry and made what haste he could with dressing and breakfast, but it seemed as though they never took so much time before; and all the while he ate he was conscious of the stir and bustle in the house, which excited his curiosity very much. Knocking—the sound of feet—something unusual was going on.

As soon as possible he slipped away from the nurse and ran to the gallery. The door was half open. He looked in, and stood still with terror. Men, in brown uniforms and steel caps, were there sounding the walls and tapping the floor-boards with staves. The gallery seemed full of them, though when Rafe counted there were but five.

"This man of iron was, in all likelihood, a Malignant also," he heard one of them say, striking the armor with his fist.

"He is somewhat old for that. Methinks that is armor of the time of that man of blood, Henry the Eighth. Move it aside, Jotham, that we may search the farther panel."

So the heavy figure was thrust into a corner, and the men went on tapping with their wands. Rafe groaned within himself when he heard them declare that the wall sounded hollow, and saw them searching for a spring. Twenty times it seemed as though they must have lighted on the right piece. Twenty times they just missed it.

"We were ill advised to come without tools," declared the man who seemed leader of the party. "Come thou to my shop, Peter Kettle, and thou, Bartimeus and Zerrubabel, and we will fetch such things as are needful. Jotham, stay thou here, to see that no men escapeth from the concealment behind the wall."

So four of the men went away, leaving Jotham striding up and down as on guard. Presently came a shout from beneath the window:

"Jotham! our leader hath dropped his pouch in which are the keys of the smithy. Hasten and bring it to the outer door."

"Aye, aye!" answered Jotham, and, pouch in hand, he ran down stairs. Now was Rafe's opportunity. Like a flash he was across the gallery, his hand on the boss. The door flew open, and he fell into the arms of Humphrey, who, sword in hand and teeth set, stood on the lower step of the staircase, prepared to sell his liberty as dearly as possible.

"Rafe! little Rafe!" he exclaimed.

"Hush! The man will come back," panted Rafe. "Come away—hide—oh, where?" Then with a sudden inspiration he dragged his brother toward the iron man. "Get inside," he cried. "They will never think of searching there! Oh, Humphrey—make haste! Get inside!"

There was no time to be lost. With the speed of desperation, Humphrey unscrewed, lifted, stepped inside the armor. Rafe slipped the fastenings together, whispered, "shut your eyes," and flew back to his hiding-place. Just in time, for Jotham's step was on the stair, and next moment he entered the gallery, and resumed his march up and down, little dreaming that the man sought for was peeping through the the helmet holes at him, not three feet away.

Presently the other soldiers came back with hammers and wrenches, and in a short time the beautiful wainscot, split into pieces, lay on the floor. Suddenly there was a shout. The secret door had flown open, and the staircase stood revealed. Four of the men, with pikes and pistols, prepared to ascend, while the fifth guarded the opening below.

At that moment Winifred entered the gallery from the farther end. She turned deadly pale when she saw the open door and the men.

"Oh! Heaven have mercy!" she cried, and dropped half fainting into a chair.

Rafe darted across the floor and seized her hand.

"Hush," he whispered. "Don't say a word, sister. *He* is safe."

"Hs? Who?" cried the amazed Winifred.

But now voices sounded from above. The men were coming down. Winifred rallied her courage, rose, and went forward. She was very white still, but she spoke in a steady voice. Her two brothers, Humphrey in his hiding-place, and little Rafe by her side, both admired her greatly.

"What is the meaning of this, Jotham Green?" she demanded. "By what warrant do you enter and spoil our house?"

"By the warrant which all true men have to search for traitors," said Jotham.

"You will find none such here," responded Winifred, firmly.

"We find the lurking-place in which one such hee doubtless lain," said Zerrubabel. "Where holes exist, look out for vermin."

"You are less than civil, neighbor. An old house like this has many strange nooks and corners of which the inhabitants have neither

BURNING OF THE BROOKLYN THEATRE.

Hexie died an aged woman before any of us were born. But still the beautiful old manor-house stands amid its gardens and pasture lands, with the silvery look of time on its gray walls. Still the armed figure keeps guard by the secret staircase, the tapestry hangs in the old heavy folds, evening reddens the cedar walls and the polished floor, and everything occupies the same place and wears the same look that it did when little Rafe played the man in that gallery, and saved his brother Humphrey, more than two hundred years ago.—*St. Nicholas.*

HOUSE AND HOME.

CARE OF THE SICK.

To all families, but especially to those where there are little children, sickness is sure to come in one form or another, and no wife and mother should feel that she has done her duty until she has trained herself to be a gentle and careful nurse. Furthermore, it is undoubtedly true that a large proportion of the illness which we so much dread may be averted or greatly modified by intelligent and watchful care, and as "prevention is better than cure," the first thing which we need to learn is how to prevent. On that point I have already said much to you, but shall once more repeat briefly some of the more important rules which have been found to be essential to the prevention of disease. In the first place, then, you must be *clean*, in your house, in your clothing, in your body and in your soul. Your house, its cellar, outbuildings, drainage, etc., must be clean, or else the poisonous gases which emanate from decay of any and all kinds, will produce fevers and choleraic diseases. Your clothing and your body must be clean or you will be preyed upon by skin diseases and all the ailments which arise from a stoppage of the pores of the skin; and, last of all, your soul must be clean, because there is no more frequent or prolific cause of disease and physical degeneration than vice and immorality.

Secondly, you must have good and well-cooked food, which you must eat regularly and in reasonable quantities, as excesses in eating or drinking sow the seed for a harvest of aches and pains, and you must be careful that the water which you drink and otherwise use, is pure, that is, is free from filth of all kinds, from organic matter or mineral salts. Thirdly, you must be clothed with due regard to the changing seasons, must have plenty of fresh air to breathe both by day and night, and, finally, must keep both mind and body in a state of wholesome activity, for work, wholesome, well-regulated work, is a most valuable safeguard against many kinds of illness.

A due attention to these rules will undoubtedly enable both individuals and communities to avoid many of the diseases (especially those that usually occur in epidemic forms) which have hitherto been considered inevitable; but even then there will remain ample need for good nursing and any woman who really knows how to nurse will always find plenty of work ready to her hand. I do not, of course, mean to say that a woman who has the care of a household upon her, should be called upon to be also a trained nurse, but I do believe that almost any ordinarily intelligent woman can, if she will rightly use her opportunities and faculties, learn to understand so well the symptoms and treatment of any common illness as to be able to prevent and alleviate much suffering and often to save from death. Take, for example, what is called a "common cold," (which, by-the-way, is one of the most futile sources of illness, especially in cold climates), and let us see what can be done to prevent or cure it. Carefulness in regard to clothing, avoidance of drafts and sudden chills, and a habit of being much in the fresh air, will do a good deal in the way of prevention, and when the cold is fairly caught a little judicious care at the outset will often prevent the long illnesses which so frequently follow neglected colds. The requisites are warmth, an even temperature, light food, and good air. It is well to give a hot bath, to put the feet in hot mustard water, to give hot drinks, if the cold is on the chest to put on a mustard plaster, if it is in the head to steam with hot water with a little camphor in it, taking care always to prevent any chill from following the profuse perspiration. The bowels should be kept open, the head cool and the feet warm, and a day or two of this sort of treatment will usually break up even a heavy cold. In the case of fever, again, the stomach and bowels must be regulated as quickly as possible, light, nourishing food, such as beef-tea, chicken or mutton broth, rice, milk, etc., should be given; the patient must be kept quiet in a darkened room with the head cool and feet warm, while ice or cold water may be frequently given. Diarrhœa or dysentery demand perfect quiet, the best thing to be done in many cases being simply to put the patient to bed and feed him or her on arrowroot, rice and rice water, beef-tea, etc.,—giving small quantities at a time. All derangements of the stomach, inflammations, etc., require the same treatment, the principle being that rest and light food give Nature a chance to effect her own cure, and Nature is by far the best physician we can employ. Medicines of any kind should rarely be given without the advice of a physician and never unless you are thoroughly familiar with their action. There are times, of course, when quick action is necessary, as in the case of croup, when ipecac should at once be given in sufficient quantities to produce vomiting, or in colic, when a dose of castor-oil is always a safe remedy; but usually it is best to get the advice of a good doctor before giving any medicine, for when you begin to administer drugs about which you know little or nothing you are playing with edged tools.

When you have a patient to take care of who is confined to the bed, there are certain things to be done, no matter what the illness may be, which are the foundation of good nursing. You must keep the air fresh by opening a window (not a door) and shielding the patient from the draft. If the weather is cold you can either leave the window on a crack for some time, or you can open it wide for a few minutes, as seems best; if the weather is mild it is best to keep one window constantly open. You must change the bed-linen frequently, and this can be done even with a very sick patient, if you can get some one to help you by raising the invalid for a moment while you pull out the soiled sheet and put on a clean one, rolling it up and slipping it quickly under the slightly-raised body of the patient who can lie upon one side of the bed while you make the other. No slops of any kind should be permitted to remain in the room for a moment, and it is well to use some disinfectant, such as carbolic acid or chloride of lime, remembering, however, that cleanliness is the only really effectual disinfectant. The patient should be kept quiet and in acute cases should never be allowed to see strangers or to become excited by talking, etc., while the nurse herself should wear a dress of some soft material which will not rustle, and should speak always in a low tone and gentle voice, humoring but at the same time controlling the patient. The room should be darkened, or at least the patient's eyes should be shaded from the light, and neatness and order should be the universal rule. Feather beds should never be used in illness, mattresses being on all accounts better, and the bed covering should be light, as a weight of clothing is very oppressive to an invalid. Obedience to the doctor's orders and constant watchfulness of symptoms are essential, and at all times it must be remembered that sick people are like children and require to be treated with great gentleness, but also with firmness.

The work of a nurse is for many reasons very difficult and trying; but the reward is great, and any woman who learns to be a good nurse will find infinite pleasure in the consciousness of her ability to alleviate and prevent suffering, and her increased power to do good to others.

COOKERY.

When one has abundance of good material and is obliged to economize neither in time nor labor, it is not a difficult matter to become a good cook, but the real test of a woman's ability in this department of household labor, lies in the results she can obtain from a few inexpensive materials with comparatively small outlay of either time or labor. The first step in the right direction is to thoroughly understand the importance of good cookery to the health and comfort of a family, and before we go into details, I should like to make clear to you the principles which underlie what is rightly called the "art" of cookery.

You are probably sufficiently familiar with the action of your own stomachs to know that anything which irritates them produces, in a greater or less degree, general derangement and illness, and the acute forms of such derangement are probably pretty well known to you. But, while you are aware that unwholesome or badly cooked food is almost always the cause of these acute troubles, you perhaps do not know that such food may, and frequently does produce a slow and subtle irritation which affects the whole constitution, mental and physical, and in time is capable of causing the degeneration of a whole race. "Dyspepsia" is the name which covers the thousand and one forms of this irritation, and dyspepsia means simply that the stomach cannot digest the food that is put into it, and that this undigested food instead of supplying the nourishment which is the result of complete digestion, disturbs the order of the whole system and lays the foundation of numberless diseases. Now the common, one may almost say universal, cause of dyspepsia is that food which is either unwholesome in itself or made so by improper cookery is put into stomachs to which Nature has given the ability to resent the abuse.

This law of Nature is so unyielding that if you attempt to make your stomach do work for which it was not intended, your whole body will sooner or later suffer the consequences, and nothing is more certain than that men and women who desire to be healthy themselves or to have healthy children, must learn to make their food and its preparation a matter of reasonable consideration. It is possible that this principle of the physiological necessity of good cookery would be sufficient for my present purpose, but there is still another fact which I want you to notice, and that is, that the highest civilization always includes great care in the choice and preparation of food. Uncivilized races live like animals, eating anything they can get, at any time and in any way; but the gradual ascent of humanity in the scale of civilizatiou is marked always by an increase of care in respect to food, both as regards material and cookery. So long as you eat like animals, that is, irregularly, coarsely and carelessly, just so long you are, and will remain uncivilized, end, therefore, if you mean to civilize yourselves thoroughly, it follows that you must become refined and careful in regard to your food and its preparation. You have then, as you see, two good reasons for trying to edncate yourselves in respect to your habits of eating and drinking,—1st, that in order to be really and permanently healthy you must have good and well-cooked food; 2d, that you can never be really civilized until you learn to be refined and careful as regards your food.

Now, practically, it is upon women rather than upon men thet the hurden of this responsibility falls, and women, in this conntry at least, have few more useful fields of work than the kitchen. For most of the women to whom I am writing, economy, of time, of money, and of labor, is a necessity, and it is only, as I have said hefore, when you have learned to appreciate the importance of your work to yonrselves and to others, that you will do it well. I hope, therefore, that you will believe me when I tell you, that when you have learned, from the materials at your command, to choose and prepere for your husband and children good and wholesome food, you have done a great thing; you are helping them and yonrself in ways of which you do not dream If you are in earnest in your desire to do this you must begin with a few simple facts which can be easily stated and remembered, and you must determine to work intelligently and by rule, not hlindly and by "guess."

In the first place, then, you need to learn how to choose and cook meat, fish, vegetables and the different kinds of grain, and a certain amonnt of real study is necessary to do this. In regard to meats, for example, you should know that beef, mntton and venison are more wholesome than veal or pork, that almost all kinds of poultry and game are good and nourishing, and that in preparing any kind of meat it is better to roast, broil or boil than to fry, as by the latter process the article cooked, whatever it may be, becomes soeked with the melted grease and is, in proportion, indigestible. Tough pieces of all meats except pork can be used for soups, and hones and odds and ends of cold or uncooked meat should be kept for the same purpose. These soups, which can be made with cheap vegetahles, as cahbege, onions, potatoes, etc., and with very little or no meat, are wholesome, cheap, and afford an agreeable variety. Fish, for all who live on the sea-coast or in the neighborhood of rivers and lakes, is also a cheep and wholesome food, and as in the case of meat, it can he hroiled, boiled, haked or fried, while when salted or smoked it provides material for many different dishes. As to vegetables and fruits, the variety, hoth in kinds and ways of cooking, is almost endless. Any man or woman in this country who has a garden, not to say a farm, can provide a family with a constaut succession of fresh vegetahles at small expense. and people who live without snch supply have nsually only their own ignorance or want of energy to hlame for it These vegetables and fruits are, with few exceptions, wholesome and may be eaten at all seasons in reasonable quantities, care being taken to use none that are unripe or at all decayed. They can of course be cooked in a great variety of ways, and an intelligent woman will quickly learn how to choose the best and most economical. The different grains also furnish most importaut articles of food and are, almost without exception, wholesome and in this country cheap. They can be simply boiled with water and eaten as porridge or mush, or can be made with other ingredients into cakes, pnddings and hread of different kinds. As porridge, mush, etc., they are especially good for children, as they are easily digested and very palatable.

The small collection of receipts which I have placed at the end of this volume, will, I trust, he of some assistance to you in preparing the material which you are able to ohtain; but nntil you learn, as I have said before, to understand the reasons for good cookery and regular hehits in respect to food, no receipts, however good in themselves, can be of much nse to you. I have, therefore, given, in connection with the receipts, such suggestions as I think may help you to bear in mind or to search for the reasons for what you are doing, hoping that in this way you may gradually find out for yourselves that I have not exaggereted the importance of your work.

When you have learned to cook well end intelligently, you have made yourselves valuable members of any honsehold, rich or poor, and this is surely no little thing to say and no mean ambition for any woman to set before herself, and I would, therefore, urge every woman who reads this to do her best to create healthy and civilized tastes in regard to food in all those who are within her reach.

CENTENNIAL VIEWS.

THE COLORED RACE AT THE CENTENNIAL.

I. THE AFRIC-AMERICAN.

The fact that the specimens of colored sk ll and industry et the Centennial were not collected into one representative exhibit, but scattered unostentatiously through the bewildering departments of the great show, accounts in part, certainly, for an existing impression that the colored people have not manifested proper respect and appreciation for the opportunity offered them. The colored men or his friend had to walk from end to end of the Main Hall, or from building to building, to search here and there through the vast display for the testimonies to his progress. The catalogues give no indication of the nationality of American exhibitors, and in the edncational departments, those in care of the varions State exhibits were not always sufficiently intimate with their charge to be able to give statistics, or distinguish between the work of colored and white schools.

Working under these disadvantages, we cannot even now be sure that we have a full list of colored exhibits, and would be glad to receive additional information from any reliable source.

The catalogue is classified lu seven departments: Mining and Metallurgy, Manufacture, Educatiou, Art, Machiuery, Agriculture, and Horticultnre. We shall find American colored exhibits as such comprised in three of them, Manufacture, Art, and Education, though colored labor and skill has, no doubt, contributed to other departments, as for instance to the fine display of cotton from the Southern States.

The colored exhibitors who appear for themselves are very few, it is trne, and the fact is to be regretted, whether a result of want of means, ability or interest, or, as the Tribune suggests, of offense taken at an inadvertent oversight on the opening day. For the best way to meet a slight, unintended or intended, is with a magnanimity and nobleness that will transfer the blush from the slighted to the slighter. Of those colored exhibitors who have appeared, however, their brethren may well he proud, and every one of them has received a well merited award from the judges.

To give precedence to ladies, and begin with probably the most familiar name, we mention first:

MISS EDMONIA LEWIS, THE SCULPTRESS.

It has been charged that no colored woman's handwork appears in the Woman's Pavilion. Any one of Miss Lewis's sculptnres would do honor to that exhibition. bnt, like some other of the women artists, she preferred to have her contributions judged on their own merits instead of as a woman's work specially. Her chief exhibit was her life-sized statue lu marble of the dying Cleopatra. The dying queeu of Egypt is represented sinking in her chair, her arms dropping with relaxing muscles at her side. The statue attracted much attention. It was well placed in one of the principal rooms, and received a prize medal as among the best of Americau sculptures exhibited. Besides this, her master-piece, Miss Lewis exhibited statuette busts in terra-cotta, of Sumner, Longfellow, and John Brown (copies of which are possessed by Hempton Institnte), and two groups in marble, one of sleeping children, the other a study from Longfellow's Indian poem of Hiawatha, representing the old Arrow-maker and his daughter. The last is a suggestive tribute to her parentage on one side, for Miss Lewis is of mixed negro and Indian descent, and was born, it is said, in a wigwam. She was in charge of her own exhibits, and her intelligent, earnest and womanly manner did much to interest visitors in them and her. She returns to her studio n Rome to work out other solid answers to qnestious as to the capabilities of her race.

MR. E. M. BANNISTER, OF PROVIDENCE,

exhibited a very good painting, "Under the Oaks," for which he received a prize medal. A Hampton student thus describes it: "In the foreground of the picture is a pond bordered by water-grasses and lilies; windiug up from the water, a narrow sheep-peth is finally lost sight of in a grove of oaks. "Under the Oaks," with his little crook, sits the shepherd boy quietly watchiug his flock."

In the department of Manufactures, the only colored exhibitor we know of has been equally successful.

MR. ASHBOURN, OF PHILADELPHIA,

exhibited a curious variety of articles manufactured nnder his own patents. Filtering powder, Oil, Tooth powder, Iuk, Vluegar, and Soap, all made from the meat or shell of the cocoanut. Mr. Ashbourne's store is in Pine Street, Philadelphia. His exhibit has set an example of surprise which colored men will do well to follow, and which must do much to benefit his business.

THE MONUMENT TO BISHOP ALLEN.

The colored people's appreciation of the Centennial exhibition and desire to connect themselves with it, is sufficiently demonstrated by the monnment erected by them on the Centennial gronuds to Bishop Allen, the first Bishop of the African Methodist Episcopal church of the United States. Bishop Allen was born a slave and bought his freedom. He was a noted preacher before he was free. After he became free, he traveled with the famous pioneer Bishop Asbnry, and learned the elements of theology. He was a lover of education, a man of great benevolence, courage, and executive talents, respected by men of all classes. Three thousand dollars were contributed by Congress to aid in the erection of the monument to his memory. Gov. Garfield of Arkansas was among the large contributors. The monument was the work of Mr. Alfred White of Cincinnati and cost $3,500, which was raised by the efforts of colored men among their own people and their friends. The pedestal was unfortunately broken in transportation, and a temporary one was set up, nine feet high, of blocks of granite, pyramidal in form. On the pedestal stands the the bust of the Bishop in Italian marble, and in raised letters on the central block is the name, "Richard Allen." A bronze statue of the Bishop is contemplated. The monnment was unveiled in October, in the presence of 30,000 colored citizens and many others. Bishop Brown, Prof. of Ecclesiastical History in Howard University made the oration.

MR. WILLIAM B. STILL'S EXHIBIT.

Mr. William B Still, the successful Philadelphia merchant, and well-kuown leader among his people, exhibits some sample volumes of his "Underground Railroad," an illustrated history of the principal transactions of that famous railaoad liue, now heppily closed for want of business. We hope at some time to give our readers some further sketch of Mr Still's life from his own pen.

Turning now to the department of Education, we find abundant evidence of progress in the colored race. Though provided, naturally, for their white teachers, it is no less the result of their own efforts, and suggests the reflection that the hope of the race is the rising geueration in the schools aud higher institutions of learning, and not quite ready yet to show what they will be and do for their people. It is only fair to wait for them, and to remember also thet, as has been the case with the white citizens of the young Republic, their engrossing aim and best work for many years must be the general diffusion of knowledge among their people, rather thau the prodnctiou of individnal prodigies of learning or accomplishments.

PUBLIC SCHOOLS.

The color line was not made a basis of classification of public schools in most of the States. The Massachusetts exhibitors, of course, smiled at such an idea. Maryland displayed some very conveuient charts from which we learned that she has 1524 white schools and 322 colored, 120,523 white pupils and 105,760 colored. As far as we were able to distingnish the work of colored pupils in all the exhibits, it compared very fairly indeed with that of white pupils. The Cincinnati public colored schools' exhibit, deserves very special mention, and has received it from many qnarters.

WILBERFORCE UNIVERSITY,

fonnded by Bishop Peyne, made a special exhibit, and showed good work. This college is interesting as being the only one entirely under colored management, and its success testifies to the ability of its fonnder, Bishop Payne. Some excellent crayon drawings by one of the students attracted particular attention. Indeed, these and other specimens of drawing, geometrical diagrams, and the many handsome samples of haudwriting scattered through the school exhibits suggest the thought that the artistic use of the pencil may be a special line in which we may expect the race to excel.

AMERICAN MISSIONARY ASSOCIATION SCHOOLS.

These appeared in full force.

Besides Hampton, which made a separate exhibit, there were represented very fully by examination papers and photographs, Fisk, Atlanta, and Straight Universities of Tennessee, Georgia, and New Orleans; Beres, Talledega, and Tongaloo Colleges of Kentucky, Alabama, and Mississippi; Avery and Emerson Institutes of Charleston and Mobile; the Lewis High School of Macon, Ga.; Union Academy of Columbus, Miss.; and the LeMoyne, Wadsworth, Storrs and Trinity Schools of Memphis, Miss., McLeansville, N. C., Atlanta, Ga., and Athens, Alabama. A special attraction to this exhibit was the large oil paluting representing the Fiske Jubilee Singers, the portraits life size. The picture was presented to Fiske by Euglish friends and cost $3000.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.

This exhibit has already been described in our colnmns. Its academic instruction was represented, as that of other schools, by volumes of writen examination papers. Its chief points of interest to those concerned in educational science and for the advancement of the colored race, were its agricultnral and indnstrial features, and prin ples of self-help, which distinguished it from others. Its specimens of farm produce, and work from the carpenters' shops, sewing room and other industrial departments of the school, with Mr. Larrabee's fine photographs of them, were inspected with interest by hundreds of visitors. The results of Hampton gradnates' work as teachers also attracted interested attention, as shown in a bird's-eye view, on the map of four States starred with their schools, and, in detail, the efforts of the little ones on the examiuation slates, and papers of the Butler and Lincoln Schools, in Hampton, and Mr. Towe's school in Norfolk. We are confident thet the Hamptou exhibit and the information given has been a good thing for the school and the race it seeks to benefit.

And we can, indeed, sincerely assure our colored brethren that the general character of their representation at the Centennial, whether made by themselves or through their teachers and friends, has been greatly to their credit and advantage, and should enconrage them to their best efforts for the future.

We must take another month to consider the very interesting exhibit of the Repnblic of Liberia, and those of other African states.

TO THE GRADUATES AND PUPILS OF THE HAMPTON INSTITUTE.

My Dear Young Friends:—

You will receive many kind wishes for a Happy New Year, hut none, I assure you, will be more cordial and sincere than mine, that the coming year may be happier than any you have yet known. Do you realize that it is in your power to make it so? Happiness is not something in the far distance, intangible, unattainable; it does not *depend* upon external circumstances; neither health, nor wealth, nor friends can give it, although they are great blessings and add much to the enjoyment of life. Happiness must be in the heart, flowing from a consciousness that we are endeavoring to live that life which is pleasing to God and useful to our follow men. He who created the soul, implanted in it an ardent longing for happiness, which is manifested hy our pursuit of it in a multitude of ways; He gave us a capacity for happiness, of which we have but a faint conception; and He has not left us in darkness as to the true means of attaining it. His hand is full of blessings, which He freely offers aud longs to bestow npon us, if we will accept them. But the difficulty is that we prefer to try our own plan; we doubt whether we shall find happiness in the way God proposes, although, if our eyes were not hlinded, we should surely see and believe that He, who formed man and gave him his faculties, knew perfectly in what his happiness would consist. Some seek it in the acquisition of wealth, fame, and power; others, in selfish gratification or sinful pleasures.

> "Allusive dreams of happiness
> Their eager thoughts employ;
> They wake, convinced the fancied bliss
> Was visionary joy."

Among the most miserable of men, according to their own confession, we find those who reached the goal of their ambition, who were crowned with the world's plaudits, who reveled in the enjoyments of sense; and found them all, as Solomon did, "vanity and vexation of spirit",—a thorough disappointment.

On the other hand, how many thousands, even in the abodes of poverty, on the bed of suffering, in prison, at the stake, have abonnded in heavenly peace and triumphant joy! That peace in the depth of the soul, which is the only foundation of real happiness, is pledged to all the true disciples of our Lord. Through faith in the atoning sacrifice of Christ, we receive the forgiveness of our sins; through His indwelling Spirit, we are delivered from the bondage of sin and walk in the newness of life. "Being justified by faith, we have peace with God through our Lord Jesus Christ, and rejoice in the hope of the glory of God." The world with all its treasures cannot give this peace, nor can its severest trials and disappointments deprive us of it. "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid," said our Saviour to His sorrowing disciples shortly before His death. But this precious legacy was not bequeathed to those who are merely professors of the Christian name; "not every one that saith 'Lord, Lord,' shall enter the kingdom, bnt he that doeth the will of my Father which is in heaven;" it is for the humble, lowly follower of Christ, who endeavors faithfully to live *with* God and *for* God. Let us not be discouraged hy frequent failures and slow progress, our merciful Saviour looks tenderly upon our feehle efforts; hut let us press forward, relying npon His strength, again and again girding up the loins of our mind. That the end of 1877 may find us all nearer the mark of our high calling, more Christ-like, more meet for Heaven, more abounding in love and faith and joy, is the earnest desire of

your friend,

M. A. L.

A LOVING heart and a cheerful countenance are commodities which children should never fail to keep on hand. They will best season their food and soften their pillows. Sour faces and cross words make everything go wrong. Keep in the sunshine of God's love, and don't give the frowns a chance to deepen into wrinkles.

LETTERS FROM HAMPTON GRADUATES.

FROM A TEACHER IN NORFOLK, VA.

Those who are helping to educate colored teachers will enjoy these simple words, not addressed to the public. Through such work as hers only will the salvation of the colored people be wrought out:

Dear Teacher:—I am generally tired in the afternoon and seldom can put my heart on a letter. I have a very good school and like it. I have from forty to forty-five on roll; they were very rude at first, but I think they are becoming interested now, more and more each day. Most of them are very poor and come to school poorly clad. I always feel so sorry for them cold days because they hing together so going home. I am very well satisfied; I don't think, as far as teaching is concerned, that I would change with a Norfolk teacher. My schoolhouse is quite a good one. I make my own janitors to make fire and clean up the schoolroom every night, which they do very well. I have very little trouble with them. I do so hate to whip! They are getting pretty good. When I first opened school with reading, singing and prayer, they didn't know what to think of it, and they talked a good deal during prayers. I had to tell them how ngly it was; so when I let school ont one little one said, "Miss D——, is yon 'ligious?" and I said, "I hope I am a Christian." She said, "Nobody never did pray with us before; yon must he mighty good if you can pray." I felt very queer, knowing that the last teacher was a professor of religion. Don't you think it queer that he never evеn said the Lord's Prayer with them? I do.

I would like to see Hampton very much indeed. I imagine if I shonld come again with my hlue frock on that you all would say I belonged there. L.

The following, from Lottsburg, Va., was received some months since. The writer is a thoughtful, Christian young man, from whom much good work can be expected:

Dear Teacher:—I have heard of the new professions in Christ among the scholars, and also of the baptizing. It was qnite cheering news to me. I hope they all may prove faithful and he good and useful Christians, for their labors are needed very much, and I am sure they will find it much more pleasant when they go out to teach. When I go to a new place to teach, after an lutroduction among the first questions I am asked is this, "Are you a member of the church?" It is a joy to me that I can tell them, I am—not only to tell them I am, hut to labor in that direction, though I feel that I am the least among God's people, especially when I go to church and see others shout, and hear them talk; but when I come to think about it to myself, it seems to me that they are not "meek and lowly in spirit," hut they are boasting too much, and need what I may call Christian civilization. I know I am not to "judge;" hot I think there are a great many meaningless words and actions among the colored people in time of worship, and for a short time afterward. I have nothing to say about it in public at church, but I speak against it in my school and also to the Christian parents when in private conversation. I pray that I may live to see it all done away, and we all shall be pious Christians. I don't think these actions have any impression on the world, or make the actors any more acceptable with God, though they may know better what they are doing than I do. W.

THE GREAT FIRE IN BROOKLYN.

On the evening of Tuesday, Dec. 5th, the city of Brooklyn was visited by one of those terrible calamities which plunge a whole city into mourning, and inspire all who hear of it with awe and sympathy. This was the burning of the Brooklyn Theatre, in which, between three and four hundred persons perished in the flames, or were crushed in the mad rush for life. Our picture—*not* taken by our own artist on the spot—can give but a faint idea of the awful grandeur of such a scene, and indeed no one who witnessed it from the outside had any idea, at the time, of the great human sacrifice engulphed in the devouring flames.

There were rumors in the next morning's papers thet perhaps from ten to thirty people might have been unable to escape, but they were hardly credited, and only the families whose members failed to return suspected their fate, until the work of removing the blackened ruins revealed the truth in all its ghastly horror. A large number of the remains found were burned beyond all possibility of recognition by the friends who flocked to look in sorrow for their dead, and, after as many as possible had been identified, often only by some trinket or fragment of clothing, it was necessary to carry the rest to one common grave in Greenwood Cemetery, their common funeral attended by all the principal ministers of the city, and followed, through the inclement weather, by a great multitude of citizens, among whom were many who knew they must be accompanying their own nnrecognized dead to the grave.

After the great shock, the first thought of all not absorbed in private grief, was of the question how many other places of public entertainment might be in danger of the same fate, and inspections were made, and precautionary measures discussed, and improvements ordered, with a vigor that sadly suggests what might have been saved had it been used in time.

The principal danger is from narrow and few ways of exit in which the excited throngs crowd and fall, and are trodden on or suffocated by the crowd. If any one notices on entering a public hall that it has only such outlets, he had better leave it before the entertainment begins. If, however, you are ever surprised by a fire in such a place or any other, remember that the next best thing to absence of body is presence of mind.

It is a good plan to think of such emergencies beforehand, and have some idea of what to do. If your house is on fire and you have to make your way through a room full of smoke, remember that the clearest air will be near the floor, and if you cannot walk, you can creep on hands and knees.

If your own clothes or another's take fire at any time, don't run, that will increase the draught which fans the flame. If no water is at hand, wrap *instantly* round the person, any woollen stuff you can lay hands on—your coat or shawl, a rug or carpet. If there is nothing better, throw him on the carpet and roll the fire out, holding the clothes together.

Remember that there are two things necessary to any fire—fuel and air—or to speak more strictly, fuel and oxygen. Cut off these and the fire goes out. Water puts out a fire by cutting off its supply of oxygen. Therefore hot water will put out fire just as soon as cold water will.

If oil takes fire, however, do not throw water on it, for the oil being lighter than the water, will float on the top of it and burn there, while the water will carry it all over the room. A carpet, or if it is on hand, sand, earth, flour, meal, or any such thing will smother the fire of oil.

Finally, or rather, to begin with, take every possible precaution against fire. Do not throw a burning match on the floor, even after you have blown it out, without seeing where it goes and trampling it out. Do not leave a candle or lamp burning near your bed. If it is necessary to keep a light all night, stand it on the hearth or in a bowl or pail of water around it. Do not set a pail of hot ashes or cinders away in a closet. Do not blow out a kerosene lamp by blowing down the chimney.

An ounce of prevention is worth a pound of cure.

NEWS OF THE MONTH.

The slave trade has just been abolished in the Turkish Empire (including Egypt and Tunis) by the decree of the Sultan.

POLITICAL.

The returning boards of the three doubtful States, South Carolina, Florida and Louisiana, have declared the electoral vote in each state in favor of Hayes and Wheeler. Charges of fraud are brought against these boards by the Democratic party, and the Democrats in Congress will probably call for an investigation and try to throw the election into the House. Two sets of votes have been sent from Oregon, each claiming to be the proper electoral vote. Just before the electors were to meet, the Governor of Oregon, on the ground that one of the three Republican electors was ineligible from having been a postmaster when elected, withheld his certificate and gave it to the candidate having the next highest number of votes—a democrat, Mr. Cronin, which would give Mr. Tilden the one needed vote. The other two electors demanding proof of his right to act, and claiming that under the State law it was their province to fill any vacancy, Mr. Cronin withdrew, and himself appointed two other electors, to whom the Governor gave certificates. The two electors elected by the people met, filled the vacancy and sent their votes sealed to Washington, accompanied with the evidence of their election, and claim to be the real Electoral college though without the Governor's certificate. It will be for the President of the Senate to decide which votes to open and count as the true electoral votes, on the 6th of this month. So we shall not know till then at any rate, who is to be our next President.

THE PRESIDENT'S MESSAGE.

His eighth and last, opens with a brief review of his administration, and the peculiar difficulties of the period of Reconstruction; acknowledging mistakes from which no administration has been free, but claiming that there have been more of judgment and not of intent, and oftenest in taking the advice of chosen representatives of the people as to appointments.

THE REDUCTION OF THE NATIONAL DEBT

is mentioned among the successes of his administration, a greater reduction than all the European nations together have made in the last 100 years. $453,000,000 have been paid off, and the interest reduced $30,000,000 by the refunding of bonds, while taxes have been reduced nearly $300,000,000.

The balance of trade has been changed from over $130,000,000 against the United States in 1869, to more than $120,000,000 in our favor in 1876. A gold is now flowing into the country more than out of it, the President thinks that the pledge of Congress to resume specie payment in 1879 will be easily accomplished.

OTHER ADMINISTRATIVE SUCCESSES

have been the avoidance of a war with England by the peaceful adjustment of the Alabama claims, the Indian policy, under which Indians hostilities have ceased except in the Black Hills, and our cordial relations with foreign powers generally.

THE CENTENNIAL EXHIBITION

is noticed as of enduring advantage to the country, and he recommends a permanent museum for the Government exhibits.

FRONTIERS, NATURALIZATION, AND NEW STATE.

The adjustment of our Northern boundary and of claims from and against Mexico, arising from disturbances on the Texas frontier are reported. The subject of naturalization of foreigners, and protection of our citizens abroad are recommended for further legislation. The proclamation last August of the admission of Colorado as a State is recited.

THE DEPARTMENTS OF GOVERNMENT

are reported in a prosperous condition. The Postoffice Deparntment in spite of increased expenses, promises to become self-supporting. The report of the commissioner of

AGRICULTURE

accompanying the message, is noticed as of great interest marking the progress of the country in the variety of products of the soil, knowledge and skill in producing, saving and handling the same to prepare them for use, in improvements in agricultural machinery, and knowledge of those scientific subjects necessary to a thorough system of economy in agricultural production, viz., chemistry, botany, entomology, &c. A study of this report is recommended to those who derive their support from agriculture, as it points out those studies for which there is a demand in the market of the world.

THE ELECTION OF PRESIDENT.

Attention is called to the importance of greater safeguards as to the election of President. He thinks the remedy is partially in the enlightenment of electors, and would heartily approve the compulsory support of free schools, and the disfranchisement of all who cannot read and write English, the provision to take effect only on those who become voters after a certain fixed time.

SAN DOMINGO.

He refers in closing to his former recommendation for the annexation of San Domingo, which was strongly opposed by the Senate, reiterating his reasons, not as a renewal of the recommendation but in vindication of it. These reasons are in great part fortified and valid as a market. He believes that free trade with San Domingo would have so affected the commerce of Cuba as to have forced espeedily the Cuban question in favor of a free Cuba, and that the annexation would have afforded American freedmen a safe asylum, which would have enabled them to demand their rights at home on pain of finding them elsewhere.

He closes by saying that as a private citizen of the republic, he shall take a deep interest in the honor, integrity and prosperity of the whole land.

England has withdrawn from her position in regard to the extradition treaty, and to meet her half way. America offers a reconsideration and revision of it. The Fenian movement has taken the alarm and left England to escape re-arrest.

THE INQUIRER appears under date of December 7, in place of The Liberal Christian. The form taken is nearly that of "The Churchman," and the appearance of the paper is much more attractive than that of its predecessor. The publishers state that very valuable additions have been made to the contributing force, and the columns bear witness to the fact in the merit of the matter presented in the first number.

The African explorer, Gordon, intends to continue his explorations in consequence of having discovered a branch of the White Nile, which may open water communications—hitherto barred by rapids—between the Victoria Nyanza Lake and Khertoom.

A great famine in India.

News from Turkey looks more peaceful.

Centra America and Mexico are undergoing revolutions.

In the gale of Dec. 8th, the Admiral's steam launch was parted from the flag-ship Hartford, in Hampton Roads, and the screw breaking, drifted out to sea, with two men in it. One boat lowered for them was at once swamped, but the men were picked up; a second boat, with thirteen men was launched and followed them, but the intense cold overpowered the rowers and they were unable to stem the rough waves, and were in great danger themselves. The Shawmut, another of the fleet, of men-of-war, got under steam as soon as possible, and kept the launch in sight, but were unable for a long time to approach it in the shallow waters it had drifted into on a bar. The men and launch were at last rescued and brought home by the Shawmut, and the benumbed rowers whose hands had frozen to the oars were picked cared up and for by the Sue, a Baltimore boat, when in imminent danger.

Peterson's Counterfeit Detector, and National Bank Note List. This excellent publication, of great advantage to every one in business, from the millionaire, banker, and auditors of vast railroad enterprises, to the retail dealer, is even more perfect at the present time than it has been in the past. It is a semimonthly publication, containing full and accurate descriptions of all Counterfeit Notes in existence. New bogus bills described as soon as they appear. Every number of the DETECTOR also contains concise, reliable, and impartial reviews of the National and local money situation, business items and late railroad news. As an advertising medium among the very best classes of purchasers, PETERSON'S DETECTOR has not its equal in the world. We advise all Business Men to subscribe. The terms of subscription for the Monthly issue is only $1.50 a year; Semi-monthly, $3.00 a year. Subscriptions may commence with any month. A canvasser could get up a large list of subscribers for it in this neighborhood. Address T. B. Peterson & Brothers, Philadelphia, Pa. for specimen copy.

As there is a great furore now about Old Coins, we would advise all to get e copy of PETERSON'S COIN BOOK, containing perfect fac-simile impressions of the Coins of the World. It will be sent by mail, postage paid, on receipt of $1,—by T. B. Peterson & Bros., Philadelphia, Pa.

PROTECT YOUR BUILDINGS

Which may be done with one-fourth the usual expense, by using our

PATENT SLATE PAINT,
MIXED READY FOR USE.

Fire-proof, Water-proof, Durable, Economical and Ornamental.

A roof may be covered with a very cheap shingle, and by application of this slate be made to last from 20 to 25 years. Old roofs can be patched and coated, looking much better, and lasting longer than new shingles without the slate, for

One-Third the Cost of Reshingling

The expense of slating new shingles is only about the cost of simply laying them. The paint is FIRE-PROOF against sparks or flying embers, as may be easily tested by any one.

IT STOPS EVERY LEAK,

and for tin or iron has no equal, as it expands by heat, contracts by cold, and NEVER CRACKS nor scales. Roofs covered with THE Sheathing Felt can be made water-tight at a small expense, and preserved for many years.

This Slate Paint is

EXTREMELY CHEAP.

Two gallons will cover a hundred square feet of shingle roof, white on tin, iron, felt, matched boards or any smooth surface, from two quarts to one gallon are required to 100 square feet of surface, and although the Paint has a heavy body it is easily applied with a brush.

No Tar is used in this Composition,

therefore it neither cracks in Winter, nor runs in Summer.

On decayed shingles it fills up the holes and pores, and gives a new substantial roof that will last for years. CURLED or WARPED shingles it brings to their places, and keeps them there. It fills up all holes in Felt roofs, stops the leaks—and although a slow dryer, rain does not affect it a few hours after applying. As nearly all paints that are black contain TAR, be sure you obtain our GENUINE article, which (for shingle roofs) is

CHOCOLATE COLOR,

when first applied, changing in about a month to a uniform slate color, and is to all intents and purposes SLATE. On

TIN ROOFS

our red color is usually preferred, as one coat is equal to five of any ordinary paint. For

BRICK WALLS

our BRIGHT RED is the only reliable Slate Paint ever introduced that will effectually prevent dampness from penetrating and discoloring the plaster.

These paints are also largely used on out-houses and fences, or as a priming coat on fine buildings.

Our only colors are CHOCOLATE, RED, BRIGHT RED, and ORANGE.

NEW YORK CASH PRICE LIST.

5 Gallons, can and box		$5 50
10 "	keg	9 50
20 "	half barrel	18 00
40 "	one barrel	30 00

We have in stock, of our own manufacture, roofing materials, etc., at the following low prices:

1000 rolls extra Rubber Roofing at 3 cents per square foot. (Or we will furnish Rubber Roofing, Nails, Caps, and Slate Paint for an entire new roof, at 4½ cents per square foot).

2000 rolls 2-ply Tarred Roofing Felt, at 1¾ cents per square foot.

3000 rolls 3-ply Tarred Roofing Felt, at 2½ cents per square foot.

200 rolls Tarred Sheathing, at ¾ cent per square foot.

5000 gallons fine Enamel Paint, mixed ready for use, on inside or outside work, at $2 per gallon.

Send for sample card of colors. All orders must be accompanied with the money or satisfactory city references. No goods shipped C. O. D., unless express charges are guaranteed.

Sample orders solicited.

For further information, address

J. F. B. MARSHALL,

Business Manager.

HAMPTON, FEBRUARY, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 32 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents aviece.

THE *Southern Workman* has entered upon its sixth year and has become one of the longest-lived of the periodicals published in the interest of the colored race. It has not been supported by, nor represented any denomination or political party. The ideas it has advocated have not always been popular, yet have commended themselves to thoughtful men of both sections and races. It has sought for common ground on which good men, without regard to party, could work together for the well-being of that portion of our country ravaged by war, and kept prostrate by ignorance, prejudice, corruption and violence. It has pointed out the follies and weaknesses of those whose interests it has had most at heart, only that the remedy might be specified and urged. It has criticised the policy of the ruling race that has so sadly failed to induce an excellent, thrifty class of Northerners, anxious for change, to leave their bleak homes for the more genial climates of the Southern States, to plant there their wealth and spirit of enterprise. It has urged the abolition of the color line in politics as indispensable to a better state of things. It has preached the gospel of salvation by hard work to the enfranchised negro, warned him of the slippery tenure and great temptations of political position, the uncertainty of continued external support, and advocated education — an industrial, practical education, as the panacea for his ills; insisting that character and manhood and not polished scholarship are the true objective points, and that, during the present generation, only a foundation can be laid for a bright future for the negro race;—that all races have advanced slowly, almost imperceptibly.

The columns of the "Workman" have been filled with reliable, convincing testimony, from first hands, that the education of the colored people is practicable, and encouraged by a large class of Southerners, in Virginia and in other States, where, whatever prejudice may yet remain, there is a liberal tax paid by all classes, chiefly, however, by the "old masters," to improve the condition of the ex-slaves by education, and where there is, by the better class of whites, a hearty moral support extended to efficient negro teachers.

Its aim has been to develop conservative, constructive forces among the colored people of the South. It says "Be thrifty and industrious. Command the respect of your own houses. Educate your children. Make the best of your difficulties. Live down prejudice. Cultivate peaceful relations with all. As a voter act as you think and not as you are told. Remember that you have seen marvellous changes in sixteen years. In view of that be patient—thank God and take courage."

The editorial labors of the last five years have been gratuitous, not over one hundred dollars having been paid, in that time, for the entire work of writing, supervision, business management, not including clerical work.

This has been gladly done in addition to other pressing duties, because it was believed to be of the utmost consequence to maintain such a periodical, and because there was no fund to support it. Is it not as well worth a foundation as a College professorship? Is it not equally far-reaching and important? A fund yielding about five hundred dollars annually, would, with its other resources, establish the "Southern Workman" on a solid basis.

It is slowly gaining ground in the South. Such a periodical finds only here and there a sympathizer. Of the monthly circulation of fifteen hundred, chiefly in the South, six hundred and forty-seven are sent to paying subscribers, of whom three hundred and seventy-seven are in the North, the rest gratuitously. It loses annually, nearly three hundred dollars. Its value to the Hampton Institute, as well as the labor and instruction it affords to students in the art of printing, justifies this. It is sent to colored teachers, preachers, to State educational officers, in nearly every county in Virginia, to a list of prominent Southerners, and wherever it is felt that it may do good.

We hope for an increased list of subscribers in every section. A few friends send, yearly, small sums of from two to ten dollars to help the paper. The generosity of the Harper Brothers of New York, in donating valuable electroplates, and the liberal terms of the "Christian Weekly" and of the "Nursery" of Boston, in supplying choice pictures, should be acknowledged.

We trust the readers of the "Southern Workman" are convinced of its usefulness, and that, among them, there will be some disposed to either contribute to its resources or aid in extending its circulation

---

WE regret to note that the Superintendent of Public Instruction in the State of Georgia advises in his recent report, that the annual appropriation by the State in aid of the Atlanta University be withdrawn. Among the alleged grounds for this extraordinary recommendation, the chief one seems to be that the white teachers of that institution had been known to visit at the houses of some of their pupils, an act of Christian kindness to the poor and needy. When we reflect that ninety-five per cent. of the colored children in Georgia are receiving no schooling whatever, and that the institution at Atlanta has honestly endeavored to supplement the lamentable deficiency of means now available to this superintendent, we mourn over the fatuity and blindness of the prejudice which would discourage the aid so urgently needed, for so frivolous a reason.

The circumstance is a new and instructive lesson on the proper method of effecting good in the South. This superintendent did not object to education *per se*, but only because of the white teachers. Education in the abstract is desired by nearly all intelligent Southerners for the laboring classes,—both as a preventive of crime and panperism, and an aid to usefulness. But white teachers from the North are in some sections considered a grievance scarcely to be borne. If then it were possible to convey the needed light by colored teachers, the pressure would be shifted, and the sore no longer chafed. What the cause needs is time and an open field. Given these essentials, and prejudice will gradually disappear.

Strong institutions like "Atlanta," "Hampton" and "Fisk," are perfectly free to pursue their own methods of culture, and are almost alone in the capability of for the good work before them. A few such have already established self-sustaining schools, but the great majority are employed in the public free schools, and as rule are welcomed by the ex-confederates. In some places, if not cordially liked, they come much nearer to that condition than isolated white teachers could hope to do. It is constantly becoming more certain that a concentration of effort upon the selection of the best material of this race, and the careful training of colored standard bearers, will have a wider influence for good and for harmony than any other method in which Northern benevolence can work.

Whenever the polls are open to all, voting unobstructed and counting fair, the colored vote, with education, and under good government, will tend to division on political questions. The negro has an instinctive appreciation of a gentleman; and, supposing a peaceful and just state of things, would often have voted for good Southern men, rather than for strangers from the North or for demagogues or Southern partisans, had it not been for a superstition that the name Republican is a stamp of God not found on base metal. On every subject but that of voting, the negro has been anxious for advice from the property owners, but on election day he locked the door of his heart and threw away the key. Thus it has come about, that many unfit men in the South have held high office simply by reason of the ignorance of negro voters.

Popular education on the broadest scale and no color line in politics is thus seen to be the wisest sort of conservatism. It is the only constitutional method by which to overthrow the power of the blind leaders of the blind. The majority of the colored men would to-day rather vote for just and capable officials than for the unworthy. But they are too often unable to form any judgment about the qualifications of a candidate, and they simply do as they are told. So long, however, as the office of one race is to mount guard over the other, unscrupulous as to how it gains or holds its power, voting will not be dictated by reason, but inspired by passionate and intemperate appeals, and the colored vote will of necessity be solid on the side that appeals to its strongest instinct, that of protection in the exercise of its political rights.

In the course of her history, Virginia has done many things wisely and well. Her encouragement of education for all classes within her borders, entitles her to the admiration of the world. A temperate, fair course towards the negro voter will tend to break up the phalanxes of colored men that march to the polls, and result in a prosperity now unknown at the South.

THE following is from the Inaugural Address on the first of January, 1877, of Governor Z. B. Vance of North Carolina, who was also governor from 1862 till the close of the war.

The fulfillment of its letter and spirit will bring better days to the Pine Tree State. Let us hope that Governor Vance will successfully carry out the just sentiments of his inaugural by caring for the rights of all his people.

"In assuming once more the government of our native State, we are reminded that with power there comes responsibility. The deep wounds, which the last fifteen years of war and misgovernment have inflicted upon us, still gape unhealed. Our public credit has been almost entirely destroyed; our wealth has been swept away; our educational fund has been lost; unpatriotic partisan statesmanship has increased and embittered sectional feeling; and worse perhaps than all, the races composing our people have been set at enmity against each other. Though it is almost twelve years since the war closed, little has been done by the dominant party to heal the jealousies of late enemies, or to reconcile the antagonism of the white and black races. Much indeed, on the contrary, has been done to aggravate both evils. So far as in us lies, it is our bounden duty to remedy these things; to restore our public credit; to promote the regaining of our wealth; to educate the children of the State, to mitigate sectional and race animosities. In an especial manner should it be our duty to disabuse the minds of our black citizens of the false impressions which unscrupulous demagogues have instilled into them; that we intend, in any way, to interfere with their chartered rights. Let us convince them by liberal legislation and kind treatment that we not only intend them no wrong, but that we earnestly desire their prosperity and happiness; that we constitute the party in this government which par excellence maintains and observes the constitution upon which their rights depend; that their former owners are, and naturally should be, their best friends; that, as men of Christian affections, we never can forget the kindly friendships which were formed

BETWEEN MASTER AND SERVANT,

between jealous protection and faithful service; and, finally, that as men of chivalry and honor we scorn to deceive or oppress them because they are weaker in numbers and intelligence than we are. Their instrumentality in our oppression has not been so much their fault as the fault of those who controlled and directed their actions and our fathers, with fidelity and with patience always, and, for the greater part, not as unwilling slaves serve hated task-masters, but as humble friends and dependents serve those whom they love. When war was rampant over the land, and nearly all our able-bodied men were absent in the army, within hearing of the very guns which were roaring to set them free, the great body of them remained quietly at home, laboring in our fields, supporting and caring for our women, children, and non-combatants, with an affectionate fidelity rarely surpassed by any race. So, too, since their emancipation, nine out of ten of the misdeeds committed by the blacks against the whites can, in my opinion, be traced to the instigation of scoundrels of our own color. They have mostly done evil because they were in evil hands. If, by believe that every semblance of personal hostility toward the negro will pass away when his almost unanimous political hostility toward the whites shall have passed away. A wise statesmanship already recognizes in him, under favorable circumstances, an element not only of public wealth, but of conservative power in politics which may become a cherished bulwark of the South. Labor, though it be never so ignorant, if it be closely allied to capital is yet not unfrequently the real strength of society. It also becomes our especial duty to look after the rights and liberties of the people, without which all material interest are as the small dust in the balance. Poor as we are, we would be poorer still if we had more wealth and less of liberty. The freedom and integrity of elections constitute the very corner-stone of our representative government. When they cease to be perfectly fair and unforced, bloodshedding and anarchy are near at hand. We are now approaching a crisis in the fate of this country which all honest men should honestly face.

It was on the soil of North Carolina that the feet of the first English colonist was planted in America, and the solitudes of her forests first of all heard the glorious tongue of Shakespeare and of Milton; it was in North Carolina that the first blood was shed in behalf of American liberty; it was in North Carolina the first declaration of independence was promulgated against the power of the British Empire; North Carolina's provincial congress, first of all, instructed her delegates to unite in a National Declaration of Independence; it was North Carolina who, with one other State to assist her, refused to agree to a provision in the American Constitution permitting Congress in any emergency to suspend the privileges of the great writ of human liberty, it was in North Carolina, and I believe only in North Carolina, that in the midst of the greatest civil war of modern times, when forty millions of people were engaged in desperate strife, amid the gleaming of bayonets, the roaring of cannon, the thunder of charging squadrons and the light of burning cities, the civil power maintained its supremacy over the military, the judge was obeyed. *Inter arma audie banitur leges!*

North Carolina of to-day is the lineal descendant of the North Carolina of the past. Her sons and daughters are the legitimate heirs of this glorious heritage. With such a record I think all who struggle for liberty and law throughout the American Union may rest well assured of the sympathy and support of North Carolina.

FEDERAL protection to any class in the South who may suffer from violence, has become a mere mockery. When the colored man is the sufferer, he may well say "A plague on both your houses," and especially on the well-meaning friends who have tempted his unpractised feet to dizzy heights where they know he cannot stand, and are themselves powerless to avert his fall. The triumph of negro rights by Republican methods, as lately practised, is as hopeless as was the case of Napoleon at Moscow.

The power of nature and the chieftain's own weakness proved that even the most surprising genius must study the meaning of the word impossible.

Those who advise the colored man to struggle for his moral and mental rights, are his true friends. Those who urge him into politics, regardless of his fitness, are only pushing him on to disaster by making him his own worst enemy. Progress in civilization is only possible by slow degrees, and by peaceful methods. While men are mad with the fury of partizanship and believe their property or liberties imperilled, they will neither prosper nor learn anything; there will be a struggle, not necessarily a bloody one, and the weaker will go to the wall. It is a question of time.

Wherever corporal injury is a recognized method of righting real or supposed wrongs, there is little redress in jury trials. Public sentiment must be changed. Wherever stuffing ballot boxes and false counting is practised, the only hope is in the slow methods of education. If the fountain is corrupt it must be purified—trying to change the stream is child's play.

A WORD TO HAMPTON GRADUATES.

IT IS quite certain that there never has been, and never will be, an enterprise undertaken for the good of others without suffering more or less misunderstanding and abuse, not merely from those who are enemies to its objects, but from some of those who should naturally be its friends, from some even of those for whom it exists.

This is one of the things slowly learned, but, once thoroughly understood, the knowledge saves much mental suffering and discouragement, and the honest worker goes ahead in his honest work, with an eye single to his purpose and a faith in its results unshaken — hardly touched—by such temporary annoyances. The more worthy his work and the more heartily he enters into it, the less time he will have to trouble himself about want of appreciation. He is happy if the results

are such as to be his immediate and constant justification, but while

"The evil cannot brook delay,
The good can well afford to wait."

These remarks are called forth by our reception recently from a Hampton graduate teacher, of a copy of the "Morning Star," an excellent little paper, under colored auspices, of Mayo, Va., containing an editorial reply in a very fair spirit to an attack upon Hampton Institute which had been made in the columns of the "People's Advocate" by a well-known colored politician of Norfolk.

For the sake of the graduate who kindly sent us the paper, and of others who like him have read it, and may have been disturbed by this and the similar attacks that have appeared, within the last six months, in this and a few other papers claiming to be the mouth-pieces of the colored people in politics and religion — we have said this much, and will say these few words more.

It is Hampton's good fortune not to have to wait for slow-growing results to justify her motives or methods. Her two hundred graduate-teachers, and the work they are doing for the six thousand children under their care, and the influence they are exerting in the communities in which they live, are her best and ever ready defense. The thought may cheer and inspire you, as well as your Alma Mater. "Ye are her epistles, known and read of all men."

It is indeed against you that the attack referred to is principally made, as the writer says:

"As to its management or its treatment of its students, I can say nothing as an eye-witness if I may except many of its great number of graduates, diplomated (?) every season with very questionable qualifications as teachers, scholars, moralists, etc., etc."

Of course the weight of all such charges must depend very much upon the "qualification as teachers, scholars, moralists etc., etc.," of those who make them. To the little hand of Hampton graduate teachers in Norfolk, who may feel themselves especially referred to by this attack, and to Hampton graduate teachers in general, we would say that the good reports we hear of you from the State superintendents who examine and employ you, from intelligent Southerners generally, whose impartial approval and respect you have gained by your character and conduct, and from your own people who have shown their appreciation of your work among them by overcrowding Hampton this year more than ever — all these good reports far outnumber any evil ones. You have the confidence and friendship of your Alma Mater, and your frequent letters and words of gratitude bring her pleasing evidence that she has yours, and that as you enter upon your work in the world, you appreciate more and more her lessons and her care.

It is to you, as to sons and daughters, that the right belongs to honor and defend her by manly and womanly words when there is need, and always by lives of honest service to God and man; for "Wisdom is justified of her children."

The Report of the Hon. W. H. Ruffner, Superintendent of Public Instruction, for the year 1876 is an able and satisfactory document of which we hope to give our readers a more complete account in our next issue. Dr. Ruffner is an organizer and, by his masterly skill and force, has accomplished an extraordinary result: the popularization of a public free school system in Virginia. Its general results are the enrollment of about two hundred thousand children in forty-five hundred schools. More than sixty-two thousand colored children, attending eleven hundred schools, are included. The average attendance is about thirty-five per cent. less than the total enrollment. Schools have continued on the average a little over five and a half months. The increase of attendance of colored pupils, both in the number enrolled and in the average attendance, has been relatively greater than that of the whites.

There are six hundred and thirty-six colored teachers employed by the State.

Total paid for all teachers' salaries during the year, $783,024.73.

Total cost of school system for 1876, $1,069,679.56.

Total gain in attendance, 10,611.

The cost of instruction for each pupil, 69 cents per month.

The outlook for education in Virginia is encouraging, although she is overwhelmed with debt and pinched by poverty.

A Vigorous Anti-tobacco tract is issued at 548 Willoughby Avenue, Brooklyn, N. Y. The use of the weed as an extravagance and a filthy habit is realized by all engaged in the work of teaching. We recommend teachers to apply to the above address for from twenty to fifty of these tracts for gratuitous distribution.

We have received an interesting little pamphlet advertising Liberia Coffee as equal to the best in the market. It is raised in the same latitude and belt as the famous "Mocha," has already a far-reaching fame, and is the basis of a growing trade with that well-known colony. It has opened a new era in its history which is significant in view of the important race question that is being settled on the West Coast of Africa. The office of the Agents of this Coffee is 129 South Front St., Philadelphia: Mr. Edward Morris is in charge.

Liberia Coffee attracted much attention at the Centennial, and received an award. Those interested in its production are enthusiastic over their prospects.

We commend to all teachers, especially to Hampton graduates, the Educational Monthly of Virginia published at Richmond. Every public school teacher in the State should be required to take it. Such a valuable periodical ought not to languish for want of support.

The Faculty of the Hampton Institute have subscribed for as many for graduates as they can afford to. The price is $1.25 per annum *to teachers*. They offer for one year, to pay half of the subscription price to any graduate or ex-student engaged in teaching, who is unable to pay the full price. Send 60 cents to the Treasurer of the school, and the Educational Journal will be sent for one year. Teachers should study the principles of their business; should know something of the fine, fresh thought that constantly issues from the press on educational questions. No one who pretends to be able to teach should be satisfied unless he takes a first-class educational paper. To do this is to double one's value in the school room.

ALL FOR ONE DOLLAR.

To any person sending us one dollar for the Southern Workman, we will send, besides the Workman, the Mayo Morning Star, containing news from schools, churches, literary societies, associations, conferences, and brief political notes, and Bible lessons for every Sunday. We will also give each subscriber a valuable premium. Both the Star and the Workman sent regularly twelve months.

THE BOSTON JOURNAL OF CHEMISTRY.

Among our numerous exchanges, we are glad to welcome the *Boston Journal of Chemistry*, the varied contents, excellent scientific views and admirable form of which render it in every way instructive and entertaining.

Without dogmatism and free from the *ex cathedra* style which is too apt to characterize journals of this class, the above paper holds a high rank among scientific men, as well as with general readers, for its impartial treatment of all questions relating to its province, and an earnest, thoughtful interest in the absorbing development of physical culture, with the advancement of which it deals in clear, easy language and philosophical discretion. Such a journal should have a place in every household in the land, that the truths and discoveries of science bearing upon the multifarious topics therein discussed may promote the enlightenment of young and old, and contribute, in no small degree, to the dissemination of popular as well as professional science, for which its able management and judicial criticism equally qualify it.

Agricultural.

BODILY WEIGHT AND NUTRITION.

Professor C Voit, in a lecture at the Public Health Congress held at Munich, remarked: "The weight of the body has often been assumed as an infallible proof of the maintenance of the condition of the body, or of a deposition of tissue, and the food which keeps up a man's weight has been regarded as on that account satisfactorily nutritious. But the weight of the body is no criterion of the value of the food taken, because while the weight remains constant, or even increases, water may increase in the tissues and albumen and fat diminish; or there may be an increase of weight and deposition of fat, while there is also at the same time a diminution of the albumen of the body. Badly-nourished people are usually not lighter than others, but their bodies contain more water and less albumen and fat than those who are well nourished. Every cattle-feeder knows that cattle which are being fattened do not at first increase in weight proportionately to the food they take. And yet people commonly regard weight as of great importance in the case of men, though a butcher will not buy a carcass on the merits of its weight alone; he must know the quality of the meat.

"The subjective feeling of satisfaction is equally deceptive. The Irish peasant who consumes ten pounds of potatoes in the day feels quite satisfied."—*Am. Rural Home*

HEDGES OR RAIL FENCES.

A nicely-trimmed hedge, fully grown, is an object of beauty, and this is a consideration we would not depreciate, so far as road fences are concerned, where a farmer may properly desire to give a pleasing impression of his premises; but for general fences, other reasons must govern.

In the Middle and Eastern States it costs from 25 to 50 cents per rod (say an average of 40 cents per rod) to furnish the quicks, prepare the ground and set them. Then it will cost as much more to cultivate and properly prune the hedge for the first six years, or while it is growing into a fence. During this time another fence must be maintained, if animals are pastured in the fields thus surrounded. From the completion of the first six years, during the next twenty years, or during the life of an ordinarily good fence, it will cost to keep the hedge trimmed, the brush cleared up and the gaps filled, one dollar per rod, or five cents per year. Now, when good rails can be bought for sixty dollars per thousand, and posts for twenty-five cents each, a bolted rail and post fence can be built for 90 cents per rod that will last as long as the posts without any repairs, really costing no more than to keep a hedge fence in repair for twenty years, after grown. The rails are bolted upon the posts with 5-16 carriage bolts, 9 inches long, each bolt going through the ends of two rails and the post. It requires four bolts to the rod, costing 2 2-5 cents each. The cost of the fence is as follows:

4 rails, 13 feet long at 6 cts.,	24 cents.
1½ posts, at 25 cts.,	33.4 "
4 bolts, at 2 4-10 cts.,	9.6 "
Labor per rod,	20 "
	87 cents.

We have built more than a mile of this fence for ten cents less than the sum stated per rod. These bolts hold the rails snug against the post, and no wind, or storm, or animal can throw it down. It requires no attention during the life of the post.

Again, a thrifty hedge requires the whole strength of the rail for at least eight feet on each side, thus occupying one rod of ground for each rod of hedge. In twenty years this would be equal to the use of one-eighth of an acre for one year for each rod of fence, amounting to at least 50 cents per rod. Besides this, it casts a shade, which injures another half rod of land. Thus the hedge will really cost at least double that of a good post and bolted rail fence in all the Middle and Eastern States. The straight post and rail fence is much easier kept clean of weeds and rubbish. The writer has over two miles of hawthorn and Osage orange hedge, and speaks from an experience of eighteen years.

In England, where the hedge has been the principal fence for the last two centuries, the farmers are rooting it up over large districts, and it will certainly be abandoned in this country, except as an ornament, and on the prairies at the West. The Western States, where fence timber is too expensive, and where it is an object to stop the sweep of the wind, will find the hedge more or less of a necessity.—*Country Gentleman.*

Lake View, N. Y., July 31.

ADVANTAGES IN THE USE OF THE ROLLER.

An old English authority, away back as far as 1817, gives four principal operations in the processes of agriculture, viz., draining, manuring, cultivating and *rolling*. It may be truly said that fifty years of experience, since that time, have not lessened the value of the field roller in the estimation of careful and thorough agriculturists, either in England or America. The advantages derived from the use of the roller, are many and important. As a clod crusher, it is indispensable. With it the roughest and most lumpy soils are rendered fit for the reception of seed and easy of cultivation by the ordinary implements of the farm. After spring grains have been sown, the roller does, perhaps, its best and most important work. The earth pulverized by its previous use and by the plow and harrow, is now firmly pressed down about the seeds, giving encouragement to the growth of the plants and keeping their tender rootlets in position; also preventing evaporation, so that even light soils are not much the worse for any, except a very severe, drought. In spring, winter wheat is greatly benefitted by a good rolling, and no field should be laid down to grass, especially for a meadow, without having its surface made smooth and fit for the passage of the mower and rake by the implement under consideration. Another good work that the farmer finds the roller to do for him is to exterminate large numbers of slugs, wire worms, chinch bugs and other vermin so destructive to his crops. In brief it may be said that there is no one other implement of the farm whose use gives such varied and permanent advantages as the field roller.—*Prairie Farmer.*

TRAINING COLTS.

One of the meanest habits of young horses is that of lying down in the harness. Some colts will lie down almost as soon as you have them harnessed. Sometimes a blow from the whip, delivered low down along the side, quick and sharp, will bring them up with a spring. If one or two blows do not answer, the whip is of no use; you will only torture and scare your colt needlessly. The better way is to "beat him at his own trade," as the saying is. When he lies down, get upon his head and neck, and make him stay there. After five or ten minutes, he will begin to grow uneasy. * * * * *

Now there is no position which gives man such absolute command and mastery over a colt as when he has his knee on his neck, and his hands gripped into the bridle-pieces. Thus situated, man is absolutely "master of the situation;" and we have often thought that it was a very good idea to have a colt of rather vicious temper lie down once, in order that he might learn how powerless he is in the hands of man. When a colt gives up, the man at his head will easily perceive it. The hot blaze and mad glitter will leave the eye; the muscles will relax their tension; the the neck will become limp; and the whole body, losing its rigidity will lie along the earth as if it had no thought of rising, and would never rise. This is the stage of exhaustion and submission. The colt's rampant spirit is cowed, and his pride humbled. His conceit is taken out of him. He has been beaten by his own weapons and *knows it*. He will never trouble you again in that way. As to the time it takes to bring a colt to this conviction, there is no precise limit. Some colts will "give it up" in twenty minutes, some in sixty; and we have known colts hold out for *three hours*. But, whether it takes longer or shorter, carry the thing through. Believe us, you cannot spend your time better.—*Golden Rule.*

"NOW I LAY ME."

TO A. E. S.

"Now I lay me down to sleep—"
Little heads so lowly bended—
"Now I lay me down to sleep—"
Little flock so gently tended—

"I pray the Lord my soul to keep."
God will keep their souls this night,
Like a gentle loving Father
Keep them till the morning's light.

"If I should die"—Oh! spare them, Father—
"If I should die before I wake—"
Ah! the mother's head drops lower—
"I pray the Lord my soul to take."

Little prayers so softly uttered,
Little angels kneeling there,
Little children, God will hear you
Offering up your evening prayer.

—LILLIE SPOONER.

HOUSE AND HOME.

SOUP.

Although soups are frequently considered, and indeed can be made, a very expensive kind of food, it is quite possible to make delicious soups at a small cost, but this requires some skill and forethought, and is therefore not often done. In the first place, all gravies, scraps and bones of meat, and many kinds of cold vegetables can be used for this purpose, and are indeed, with the addition of an occasional piece of fresh meat and some fresh vegetables, all that is required to make many kinds of soup. The bones, etc., which of course must be perfectly sweet, should be boiled for four or five hours or longer in sufficient water to cover them, then the broth should be strained off and set away until the following day, when it must be boiled again for a short time with whatever vegetables or seasoning you may prefer to use. To "stock," as it is called, made in this way, you can add tomatoes, rice, barley, cabbage, onion, etc. You can thicken it with potatoes or milk; you can season it and put in maccaroni or vermicelli; in short, there are numerous different ways of treating it, and a little experience will soon teach you to make excellent soup from materials which must otherwise be thrown away. Of course, if you can afford fresh meats the soup will be richer and more nourishing, and whenever you boil any kind of meat (except pork) or poultry, you should carefully save the water in which it is boiled for the basis of a soup. There are some kinds of soup which are in themselves a dinner, and I add a few receipts which you will find both good and cheap.

BEEF SOUP.

Take a hock of beef, or any such piece as would be used for corning, boil it three hours, add a dozen white potatoes, three carrots cut fine, two onions, one turnip and a little celery if you can get it, and boil another hour. Season to taste, and serve all together, taking out the beef and putting it on the table in a separate dish.

VEAL SOUP.

Boil a knuckle of veal three hours, add a dozen potatoes, one onion and a large handful of rice and boil another hour. Take out the veal and potatoes and season the soup to taste. Then cut up the veal and potatoes in rather small pieces, and season with pepper, salt, and a little vinegar. Take one pint of milk, or of milk and water, thicken it with two tablespoonfuls of flour; when it boils, add a small piece of butter and pour it over the veal and potatoes. This, with the soup, makes an excellent dinner.

VEGETABLE SOUP.

This can be made without any meat at all, and, if you raise your own vegetables, is the cheapest of all soups. Take a dozen potatoes, half a small head of cabbage, three onions, four carrots, two turnips, if possible a little celery or three or four tomatoes, two handfuls of barley or the same of rice. Cut the vegetables, except the potatoes, quite fine and boil until thoroughly done, seasoning to taste. If desired, a small piece of pork may be added.

SUCCOTASH.

Take two dozen ears of sweet corn, cut the corn from the cobs, dividing the kernels as nearly in half as possible; scrape the cobs and throw them into a large pot full of water. Let them boil two hours, then dip them out and scrape them thoroughly, putting all that you scrape off directly back into the pot, into which at the same time you put rather less than a quart of Lima beans, and a piece of salt pork weighing from one and a-half to two pounds. Boil for three-quarters of an hour, then add the corn which you cut from the cobs, half a table-spoonful of sugar, and a very little salt. This is a most excellent and inexpensive dish, and is very good even when made of dried corn and beans.

BEAN OR PEA SOUP.

One pint of beans or peas to two quarts of the "stock" already described. Soak the beans or peas all night and boil them soft; season with pepper, salt, and a little onion.

CALF'S HEAD SOUP.

Boil until the meat clears from the bone, strain the broth and add the meat to it, with three onions chopped fine. Boil the brains in a cloth by themselves, mix them with a little flour, and add to the soup. Season with pepper, salt, thyme and a little mace.

OKRA SOUP.

Five quarts of water, one and a-half pounds beef, five dozen okras cut in thin slices, one dozen tomatoes, one cup of rice. Season with salt and cloves. The whole must be boiled four hours and strained through a sieve.

OX-TAIL SOUP.

If you have a butcher in your neighborhood you can frequently get the ox-tails for a very small price, or indeed for nothing, and the soup is of course cheap in proportion. Boil the tail until it is thoroughly done, take out the bones and add any vegetable you like, or strain the soup and thicken with a little browned flour, seasoning to taste.

TOMATO SOUP.

Take two quarts of stock, boil two dozen tomatoes until thoroughly done; rub them through a sieve and add to the stock. Thicken with a little flour, season with onion, pepper and salt, then cut wheat bread into small square pieces, fry in a little butter or lard, and drop into the soup just before putting it on the table.

NOW I LAY ME.

POTATO OR MILK SOUP.

Take two quarts of stock and thicken it either with a quart of finely mashed potatoes, or a quart of milk into which you have rubbed a pint of flour. In both cases season with onion, pepper and salt, straining your stock perfectly clear before you add either the potato or milk.

FISH.

For all who live on the sea-board, or in the near neighborhood of lakes and rivers, fish is a cheap as well as a wholesome food, and even those who live far inland, can, at a slightly increased cost, obtain a good variety of canned or salted fish. Fresh fish may be cooked in many different ways, but the simplest are usually the best, and for these, only a few rules need be given.

BOILED FISH.

Clean your fish carefully and boil it whole, in very little water, with or without salt as you like. It should be eaten with some kind of sauce or drawn butter, for otherwise it is very tasteless. A fish weighing four or five pounds is the best to boil.

BROILED FISH.

Split the fish exactly in half and broil it over live coals, taking care that it does not get burned or smoked. When done, put it on the dish and butter while hot.

FRIED FISH.

For this, small fish are necessary, and should be rolled whole in bread or cracker crumbs, or Indian meal, and fried quickly in hot fat, lard or butter.

BAKED FISH.

Take a fish as for boiling and fill it with the following stuffing, sewing up the side where you put the stuffing in, and putting a few small lumps of butter on top while baking. Bread crumbs in quantity according to size of fish, mixed with a little butter, pepper, salt and a little thyme or sage, or instead of the butter a little finely chopped pork.

SHELL FISH.

While the different kinds of shell fish make many delicious dishes, they are, for some people, very unwholesome, producing violent indigestion with often a bright red eruption, and they should therefore be eaten with great care, especially in hot weather.

OYSTERS AND CLAMS.

Stewed. Put the liquor on the fire by itself; when it comes to a boil, drop in the oysters or clams, and add at once, stirring all the time, milk (in the proportion of one cup to a quart of oysters) in which you have mixed smoothly two table-spoonfuls of wheat flour, and one table-spoonful of butter. As soon as this thickens so that the broth is creamy, take from the fire and serve hot.

Fried. Roll each oyster or clam in bread or cracker crumbs, or Indian meal, and fry in butter or lard.

Scalloped. Small dishes should be used for this: scallop shells themselves being excellent. Roll the oysters or clams in bread crumbs with which you have mixed a little salt and pepper, put them in the dishes or shells, with several small lumps of butter on top of each, and bake in a quick oven.

LOBSTERS AND CRABS.

Boil till thoroughly done; take the meat from the shells and eat cold, stewed, pickled or scalloped.

Stewed. Mix with butter, pepper, salt and a little hot water, and boil for one minute.

Pickled. Put in a bowl, season highly with pepper, salt and mace, and cover with vinegar.

Scalloped. The same as oysters and clams.

SALT FISH.

All the different kinds of salt fish may be either broiled or boiled, while some kinds, as codfish, haddock, etc., may be made into a variety of palatable dishes.

CODFISH.

1. Shred fine and stew in a little milk, butter and pepper. Just before putting on the table, add one or more hard boiled eggs, cut into small pieces.

2. Chop up very fine with an equal quantity of potato, add a little milk, butter and pepper; serve hot.

3. Roll the above, when cold, into small cakes and fry in lard.

HADDOCK.

1. Stew with milk etc., the same as codfish.

2. Boil a cupful of rice; when thoroughly done, add twice the quantity of finely shredded haddock, and two hard boiled eggs, chopped very fine; a little pepper.

KREE.

BY A. C. GORDON.

My boy Kree?
His played wid you when you was a chils!
You ac' he
Growed up together? Wait! Lemms see!
Closer! so I kin look in yer face.
Mas' George's smile!
Lord love you, Marster!
Dar 'neath dat cypress is whar Kree lays.

Suburat an' growa!
Mas' George, I shudder he knowed you, son,
'Count o' de beard dat your face has on,
But for dat ole time smile o' yourn.
"An' Kree?" you say—
Hadn't you heerd, Marster,
He 'ceased de year dat you went away?

Kree ac' you,—
How de old times comes back onst mo'.
Moonlight fishin's, ac' hyars in de woow,—
Squirrels an' jay-birds up overhead
In de oak-trees dat de sun shined through.
Look at me, Marster!
Hers is me livin', an' Kree, he's dead!

'Pears to me straogs,
Now when I thinks on 'em, dose ole years.
Mas' George, sometimes de blin'n' tears
Fills up my eyes
'Count o' de misery now, ac' de change.
De sun dims, Marster,
To an ole man when his ons boy dies.

Did you say "How?"?
Out to de dug-out one moonshins night
Fishin' wid your baby brother,—his
Wid de curls o' yaller like streaks o' light
An' de dancin' big blue eyes. Dead, now.
Kree died for him,—
An' yearnin' for Kree,
The Lord tuk him, Marster;
De grees kivers 'em both from sight.

Heerd o' de tale?
Didn't know Kree was de one dat drowned
Savin' Mas' Charley? Well, 'twer he.
De chile waxed weaker, his face mo' pale,
After de corpse o' poor Kree were found;
Two months later he went, you see.
God bless you, Marster,
Nine years has rolled over both underground.

Worn out an' gray,
Here I sits waitin', Mas' George, alone.
All on 'em's gone,—
Marster an' Miela, an' Charley an' he.
You ac' me only is lef'. Some day,
When you've gone back to yer ship on de sea,
I'll hear him say,
Jes as he used ter, a-fishin', ter me:
"Daddy, come over!" An' passin' away
Dat side de river, again I'll be
Wid my boy, Kree.

HOME.

By the firside still the light is shining,
The children's arms round the parents twining.
From sweet, sweet love, oh, who would roam?
Be it ever so homely, home is home.

Should we fall out, let us mend ill-doing,
And begin anew a second wooing;
From sweet, sweet love, oh, who would roam?
Be it ever so homely, home is home.

—*Dinah Mulock Craik.*

HOME LIFE A HUNDRED YEARS AGO.—One hundred years ago, not a pound of coal or cubic foot of illuminating gas had been burned in the country. No iron stoves were used and no contrivances for economizing heat were employed until, Dr. Franklin invented the iron-framed fireplace which still bears his name. All the cooking and warming in town and country were done by the aid of fire kindled on the brick hearth or in the brick oven. Pine knots or tallow candles furnished the light for the long winter nights, and sanded floors supplied the place of rugs and carpets. The water used for household purposes was drawn from deep wells by the creaking "sweep." No form of pump was used in this country, so far as we can learn, until after the commencement of the present century. There were no friction matches in those early days, by the aid of which a fire could be easily kindled, and if the fire "went out" upon the hearth over night, and the tinder was damp so that the spark would not catch, the alternative remained of wading through the snow a mile or so, to borrow a brand of a neighbor. Only one room in any house was warm unless some of the family was ill; in all the rest the temperature was at zero during many nights in the winter. The men and woman of a hundred years ago undressed and went to their beds in a temperature colder than that of our modern barns and woodsbeds, and they never complained.

THE TOILERS OF THE SEA.

We ride on the back of the wave,
We dip in the trough of the sea;
Our boat is stont, and our hearts are brave,
As fishermen's hearts should be;
For winds may be fierce and strong,
And the waves may do us wrong,
And those may weep ere long
Who wait for us three.

We laugh when the winds are fair,
And the nets drag heavily
With the weight of the fish, and there is no care
For my fisher-boys and me;
But the winds may rage and roar,
And the surf beat on the shore,
And those wait evermore
Who wait for us three.

'Tis toil and danger and strife;
Yet we love the greedy sea,
That gives us bread for a wagered life—
Bread for my lads and me.
But the waves in anger churn,
And the winds seem cruel and stern
To those who wait, and yearn
To welcome us three.

We laugh when the wind is light;
But my heart is heavy in me
Sometimes when I think of my lads at night,
And the perils of the sea.
For winds may be fierce and strong,
And the waves may do us wrong,
And those may weep ere long
Who wait for us three.

ON THE ROAD TO THE NORTH POLE.

"And now there came both mist and snow,
And it grew wondrous cold;
And ice, mast high, came floating by,
As green as emerald."

Rime of the Ancient Mariner.

There has ever been a strange fascination about the frozen regions of the North. Drawn by its hidden magnet, men leave comfortable firesides, family and home, and brave the terrors of perpetual winter and nights six months long, trying to wrest from Nature the secrets she treasures behind the "Shining Wall," and beyond "The iceberg's slippery stair."

They bring back wonderful stories of Eskimo and Polar bears, and reindeer, and fields of ice that never melt, and mountains of ice that glitter with all the colors of the rainbow, and strange auroral lights that dance above them and illumine the solemn Arctic night with their many-hued streamers.

But no mortal yet has planted foot on the northern pole of our whirling sphere, and whether it is surrounded by an open Polar sea, as the veteran explorer, Dr. Hayes, believes, or,buried under a "Paleocrystic sea" of ancient and never-melting ice, as Captain Nares is sure, "You nor I, nor nobody knows."

The latest expedition in search of it, an English one, has returned unsuccessful, but with the glory of having pushed farther north on the road to it than any one, unless Eskimo, ever has before. They bring back the usual number of exciting stories which make such pleasant reading by our Christmas fire-sides, especially as we can think that the daring adventurers are enjoying the comforts of their own.

The Alert and Discovery sailed from the British shores in the spring of 1875, finely equipped with scientific apparatus, provisions, and everything necessary for a three years' voyage. They were manned with good crews of courage and experience, and their officers were men of scientific skill and heroic enthusiasm and endurance. They left with high hopes that the British Union Jack would be the first flag to float proudly over the North Pole. Last August, news was brought of them by the Captain of a vessel returning from Greenland. He had found a "cairn," or pile of stones, left by them on one of the Cary Islands, containing letters from them up to July 26th, 1875, at which time they were steaming northward in an almost clear sea, with the water at a temperature of nearly forty degrees, and nearly six weeks of open season before them. From that time nothing was heard of them until Oct. 28th, 1876, when a telegram was received from Captain Nares from Valentia, reporting in five words the failure of the expedition: "Pole impracticable. No land northward."

Further detailed accounts report that a point at least seventy miles north of previous explorations was gained, and within a distance of about four hundred and sixty miles of the Pole. Beyond that, advance was impossible. The Discovery was closed in by the ice and had to be left in winter quarters in Lady Franklin Bay. The Alert pushed on and reached the limit of navigation on the shore of the Polar sea, on which the ice reached a thickness of 150 feet, in latitude 83 deg. 27 min., a higher latitude than any vessel had ever attained before. Here it was frozen in for the winter, and unable to communicate with the Discovery, or to attempt any further exploration till the return of spring and daylight. We will let Captain Nares himself tell how they passed the winter:

"The long Arctic Winter, with its unparalleled intensity and duration of darkness produced by an absence of sunlight for 142 days, was passed by each individual on board with much cheerfulness and contentment. Owing to the sameness in the daily routine, which, when looking into futurity, is thought to entail a long duration of dreary monotony, the time, in reality, passed with great rapidity, and in January, when the first glimmering increase in the midday twilight began to lengthen sensibly day by day, the want of light was scarcely noticed by any one; and not until the sun actually returned on the 1st of March did we in any way realize the intense darkness we must have experienced for so long a period. The manifold ordinary duties of the ship—to which were added the constant repair of the snow embankment, which, in consequence of our being frozen in close to a stranded piece of ice, was thrown down every spring tide—kept the ship's company fully employed, and gave them plenty of exercise during the day. On five evenings in the week, a school formed on the lower deck under Commander Markham and several of the officers was well attended, each Thursday being devoted to lectures, songs in character, and readings, with occasional theatrical representations; the whole so admirably arranged and conducted by Commander Markham as to keep up the pleased interest of all for the whole period."

Our picture represents the inspection of the thermometer or barometer on ship-board. It also had to be inspected at the various observation stations on shore, some of them buried in the snow and some of them elevated on a frame. This inspection was serious work, a few seconds of exposure of any part of the face to the intense cold, endangering a frost-bite. The lowest temperature observed was 72° below zero, Farenheit. For forty-seven days the mercury was frozen.

Against these rigors did the gallant men contend. There was daily muster and divine service, parade for lime juice served out to each man as a very essential preventive of scurvy, a terrible disease which results from long confinement to salt food, especially in the Arctic regions. Regulation exercise was kept up, and walks on the ice, marking the way for return by empty meat cans.

The last weekly entertainment on the Alert was given March 2, 1876, for, the sun having risen the day before—for the first time in one hundred and forty-two days—the time for the sledging explorations had arrived. Captain Nares lectured on The Paleocrystic Sea (sea of ancient ice) and Sledging Experiences, and the whole company joined in singing with the troupe, who called themselves The Pale-o-Christy Minstrels.

THE PALEOCRYSTIC CHORUS.

"Not very long ago
On the six-foot floe
Of the Paleocrystic Sea,
Two ships did ride
'Mid the crushing of the tide,
The Alert and the Discovery.

"The sun never shone
Their gallant crews upon
For a hundred and forty-two days,
But no darkness and no hummocks
Their merry hearts could dummox,
So they set to work and acted plays.

"There was music and song
To help the hours along,
Brought forth from the good ship's store.
And each man did his best
To amuse and cheer the rest,
And 'nobody can't do more'."

In March, after one unsuccessful attempt in which one man died, a party succeeded in reaching the Discovery and reported all well on that ship.

"In April," the report goes on, "in accordance with the scheme laid down, a sledge expedition was started, to attempt to reach the Pole, not overland, for as Capt. Nares telegraphed, there was,as far as could be seen,no land to the northward, but over the ice-floes of the Polar Sea. This expedition was absent 70 days, and reached the latitude of 83° 20' stated in Capt. Nares' dispatch. In the course of this toilsome journey, Cape Columbia, the northernmost point of the American continent, was rounded, and a large portion of the coast of Greenland explored. It was found that no such land as that called by the American explorers President's Land existed. The Polar region seems, in fact, as approached from the direction of Smith's Sound, to be a vast frozen sea. After a terrible struggle, in which the sledges could only advance a mile a day, they reached the extreme latitude yet attained on any part of the Arctic region, and were then within 400 miles of the Pole. It is quite obvious that at such a rate of travel there was no possibility of passing over the intervening space. The obstacles were, in fact, absolutely insuperable. Ice some hundreds of feet in thickness covers the sea, and it may probably be considered as finally settled by the expedition that the Pole is guarded, at least on that side, by 'thrilling regions of thick-ribbed ice,' as terrible as those which Shakespeare's imagination conceived as giving new terror to the fear of death."

This being the case, there was nothing for the expedition to do but return, and many homes must have been gladder on Merry Christmas for their safe return.

But Dr. Hayes, our American explorer, still holds to his faith in the open Polar Sea, which he believes he discovered, and says, "After several years of experience in Smith's Sound, where the ice is probably the heaviest known, I cannot conceive of such a thing existing as a permanent ice barrier on any water." He thinks other seasons may be more favorable, and like enough there will be other dauntless hearts eager to try it once more.

TOILERS OF THE SEA.

THE NEWS WITHOUT POISON.—The NEW YORK OBSERVER claims to publish the *best family newspaper*, and repudiates all unsound or objectionable teaching. Even its advertising columns are free from all quackery and dangerous advertisements; and the whole paper, both in its religious and its secular department, is filled with pure and entertaining reading. While we commend the position of the OBSERVER in this matter, we also heartily endorse it as one of the most desirable periodicals for any household. The price, $3.15 a year post-paid, can hardly be made to return as much good, spent in any other way. S. I. Prime & Co, 37 Park Row, New York.

The Teacher's Table.

HAMPTON INSTITUTE LECTURES ON TEACHING;

BY PROF. F. A. ALLEN.

LECTURE VI.

SCHOOL BOOKS.

We are to consider School books: 1st—What they are for; 2d. How they are to be used by pupils; 3d. How they are to be used by teachers.

What they are for. } To be used in gaining knowledge, not as knowledge itself.

By this I mean to caution you against too great a regard for the text-book itself. The great number of text-books published is often a disadvantage to schools and teachers. A child studies half way through Davies Elementary Arithmetic and then moves to another place and has to buy a new Greenleaf, and then to another place and has to buy a Robinson, and then the school committee adopts Hagar and he has to buy another new book. Or first it is Harvey's Grammar, and then it is Smith's, and then it is Brown's, and then it is Bullion's; and every time he is put back, and finds new rules and new terms and new ways of putting things, and they all seem to him to contradict each other, and, only partly understanding any of them, he does n't know which to believe, and his mind gets into a complete muddle, and he "hates grammar." What wonder? It is well for him if he has a teacher who knows grammar apart from text-books, and can make him understand that a noun is a noun and an adjective an adjective, whatever it may be called; that it doesn't matter whether you call the verb *to be*, intransitive, copulative, attributive or neuter, if you only understand its various characteristics which these terms describe, and know how to use it correctly. It will be a great relief to the pupil's puzzled mind to understand that the different grammarians are not contradicting each other—usually—but only striving, each one, to explain the subject in the way that seems to him clearest and simplest. Unfortunately, the teacher himself is often so deficient in general knowledge of the subject, that he is almost as much puzzled as the child by finding himself obliged to use a new text-book.

Let us see, then, how text-books should be used.

How to be used by pupils } 1. In hand but a short time. 2. Terms & definitions committed. 3. Not all problems wrought.

A child will go to his books with much more interest if he does not grow too familiar with them. Familiarity breeds contempt. If it is possible to keep him from looking ahead of the lesson, it is so much the better. Take the reading book, for example. A class in the second or third reader, if allowed to take their books home, will usually have read through all the stories and interesting articles several times before they have to read them in the class. The consequence is, they lose their freshness, and reading in the class becomes a dull task. So it is with the reading-part of their geography. I know a teacher who keeps a rubber band slipped over the pages and cover, in advance of the day's lesson, so as to prevent all looking ahead. If the pupils like to read over the back lessons, they can,

Then a child should have enough time given him to learn his lessons comfortably and thoroughly, but not enough to make him lazy over it. He will enjoy it all the more for exercising his mind briskly over it. If I say to my little boy, "Willie, I want you to do this errand for me to-day," why of course he takes his time about it—lounges along if he feels rather lazy, stops and plays with boys along the road, and gets back some time or other. Now, that isn't what I say to him if I want my business promptly done, and well done. I say, "Here, Willie, I want you to run an errand for me. It will take you, let's see, fifteen minutes to get there, ten minutes to do the errand, and fifteen minutes to get back. I'll allow you five minutes for unforeseen delays. Now off with you. Off he runs, and comes back inside the time with the errand well done, and a pair of bright eyes and red cheeks into the bargain. He'd found it a great deal better fun than lounging over it.

2d. Terms and definitions should be committed to memory. It is well to have a child accustomed to give the rest of his lesson in his own words, but terms and definitions should be learned word for word, because they are expressed in clearer, better English than the child can give, and it is important that they should be clear and definite in his memory. Besides, the mental exercise of committing accurately to memory is valuable. Of course the teacher should thoroughly explain the terms and definitions.

How to be used by Teachers.
1. Studied out of school.
2. Not in hand during recitations.
3. Subjects systematically considered.
4. Give terms and definitions.
5. Principles laid down and rules formed.
6. Books should be well marked up.

1st. The teacher should make himself as familiar as possible with the text-books he is to teach, and, indeed, with the whole subject he is to teach. This will give him a sense of confidence in himself, and the pupils a sense of confidence in him. You cannot hope to make a subject interesting to your pupils if you don't understand it pretty thoroughly yourself. They will ask you questions outside of the text-book, and you will find that it is much easier to ask questions than to answer them. A mere pretense of knowing will hold but a little while. A bright child soon finds out if his teacher knows little or nothing about his subject.

I know I am urging a degree of culture which many of you do not possess, and find it difficult to attain. I don't want to discourage you, but to incite you to work. Take home your text-books. It won't hurt *you* to become familiar with the advance lessons. If you have any chance to read other books on the subject, do so, but at least be thoroughly acquainted with the one you teach.

2d. The teacher should not be dependent upon the text-book in conducting a recitation. This will be quite possible if he has followed the advice already given. You have seen teachers, no doubt—I have—hardly able to take their eyes off the text-book, lest they lose the place, and be unable to tell whether the pupil has given the right answer or not. "What is the capital of Ohio ?"—"Columbus"—Looks on the book—"Yes. What's the Capital of Illinois ?"—"Chicago"—stops, looks at the book, loses the place, hesitates, finds the place, —"No sir—next."

How long do you suppose it takes the pupil to find out that the teacher doesn't know much more about Geography than he does ? And how would it look to you, if you were a visitor at such a school ? But if the pupils see that the teacher is independent of the text-book to a great extent, and can tell them some things about the subject that are not in the text-book, they feel a respect for him, and confide in his teaching.

If you have not known much, or enough, about the subject before, do not be discouraged, but study it up, so as to keep well ahead of your class.

3d. The subjects of the text-book should be systematically considered. Nothing helps the memory, and clears one's conception of a subject so much as a systematic arrangement of thought upon it. If you have the choosing of a text-book, choose one that is systematic in arrangement. If you have to make the best of one that is not very clearly arranged, in studying it up try to devise some system in which you can present the subjects to your pupils more clearly."—

A good illustration of such systematic arrangement, irrespective of text-books, is the method of teaching or studying History by topics, given in a former number of this paper. The example was on the American Revolution—as follows:

1. Time.
2. Parties engaged.
3. Causes.
4. Territory.
5. Principal Generals—each side.
6. Principal Victories.
7. Result to each side.
8. Result to the world and civilization.—

"4th. Give terms and definitions clearly, in as few words as possible; explain thoroughly, and have the pupils commit them perfectly to memory.

5th. To give rules alone without showing them to be the result of principles leads to a merely mechanical way of working, without thought. To give a child merely the rule to divide a fraction by a fraction,—"Invert the divisor and proceed as in multiplication,"—or, to teach him borrow one from the next term in subtracting, when the term of the subtrahend is too large,—is all well enough at first. He has enough to think about without going into the reasons of things. But when your advanced scholars are familiar with rules and processes, then analyze and show them the principles on which the rules are formed.

6th. You don't want to let the children mark up their books. It is a very bad habit for the children—but it is a very good habit for a teacher. As you study your text-books, make your notes and pencil your plans on the margin, as neatly as you can, of course. They will be a great help to you, and save time when you come to them in teaching.

TO HAMPTON GRADUATES.

My Dear Young Teachers :—

In a former letter I promised you some hints about the treatment of *inattentive* pupils. You will be surprised when I tell you you must not have any such pupils. I think I hear you exclaim, "What do you mean ? Do you advise us to dismiss from school all the inattentive pupils that are placed under our care ?" By no means; but I hope you will have so much influence over them, so much tact, energy, and enthusiasm in your work, that you will attract and rivet their attention. You will not, of course, be able to accomplish this with new pupils at the beginning of their course; they will come to you untrained, undisciplined, not knowing how to use their eyes and ears, or to follow a train of thought. They will be "pleased with a feather, tickled with a straw," more readily than charmed with your eloquence and the truths you wish to teach. But the more careless and indifferent they are, the more earnest you must be. Gradually, they will catch your enthusiasm, and be all eye and ear in their eagerness to learn from you. I have visited your Alma Mater, the Hampton Normal and Agricultural Institute, in three successive years, and listened with great pleasure to the recitations of the classes. On no occasion did I see an inattentive pupil. The good order and profound attention that prevailed every where, were due partly, of course, to your own desire to learn, but chiefly, I think you will admit, to the excellence of your teachers. A poor teacher makes inattentive scholars. Who wishes to listen to a dull teacher that does not himself clearly understand what he attempts to impart to others ? Do not undertake to teach what you do not know. All of you who have duly profited by the course of study you pursued at Hampton, are well equipped for the beginning of your career; but, as you catch glimpses of the fair fields of knowledge which lie beyond, and see "Alps on Alps arise," you will be inclined to enter new paths. Follow these new paths by all means, if you have leisure to do so; but do not try to teach new subjects until you have fairly mastered them. Every day, before you go to school, be prepared with the lessons you expect to hear recited. If it be a spelling lesson, be sure that you know the correct pronunciation and meaning of every word in it. If a lesson in History, or one of the sciences, (you have studied Natural Philosophy, Physiology and some others), do not trust to the recollection of what you learned at school; but study the lesson for the day so carefully that you will hardly need the text-book in hearing your class. All the most important facts and ideas you must have so clearly and firmly fixed in your own minds that you can talk about them and ask questions without the book, and then, opening it, glance over the page to ascertain whether you have omitted anything of importance. For a lesson in Geography, be sure that you can point immediately on the map to every place named in it, and also try to be prepared to tell your pupils more than they have found in the text-book. You will, thus, go to your class with confidence; your eyes will be upon your pupils, and not fastened to your books is the endeavor to find the questions to be asked, and the eyes of your pupils will be fixed upon you.

You will soon be able to distinguish between a wilfully inattentive pupil who is mischievously trying to divert the attention of his classmates, and one who wishes to learn, but is naturally restless, and has not from previous training acquired the power of self-control. With the letter you should be very patient, encouraging him to make repeated efforts to overcome his careless habits. With the former try different methods. Let him see that you have an eye upon him and are noticing his conduct, but do not be fretted by it. His object may be to vex you; but, if it is, disappoint him by your self-possession. If he should persist in his wrong-doing, stop short in hearing the lesson; fix your eye upon him; his classmates will do the same, and he will probably feel so ashamed that he will cease to annoy you. Should this not succeed, send him from the class to his desk, and assign some work to occupy him,—perhaps writing out the lesson. It is a good plan to make it more troublesome to the pupil to do wrong than it would have been to do right. Avoid scolding refractory pupils. Take opportunities of reproving them privately; appeal to their sense of right; try to enlist their sympathy on your side; call out their kind feelings; there are few persons that have not a tender chord somewhere; write short notes to them occasionally, give them some work to do for you, and let them render you little services; difficult as it will be, I beseech you to be patient, hopeful, persevering. The most beautiful work in wood is made from the *tough knots*. Yet, should a boy's conduct after a fair trial be as injury to his fellow-pupils, it may be necessary to dismiss him from school.

When you take your seat to hear a lesson, look bright and cheerful; do not habitually preface the recitation by a lecture upon attention, or it will become an old story and lose its effect. But strike your hand-bell or tap gently on the table; then, pause a moment until there is perfect quietness before you ask the first question. Do not, however, omit to talk to your pupils occasionally upon the important subject of order; but choose the opportunity when you feel that their minds are in harmony with yours and open to good impressions.

Finally, be patient with yourselves. You will often be disappointed in the result of your efforts. Your progress is gaining the attention of your pupils will seem slow. You will compare your power, authority and influence over them with your recollection of your Hampton life, and be tempted to fear you will never reach the standard at which you aim. Try and try again. Invent new methods of interesting the young minds around you, and learn from the great teacher *Experience*. Above all, pray much for light and wisdom, for aptness in teaching, for strength and patience. Pray not only in the morning before you begin your work, but through the hours of school as you feel the need of help from above; let short, silent breathings arise from your hearts to Him whose ear is always open, and who "is able to make all grace abound toward you; that ye, always having all sufficiency in all things, may abound to every good work."

Your sincere friend, M. A. L.

LETTERS FROM HAMPTON GRADUATES.

The following is from a graduate-teacher in Georgia, who gives promise of great usefulness in the good work to which he has devoted himself:

"I am at present engaged in teaching exclusively for the people, a school of thirty-five attendance. My scholars progress rapidly, and their parents make no delay in their monthly regular payments. Well of course it is not much as to a salary; but I thought that being engaged by my people, with their endeavors to run their own school, and the good of service, I could and would be of use to them, if I would '*try*' and put my hand to the plow, remembering 'That he who by the plow would thrive, himself must either hold or drive.' I took the offer, and am now doing nicely with my day school and acting as assistant to Mr. T. P. Pease in the Sunday-school, who as regular as the working of a clock, every evening is present. I have received valuable experience since I've been teaching, and experienced also the 'love of Jesus.'

C."

A young woman with a little African blood in her veins, but perfectly white, gives an account of her labor in a remote part of Virginia:

"They are very strange out here in many ways and it takes a patient person to work with them. I have now a cunning little fire in my room, and just as comfortable as one could wish for in the country. I have a plenty of everything nice. These people I live with are the leading ones of this place, and they think I have a splendid education. They say if I will only teach the children what I know they will be satisfied. I will have more scholars than I will know what to do with after Christmas. They are going to try to help me get up a Christmas tree for the children.

"Oh! you know I am happy in many ways, for I have now just what I have so long prayed for, and that is a school in the country where the people are behind in everything and where knowledge has been kept from them, and where I might make the poor rejoice with kind words if no more. I hope that you will pray that my entire school may come to the dear Saviour and be made to rejoice in his love. There is not one of my day scholars Christians, but I do feel that some of them will be before long.

"The people are very wicked out here, and it does trouble me so. They shout, tear things all to pieces, knock the glass out of my schoolhouse windows—and then I have to sit there and suffer with the cold until we can get some more and have them put in. Mr. H.—the man I board with—forbid them having their meeting in there any more on that account. The men and women both drink out here and smoke their pipes—every minute in the day nearly sees them going all around with pipe in mouth—swear and take the Lord's name in vain, and it does hurt me so. All I can do is to pray for them and correct them and tell them how wrong it is. You know I never was so far out in the country before, and in the mountains too!—makes things seem very sad to me at first; but we must be cheerful in the work of the Lord. I am enjoying my stay here very much, although some parts of my future look so dark to me, but I know if I trust *Him* that is above, He will provide for me in the future as *He* has in the past.

"I carried some of my Sabbath-school papers an gave my Bible class this morning, and they were so glad of them! I told them that a lady was going to send them some cards and some papers for the school, and they seemed so delighted. I told them that if they would take good care of them and come regularly to Sabbath-school I would show them your picture and try to do all I could to make the stay in school interesting for them. I have to whip some of them, for they have always had it and some of them will not get along without it. You know I teach them in reading as Miss Lord used to teach us. I have one of those books, and they think it is just the thing, and they give them very nicely; and I give them gymnastics, too; they enjoy it so much that they try to do it just as good as they can. I have had over so many visitors, and they always come more than once, both ladies and gentlemen. I have some scholars larger than I am, but not any so old. Some of them are so queer and funny it is all I can do to look sober. I have some very good scholars but the majority are not very far advanced; they don't know anything about grammar. Some of my scholars are at times very dirty, but the most of them come as clean as they can since I have given them a lecture about being neat if they were poor. I wish you were where you could visit my school.

"We talk of having a spelling match between Walt's scholars and Orpheus' and mine—Orpheus' will spell against Walt's and mine—Friday before Christmas; it may not amount to anything. Before the close of school we might have it, but now they all seem so poor where McAdoo is, that I am afraid the little children cannot afford to come up here on the train to spell against us. I have found many kind friends here and some very nice ones too, and they have real nice houses—some of them just as nice off as some of the best white people here."

A Hampton graduate teaching in West Va., gives a bit of his experience. It is valuable as showing the spirit of many negro teachers.

"The school that I am now teaching will be out in about a month, and I see very little prospect of getting a house to teach my next school in (I mean the one at home). We have a brick building there, but it is so entirely dilapidated inside that it will be impossible for me to begin school in there, this winter, till it is greatly repaired. Many of the children and myself suffered greatly last winter, on account of the house being so cold and damp. It has grown so much worse that now I find it wholly unfit to begin school in. Thus you see the precarious condition that it leaves me in. The children in this place are too anxious to go to school for them not to have any school this year, and perhaps none next, on account of that. I believe it is one of the best common schools in Virginia or W. Virginia. I intend to work for a house till I see it is utterly impossible to get one. You may ask me why doesn't the Board of Education furnish a house—well, the reason is this: The Board is composed of Democratic men who do not care much whether we have any school at all or not. Colored people of this place have petitioned to them time after time for the last ten years to build them a house, or to repair the one they have. They have refused on the ground that they have no money. I am going to begin work now to raise money in all the ways I can to repair the house we have. It is impossible to rent a house here. If I can succeed in raising about $40 it would fit the house up very nicely, and make a pleasant schoolroom of it.

"I thought that I would let you know my condition, and perhaps you might know some kind friend in the North who would be willing to aid me a little in this.

THE ELECTORAL COLLEGE.

A reader asks us to explain all about the electoral college.

When the constitution of the United States was framed, the faith in the capacity of the common people to decide upon their destinies was much less strong than it is now. Hence, in the election of president, the fathers sought to place the choice in the hands of a body of men who should themselves be the chosen, so that the president should be the picked of the picked. For the same reason, the choice of senators was devolved not directly upon the people but upon the Legislatures of the several states. In the presidential election, the constitution therefore provided a body of electors, of whom each state should choose as many as it had members of Congress and senators. Every state has two senators, and adding to them the number of its representatives gives the number of electors to which it is entitled. Massachusetts, therefore, has thirteen. How these electors should be chosen, or "appointed," to use the constitutional word, is left to the Legislature thereof, and if the Massachusetts Legislature were to authorize the governor to appoint them or

shonld proceed to elect them itself, there would be no objection nndar tha federal constitntion. In fact, in many states the Legislatures have elected the electors, though only Colorado did so this year.

Now, then, tha electors, having been chosen in each state in November on a genaral tickat, to represent tha whole stats, and according as the whole stats has gone for one party or tha other, meet in each state and ballot for president and vice-presidant, ona of whom must not be a resident of that state. That is, if both of one party ware residents of one state, the vote of that state could not be cast for those candidates. This voting is fixed on tha sama day in all the states by federal law, and took place, this year, December 6th. Lists of tha votes are made out and transmitted to the president of the Senate at Washington, who opens tham in the presence of both houses of Congress on the second Wednesday of Febrnary. Tha votes shall then be connted; and those two having majorities of the electoral college, (as the electors all togatber are called) are chosen president and vice-presidant. As thare are 293 mambers of Congress and 76 senators, the electoral college nnmbers 369, a majority of which would be 185. Heuce Tilden or Hayes must receive, to be elected, at least 185 votes.

If two men nre thus chosen, they are inaugurated, according to tha law, on tha 4th of March following. If no one receives a majority for president, the House of Representatives immediately proceeds to alect one, from tha three highest candidates; each state has one vote. If no one receives a majority for vice-president, the Senate must immediately ballot for that officer, two-thirds being present and a majority deciding. If the House shonld not choose a president by March 4th, the vice-president chosen shall act as president. And if naither should be chosen, tha president pro tem. of tha Senate would act as president and ordar a new election. This last procedure is a matter of federal law and not of the constitution.

It is proposed to do away with the whole system of the electoral college and substitnte for it an alection by a direct popular vote, and this seems to be tha tendency of public opinion and of destiny.—*Springfield Republican.*

NEWS OF THE MONTH.

POLITICAL.

Jan. 1st. Repnblican and Damocratio Assemblies convened in New Orleans, each claiming to be the Legislature of Mississippi.

Jan. 8th. Repnblican and Democratic Governors and Lieutenant Governors were inaugurated in New Orleans. On the 9th, a body of several thousand men, armed and organized as militia under the orders of the Democratic Governor, Nicholls, t ok forcible possession of all the public buildings, except the State House which was held by the Republicans.

THE Senate and two Assemblies claiming to be tha House of Representatives in South Carolina have adjourned *sine die.*

RESOLUTIONS proposing plans for counting the electoral votes, are the order of the day in both houses of Congress.

IN FLORIDA the State Supreme Court recently issued a mandamus to the Canvassing Board requiring them to re-canvass the votes for Governor, and report the result according to the fnce of the returns. The Democratic candidate, Drew, was thus declared elected and was inaugursted on the 2d inst. The proceedings of the Court have had no reference to the vote for Presidential electors.

THE Committees of tho two Houses have agreed npon a plan for settling the electoral count.

THE House has passed a bill allowing pensions to all who served sixty days in the Mexican war, or thirty days in the Florida or the Black Hawk; one authorizing the Freedmen's Bank Commissioners to buy in property sold nnder foreclosure to secure debts of the bank, and sell the snme; and ona for the sale of desert lands in California, Oregon, Nevada and the Territories.

PERSONAL.

COMMODORE VANDERBILT, the great capitalist and Rail-road king, after his protracted illness, died January 4th. A self-made man like A. T. Stewart, his property amounted at the time of his death to $60,000,000, and the larger part was left to his son, William H. Vanderbilt, who nsumes the Presidency of the Hudson River and N. Y. Central Rail-road.

BISHOP BROWN of the African M. E. Church has gone to visit Hayti to organise missionary work thare.

GENERAL.

THE one-hundredth anniversary of the Battle of Trenton, New Jersey, December 26th, was celebrated on the spot with a brilliant mock reproduction of the battle

THE Pacific night-express train on the Lake Shore Road, bound west, plunged through an iron bridge at Ashtabula, Ohio, December 29th, tha cars and engine falling 75 feet into tha ice-covered stream below. Tha cars took fire, and about 100 persons perished hy burning, drowning or freezing, while many more were injured. Among the killed was Rev. P. P. Bliss, anthor of many of the Moody and Sankay hymns. His wifa was killed with him.

THE amount of snow covering New York state this month has not been equalled since 1857. Ovar a great part of the state it lies three feet on a level, with drifts ten and fifteen feet high.

THE breaking np of an ice gorge in tha Ohio river has caused great damage to freight boats.

FOREIGN.

THE Conference of the Great Powers now sitting to consider the Eastern Qnestion, is still in session. Warlika signs multiply in Russia, and the Turks are preparing actively for war.

MEXICO is in revolntion. President Lerdo de Sejada, elected last autumn, has been compelled to flee, and the city of Mexico captnred. The military commandars, Diaz and Iglesias, who headed tha rebellion are now quarelling ovar which shall be President.

A FIRE in Tokio, tha capital of Japan, has recently destroyed 5,000 houses. The residence of the United States Minister narrowly escaped.

The Russian frigate Svetland, flag-ship of the Russian squadron, arrived in Hampton Roads, Jan 13th, and, after exchanging saintes and receiving visits from the American flagship Hartford and Fortress Monroe, proceeded to Norfolk where the rest of the squadron is expected. The Svetland is commanded by the Grand Duka Alexis, son of the Czar and heir of the Russian throne, and has also on board the Grand Duke Constantine, a young prince of eighteen, cousin of Grand Duke Alexis, and brother-in-law of the King of Greece.

Bishop C. C. Pennick of Virginia has been appointed bishop of Southern Africa by the Protestant Episcopal church of America.

CENTENNIAL VIEWS.

THE COLORED RACE AT THE CENTENNIAL.

II.

AFRICA.

The African States represented at the Centennial Exhibition are Egypt, Tunis and Soudan, Cape Colony, the Orange Free State, the Gold Coast and Liberia. These were all in some degree representative of negro industry and skill, though none as distinctively nnd honorably as Liberia.

EGYPT.

In tha exhibit of this, "the oldest of the nations," it was curious to observe a chart of the telegraph lines, with which modern Yankee notion the enterprising Khedive has electrified his ancient domain. Egypt, forming part of the great Ottoman or Turkish Empire, (great only in extent and age), has been, since the Crimean war, under the protection and influence of England. The Khedive or Turkish vice-roy is a man of progressive ideas, and is doing much to modernize Egyptian civilizntion by tha introdnction of telegraphs, rail-roads and common schools. Travellers tell us that all nations and tongues are represented in the swarming, picturesqne streets of Cairo, and sonn idea of these schools' infinence may be gained from the register exhibited of one of them which, among four hundred and eighty-six pupils, includes over ten different nationalities; Egyptians, Italians, Greeks, English, Turks, Spanish, French, Austrians, Prnssians, Russians, *&c.*,—and over six different religions; Mnsselman, Catbolic, Jewish, Greak, Protestant, *&c.*

A recent act of the Sultan of Turkey—forced from him by the critical state of his government —has abolished slavery and the slave-trade in all his dominions, so it is to be hoped that the schools may sonn day find room among their overflowing nationnlities for those who once were slaves. The only distinctive representation of the race in this exhibit was by photographs of native Africans of marked negro type.

SOUDAN—THE COUNTRY OF THE BLACKS.

Associated with Egypt was the exhibit of Soudan, the Country of the Blacks, as it is called. This province lying along the southern borders of the great desert of Sahara, has long been known to commerce. It contains fertile plains, and popnlous villages and cities principally inhabited by negroes and under negro government.

The most delicate specimens of native work in jewelry, aspecially of gold filligree work, were exhibited. Whole sets of dainty gold cups or cup-holders, shaped like small eggcups, were made of the finest gold wire wrought into Turkish designs, intended to hold small porcelain coffee-cups, and a swinging brazier of gold like a hanging baskat, exquisitely wrought and ornamented with pendent chains. Besides the gold work, there were suits of chain armor, bamboo hats, mats and sandals, ornamented spears; qneerly-shaped dromedary saddles of leather, drums and strange musical instruments, all of native negro manufacture. Silk worm cocoons suggested other industries of the country.

CAPE COLONY.

This British colony occnpying the southarn extremity of the peninsula of Africa at the Cape of Good Hope, extends a wise protection ovar tha native tribes within its bordars, and one of tha most interesting features of its exhibit was the School Almanac for '76, giving a description of the Government schools for Aborigenes, from which we qnote:

"To place the means of instruction in the ordinary branches of elamental knowledge within reach of native yonth at certain allgible stations appointed by the Govarnment, and to promote the snitable industrial training of both sexes, are the general objects to which Govarnment aid shall be applied. To encourage native youth to become skilled workmen, an allowance of £15 ($75) annually is allowed to young man who after a year's probation pledge themselves to two or four years' apprenticeship to a trade, and £10 ($50) annually to girls who after three months' probation angage themselves to the authorities of the institntion for domestic work. All these are to have alementary instruction morning and avening." Allowances are also givan to needy pnpils who board in the school and besides school work, have some industrial occnpation or are in training to become elementary teachers. Examinations for a certificate as alamantary teachers are held in tha English language and grammar, native languages, Arithmetic throngh interest, Geography physical and descriptive, hand writing and school management.

A tabla cloth of cotton grown in tha eastern province was shown, and some nicely bonnd books, one of them a Pilgrim's Progress translated into Kaffir by a native missionnry, Rev. Tiyo Soga, the second edition printed and published at Lovedale Kaffir Mission Station. There was also a volnme of Genesis translated into the sama tongua.

The most novel of the exhibits was a small model of the "ostrich incubator" or ostrich hatcher used on the ostrich farm of the inventor. This, though not representative of negro skill, suggests a new industry and means of wealth which may benefit settlars of any color. The incnbator, like most clevar inventions, is very simple, merely a large wooden frame divided into an upper and lower compartment, both heated to a proper, steady temperatnre. In the lower nnd warmer ona, fresh ostrich eggs are placed nntil they are hatched by the gentle and constant heat. The young ostriches ara removed to the npper, cooler compartment and covared with a light blanket at night, and carefnlly fed till abla to shift for themselves on the farm. Thus "brought np by hand," the wild creature hitherto anpposed untameable is transformed into a domestic fowl—of rather a large pattern—and submits to a periodical pluckling of its beautiful tail feathers as qnietly as if it were a goose. The loss is small on them, and the profit very great. Natives are employed on the farm and in gathering the eggs, though they cannot imagine what so mnny feathers are used for, we ara told, and think they are made into bread-cloth. A stuffed ostrich fledgeling of two weeks, and one of two months, were exhibited, the smallest looking much like a picked Shanghai rooster

Some water-color sketches were shown of the native population, some with really negro features, others of a more Mongolian type,

THE GOLD COAST.

This province, forming part of Guinea and lying on the west coast of Africa, south of Liberia, is also under British rule. There are English forts and trading stations there, but the population is chiefly formed of negro tribes more or less civilized. A curions and interesting exhibit was made, illustrating the various degrees of progress. Here was the first sample of tooled and polished granite worked in the Surveyor's Yard at Cape Coast Castle in 1875, native work; a block about eighteen inches cnbe, fairly finished. Near it were some frightful idols from Abeokuta. A chair ingeniously carved from a single block of wood showed unaided native art, and a child's jointed woodan doll bore curious witness to the universality of childish instincts, though it was ugly enough to scare a civilized and enlightened baby into fits. A chief's sandals with elaborate ornnments of gold on the straps, a native drum, the sides made of twisted willow enclosing a wooden casa, and a rude triangular harp were objects of interest. A curious exhibit was the white chalk used by the natives to *mark divorced* wives, also those who are victors in law snits and *palavers*, and at marriage ceremonies as a symbol of purity. There were also rope ladders for climbing palm trees, black monkey skins for export, baskets of bamboo leaf, ornaments of the very yellow Guinea gold, and cloth of cotton and silk woven in strips only two inches wide and sawed together. Some very remarkable sword handles were made of the Guinea gold hammered thin and *sewed* on with very fine gold wire.

The exhibits of the Gold Coast and Soudan were the most distinctively native and most characteristic of all the African exhibits, except Liberia's which has its own great and special interest, and deserves an article to itself.

Tunis and Algiers are not representative of the negro race, their popnlation being mixed and chiefly of other blood—of Arabs, Moors and Turks.

The Orange Free State, a very intsresting little dominion, is a settlement of Holland farmers.

The exhibits must attract new attention to Africa's vast and undeveloped, and but partly-known resources. The Liberia exhibit we will consider next month.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, nnmbering between three and four hnndred volnmes, *is known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variaty and grade of science and literature, from the primer which guides the lisping tongue of tha infant, to the abstruse and difficult "West Point Course."

Tha series is *uniformly excellent.* Each volnme, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is tha pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, npon a title-page is a sort of guarantee which the edncational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series inclndes the following well-known and universally popular works:

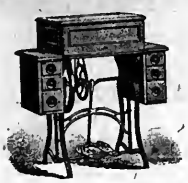
SEWING MACHINE.

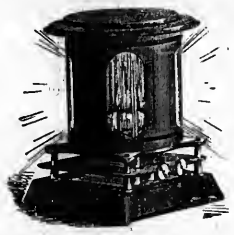


For Family use and Manufacturing purposes. The best in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its REVERSIBLE FEED enables it to sew forward or backward without stopping the machine—it being the *only* machine that *can* do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between SIDE FEED and BACK FEED machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.



The only *safe*, *odorless* and *durable* Oil Stove for all who want PURE, MOIST, WARM AIR in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection ohimney flues, as it generates no smoke or with noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

Manufactured by

THE FLORENCE SEWING MACHINE COMPANY,

Florence, Mass.

HAMPTON, MARCH, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 32 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE NEW YORK TIMES, in an article on the recent kindly meeting of the creditors of Southern States, seeks to stay the hands of those who wish to help the prostrate South to rise to her feet, by arguing that the absence of Northern enterprise and emigration to the South "is a circumstance for which it should blame only itself." "Before they (the Southern States) can hope to obtain either, they must rid themselves of their malignant partisanship, and impart to the politics, business and society of their respective States, the temper which prevails in other parts of the Union." In short, self-help is the only solution which the Times can see to Southern troubles, and until this panacea is used, the Times's hair rises in nervous horror at the idea of measures calculated to benefit the South.

With all due deference, we submit that there is a serious *non sequitur* in the argument. It is notorious that the South is full of people as one-sided as the Times, and who grossly misconceive the temper, purposes, and even the civilization of the Northern people. The remedy of the Times for this ignorance is like that of a school-master who would shut a boy up in a dark closet without a book, till his ignorance developed itself into knowledge.

On non-partisan grounds we believe it would be safe and wise for the rest of the nation to aid in restoring prosperity to the South. If by any means capital could be induced to operate in the old slave States, whether that capital were in the hands of Southern men or of strangers, can any one doubt that the influence of that capital would year by year be increasingly in favor of liberality; *against* fire-eating politicians; and *for* a steady and reliable administration of law?

Slavery being dead, liberalism is a question of time, dependent on the rapidity with which the power of the politicians is undermined by the gradual growth of the monopolized classes, whose pecuniary interests depend upon peace, and upon the respect and good-will of the rest of the world, outside the South. Bitter blasts of censure only make the way-worn traveller hug tighter his dark cloak. If you want to see the light and air of heaven enter, try a little genial sunshine Mr. Times! The effect could not be worse than that of your present course.

WE HAVE received a copy of the "Freedmen Monitor," "For the freedmen in America, and against the slave-trade in Africa." Yardley Warner, Editor; published in Penyfort, Wales, Great Britain; printed at the "Orphans Press," Leominster.

It advocates temperance, publishes letters from teachers of the American freedmen, and goes to the root of the matter by urging education for them, and self-help by them.

Its revelations of the slave-trade as the most flourishing business in Turkey, as requiring 350,000 men, women and children yearly to supply the market, and the sacrifice of four lives for every one sold, are startling. So is the statement that the Eastern and Western shores of the Red Sea are alive with this traffic. All this in spite of the fact that the Porte and the Khedive publicly repudiate the slave-trade both foreign and domestic.

THE SOCIETY of Friends is doing a quiet, thorough work for the education of the ex-slavee at points in Virginia, North Carolina and Tennessee. One of their best schools is the Freedmen's Normal Institute at Maryville, Tennessee, sixteen miles south of Knoxville. It has sent, in the past three years, forty-seven teachers, who are instructing nearly fifteen hundred adults and children.

The Friends in and about Philadelphia have, for years, contributed about ten thousand dollars annually, and maintained not only a most admirable system of primary and graded schools, in certain districts, but have sent supplies to the poor, alleviated great suffering, and saved people who otherwise would have perished through hardship.

GENERAL W. F. BARRY.

This accomplished officer, who has for nine years commanded Fort Monroe and the Artillery School at that Post, has been ordered by the President to his regiment; headquarters at Fort McHenry, near Baltimore.

Not only has the Artillery School been conducted in a most thorough-going manner, requiring a degree of hard study far beyond that of the average college student, but the whole effect of this Military Post, under General Barry's command, has been most fortunate as representative of the Federal power.

Himself a man of no doubtful opinions, the General has, by his tact and consideration, won the respect and confidence of of all classes; and his leaving is a matter of universal regret.

Not a little of the genuine respect for, and loyalty to the old flag, in this and other parts of the South, is due to the manly, straightforward course of the officers who have upheld it, whose high *morale* and just courses contrast happily with the self-seeking of many in the civil service. The Artillery School and the Hampton Institute opened at about the same time; the latter is under many obligations to General Barry for courtesies throughout the period of its existence.

The best wishes of this community go with General Barry and his family, whose place in society and in the hearts and lives of many of the poor and needy, cannot easily be filled.

THIS EXTRACT from a County Superintendent's letter shows a phase of the educational work in Va. The writer is a Southerner.

"I think it my duty to see that the public schools of my neighborhood have efficient teachers, and, if not within reach, to try and obtain them elsewhere. Around me are several schools, white and colored, with very inefficient teachers, and I write you to know if it is possible to obtain two or more colored teachers for the next session of the public schools, at $30.00 per month. At present there are two colored schools having white teachers appointed, but whom the colored people will not accept, and consequently there are no schools as yet opened. If two good colored teachers can be obtained at once, I will call a meeting of the trustees and have them appointed, subject to examination by the Superintendent."

The tone and spirit of the preceeding letter pervades the entire correspondence of this office with the County Superintendents of Education in Virginia.

THE Agricultural department of the Hampton Institute needs a new barn, 50 x 100 feet, with a wing 40 x 100 feet, to cost $5,000. It will have a brick basement on the surface of the ground. The 100,000 bricks required are already made and paid for. Its uses will be the accommodation of upwards of a hundred head of cattle and horses, to provide a large work-shop for grinding, cutting and steaming food, for making fertilizers—already an important and successful industry here,—and a repair shop. In part of the basement, tools and implements will be housed. The present barn, built of old lumber taken from hospital wards at "Camp Hamilton," which were erected in 1863 and 1864, is leaky, decaying, inefficient and inconvenient—a mere makeshift.

Over seventy head of cattle and fourteen horses and colts have been wintered in this barn, sheltered in all sorts of temporary ways.

Quantities of milk are produced, used and sold,—quite a source of subsistence and revenue. Cattle are bought cheaply, fattened and killed for the students' and officers' tables—which use over three thousand pounds of beef monthly. Huge piles of manure are made for the hard-worked farm, on most of which two full crops are raised every year.

In winter a capacious and well-filled barn would provide labor otherwise not to be had. The school farm has, during the past eight years, given nearly $12,000 worth of work to over 350 students, and is now paying out $350 to $400 a month for their labor. As a means of self-help, on the only royal road to education—that through self-help,—the Hampton farm should have what buildings and machinery it needs.

Fifteen hundred dollars have already been promised for the new barn. Thirty-five hundred more are needed.

The Society of Friends had the proud distinction before the war, of being the only class who successfully encountered Southern sentiment on Southern soil. For nearly a century they had "meddled with politics" by openly and pointedly condemning the darling sin of the South. In North Carolina, for example, the Society had taken pains since 1787 frequently to publish their sentiments to the world. Almost annually the Yearly Meeting presented memorials to the General Assembly of that State, denouncing slavery, and in favor of negro education. Since 1818, Friends had disowned all slave-holders. Unlike the other churches their standard of right and wrong to black men, and their interpretation of the golden rule, were not allowed to depend on geographical lines or pecuniary arguments. They alone, in spite of threats, had confined themselves to no neutral position, but had presented an unbroken front of hostility to human bondage. And yet they conquered for themselves the respect and tolerance of the Southern communities in which they lived.

When war came the trials of Friends were very severe. They not only refused to fight for the Confederacy, but the whole record of the Society proved them to be abolitionists. And in that word their Southern neighbors were accustomed to sum up all villainies. Military movements unchained the lawless and unreasoning classes of the South. Friends were drafted, and on refusing to fight, were prodded with bayonets, hucked, hung by the thumbs, and threatened with instant death. They were in the hands of men whom slavery had long trained in the exercise of almost irresponsible power. Yet it is the testimony of the Yearly Meeting in North Carolina, that "not one Friend suffered a violent death" for refusing to fight.

Thus on the field, the principle of patient appeal to the better natures of men left the Friends masters of the situation. Just as in peace, the same principle had secured for them a greater degree of liberty to say what they thought, than any other class of people enjoyed in the South.

The whole history is full of instruction for those who think that carnal weapons or political strife are the only methods by which men may be sure to secure their civil rights. The experience of the Friends is also of the greatest value as a demonstration that the prejudices of Southerners on the subject of slavery, however bitter they may be, are not so strong as their involuntary homage to practical piety and moral courage.

PUBLIC SCHOOLS AT THE SOUTH.

Abbreviated from the Report of Rev. B. Sears, D. D., agent of the Peabody Fund, dated Aug. 3, 1876, with statement of aid given to each State from that Fund.

NORTH CAROLINA—$8,300.00.

Not appointing politicians to the office of Superintendent of Schools would be a great improvement. The State tax for education is very light, and a local tax is scarcely known.

SOUTH CAROLINA—$5,000.00.

School population,	239,264
School attendance,	110,416
Average length of sessions four and a-half months.	
Total expense,	$426,463.00
Increase of schools over previous year,	227
Increase of pupils,	5,767

Average school term, one month less. Better teachers and more interest in school would improve them much. The State donated $10,000 last year, to an excellent Normal School at Columbia.

GEORGIA—$8,550.00.

A very decided advance in public sentiment in favor of free schools; more friends and fewer enemies than ever before.

Number of children of school age in the State,	394,037
Available school money for the last year,	$435,319.00
Pupils enrolled in 1871,	49,578
" " " 1873,	83,677
" " " 1874,	135,541
" " " 1875,	156,394

FLORIDA, $3,700.00.

Much embarrassment from death of former school superintendent. The present superintendent, appointed after a vacancy of some length of time, says "We are putting forth our best efforts, and successfully too in the cause. Florida is alive to the public school interest."

ALABAMA—$5,800.00.

The State Superintendent of Education believes "that every person in the State, within school age, has had the opportunity and privilege of attending the free public schools during the last year." He further says "that of the total number of 406,270 persons within the school age, 145,797 have been in the public schools. The average cost of tuition for pupils of the white schools has been $3.09 for the term of 90 days, or 69 2-3 cents per school month; and that per pupil of colored schools has been $3.79 for the term of 83 days, or 91 1-2 cents per month. It will be readily observed that the tuition of these pupils in private schools would have been about seven times more than it has been under our free school system." The want of competent and energetic county superintendents, of intelligent supervision, is one of the great drawbacks to a more efficient School system in Alabama.

MISSISSIPPI—$11,800.00.

State Superintendent charged with fraud; resigned; his successor zealously at work. Salaries of teachers reduced for economy's sake. Believed to be a mistake. Thus far in these Southern States every retrograde movement in school legislation has been followed by a reaction, resulting in decided progress.

LOUISIANA.

To the Peabody Normal Seminary, $2,000.

Dr. Sears reports that his arrangements with Louisiana have undergone no change the past year.

TEXAS—$4,550.00.

Texas made a new school law in March, 1875, and, in September of the same year, a new constitution was adopted, making

tion with the schools, is not able to express any opinion of the present prospects of the State in regard to its pnblic schools.

ARKANSAS—$2,800.00.

Schools suspended year before last from nnfavorable legislation. There has been some favorable school legislation the past year, and there are signs of a reviving interest in education among the people.

Places that had abandoned public schools have learned their mistake, and are making strenuous efforts to re-establish them on a firmer basis. The department of education seems now to be administered with great energy and to have popular sympathy. In July, 1876, the State Superintendent said "I think this State is aronsing itself on the educational question, and I hope will show a degree of enterprise heretofore unknown."

TENNESSEE—$14,600.00.

From last Report the number of children of school age is	426,612
Enrolled in schools,	199,058
Expenditnre for schools,	$703,359

An excellent State Normal University, well endowed and officered, Eben S. Stearns, LL. D., President, was established in March, 1875. The President travels extensively in different counties, holding Institntes, awakening interest in and aronsing enthusiasm on popular edncation.

WEST VIRGINIA—$12,000.00,

Has manifested conciderable vigor in carrying on her schools. The people take an interest in the work, and supplemented State money somewhat liberally. There are five State Normal Schools. But the policy of the government in supporting them has been somewhat vacillating.

VIRGINIA—$20,050.00.

The Report of Dr. Sears upon Virginia embodies statements already made in the "Workman."

Grand total aid by Peabody Fnnd for year closing Aug., 1876, $99,150.

For a just and complete idea of the edncational work in the South, especially among the freedmen, it is requisite to know that of the American Missionary Association, and of the various denominations. The above is from the standpoint of Dr. Sears as agent of the Peabody Fund, who deals chiefly with State officials, although the religions societies are aided in some degree, but always throngh the State Snperintendent of Education.

The Southern States are amply supplied with colleges, Virginia having more yonth in her colleges, in proportion to her white population, than any State in the Union, and there are countless private schools, academies and young ladies' seminaries devoted to the whites throughout the South. It is amply provided for in respect to collegiate education of a high order, secondary schools, as a class, are inferior, and primary education, heretofore sadly neglected, is receiving much attention in some quarters, and has taken a new departure.

Virginia leads in popnlar education. Free schools for all classes have been opposed by a strong party, yet the idea has taken root; it is irrepressible, and the spread of intelligence among the masses of the South, with all its happy results, is a question of time—perhaps of a long time. That depends upon whether Congress will do its duty by aiding these impoverished, prostrate States to educate all their children.

It is time to do something for *real* reconstruction. Will our legislators who have heretofore treated the negro from the standpoint of the professional politician, ever learn anything from the sad experience of the past, and finally help to provide for the nation's wards what they need more than votes and offices?

BURTON HUDSON, class of 1872, is teaching three miles from Enfield, N. C., in a pleasant country place, in a thriving cotton region.

A TELEGRAM from New Orleans reports that Straight University, of New Orleans, was burned Feb. 16th by an incendiary. "What will the end be?" asks Secretary

VIRGINIA SCHOOL REPORT FOR 1876.

In the last annual Report of Hon. W. H. Rnffner, Superintendent of Public Instruction, the following interesting items appear:

The gain in attendance in 1876 over 1875, was 15,370 children. In two years the gain has been 26,000 pupils. There were 333 new school-honses built during the school year, against 292 the previous year.

Dr. Rnffner says "I have every reason to believe that the school funds have been honestly, economically, and, in most cases, jndiciously administered hy the local authorities. Moreover, there has been increased attention given to the improvement of teachers and school appliances. The systematic training of teachers is a subject that cannot much longer be postponed. Some of our best superintendents and teachers are personally laboring in this cause with a resolution and self-sacrifice truly admirable; hut our schools can never become satisfactory until the State takes the matter in hand."

In 1841, Dr. Henry Ruffner, President of Washington College, Virginia, submitted to the Legislature a plan for public instruction, in arguing for which he said;

"Great care shonld be taken to prevent our youth from falling into the hands of immoral or incompetent men. Many such now go ahout as school-masters—some of them lazy, drunken, unprincipled vagabonds—who impose on illiterate and incautious persons hy crafty pretensions, and gain employment hy offering to work cheaply."

Dr. William H. Rnffner in carrying out the plan so ahly advocated years ago by his father, states that the "law requires the absolute extirpation of that worthless class of so-called teachers, from whose impositione the people have suffered from time immemorial."

Every candidate for a teacher's place in the State schools is required to pass a rigid examination as to ahility, attainments, character and manners. With faithful officers, immoral teachers in the public schools are an impossihility, and there must be at least a respectable degree of competency. The worst are dropped, and better ones snbstituted; the standard of examination is raised each year, as fast as the improvement of the teachers will allow; the schools are inspected; the teachers are required to report their work every month, and are periodically gathered for professional instruction, debate, and drill, and all means are employed to promote growth and enthusiasm."

But Dr. Ruffner does not flatter himself with figures. The State paid in 1876 for free schools $1,069,679.56. He says, "there may be a high percentage of schools, school attendance and length of school terms, and yet *no education! There* is juet where figures might deceive us fatally. We hear of schools mnltiplying, and children added hy the thousand, and we feel happy; but it is quite possihle for that to happen and real education be in inverse porportion to its extension.

Let it be repeated all over the land a thoueand timee, let it be written on every school house, and on the record book of every school board; and let every superintendent write it npon the palms of his hands—*What we want is not schools, but education!*"

Surely Virginia is in the march of progress.

THE FOLLOWING letter is one of many of similar character received at the Hampton Institnte:

"*Dear Sir:*—"I am sure I am behind in paying my son's schooling [board], but my means are so limited I can't do anything just now. I gave him fifteen dollars when I entered him, and thought at that time to have been able to have sent ten dollars this month, but my pay is only six dollars monthly and I pay two dollars of that for room rent. My husband is no help to me: he is only a stepfather to ——.

"If you can let —— remain there till June, then let him go off and work, I am sure he will pay all that he owes; meanwhile I will pay some if I have to do without the necessary things of life. I am so thankful to God and to —— that he is there. I am sure that God put it in her heart to stop him from going to sea

To meet the many just such cases as the above and the harder ones of students who have no one whatever to look to, the labor system of the Hampton Institute ought to be enlarged. It is already overcrowded. The school farm snpplies, this year, thirty-five hundred (3,500) dollars worth of work to nearly a hundred yonng men, many more than it is profitable to employ.

Will no one give ten thousand dollars to estahlish new and profitable industries, light mannfactnring, easily learned, to turn eurplus labor to account, to give our young men and women something even better than money, to make them self-reliant, and able to take care of themselves? It pauperizes to give hread: it elevates to create opportnnities for earning hread. The latter is the Hampton plan.

A large stock and grain farm is also a great need; it would ahsorb much labor now applied at a great disadvantage, and cheapen the cost of living. Ie not this the way to do the educational work for the freedmen? Let us help them to help themselves. May we soon see ravens flying into our windows, hringing the needed hank-checke in their bills!

THE CO-OPERATIVE Industrial Association of Virginia, organized under the State laws, ie a new and interesting movement. "A company proposes to unite capital with a large number of workers skilled in all the industrial pursuits essential to comfortable living."

A tract of well-timbered land has already been secured, lying beautifully on the Potomac river about twenty miles below Washington, where there are already sufficient huildings.

Subscriptions are eolicited; shares are $25.00 each; workmen are called for from all quarters. Colored laborers and mechanics are wanted. Labor is to be made attractive; capital and labor are to be combined in harmonious union; a practical education is to be secured to every child. The President of the Association is Thomas Y. Durant of Washington; Secretary, J. A. Rowland, 600 Sixth St., Washington, D. C. For information address the latter.

The scheme, if successful, will create a "Happy Land," on the shores of the Potomac. Our information is gained from the circulars of the company, and from the statements of one of its Directors, Mr. Edward Daniels, of Fairfax Co., Va.

We wieh every success to so laudahle, hut at the eame time so ideal and difficult an undertaking.

A RECENT N. Y. *Tribune* contributes the following to the cause of Peace and Good-will in our land:

"The growth of a more liheral sentimsnt in the South, of which there are encouraging evidcnces, is likely to disarrange the plans of some politicians. Had the Southern people during the past ten years followed the path which *The Vicksburg Herald* now advises them to pursue, much of the hate and bitterness engendered hetween the two sections might have been avoided. That journal, in an editorial on 'The Extremists,' says: 'The South has nothing to gain aud everything to lose hy heeding the counsel of this class. She must have done with sectionalism. We have suffered snongh hy the hlunders of the old Bourbons, and if they will not find other questions than the hates and fanaticisms of the past, they must he made to take back seats. The South is solid, hut if she is solid for another sectional contest, woe and failure will be her portion; if she is only solid for the privilege of equality in the Union and ths right to manage her own affairs in a jnst and catholic spirit, happiness and snccess will he her portion. We must act for the present and not from the feelings engendered twenty years ago. We must recognize aud keep in view at all times the difference between the Republican party North and the so-called Republican party of ths South. The one has the confidence of a majority of the Northern people as the great Union party; the other has the just contempt of all honest men. Ths party in ths North will not approve the acts of the concern in the South if ws dis lay the feeling we century."

TO HAMPTON GRADUATE TEACHERS.

Dear Young Teachers:—

The remarks in my last letter on the treatment of inattentive pupils referred especially to those who were engaged in reciting, and, now, I wish to add from my own experience that it ie very important you should not be interrupted while you are hearing a lesson. A pupil may come to you from his desk, and ask a question that can he answerpd in less than a minute, and yet may really consume several minutes of precious time; the thread of your thonghts will have heen broken, and you will not be able to gather it up immediately. A distressing question to a teacher, when thus occupied, is "Teacher, what shall I do next?" and almost equally trying it is, in looking over the school, to see pupils sitting unemployed. Before you begin a recitation, give the pupils who are left at their desks as much work as you think they will he able to accomplish while you are engaged, and, in addition to that, assign other work for them in case they should finish their task sooner than you expected, or meet with a difficulty that requires explanation to enahle them to go on with it. This extra work might profitably he copying from the book they nse for reading. Require them not only to spell the words correctly, dotting every *i* and crossing every *t*, but to copy the marks of punctnation. The yonng pupils who cannot write should print ths words. A habit of closs attention will be formed, which in itself is valnable. It is astonishing how few well-edncated people copy correctly. At the close of each recitation, a short time should be allowed to answer the questions of those who were not permitted to interrupt you.

With regard to the subject of order, Professor Allen's Lecture on School Regulations in the January number of the SOUTHERN WORKMAN was so full and excellent that I have little to add. I hope you have read his lecture very carefully,—in fact, studied it. He tells you that your own manner will he reflected in your pupils. A striking illnstration of this truth is given in Page's Theory and Practice of Teaching. Some of you may own a copy of this useful book; hut, as it is probahle that most of you have not access to it, I will make the following extract:

"The school consists of some seventy pupils and a class in grammar is parsing the sentence 'A good boy loves study;' ths language of the teacher is in italics. '*Mary, parse A.*' 'A ie an indefinite'—'*Silence! order there!*'—'article, and is prefixed to'—'*Martha, Martha! sit up!*'—'it is prefixed to—boy.'—'*Right.*'—'*Good, next.*'—'Good is an adjective.'—*Order, Order, Order!*'—thnmp, thump, thump!—'*Go on, go on, I hear you!*'—thump, thump!—'and belongs to'—'*Speak louder! Sit up there! What are you doing? and belongs to?*'—'boy.'—'*The rule. The* RULE *I say.*'—Here several children looked earnestly at the piece of timher he held in his hand.—'*The Rule, sir, the Rule!*'—thnmp, thnmp!—'You've got it in your hand,' vociferated a little harmless-looking fellow on the front seat, while the scholar proceeded to recite the rule. 'Adjectives belong to'—'*Lazy, lazy fellow! Sit up there,*'—Here the class smiled, and the scholar completed his rule, asserting, however, that 'adjectives helong to nouns,' and not to '*lazy fellows,*' as the class seemed to understand the master to teach. Word after word was parsed in this way, till the teachcr, nearly exhausted by this strange combination of mental, oral, and *manual labor*, very much to the relief of all, vociferated '*That'll do,*' and dismissed his class. At the close of school we were told that it was a very hard school, and almost impossihle to keep in order. Now this teacher made the school what it was hy his own manner."

If we wish to govern others, we must be able to govern ourselves. Self-government! What an attainment! Do not be discouraged, if, at first, you often fail in thie respect. Our physical condition varies; the state of our nervous system may at one time make that unbearable which at another time we would scarcely notice.

Equanimity of temper and nniformity of action are very important to success in governing. To secnre these, good health is requisite. Use, thsrefore, every meane to promote it,—good ventilation in your school-room, exercise in the open air, plenty of eleep and wholesome food.

However frequently we may fail in onr efforts at self-government, let us never give up the strnggle. We have a High Priest, who is touched with ths feeling of onr infirmities, who was tried as we are, and who is both willing and ahle to deliver us in the hour of temptation. "Let us thsrefore come boldly unto the throne of grace, that we may obtain mercy and find grace to help in time of need."

I am your sincere friend, M. A. L.

A SIGN-BOARD.

I will paint you a sign, rumseller,
And hang it above your door;
A truer and better sign-board
Than ever you had before.
I will paint with the skill of a master,
And many shall pause to see
This wonderful piece of painting,
So like the reality.

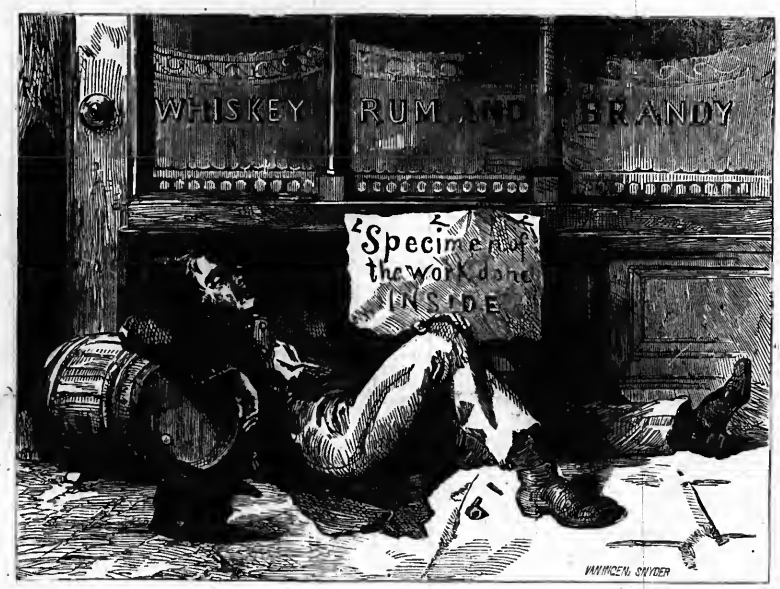
I will paint yourself, rumseller,
As you wait for that fair young boy,
Just in the morn of manhood,
A mother's pride and joy.
He has no thought of stopping,
But you greet him with a smile,
And you seem so blithe and friendly,
That he pauses to chat awhile.

I will paint you again, rumseller,
I will paint you as you stand
With a foaming glass of liquor
Held out in either hand.
He wavers, but you urge him:
"Drink! pledge me just this one!"
And he lifts the glass and drains it,
And the fatal work is done.

And I next will paint a drunkard;
Only a year has flown,
But into this loathsome creature
The fair young boy has grown.
The work was quick and rapid;
I will paint him as he lies
In a torpid, drunken slumber,
Under the wintry skies:

I will paint the form of the mother
As she kneels at her darling's side—
Her beautiful boy that was dearer
Than all the world beside.
I will paint the shape of a coffin
Labelled with one word—"Lost!"
I will paint all this, rumseller,
I will paint it free of cost.

The sin and the shame and sorrow,
The crime and want and woe,
That are born there in your rumshop,
No hand can paint, you know;
But I'll paint you a sign, rumseller,
And many shall pause to view
This wonderful swinging sign-board,
So terribly, fearfully true.



A SIGN-BOARD.

FACTS ABOUT AN OLD FOE.

BY GEN. O. O. HOWARD.

The subject of temperance has always puzzled me about as much as the subject of intemperance has troubled me. Perhaps the reader can tell better what I mean, as I try to put some of my thoughts and experiences into the concrete.

When I was eleven years old, I lived in the house of an uncle on Second street, in Hollowell, Maine. The next house to this, north, on the same side, was occupied by a very quiet family. This house was shorter than my uncle's, so that, from the back windows of our kitchen part, we could look across into the next lot beyond. On this lot stood an old, rickety tenement, in which the glass was more or less broken, the window-blinds awry, the shingles off in spots and sliding down, the doors cracked and draggy; in fact, the whole outward appearance and immediate surroundings presented the idea of extreme poverty accompanied by sheer neglect and squalor. Out of those rickety doors and broken windows agonizing cries frequently issued; and they were often heart-rending to hear, shrill and piercing, sometimes from a woman, and sometimes from the lips of a terrified child. "Come, Willie, let us go over there and see what is the matter," I said, the first time I was startled by the suffering cry. "No, no," my cousin replied. "It's John beating them; he's *drunk*, and he'd strike us if we meddled.

That house was a great curiosity-shop to my imagination. I never went in; but one day I watched till the door opened, and John came out to go to his work. He was an old-looking man, very straight and well made; had on pretty good working-clothes, and his pants were low on his hips and held up by a leather strap. He did not step like a strong man, but tottered a little in his gait. When he turned towards me, I took, boy-like, a good look at his face, and I can almost see it now, —the drunkard's scarred face! It was not red and bloated; it was not of that kind. It was pale, deathly pale, while the lips were tightly compressed. His eyes appeared dull and sunken; a fearful fresh scar was on the upper lip, he having consumed a part of the lip in his recent wild delirium. This was the picture of a *real* drunkard. Who can describe the misery in that house? Who can even indicate, the forlorn appearance, the utter wretchedness, depicted in that man's face? Yet everybody said, "John is a good man, a kind father and husband, when he don't drink." The cries of the miserable, neglected, poverty-stricken wife, the screeches of the terrified child, and the hopeless, woe-begone, despairing face of the offending drunkard, have become so deeply engraven upon my memory that I generally begin anything that I have to say concerning temperance and intemperance by endeavoring to present this picture which was presented to my childhood.

Perhaps it was fortunate to me to be introduced to drunkenness in this shape, for I assure you there was not a particle of attractiveness about it. The delightful and seductive jollity that Dickens describes so often and makes attractive by inimitable pictures of good fellowship, was not there. The fascinations of generous prodigality, where a young man is simply "going through" his inherited wealth, for his own edification, were not there. The antecedent pleasures of even the brutal man, when he stood at the bar and gave the price of his poor child's bread, that he might treat his boon companions, and under this cover appease his burning thirst, were then wanting. I heard the cry of humanity, and saw the signs of the ravages of a drunkard's despair written in a language that a child could read; and it left its lesson. I now know, after upwards of thirty years of additional experience, that this confirmed drunkard, John, is a type of a class. It is the "pale" drunkard class. We find a few such in almost every community. Hardly any company of fifty enlisted men in the army is without one or more of these poor fellows. They drink excessively at intervals. In the army the drinking period is just after pay-day. For several days, when unrestrained, they do nothing but drink until completely crazed. First, with a drunkard of this class, everything seems to brighten up; all past misspent time and all offenses seem to be forgotten; the eye gleams with unnatural lustre; a smile spreads across the face, and even blasphemy and profanity, seldom ever intermitted by a drunken man, take on a good-natured type. Next the veins are swollen, the body begins to stagger, the man is fiendish, or patronizing, or loving, as the mood takes him. Then he is filled with nausea, becomes apparently dreadfully sick, and vomits excessively. At the end of two weeks, his friends can scarcely recognize him. He has pounded the lamp-posts with his head; he has blackened one eye, scratched the skin from his forehead, sadly hurt his nose, and his clothing is torn and filthy. In a plight, of which this description is only a hint, he, sick, weak, depressed, morose, brutalized, presents himself to his wife and children, if he has such. Where there is plenty of means, tender sympathy, and unremitting care, he is brought comfortably through this sickness. But the outraged home of biting hunger is not always so full of tender sympathy and gentle care. Tears, reproaches, and anger stir up delirium; chairs and tables are broken; children and wife are pounded and kicked; and every sort of violence and outrage is perpetrated at this stage of the spree of the "pale" drunkard.

Another class, very numerous, and a step higher in the scale of drunkenness, I remember was first exemplified to me by a man in Brunswick, Maine, where I was at the time a student in college. His face was always flushed. He never passed through the different stages which I have described. The veins of his face seemed to be flattened out under a transparent skin; his eyes were always reddish and watery; his voice was deep and manly in tone, and he had a perennial good nature. His flesh was abundant; in fact, his proportions were very corpulent. His hands and wrists appeared puffed up, and a pencil always shook in his fingers. He drank liquor constantly. Everybody wondered how he could hold so much. In truth, the drunkard of this kind never draws a sober breath. He often displays a little cunning, but never has any intellectual force. As the years pass on he appears to become more and more good-naturedly imbecile. There is no quarrel at his house, for no one can be more impertinable than he is. He opposes good-nature and thin joking to every reproach: neither his virtue, his honor, nor his conscience, is sensitive. Nothing makes him cross and uncompanionable, unless it be some uncontrollable accident that diminishes or cuts short his supply of liquor. This apparent effect upon the drunken man, tha besotting effect, does not seem to do the world much harm; and these men often live to be quite old. They keep taverns and small hotels; they are proprietors of liquor-saloons; they have brothels and gambling resorts, and are very often seen standing behind bars. They do to be sure, creep into all callings and professions, but they seldom remain long where a clear head and a strong body are needed. The child of such a man has constitutional tendencies in spirit, in mind, and in body that none but God can fathom and expel. The wife of such a man often keeps up a respectable outside, but she covers in her breast a heart full of shame and sorrow.

A third class you would neither denominate the "pale" nor the "ruddy" drunkards. I would call them "mixed." Life to them has been a terrible battle with the demon of drink, and one sooner or later proved to be unsuccessful by the adverse issue. I had hardly entered college, in 1846, when I found that a friend of mine enjoyed strong drink. He usually took wine or malt liquors, though occasionally gin, brandy and New England rum. (We did not hear so much concerning whiskey in those days as we do now.) He was older than I, an elegant gentleman and a promising scholar. I knew him to be ambitious for a successful life; and when a favorable opportunity occurred, I said, "Hal, you love liquor, and it upsets you now and then; aren't you afraid of it?" "No, Howard; I have a strong will, and too much pride ever to succumb to liquor. I shall just drink here for sport and companionship, but I'll never touch a drop when I get out of college into real life. I am bound to make a man of myself." I believed him then. How clear were his eyes and complexion; how handsome his forehead; how manly and strongly made was his figure; how silvery sweet-toned was his voice; how courteous and winning his manners! He was too good material to make a drunkard of; yet, after years, he became one. He rose rapidly to distinction; was much flattered and courted; wealth came at his bidding; a beautiful family gathered at his home; public office sought him. Yet, little by little, his will-power gave way; his pride, after repeated shocks of awful degradation and debaucheries, was destroyed; his wealth went; his family were scattered and impoverished. He lived only a few years after his fall, a bloated, bleareyed, unhappy sot, passing, after the death of his broken-hearted mother, into the drunkard's grave.

Oh, how the men of whom this is a type rise up before the memory of one in middle life! They are not few, but many. There is L——. How strong he was! The only one of a convivial college party who, on the Fourth of July, could drink twenty times, and he "only lively." Two or three years only his body bore it. Then there was M——, the brightest linguist of them all. He intended to be a great man. "Howard, you are a fool; you are old before your time; Webster drinks, Clay drinks, every man that is anybody drinks." Such were his words. All the life that was of value to him or to his friends yielded to weakness and imbecility in a few short years. They became worthless, the early drinkers, or days gone. It is almost dangerous to refer to the army of imbecility, disease, insanity, suicide and death. These are the fruits, not theoretic, but actual, of the drinking of whiskey by many men with whom I have been intimately associated during the last twenty years. A case resulting in delirium on the part of an officer to whom I had passed the liquor, nineteen years ago, so impressed me that I made up my mind that I would never again put glass or bottle to my neighbor's mouth. I made up my mind that it would be better for me, who am socially inclined, and with whom habits have unusual strength, to abstain altogether; and, further, as a motive that I believe was stronger than that of self-love, I saw the prevalent evil of drunkenness wherever I went in this country, and the resulting distress and despair that followed it, and I hoped that I might put some little barrier to its sad ravages by a consistent living protest of life and words.

Now, what has puzzled me, is to define temperance properly; to draw the line in my heart so as not to be small, narrow and censorious on the one hand, or falsely liberal on the other. Next, I have been confounded by the extraordinary prevalence among our people of an almost unquenchable thirst for strong drink. When we were about to cross the Chickahominy, under Gen. Sumner, in 1862, a bridge had to be built in a very short time by a regiment of my brigade. The Colonel asked of General Sumner a barrel of whiskey as an extra inducement for the occasion. It was given, and eight hundred men were, with few exceptions, filled with delight. They drank, and they worked, and the task was accomplished in an incredibly short space of time. General Sumner, knowing my prejudices against the strong drink, said to me kindly and apologetically, "I don't think, General Howard, we should have had that bridge built so soon if it had not been for the whiskey; but I admit that it is like endeavoring to get unusual speed to a locomotive with tar and pitch. It gets up the speed, but it burns out the engine." General Sumner was wont thus to take a practical view of our marching engines; but he might have thought of how many poor drunkards were baited again; and, possibly, of the many boys there who were tempted to drink under authoritative

sanction. My point of observation, however, was the extent of the evil appetite.

This enemy of our people, strong drink with its hydra heads, is strongly intrenched. How can we meet it and conquer? We pick up a few poor worn-out victims and help them, but it only makes the enemy laugh in scorn. He recruits his forces from our precious families, from our splendid schools and colleges, from our Sabbath teachings and church organizations; he gets behind all our pressing necessities, and binds us, as a people, hand and foot. For example, our public debt is enormous. We must pay it, and consequently tax the whiskey, the brandy, and the wine, for the people *will* have these things at any price. The tax becomes the principal source of income. There is in the United States license, a grand charter of respectability. We must, as a government, encourage distilleries and gin-mills of every description, for they increase the public revenue. I need only hint at it; we are making of the vicious appetites of our children, appetites which, indulged, will cause their temporal, if not their eternal ruin. We are making of them "ways and means" to defray our honest debts.

If this is true, what have you and I got to say to the poor bar-tender who, simply supports his family out of the bread and clothing of a few wives and children of drunkards in our neighborhood? "My business, he may well say, has goverament sanction; my object is as high as that of Uncle Sam, for it is not that I like the business, but it enables *me* to get a private revenue."

It will be said that the true remedy is with the children; correct public sentiment through them. Yet it is not wise, when you see that the ocean is daily washing away your very fonadations to postpone too long the dykes and barriers. Intemperance comes in like a flood, and it seems now to sweep us all into helpless struggles in the maistrom of its destroying power. May God in his mercy show our people how to build the barriers in the family, in the school, in the church, and in the street, against this fell destroyer that develops dishonesty and crime, and fills our prisons, that poisons the very soul of existence, and peoples the world with morbid longings for the poison, that, in short, seems to have satanic power to wound and to destroy the very subjects of divine compassion and love! Oh, let the Holy Spirit expel and replace this intemperate lust that causeth evil and only evil continually in the hearts of the children of men! To be filled with the Spirit, the comforting Holy Spirit, which is the bequest of Christ's unspeakable love, *may* be the individual remedy for intemperance. Extend it then, dear brother, till multitudes of old and young have this thing more delightsome than food and drink, and more satisfying in its power than aught the intrenched enemy, even from the inmost citadel of his strength, can offer to our brothers and friends.—*Sunday-School Times.*

THE PERILS OF THE ARCTIC SEAS.

Our pictures of Arctic perils, for which we are indebted to Messrs. Harper Bros., are engraved from sketches taken on the spot, and furnished by Capt. Kelley, master of the ship Marengo, New Bedford, one of the ill-fated whaling fleet which were lost together in an ice pack off Point Barrow last August. The sketches give a striking view of the sufferings and dangers to which Arctic voyagers are exposed. But what will not men do for fame, for science, and for daily bread! The whales, which used to be abundant in warmer latitudes, having been nearly exterminated there by the long war commerce has waged upon them, there is nothing to do but to follow them to the frozen seas where they still abound, and though kerosene and gas have taken the place of whale oil for lighting our houses and streets, it still is used in manufacture sufficiently to make it worth while to encounter the hardships of an Arctic whaling voyage in their pursuit.

The news of the fleet's disaster was brought into San Francisco in October last, by one of the three vessels left to bear the tidings, the bark Florence with 192 of the survivors on board, the remainder going to Honolulu in the bark Three Brothers. The lost vessels were five from New Bedford, two from San Francisco, two from Boston, one from New London, and two from the Sandwich Islands. Their value was estimated at nearly $500,000 besides their valuable cargoes of 1000 barrels of oil and a large amount of whalebone and ivory.

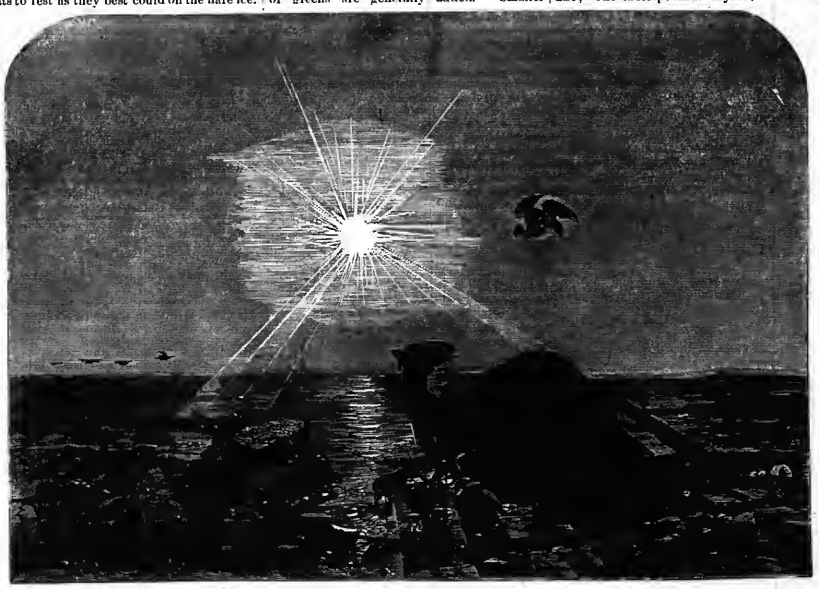
The masters' written report tells us that on their arrival in Behring's sea in May, the vessels found plenty of ice, but few whales, in the first part of the season. They took, however, a great many walrus, and some of the vessels stayed walrusing and so escaped the disaster. The rest of the fleet pushed north, and, about the middle of August, the whales appeared in great numbers and the fishing became lively. The wind increased and hauled to the north, causing anxiety, but the ships ventured to linger, the fishing seeming too good to lose. Two of them, however, the barks Rainbow and Three Brothers, anchored under lee of Point Barrow, and lay in comparative safety.

THE ICE NIP—On the 23d, the wind freshening brought down the drift ice upon the rest of the fleet which set all sail hoping to run ahead of it to the open sea. At sunset the ice stopped their progress, and the next morning a heavy fog surrounded them. The bark Florence fortunately drifted up to Cape Smith and under the lee of a grounded ice-berg which proved her salvation.

The ship Marengo, under all sail, got within three or four ship lengths of open water, and then the ice closed in on her. The other twelve vessels were nipped and held in the ice within sight of each other, but all helpless. Some of the crews perished in the fog and ice in attempting to reach the shore.

The prospect was gloomy enough. With provisions enough to last but three months at furthest, the ships, twenty miles from land, lay powerless in the grasp of the ice, and slowly drifting northward with it farther and farther from help, farther and farther into the regions of death and eternal winter. The ship masters held a council on the Java, and as evidently there was no possibility of saving the ships, they decided to make a last effort to get to shore before all escape became impossible. "September 5th, the signal for departure was given. The boats had been put in the best possible condition, the baggage consisted of about twenty-five days' rations, bread and meat, change of clothing and a blanket for every man. Everything else but guns and ammunition was left on board. Left at three in the afternoon, and dragged the boats along the ice which was very rough with many holes. Many of the men fell through and suffered much from the cold.

THE CAMP ON THE ICEBERGS.—The first night we camped on the ice about four miles from the ship. Many of the men, utterly exhausted by their labors, lay down under the boats to rest as they best could on the bare ice.



THE SHIP OF THE DESERT—page 23.

The next morning we resumed our march in a blinding snow storm from the north-east. Several of the men deserted and returned towards the ships, where numbers of the crew remained rather than face the hardships of the journey towards the land. Of their fate we know nothing. On September 6th, reached a strip of open water, launched the boat and pulled toward the land. All that day and the next we kept working through and over the ice, and at 8 P. M. made land two miles west of Point Sargent.

We continued working along shore, and at noon of the third day after leaving the ships, sighted the Three Brothers and Rainbow at Point Barrow. Reached them before night, and found the ice all solid beyond. The only chance of escape was to drag the boats overland to the open sea, a distance, as it afterwards proved, of 130 miles. We made sleds and attempted the journey, but on reaching Cape Smith, we found the bark Florence there. After a consultation, it was decided that any effort to proceed would be madness, and preparations were made for wintering as best we could at Point Barrow. Boats were prepared for whaling as that was our only resource for food and work."

At Point Barrow the shipwrecked crews bravely set to work to build two houses for winter quarters, the natives on the shore assisting them kindly, and lending them dogs to draw drift-lumber for their houses.

THE ESCAPE OF THE FLORENCE.

The brave men were however to be saved the horrors of an Arctic winter. Before their houses were finished, on the afternoon of the 13th, the ice began to break up before a strong east wind, and the Florence was able, by great exertions, and cutting a channel through the ground ice, to get under way. The men left their houses and rushed to the boats. The Florence ran down the coast, joined the Rainbow and Three Brothers, took in the Captain and crew of the Clara Bell, and gladly set sail for home, leaving the abandoned vessels to drift on into darkness and death with the unfortunate men who could not be persuaded to undertake the struggle for escape. At least sixty were thus left, most of them it is said Sandwich Island natives, whose tropical natures lack the grit and determination of American constitutions, and whose memories of their flowery islands where perpetual summer smiles, must have made their dreary fate more dreary and terrible.

HOUSE AND HOME.

MEATS.

Large pieces of beef, mutton, pork, veal, venison, etc.—poultry and many kinds of game are best and most wholesome when roasted in a slow oven, care being taken not to over do them. Beef, mutton, and poultry may also be boiled, and in this case the water used should always be saved for soup, while the meats may often be made more palatable by boiling vegetables with them, as corned beef with cabbage and turnips. Ham, bacon, and salt pork are usually boiled, and to the last two cabbage, beans, turnips, or some kind of greens are generally added. Smaller pieces of beef, mutton, venison (as steaks and chops,) spring-chickens and the smaller kinds of game are best broiled, and for this the meat should be cut thick (at least two inches) and broiled quickly over live coals, taking care not to smoke, burn or overdo it. With the exception of ham and bacon, no meat should be fried, and even these two are less greasy and safer when well broiled. There are very few articles which a careful and intelligent cook will fry, and as a rule almost any way of cooking food is to be preferred to this.

Excellent hashes and stews can be made from cold meats or from pieces of meat which cannot be used in any other way, and for these I add a few well-tried receipts.

BEEF, MUTTON, CHICKEN, VEAL, OR TURKEY HASH.

Remove all gristle, bones or fat, chop the remaining meat very fine and put it in a pan with a little hot water, or better still a little meat gravy. When thoroughly heated, put it on a flat dish, and surround it with small triangular pieces of buttered toast. In making this of poultry, add any cold dressing, liver or gizzard (chopped fine) which you may have.

CORN-BEEF HASH.

Chop the beef fine, with an equal quantity of potato, add a very little hot water, a small piece of butter, and a little pepper. Heat thoroughly.

BEEF OR MUTTON HASH.

Cut the meat up (not very fine) and mix with an equal quantity of potato cut in the same way. Add gravy, pepper, salt, and heat thoroughly.

VEAL, MUTTON OR CHICKEN HASH.

Chop the meat very fine, season with salt, pepper and thyme or sage. Line a bowl with hot boiled rice, and into the hollow left in the center put the chopped meat. When quite cold, the whole will turn out in shape, and should then be put in the oven and allowed to warm, without browning at all. Take it out and pour over it drawn butter, made as described for fish sauce.

STEWED MUTTON OR BEEF.

For this you can use either meat which has been once cooked, or can take inferior pieces of fresh meat. Boil gently for one hour with just sufficient water to prevent burning, then add potatoes, carrots and onions and a little turnip, and boil three-quarters of an hour longer. Turn out onto a large flat dish, and put hot boiled rice neatly round the edge.

CHOPPED VEAL, MUTTON OR CHICKEN.

One and a-half pounds of the meat; quarter of a pound salt pork chopped fine; three Boston crackers, or an equal amount of butter crackers; two eggs; salt, sage, pepper to taste. Pack in a pan and cook till thoroughly done. Half a cup of cream will improve this receipt.

SAUSAGES.

Three full tablespoonfuls of powdered sage; one and a-half full tablespoonfuls salt; one full tablespoonful pepper, to a pound of finely chopped meat.

CHOWDER.

Three slices salt pork fried brown; three onions fried in the fat; one quart boiled potatoes, mashed; two pilot biscuit broken fine; one tablespoonful thyme; three teaspoonfuls pepper; half a teaspoonful cloves; a little salt, six pounds fresh fish cut in slices; water enough to cover, boil slowly one hour.

STUFFING FOR POULTRY.

Soak a sufficient quantity of bread crusts in water; when soft, chop fine and add salt, pepper, sage and a little butter; chop the liver and gizzards of the fowls very fine and mix with the bread.

CHOPPED BEEF.

Take cold roast or boiled beef, chop it fine, and add half the quantity of bread crumbs, salt, pepper and a little butter. Warm with a little water or gravy, or put it in a pan and bake.

PORK AND BEANS.

Soak the beans all night; put them in a deep dish with a little water, and in the center of the dish put a thick piece of salt pork. Bake three or four hours.

CROQUETTES.

These can be made of almost any kind of meat, game, or poultry, chopped fine, seasoned, and moistened with gravy, soup stock or cream. Form into round balls about as big as an egg; roll these in beaten egg and then in bread crumbs, and drop into boiling lard or beef fat.

VEGETABLES.

Potatoes may be cooked in a great variety of ways, and are always good and nourishing food.

Mashed—Rub well-boiled potatoes till there are no lumps, add salt, milk or cream, and a little butter. Leave them in this way, or put them in a deep dish and brown in the oven, or roll and cook as croquettes.

Chopped—Chop cold potatoes not very fine; warm them with milk, butter and salt.

Fried—Cut in thick slices, and brown slightly in butter or lard, or slice very thin and fry to a crisp.

TURNIPS.

Mash while hot and mix with butter, pepper and salt.

CARROTS.

Cut in fine strips, boil soft, drain off the water, and thicken it with a little flour and milk, add pepper and salt, and pour over the carrots. Celery and salsify may be cooked in the same way.

TOMATOES.

Cut two cucumbers and one onion into very small pieces, boil till quite soft, add six large tomatoes which have been peeled and cut up, some pepper and salt, and boil till done. If any of this is left, thicken it with bread crumbs, put in a deep dish, sprinkle bread crumbs and a little butter on top, and bake. Canned tomatoes can be cooked in the same way.

ONIONS.

Boil till soft, put in a deep dish and pour over them a sauce made of milk thickened with flour, butter, pepper, and salt. Scallop cold boiled onions with bread crumbs in the same way as tomatoes.

Cauliflower should be boiled with a little salt and served with drawn butter.

Greens of any kind should be boiled very tender, rubbed through a sieve and garnished with slices of boiled egg.

WHEAT BREAD.

The night before you intend to bake, sift a quart bowl a little more than half full of flour, pour into it enough warm water to make a stiff batter and beat it well. Dissolve half a yeast cake (or an equal quantity of whatever yeast you are in the habit of using) in warm water, stir it into your batter, cover and set in a warm place to rise. In the morning, the batter should fill the bowl and if it does not, you may know that either the yeast is not good, or the batter has not been kept sufficiently warm. Sift four quarts of flour into a large wooden bowl, putting in a handful of sugar, and a tablespoonful of salt, then making a hollow in the middle of your flour large enough to hold all the batter. Dissolve a flat teaspoonful of soda in warm water, stir into the yeast, and then pour it into the hollow made in the flour, kneading the whole well for a quarter of an hour. Cover the bowl up, set it in a warm place and leave till it is so light that it is cracked on top and full of small air holes, then take it out on your breadboard, cut in four pieces, knead each one well but not as long as the first time, shape each loaf and put in the pans, letting them stand for fifteen minutes and then baking in a not too hot oven.

TEA BISCUIT.

Three gills warm milk; one heaping spoonful equal quantities butter and lard; one tablespoonful white sugar; two tablespoonfuls yeast; mix quite stiff. When raised, roll out rather thin (half inch) and cut in very small rounds. Let them rise again and bake in a quick oven.

RAISED BISCUIT.

Warm together one large cup of milk, three-quarters of a cup butter and lard mixed, and one-third of a teaspoonful of saleratus. Take a piece of dough large enough to make a loaf of bread and knead the above mixture thoroughly into it, adding a little flour. Roll it out, cut with a biscuit cutter and set in the pans to rise.

SODA BISCUIT.

One quart of flour and a piece of butter the size of an egg, well rubbed together; one teaspoonful of soda dissolved in one and a-half cups of cold milk; two teaspoonfuls of cream tarter sifted in the flour; stir all together with a fork quickly, roll out on the board, and bake immediately.

ROLLS.

One pound of flour; one egg; butter the size of an egg worked in the flour; one tablespoonful of sugar; half a pint warm milk; an even spoonful of salt; one and a-half tablespoonfuls of yeast. Make over night, mix early in the morning, let it rise once, then put it in the pans to rise again before baking.

RICE BREAD.

One pint rice flour; one pint milk; one tablespoonful butter; one egg; one level teaspoonful soda; one of cream tartar; a little salt. Scald the milk and mix as for corn bread.

MUFFINS.

One quart warm milk; three eggs; one teaspoonful salt; four tablespoonfuls of yeast; flour to make a stiff batter, a piece of butter the size of an egg—bake when risen.

CORN BREAD.

Two heaping cups Indian meal, one cup wheat flour, two and a-half cups milk, tablespoonful melted lard; two tablespoonfuls white sugar, one teaspoonful soda, two teaspoonfuls cream tartar, one teaspoonful salt. If a rich bread is desired, add three well-beaten eggs. Bake in small tins.

BROWN BREAD.

One coffee cup wheat flour; two coffee cups Graham flour; one coffee cup yeast; one-half coffee cup molasses; one coffee cup milk; a little salt; mix carefully with a spoon. Let it rise, then add one-half teaspoonful saleratus, put in the pans, let it rise again till very light and bake.

OAT CAKE.

One teacup oatmeal; two large tablespoonfuls flour; one teaspoonful salt. Boil together one cup milk and one and one-half cups water, and stir into it while boiling, the oatmeal and flour. Add piece of butter the size of a walnut and boil five minutes. Spread thin on earthen pie plates and bake in a quick oven.

BUCKWHEAT CAKES.

Ten large spoonfuls buckwheat flour, two spoonfuls cornmeal, half a teacup yeast. Beat the batter at least fifteen minutes at night. In the morning mix with warm water, add a little salt and cook on a griddle with as little grease as possible.

BREAKFAST GEMS.

Eight tablespoonfuls rye flour; one pint milk; four well-beaten eggs; eight tablespoonfuls wheat flour. Indian meal may be used instead of rye, with the addition of one tablespoonful melted butter. They must be baked in small iron pans, which should be heated before the batter is put in them.

FLANNEL CAKES.

One cup milk; two-thirds of a cup butter; two tablespoonfuls sugar; whites of two eggs, well-beaten; half a cup yeast; flour to make a thick batter—cook on griddle.

HOMINY WAFFLES

To one pint cold boiled hominy add one quart sour milk, two beaten eggs, two tablespoonfuls melted butter, and one teaspoonful soda, with flour sufficient for a thick batter.

Rice cakes can be made in the same way, and can be fried on a griddle, or cooked as weffles.

Boiled rice, hominy, cornmeal and oatmeal are all excellent for breakfast end supper, as they are nourishing, satisfying and cheap. Hot breads of all kinds are, as a rule, unwholesome, and the same is true of fried cakes which should seldom be eaten, especially in warm climates. A breakfast or supper of oatmeal, mush or boiled hominy, with milk, butter or molasses is on all accounts far more wholesome than hot breads or cakes, fried pork, bacon, or indeed than any of the food commonly eaten by the poorer classes in this country, besides being cheaper and easier to prepare. Two meals out of the daily three can be made upon these grains, with the addition, for the sake of variety, of white and sweet potatoes, boiled or baked, and such a diet is, as I have said, strongly to be recommended to all who desire to live cheaply and well.

CENTENNIAL LETTER.

FROM A SOUTHERN LADY.

If any one visiting the Centennial Exhibition fails to see the groups of peasants, and simple country folk, they will lose one of the most quaintly, curiously interesting things in that little world of curiosities, treasures of art and industry. They are made of some composition of plaster or wax, and painted in the most perfect flesh tints, and so life-like, natural, perfect, are they that you are almost tempted to check the remarks of the younger members of the party, lest the objects of their criticism overhear and resent their curiosity. The first group represented the sleigh of a sturdy Lap or Norwegian, or some hunter of those cold North regions, drawn by the gentle, faithful reindeer, of whose strength, patience and fidelity we have often read. Upon the sleigh, dressed in fur up to his eyes and down to his toes, sat the owner, evidently about to start on a long, cold ride. The heavy robe formed of the nicely-dressed skin doubtless of some fruit of a hunt, is drawn up; the hands are held out for the very last provision for warmth and comfort, at least in the region of the heart, which is to get a kiss from the queer-looking, ugly little baby which the mother holds out, all wrapped up in its furs and flannels, until only the little flat, red face is to be seen. The funny, short little mamma, dressed in heavy linsey woolsey, short skirt, long woolen stockings and heavy shoes, stands in the snow beside the sleigh, evidently thinking this last precaution, at least, well worth making. The reindeer is a real reindeer; the clothes are real clothes, and the people look like real people.

The next was a group of peasants, gathered about a wounded deer. There were two women, two men and a little child, and there was an air of sadness about them that led us to think that perhaps it was a "homa deer," the friend of the family, as the faithful creature always becomes when domesticated, which had been wounded by chance and had crawled home to die, for the child was crying bitterly and trying to hide her face in her mother's gown; the woman looked sadly upon the beautiful creature whose soft, mild eyes were turned toward them, with the last effort of expiring nature, and the men tho' hunters in dress and appearance, looked sad rather than exultant, we thought. Algie remembered to have read that the peasants are sometimes obliged to kill even their domestic deer, when the winters of their terrible climate are unusually long and severe, and such a sacrifice, we thought, might have occurred. They are all dressed in the useful, sensible costume, which seems so well fitted to protect them from the intense cold, and it is at the same time so bright and picturesque we thought it very pretty. Indeed the woman quite set the fashion of the red and blue now so very stylish. Why can't these useful lessons of warm stockings, stout shoes, short dresses, be among those taught by the great international exhibition?

The third group was a very touching one. It represented a room where a family sat around a plain little cradle, in which lay a dead child. Upon the floor near it stood the little coffin, which was to be the last resting place the little one would need. The old grandfather leaned upon his cane, trying to repress his emotion, but with the lip almost quivering, with that grieved expression peculiar to a little child or an old person; the grandmother holds in her arms another child, who gazes in wonder and awe upon the little baby sister, so still and cold; the father sits at the head of the cradle with the Holy book upon his knees, trying to find the words of consolation which every stricken heart, of whatever land, must need, and the young mother has thrown herself upon her knees beside the cradle, her head resting upon the breast of her little child, in sorrow so real, so true, in its deep stillness, that we wondered the crowd gathered around the group, could laugh and talk and eat peanuts before the sorrow which seemed dumb, only because too deep for words. With a sigh of real sympathy for the poor peasants, we went on our way to look at the more cheerful group of the old watch-maker and his wife, and a young couple who look very bashful, and you quickly understood she is consulting the head of the house about things which greatly concern them. The old woman's *thumb* is so expressive as with one hand on the old man's shoulder she points with the other to the young people, the girl blushing and turning her head coquetishly away from the youth, though at the same time listening with evident anxiety to the decision of her paternal, while the young man looks too wretchedly awkward and bashful to think of anything, but getting out of such an embarrassing position.

Another group was a pleasant little family scene, where grandfather and grandmother, father and mother and little child, all looked comfortable and cosy, but we could not quite understand whether it was any special scene or only to give a good idea of the home life of the simple people. The last group was a very fine bride and bride-groom in the fine festive costume that looked rather *gay* for our taste, as both wore bright colors, and all manner of brass and tinsel ornaments. Indeed the bride wore such a fine crown we thought she must be meant to represent the good Queen Christina, whose Centennial her grateful people so lately celebrated. The contrast between these groups and the many wax figures seen in different parts of the building was very striking; these so natural, the rest so stiff and ugly, that I think plain and simple as they are, they must be considered works of real art in their special department.

THE SHIP OF THE DESERT.

The camel cannot, certainly, be called a handsome beast, unless on the principle that "handsome is that handsome does." To look at him in a menagerie—at his huge hump, ungainly neck and legs, big feet, and sheepish face, half stupid and half vicious, one could hardly help saying—What an ugly brute! But a camel seen thus is not seen to best advantage; he is as much out of place as a real ship out of water. His home is in the desert, the great sandy plains that lie desolate and terrible under the burning sun of Africa and Arabia. You could not expect that a creature fitted for such a home would look well in any other. An Arab thinks his camel a real beauty, and perhaps you would too, if you had the Great Desert to cross.

See how wonderfully adapted to its native home and work the camel is. His big feet, well cushioned with flesh, give him a firm footing on the shifting sand in which a horse would sink and stumble. His knees and breast are fitted with callous bunches which protect them from injury when he kneels to receive his burdens. His long, powerful legs carry him swiftly over the desert, and his powers of endurance are the most wonderful of all his gifts. He travels sometimes for six or eight weeks with only a few days of rest, and can go for a week without drinking, and with very little food. How is that possible?

Nature has provided him with a curious arrangement of cells connected with his stomach, in which he can store away water enough to last him a week if necessary. A full-grown camel has been known to take twenty gallons of water in one drinking. But what does he live on when he eats nothing? He lives on his own hump. This hump is a fat, fleshy mass, and when the animal is in good condition, is firm and full. At the end of a long, severe journey, the hump will often nearly disappear. It has been absorbed into the system to support the animal, and can only be restored by good feeding long continued. On this hump the load is placed, and a good camel is able to support a weight of five or six hundred pounds, without being overloaded for a short journey, and half as much for a long one. The merchants who carry on the traffic between Soudan and the Mediterranean states, bearing north gold, ivory, ostrich feathers and salt, and returning with arms and gun-powder and European manufactures, depend entirely upon the camels to transport their merchandise. As in the times of Isaiah, —"They carry their treasures upon the bunches of young camels." For protection against robbers and the dangers of the desert, these merchants travel together in companys or caravans, counting some times as many as five hundred persons, and two thousand camels. Moving swiftly over the vast sea of sand with their rich freight they are well called the Ships of the Desert.

The dangers of the desert are many and serious. Robber bands of wild Arabs may sweep down upon them; the springs, few and far between at the best, may fail altogether, and there is sometimes nothing to do but to kill one of the camels and divide the warm, rank water stored in his stomach among his perishing owners. Disagreeable as it is, it is eagerly drank by men dying of thirst. The mirage of the desert, a deceptive appearance produced by the reflection of the sun's rays from the burning plains, often deceives the traveller with the appearance of lakes and pools of water with palm trees mirrored in their depths. Misled, he hurries thither only to find himself farther from the cooling springs than ever. Worst of all, comes the *simoom* or hot wind and sand storm, scorching gales as from a furnace mouth, bearing clouds of sand over the travellers. When the simoom approaches a caravan, every one prostrates himself; nobody can face it for a moment. The camels squat down and refuse to move, and the travellers' only chance of safety is to make a rampart of the bodies of their beasts, and cover their heads to protect them from the sand. Entire caravans have perished in these send storms; it was one of them which buried the army of Cambyses.

Our picture represents a sad scene. A traveller has been left by his comrades to die alone in the desert. Perhaps the rest of his party has been conquered and carried off captive, while he was left for dead, and survived only to perish more miserably. Perhaps he was sickened and unable to travel farther, while his fellow-travellers, nearly exhausted themselves, were unable to help him on, or to wait for him. Perhaps they heartlessly abandoned him rather than risk anything for themselves. How terrible his fate. Only his camel near him—alone in the dreadful desert where the bones of other victims lie whitening on the burning sand. His faithful camel tries to drive away the vultures hovering above him, but the next caravan that passes the spot will find only bleaching skeletons, or the drifting sand may have covered them far from sight.

Besides carrying merchandise, the camel is still used as a swift post as in Bible times, when "Mordecai wrote in King Ahasuerus's name, and sealed it with the King's ring, and sent letters and posts on horseback, and riders on mules and camels." A courier belonging to the Sheriff of Mecca told a traveller that he often rode on the same camel from Mecca to Medina in forty-eight hours, a distance of twenty-four miles. To ride on a camel is, however, a difficult art. Perched seven feet above the ground, in a curious high-pommelled saddle, on the top of the animal's hump, holding hard on the back of the seat with one hand and grasping the bridle with the other, it is almost impossible for any but an experienced rider to retain his seat.

Women and children cannot endure the rough gait end always ride in large panniers slung on each side of the hump.

The camel, though far below the horse in intelligence and good disposition, is still a good illustration of the truth that kindness is better than blows. Their Arab owners talk to their camels, cheer them, and sing interminable songs for their benefit.

"Dear unto me as the sight of mine eyes,
Art thou, O my Camel!
Precious to me as the health of my life
Art thou, O my Camel!
Sweet to my ears is the sound
Of thy tinkling bells, O my Camel!
And sweet to thy listening ears
Is the sound of my evening song."

SOMETHING NEW.

In our advertising columns will be found a notice of Zuccato's Papyrograph. This is simply a paper-printing apparatus scientifically spoken of. In common-sense lingo, it is a contrivance for printing, not from type, but from the *identical manuscript* which is written for copy. Letters, bills, sketches—whatsoever that can be done with pen and ink—is itself made the "form" from which impressions are made to an indefinite extent. It follows that they must be exact fac-similes. A quick chemical manipulation, which any boy fairly intelligent can comprehend and practise after ten minutes' showing, constitutes the novelty and utility of Zuccato's invention. And nothing of the kind or of any kind heretofore brought to public attention at all approaches it in simplicity and certain usefulness.

Persons needing duplicates of manuscript, pen sketches and the like, will find the Papyrograph invaluable.

Where privacy is required, its usefulness is of the highest importance, as secrecy may be had without trusting to the good faith of others.

For cheapness of production no other system

of printing can compare with it, as five hundred circulars only cost for papyrographic materials; three cents for 8vo size, six cents for 4to, nine cents for foolscap, and twelve cents for post folio.

The public schools of Boston and many other cities are using It for examination papers, drawing lessons, etc.

NEWS OF THE MONTH.

POLITICAL.

The bill creating an Electoral Tribunal to decide upon the counting of the electoral returns passed the Senate on the 29th of January, and the House the next day. Democrats voting aye 159, nay 18. Republicans voting aye 28, nay 68. It was signed on the 30th by the President who, in a special message, gave the following reasons for doing so: "The bill may not be perfect and its provisions may not be such as would be best applicable to all future occasions, but it is calculated to meet the present conditions of the questions and of the country. The country is agitated; it needs aid; it deserves peace and quiet and harmony between all parties and all sections. Its industries are arrested, labor unemployed, capital idle, and enterprise paralyzed by reason of the doubt and anxiety attending the uncertainty of a disputed claim to the Chief Magistracy of the nation. It wants to be assured that the result of the election will be accepted without resistance from the supporters of the disappointed candidate, and that its highest officer shall not hold his place with a questioned title of right. Believing that the bill will secure these ends, I give it my signature."

The Electoral Tribunal was formed by the election of five members from the Senate and five from the House, with four Associate Justices of the Supreme Court named by the committee, and one more named by these four. The members thus chosen are Senators Edmunds, Morton and Frelinghuysen, Republican, and Senators Thurman and Bayard, Democrat: Representatives Hoar and Garfield, Republican, and Peine, Abbot and Hunter, Democrat; with Supreme Court Judges Clifford, Miller, Field, Strong, and Bradley, the last selected by the other four.

The Joint Convention of Congress to count the electoral vote assembled in the hall of the House of Representatives on the 1st of February. The votes of the States —in alphabetic order—of Alabama, Arkansas, California, Colorado, Connecticut and Delaware, were counted without objection. Three rival sets of certificates were presented from Florida, and objection was made to the eligibility of one of the Republican electors. The papers were referred to the Electoral Tribunal which at once assembled in the Supreme Court Chamber with counsel for the opposing sides.

On February 8th, the Electoral Tribunal sent in its decision—by a majority of eight to seven—that the legal certificates are those of the Republican electors, on the ground that the Tribunal has not the right to go behind the certificates regularly certified to by the Governor of Florida, in accordance with the appointments declared by the Board of State Canvassers of that State.

The decision of the Commission was sustained by the Senate, but rejected by the House. Congress assembling in joint convention on the 12th, the two Houses not having agreed to revoke the decision, it stood unreversed, and the four votes of Florida were counted for Hayes and Wheeler. Georgia, Illinois, Indiana, Iowa, Kansas and Kentucky were then counted without opposition. When Louisiana was called, three sets of certificates were presented, and with the objections made were referred to the Tribunal.

The President has addressed to the House a special message in favor of the immediate resumption of specie payment.

The Electoral Tribunal decided February 16th, by a vote of eight to seven, that the returns of the Hayes electors in Louisiana are the valid ones.

The joint meeting of the two Houses was postponed to February 19th. Objection was made by the Democrats, and the Houses separated. The Senate voted to sustain the decision. The House did not act upon it, but took a recess till the 20th. The vote was counted, according to the decision of the Tribunal, on the same day.

On the 21st the votes of Nevada, New Hampshire, New Jersey, New York, Carolina and Ohio were counted. Oregon was objected to by the Democrats, and was referred to the Commission.

The *Tribune* remarks on "The temperate and sensible conduct of the Southern delegation in the House, in the face of the revolutionary attitude of their Northern associates."

Feb. 26th. The Electoral Commission adopted a resolution, by the usual vote of eight to seven, that the ballots cast by Odell, Cartwright and Watts were the lawful electoral votes of the State of Oregon and should be counted for Hayes and Wheeler.

GENERAL.

The Jubilee Singers of Fisk University, still travelling in Europe and winning golden favors, have been admitted to the Central Yorkshire order of Good Templars as brothers and sisters of the order.

The autobiography of William H. Seward is about to be published by his son.

Mr. Moody's meetings in the great Tabernacle prepared for him in Boston are thronged as all his meetings have been.

Vesuvius shows signs of increasing activity.

The Mexican Government has paid to the United States the first installment of $300,000, on the award of the Joint Claims Commission.

An extradition treaty has been arranged with Spain.

It is hoped that the armistice between Turkey and the provinces of Servia and Montenegro will lead to peace. Both Russia and Turkey, however, are continuing active preparations for war.

A failure of peace negotiations between Spain and Cuba, reported.

Hon. H. A. Stephens of Georgia is in a failing and critical state of health.

The Senate has passed the House bill authorizing the Commissioners of the Freedmen's Savings and Trust Co., to buy and sell certain property.

The New York University has consented to admit women to all its departments, forming separate classes. It, however, demands entrance fees, its funds not allowing it for the present to increase its expenses so largely.

Feb. 15th an attempt was made to assassinate Gov. Packard of Louisiana by shooting him in the head. He struck down the pistol, receiving the charge in his knee. The assassin was fired on by a bystander and was slightly wounded. He was arrested at once.

A resumption bill has been reported by Senator Sherman to the Senate from the Finance Committee. It proposes an annual redemption of $25,000,000 legal tenders in bonds, and a larger issue of silver.

The Rinderpest (cattle plague) has appeared in England.

Spain has granted amnesty to the Carlist refugees.

The highest percentage of illiterates in the South is in South Carolina, where it mounts up to 57.64. The lowest is in Maryland, where it is 23.55. In Alabama it is 54 19; in Georgia, 56.06; Mississippi, 53.91; Louisiana, 52.46; Florida, 54.76. The average percentage for fourteen of the Southern States is 42. 37.

The following is a summary of the work of the American Board from its organization: "In all, 380 churches have been organized, into which have been received over 80,000 communicants; while the missionaries have scattered abroad, through 2,300 different publications, in 46 languages, more than 1,800,000,000 pages of educational and religious literature. They have reduced 26 languages to writing, and prepared grammars and dictionaries of great value both to missionaries and to students of comparative philology."

Six Rear Admirals of the United States Navy have died within the last six weeks: viz., Admirals Smith, Alden, Wilkes, Bailey, Davis and Goldsborough. All but Rear Admiral Davis were on the retired list.

Our Centennial View of Liberia is postponed to the next number for the sake of adding to its interest, some fine pictures of the Liberian exhibit.

Hampton Institute was visited on Wednesday, Feb. 21st, by the Committees on Public Institutions, of the Senate and House of Delegates of Virginia, consisting of the following gentlemen:

Of the Senate, Dr. Wm. D. Quesenberry, chairman, Colonel Benjamin F. Bland, Dr. Beazeley, Dr. Nuap, Judge Cochran, and Colonel George W. Ward.

Of the House, Col. W. S. Gilman, chairman, Major L. Scruggs, Major F. M. McMallan, Gen. C. A. Ronald, Mr. W. B. F. Leech, Dr. Thomas M. Duna, Captain Isaac C. Fowler, Mr. William Gaines, Captain John D. Parsons, Mr. B. K. Price, and Mr. Robert M. Smith.

Major Schoolcraft, editor and proprietor of the Richmond Enquirer, accompanied the expedition.

The Old Dominion Steamship Company, of New York, kindly invited the gentlemen of the Committees to be their guests on the trip from Richmond to Norfolk and return. They were met in Norfolk by the Principal of Hampton Institute, arriving on the N. P. Banks, Capt. McCarrick commander, on Wednesday morning at Old Point Comfort, where they were waited upon by the Normal School brass band. After breakfasting at the Hotel, the Committees were brought up to the school, and spent the morning in a careful inspection of the various departments, the buildings, farm, stock, industrial rooms, workshops, and class-rooms. The accounts of the institution were also laid before them.

At noon, after listening to a few songs by the whole school in its Assembly Room, the visitors were invited to the dining room of Virginia Hall, which had been decorated with flags and flowers for the occasion.

Invited to meet the representatives of the Commonwealth, were General William F. Barry in command at Fortress Monroe, Admiral Stephen D. Trenchard of the North Atlantic Squadron in Hampton Roads, Capt. S. B. Luce of the flag-ship Hartford, and Lieut. Charles P. Shaw, Captain P. T. Woodfin, Governor of Chesapeake Military Asylum, and Col. Thomas Tabb of Hampton.

After dinner, the company repaired to the chapel, and spent the hour and a-half before their departure in listening to speeches from several members of the Committees interspersed with songs from the choir and school, and music from the Chesapeake Soldiers' Home band, who kindly lent their services.

Dr. Quesenberry, chairman of the Senate Committee, Col. Gilman, chairman of the House Committee, Senator Bland, and General Ronald and Mr. Robert Smith, Delegates, made short and stirring addresses, marked throughout by a discriminating appreciation and cordiality. Dr. Quesenberry expressed the gratification of the committee with all they had seen, and said that after having examined many public institutions, he could conscientiously say that Hampton comprises favorably with any. He thought that no friend of humanity could see it without professing that we have here a source of power, the source of a stream of civilization which will carry blessing with it. He assured the students, with many kind words, that if they spread broadcast the seed here received, though they may be far behind in commencing their career, they will do justice and credit to themselves, and all right-thinking people will bid them Godspeed.

Col. Gilman, chairman of the House Committee, brought down the house by a lively speech, the text of which was Common Sense. He assured the students that he had done all he could to build up this great common school system which he believes is the great glory of Virginia. He was glad to see that common sense seems to be at the bottom of all that is done here. He told the story of the learned philosopher who, for want of common sense, ordered the carpenter to make two holes in his door, a large one for his large cat to go through and a little one for the kitten. He told them that as when they would furnish a house they would furnish each room according to its use, so in educating themselves, they should think what course of studies would fit them for the practical duties of their lives—and remember, too, that they are Virginians, and that what helps build them up into true manhood and womanhood helps build up the State; that they should go forth as missionaries teaching morality and religion, as well as books. He said he was always glad to see their graduates who have already gone, thus going forth—that as the sun's rays tell of the sun's warmth, so these graduates teachers tell of the common sense in this institution. He cautioned them to keep up their standard of self-respect; and said that he sometimes saw colored men in Richmond laughing and talking with convicts in the penitentiary as if they considered themselves on the same plane. They should cultivate a sentiment of self-respect, and learn all they can here, for every day will bring them a rich harvest in afterlife.

Senator Bland was introduced by General Armstrong with the remark that the gentlemen who had spoken well represented the Assembly and its Acts during the last five years, in relation to the cause of education and this institution.

Senator Bland remarked that this was his first visit to Hampton under the new regime, that what he saw gave him great pleasure and high hope for the colored race; that there is no enmity between the white and colored men of Virginia—they are friends and ought to be, for many of the white people had had black mammies almost as soon as white mothers; that, "carry me back to old Virginia," is a song in which black and white can unite. He reminded the students of their duty to develop and elevate their race in this country, and perhaps in Africa, and that to do this it is first and absolutely necessary to elevate themselves, both intellectually and morally. He said the Committees would have a pleasant report to make to the Assembly, and hoped that future years might continue to see the benefits from the patriotism and philanthropy which has founded this institution, and that the State will put it beside the University of Virginia and Blacksburgh, in its protection and fostering care.

General Armstrong then introduced Mr. Robert M. Smith, as the (colored) representative of this county, and a member whose course since he had been called from honest labor to fill the position, had been such as to reflect credit upon his race.

Mr. Smith made a brief speech, endorsing what had been said by the other members, and speaking particularly of the hearty advocacy of the interests of the Hampton Institute, and of public education in general, by Colonel Gilman, in the Assembly. Mr. Smith said that he fully believed that the only way to make good citizens is to educate the people, and as he had said in the Assembly, this school is a light that should not be put out.

The closing address was made by Gen. Ronald, introduced as one of the veterans of the Mexican war.

General Ronald said that though the invitation to speak had taken him by surprise, he was glad that General Armstrong had given him the opportunity to say that what his eyes had seen had delighted them; what his ears had heard had gladdened them; what his heart had felt had rejoiced it. He told the students that he thanked God from the deepest recesses of his heart that the lines had fallen to them in such pleasant places, and that they had from henceforth such a goodly heritage. He was glad that the State of Virginia had joined hands with the Federal Government to protect them. He said that, as a Virginia gentleman, and a member of its Assembly, he rejoiced when in 1862 the State gave its seal to the act incorporating this school as a State institution; that he gloried in God over its progress and prosperity. He counselled the students to try to make themselves worthy of the protection of the State and General Government. He had been commissioned, he said, by his colleagues to tender to General Armstrong their hearty thanks; and said that they would all carry away with them feelings of gratification and cordial good-will. He closed by gracefully thanking General Armstrong for having done them the honor to introduce them to the gentlemen of the army and navy who had been invited to meet them.

General Armstrong returned the thanks of the school and its officers for the generous words of the speakers, and thought they must have read in the eyes of their audience and the demonstrations of applause called forth by their words, the very hearty appreciation they had met.

The very pleasant hour was closed by the singing of the "Gloria" by the whole school, and music by the Military Home band.

ZUCCATO'S

PATENT PAPYROGRAPH.

The simplest and cheapest means of producing **facsimiles** (equal to manuscript) **of Price Lists, Specifications, Designs, Examination Papers, Notices, &c.** It saves time, labor and money. From one to a thousand copies are made from one writing, at rate of five hundred per hour.

PAYS FOR ITSELF EVERY WEEK. SAVES TIME, POSTAGE AND STATIONERY.

Bankers, Schools, Commission Merchants and all Public Offices need it.

☞ Send for circular giving full particulars. Address **The Papyrograph Company,** P. O. Box 173, Norfolk, Va.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens,* representing all shades of political opinion and religious belief.

The series is *complete,* covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent.* Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The best in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its Reversible Feed enables it to sew forward or backward without stopping the machine—it being the *only* machine that *can* do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between Side Feed and Back Feed machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe*, *odorless* and *durable* Oil Stove for all who want Pure, Moist, Warm Air in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection ohimney flues, as it generates no smoke or with noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

VOL. VI. HAMPTON, VA., APRIL, 1877. NO. 4

OUR NEW PRESIDENT.

The long suspense is over, the 4th of March is past, and we have a President. Every lover of peace and order must rejoice in this fact, whether the method or the result of the arbitration has been exactly according to his choice, or not. We believe that the great majority of every party do so rejolce. The very possibility of deciding such a question hy arbitration in the midst of the intensest party excitement and sectional feeling is an advance in civilization, and in spite of attendant ebullitions of disorder, is cheeringly suggestive of the time when wars shall cease among men. We have, now, to look hopefully into the future, remembering in Whose hand is the king's heart, and resolved to do our best in our own place whether that be great or small.

Inauguration day, falling this year on Monday, March 5th, was, unlike most Inauguration days, bright and pleasant. Pennsylvania Avenue was decorated the whole length with arches, flags and streamers, and crowded to tree tops and lamp-post tops with surging humanity. The sovereign people appeared in full force to look at its new servant. As the brilliant procession came in sight and passed between the solid lines of spectators, it was received with cheer upon cheer from thousands of throats. First came the battalion of Metropolitan Police, then the staff of the Grand Marshall, then United States troops, light and heavy artillery, Marine Corps, Washington Light Infantry, State troops from Pennsylvania, and Washington Light Guards. Then came the Presidential party from the White House. First in President Grant's four-horse carriage, sat President Hayes, ex-President Grant, and Secretary Morrill. In the second carriage, Vice-president Wheeler, and Senator McCreery of Kentucky. Then three more carriages with other dignitaries. The Washington Artillery followed, and then came the Colored troops, the first battalion of the District militia eighty strong, commanded by Major Charles B. Fisher and leaded hy field music. They wore dark blue pants and light blue overcoats, the ordinary soldier cap with a white pompon. The officers wore a similar cap, hut with a plume instead of a pompon. Then came the Columbus Cadet corps, a fine looking body of young fellows of eighteen or twenty.

The Grand Army of the Republic was represented by 150 men, marshalled by Maj. A. G. Richardson.

Various clubs and associations from Washington and elsewhere, including the Pioneer Club (colored), and a Mounted Guard of Citizens, followed, and the Fire Department brought up the rear in brilliant style.

THE SCENE AT THE CAPITOL.

The doors of the Senate Chamber were open before eleven. Statesmen, military officers in gay uniforms, and foreign ministers in brilliant costumes mingled on the floor. In the reserved gallery opposite, the President's desk, Mrs. Hayes, Mrs. Senator Sherman and their families occupied front seats.

At ten minutes to twelve, the Diplomatic Corps, in court costumes, covered with gold lace, were ushered to their seats. Then came the members of the Supreme Court, and promptly at uoon, the Presidential party entered. The Sergeant at Arms of the Senate advanced in front of them. The ex-President and President walked side by side to the bar of the Senate, followed hy the members of the Cahinet, the President's aids, and in the rear of all a police escort.

THE SCENE IN THE SENATE CHAMBER.

The Senate was called to order by its Secretary, a prayer was offered by its Chaplain, Dr. Sunderland, and President Grant's proclamation convening the special session was read. After the organization of the Senate, Vice-President Wheeler entered, escorted by Senator McCreery of Kentucky, and was greeted with applause. After a short address from him the oath of office was administered to him hy the president *pro-tem* of the Senate, and his first official act was to direct the Sergeant at Arms to proceed with the inauguration coromouies.

THE INAUGURATION.

The Presidential party then proceeded to the platform which had been erected for the inaugural ceremonies at the east front of the Capitol. The President-elect took his position in front, and was greeted by a hurst of applause from the immense crowd. On the platform were seated the foreign legations in their glittering court uniforms, General Sherman, and other officers of the United States army, the Senators and members of the Supreme Court.

The President then read his inaugural address, loudly applauded at its close. Then turning to Chief Justice Waite, who was in his robes of office, he raised his right hand, and repeated after the Chief Justice the oath of office, and touched with his lips the open Bible held hy Justice Swayne.

Once more the great multitude broke out into cheers and applause. The party then returned to the Senate chamber, and after receiving the congratulations of his friends, the new President entered his carriage with ex-President Grant and Senator Morrill, and was escorted to the White House hy the procession.

It is natural to le interested in details of the life and personal manners and appearance of those who are to be the chief representatives and rulers of the nation. Character itself is made up of small lines, and indicated hy little signs. So it is pleasant to hear that our new President has a free, manly bearing, and genial counteuance, and a firm and cordial grasp, that he has cultivated manners, and that he is temperate in all things. It is pleasant to know of his happy home life, and to read of Mrs. Hayes's fine, matronly face—and that she is the beau-ideal of an American lady of refinement and heart.

Our readers will be interested in a picture of the beautiful home our new President has left to assume the difficulties and responsihilities of the Presidential position.

RESIDENCE OF GOVERNOR HAYES.

RESIDENCE OF GOVERNOR HAYES IN FREMONT, OHIO.

Our first-page engraving, for which we are indehted to Messrs. Harpers, is a picture of the late residence of our new President, in Fremont, in the northern part of Ohio. It is a pleasant though modest country house in a park of about seventy acres of ground, very attractively laid out. A smooth, green lawn in front of the house stretches down to a wild-wood of forest trees, through which one may wander for a summer day, by pleasant wood-lawn paths. One of the most charming nooks in it, and the favorite resort of the family, is called Boffin's Bower.

Inside, the house is furnished quietly and comfortably. The Governor's hlrary is lined, from floor to ceiling, with well-filled bookshelves. In this room and his study he spent many hours daily, hard at work. Here also he preserved his camp chest and sword, some old hattle-flags and other relics of his war experience.

RUTHERFORD BIRCHARD HAYES

was born in Delaware, Ohio, October 4th, 1822, his parents having emigrated from Vermont in 1817. His father's ancestors came from Scotland, his mother's—the Birchards—from England, and came to this country in 1680, and 1635. Three of his ancestors fought in the Revolutionary army. He was a graduate of Kenyon College and Law School, and began the practice of his profession in Fremont, Ohio. In 1849 he removed to Cincinnati, and held the office of City Solicitor there from 1858 to the hreaking out of the Civil War, when he raised a regiment for the Union army, going with it as Major. Receiving promotion as Lieutenant Colonel, he led his regiment at the hattle of South Mountain, remaining with it through the action though severely wounded in the arm. In 1862, he was appointed Colonel of the Twenty-third Ohio Regiment, and was afterwards promoted Brigadier General "for gallant and distinguished services during the campaign of 1864." Before these promotions, he had commanded a hrigade as Colonel for over two years, and was then commanding a division. In the course of his service four horses had been shot under him, and he had been wounded four times.

In 1864, he was elected to represent the Second Congressional District of Ohio, by a majority of 3,098, and in 1866 was re-elected. Before his Congressional term had expired in 1867, he was elected Governor of the State, and was re-elected in 1869. On his retirement from the Governor's chair, he was elected again to Congress. In 1874, he was unanimously nominated for the third term as Governor, and after a contest whose energy hrought out the largest vote by over 63,000 ever cast in Ohio, was elected by a majority of 5,544.

VICE-PRESIDENT WILLIAM A. WHEELER

was born in Malone, Franklin Co., New York, June 3d, 1819. He was educated in the University of Vermont, studied law, and com-

menced practice in his native county, being known as an able lawyer. He became District Attorney, and was afterward elected to the Assembly by the Whig party, but served only one term, and then entered business life, being for fourteen years cashier of the bank in Malone, and afterwards for eleven years president of the Northern New York railroad.

In 1858 he was elected to the State Senate of which he was made president *pro-tem*, by the Republican party. In 1860 he was sent as Representative to Congress, and in 1867 was chairman of the New York Constitutional Convention. A year later he re-entered Congress, since which time he has been a member of the House of Representatives up to the time of his inauguration as Vice-President of the United States.

Southern Workman,

ISSUED MONTHLY.

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager.

HAMPTON, APRIL, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

WHEN without funds or the prospect of any, nearly ten years ago, the Hampton Institute was established, its founders had these convictions:—

That the improvement of the South, principally through education, was the work of the hour, and that in the elevation of the freedmen the North had a special responsibility.

That the negro required a system of training adapted to his condition.

That only with the co-operation of the best people of the South could effectual work be done for the negro.

That Northern aid would not fail a work wisely done in his behalf.

The Hampton Institute is, to-day, probably the largest, most completely equipped and effective institution devoted to the negro in this or any country. Friends of education in the North have, regardless of denomination, helped it generously. Positively and earnestly religious in its influence, it neither is controlled by or favors any sect, being simply "evangelical". Its graduates connect themselves as Christian workers with the denominations with which they naturally associate, chiefly Methodists and Baptists, who are the smallest contributors to its support.

From the North has come $200,000.00 worth of land, buildings and equipment for the instruction of 260 youth of both sexes—215 of them boarders, from all sections of the country—not only in book knowledge, but in good habits, in moral and Christian principle, and in practical industry, qualifying them to work for a living anywhere and giving them a self-reliance and strength of character worth far more than the money value of their labor.

Hampton's appeal to the North has been nobly met, for in addition to the above, it receives yearly, from between two and three hundred friends, about $20,000 for current expenses, and improvements. No individual or society is responsible for its expenses. Its trustees appeal to the general public. Representing the ideas of those who struggled and fought for the overthrow of slavery, its officers have done nearly ten years' work in a community that is distinguished as the only one in the South that voluntarily applied the torch to its own dwellings and churches, rather than subject them to desecration by the "Yankee." In all that time they have failed to have a grievance. In nine years over 500 students have come and gone, and there has not been a *fracas* in the town in which students have participated. Time has settled social relations between the residents of Hampton and school officers most pleasantly. No one has been on the look-out for grievances, and no one has found any. While refraining from active politics all have voted as suited them, invariably in opposition to Southerners.

Three Legislative delegations have visited the institution and reported most favorably. The General Assembly of Virginia (Conservative) devotes one-third of the Agricultural College Land Fund to Hampton, and an annual interest of $10,000 is paid from the State Treasury to the Institute. Not less than $20,000 are yearly paid by the State as teachers' salaries to our two hundred graduates and ex-students, most of whom are engaged in the public free schools of Virginia. Not one has complained of ill-treatment except at the hands of a few of the lowest class of his own color, and, as a rule, they speak gratefully of the moral support of the whites. There are none more friendly to the work than the Executive of this State and his associates.

The North is helping the South, the South is not helping the North to educate the negro. Southern co-operation is indispensable, and will not be refused to those who enter this work "with malice toward none, with charity for all."

The North has a responsibility in aiding to fit for their duties those whom they have freed and enfranchised. The point at which to apply such aid most wisely is to maintain training schools officered by the best teachers in the country, in which the higher class of negro youth shall be fitted to teach their race. The Southern States are providing by taxation for free schools and are building school-houses. "Salaries are ready, buildings are ready, but qualified teachers cannot be found," is the language of Dr. Ruffner, Superintendent of Public Instruction of Virginia.

THE key of whatever success the Hampton Institute has attained is its *common-sense methods*. Sensible work for the negro will command the respect and moral support of all classes, irrespective of denomination or of section.

Only a common-sense course will settle the vexed Southern question. "Rebels" will not be reconciled to rulers whom they cannot respect. Viewing federal officers in the South as emissaries of a finer civilization, they stand in a fearfully grotesque light.

The overthrow of the present system of political appointments is indispensable to peace. Wisdom and kindly sentiment have been flung to the winds and all possibilities of progress crushed by the power of rings whose inspiration has been selfishness.

When Republicans' pride in the noble record of their party has been turned into mortification by the abuses that have crept in, what must be the feelings of good men of opposite politics! We are promised a reformed Civil Service. The rights of all are to be maintained. Universal education is pointed to as the only safe basis of universal suffrage; to this end national aid may be hoped for. May one not say in the words of the old negro song,—"Dere's a better day a comin'!"

THE Republican party has lived too long on its record. Its managers were convinced that God had no other means to work with than through its agency. They found no better way of propagating liberal ideas at the South than at the point of the bayonet. Unconscious of failing powers, of the change of its grand, manly voice to a weak treble, they quarrelled with the inevitable, gave excuses instead of results, ignored all moral means of reconstruction, made ignorance their tool and public office a personal perquisite. This course with a conquered but proud aristocracy created such confusion that the rule of the opposite party came to be regarded as necessary to peace. This transpired in the face of the greatest political and social difficulties that ever a dominant party encountered, in which success could be won only by skill and firmness and by a corps of competent public officers in sympathy with its true mission, controlled by the dictates of a rare common-sense and of honor, and by a keen moral perception. These it did not have, and complains it could not get. The future will show the justness or otherwise of its complaint.

In the present crisis of its fate as a party, a new man has grasped the helm, with an insight and decision which give great hopes that he will follow the only possible path by which permanent peace can be attained, and prosperity once more visit the nation.

The Executive acting for the nation has a plain path of duty before him. First, to disregard utterly the evil maxim—chief source of our woes—that office should reward party service. Second, to cut entirely loose from the dictation of party leaders,—simply because they have lost the confidence of the country. Supposing them to be good men, good men are not so scarce that it is necessary to advise with those who are tainted with suspicion and distrusted by the nation. Now, if ever, our President has ample justification in the closeness of the vote, to cast aside party affiliations, and, for the first time since Washington, to be universally recognized as the President of the whole people.

THE PRESIDENT'S inaugural wastes no words on glittering generalities but goes straight to the heart of the vital questions which, in one way or another, the nation has to answer.

While, as he says, he does not undertake to lay down irrevocable measures of administration, but simply to announce leading principles, and suggest motives and ends, he does this in a way which promises well for the vigor and judgment of his administrative measures when these shall be in order. His clear perception and statement of the problems before us will help their solution, and are worth committing to memory.

The Southern question which, after fourteen years since its so-called settlement by war, has not retired to the background, he recognizes as "the one subject in our public affairs which all thoughtful and patriotic citizens regard as of supreme importance," seeing that "many of the calamitous effects of the tremendous revolution which has passed over the Southern States still remain, and that the immeasurable benefits which will surely follow, sooner or later, the hearty and generous acceptance of the legitimate results of that revolution have not yet been realized."

And thus recognizing the supreme question of our national politics, he comprehends in one glance the two essential elements in its solution, that touch the very root of the whole trouble.

These necessities to the perfect restoration of peace and prosperity to the South are: local self-government founded in justice, and universal education aided, if necessary, by the general government.

"For," the President remarks, "it must not be forgotten that only a local government which recognizes and maintains inviolate the rights of all is a true self-government. With respect to the two distinct races, whose peculiar relations to each other have brought upon us the deplorable complications and perplexities which exist in those States, it must be a government which guards the interests of both races carefully and equally. It must be a government which submits loyally and heartily to the Constitution and the laws—the laws of the nation and the laws of the States themselves—accepting and obeying faithfully the whole Constitution as it is.

Resting upon this sure and substantial foundation, the superstructure of beneficent local governments can be built up, and not otherwise.

But at the basis of all prosperity, for that as well as for every other part of the country, lies the improvement of the intellectual and moral condition of the people. Universal suffrage should rest upon universal education. To this end liberal and permanent provision should be made for the support of free schools by the State governments, and, if need be, supplemented by legitimate aid from national authority.

Let me assure my countrymen of the Southern States that it is my earnest desire to regard and promote their truest interests, the interests of the white and colored people both and equally, and to put forth my best efforts in behalf of a civil policy which will forever wipe out, in our political affairs, the color line, and the distinction between North and South, to the end that we may have not merely a united North or a united South, but a united country."

The common-sense and wisdom of these words, and their tone of manly sincerity and patriotism, commend them to the whole country, and it is not surprising that they have already met a response from both North and South, from men of all parties who have most practical interests at stake, or least of partisan prejudice.

The promise of aid, moral and, as far as necessary, pecuniary—of a general free school system in the Southern States, is full of hopeful significance. Whatever the value of general education under other forms of government, it is absolutely essential to the safety and continuance of Republican institutions. If we would not see these stifled out of existence by the flood of ignorance which has been let in upon the nation by the breaking down of the barriers of slavery, more vigorous measures must be taken than have yet been instituted. Great as the private and local efforts and their results have been, compared with actual needs, they are useful only as showing what ought to be done and how to do it. We cannot irrigate this great desert by streams of private benevolence—we must let in the sea.

The great questions of Civil Service Reform, and the currency, and the subjects of national finances and of Foreign relations, are treated with as able a hand. "A reform in our Civil Service not merely as to certain abuses, but a change in the system of appointment itself, a return to the principles and practices of the founders of the government, who held that appointments should not be made as rewards for partizan services, nor merely on the nomination of members of Congress; and who meant that the tenure of office should depend on personal character and performance of duty."

In furtherance of this reform, he recommends an amendment to the Constitution lengthening the Presidential term to six years, and forbidding a re-election.

He declares in favor of solid money as the basis of currency, and of an early resumption of specie payment.

"Looking for the guidance of that Divine hand, by which the destinies of nations and individuals are shaped," the President calls upon the people, "senators, representatives, judges, fellow-citizens here and everywhere, to unite with him in an earnest effort to secure to our country the blessings not only of national prosperity, but of justice, peace and union—a union depending not upon the constraint of force, but upon the loving devotion of a free people."

In such earnest effort there is not one who cannot help a little.

WHAT is the real problem which the colored race has to solve? Stripped of all its disguises, is it not, simply, how can the negro disarm the prejudices of the Southern whites against him, not as a man, but as an element in politics and in government?

The Southern white man believes that the leaders of the negroes wish to make laws about property which they do not own, and to act as magistrates before they know how to read, and before they have the moral strength to refuse bribes. In

them by refusing office until he represents more property holders and intelligent men. Meantime, both wealth and knowledge are within his own reach, and in their acquirement by patient effort, he will win also the golden opinions of all good men.

Three things have signally failed, since the war, in securing for the race this vitally important sympathy and good-will. The first is solid race voting; the second is the candidacy of unfit persons for office; and the third, military aid. All these things have tended directly to convince fair-minded Southerners that it would not be *safe* for them to aid the negro to rise.

In history; only two ways are recorded in which a minority has established its civil power. The first of these methods is that of military conquest. This course is as utterly out of the question for the blacks as it was for the Indians, and can be advised by no sane person. The second method is by patiently proving that the ill opinions of the majority were undeserved, not so much by argument as by the demonstration of good works. Southerners, like all other men, are open to conviction by this method. And in proportion as religious bigotry is more inexorable than race antipathy, will the colored people have an easier task than the early Christians and the Quakers had, in securing the hearty acknowledgement of their rights of every kind.

THE Cabinet of the Hampton Institute has received a valuable addition, by the gift of specimens of Liberian products and manufactures from Mr. Edward S. Morris of Philadelphia. The specimens include coffee hulled and in the berry, cacao nuts, palm fruit and palm oil, arrow root, ginger, manufactured India rubber, and iron ore. For the plates which add so much to the interest of our articels on Liberia at the Centennial, we are also indebted to Mr. Morris.

Our other plates this month we owe to Messrs. Harper Bros. and the American Congregational Publishing society.

FORTUNATELY for the good name of the colored people, such able men as Professor John M. Langston and Frederick Douglass are likely to be recognized by the new administration as representatives of their race, because of their capacity, rather than as compensation for wire-pulling. By rewarding the meritorious and encouraging those who have proved their claims to universal respect, worthy colored youth will receive a stimulus as much needed as it is deserved.

AMIDST the conflicting evidence before the Congressional Committee in Louisiana, one agreeable circumstance came out, which, as the witness could have had no motive for deception, we may perhaps venture to believe. Antonio T. Alasco, colored, a canvasser for the Democratic party, testifies: "In my speeches I dwelt a good deal on school matters, as the colored people were mors interested in schools than anything else."

OUR next issue will contain a full-page likeness of President Hayes. The electro-plate portrait is the gift of "Harper Brothers" of New York, to whom we are indebted for the picture of Governor Hayes's home in this number.

The "Southern Workman" is under many and constant obligations to the Harpers for the use of valuable cuts.

REV. B. Japhet Medley, in notifying us of the discontinuance of his excellent paper, the *Morning Star*, published at Mayo, Va., says:

"It was not exactly the want of money or the lack of ardent friends that caused our suspension, but merely the fact that my school this year numbers one hundred and fifty-seven regular scholars, with a probability of an addition of twenty or thirty more during the spring, and I had no one at all to assist me in my editorial labors, which were gradually becoming more arduous, and at the time the *Star* suspended I had not secured an assistant teacher for my school. I do not only wish you toward sustaining it, simply to advance the interest of the Normal and Agricultural Institute. Its correspondence is so valuable to young teachers and others who are anxious to see the negro problem solved, that the paper readily commends itself to the reading public.

THE tone of the political papers of Norfolk, Richmond, and of many leading journals in Virginia and the South, is expressed in the following language of the *Richmond Whig*":

"To President Hayes we would say: We will judge your measures in detail. We will not sell out for all the paltry offices in your gift, but we will sustain your every act that is just and right. As we judged Grant and condemned him, not factiously but impartially, because he was wrong, so would we apply the test to Hayes, and applaud and sustain him in his every effort to promote the best interests of our section and of the common country. We advocate no 'new departure,' but we would stand fast by the Conservative organization, and by our moderation and prudence prove that we are conservatives in fact as well as in name."

AT a recent meeting of the Pennsylvania Colonization Society it was reported that thirteen young men from Liberia are now in this country at Lincoln University and other institutions, preparing for usefulness in the African Republic.

Rev. John B. Pinney, LL. D., formerly Secretary of the Pennsylvania Colonization Society, is now visiting Liberia for the sixth time. He writes from Monrovia, Dec. 6th, 1876, to Wm. Coppinger, Esq.: "I am quite agreeably surprised to see so general and extensive attention to coffee culture; and despite the calamities of recent difficulties and the late war, general hopefulness."

Many freedmen in North Carolina, South Carolina, Alabama and Mississippi have applied for help to emigrate to Liberia. Among them are two teachers and seven preachers of the gospel. An eloquent colored man, recently elected to Congress from the Charleston district, advocates, in a newspaper ably edited by himself, the emigration of 500,000 freedmen to Liberia, and thus to promote African nationality.

GENERAL EATON, the Federal Commissioner of education, has issued his Report for 1875. It shows a total school population in thirty-six states and eight territories, excluding Delaware, the Indian Territory, New Mexico, and Wyoming, as not reported, of 14,007,522. The total enrollment of pupils in the public schools of all the states is 8,756,059. The total number of teachers reported is 249,202. In Alabama, Delaware, Kentucky, Nevada and Texas, the same salaries are paid for the same work to men and women teachers. The total income for public schools in all the states and territories, except North Carolina, Idaho, Washington and Wyoming, is $88,048,950. The total expenditures for public schools in the Union, excluding Delaware, Georgia, Missouri, Idaho and the Indian Territory, not reported, is $81,032,954. The value of school property reported from twenty-nine states and six territories is $173,833,545. Statistics are given of 137 normal schools, with 1,031 instructors and 29,105 students. Fourteen normal schools, including the one in Michigan, each receive an annual appropriation exceeding $17,000. Reports exhibit from 131 commercial and business colleges 504 instructors, 26,109 pupils, and 10,099 volumes in their libraries. There are 95 kindergarten schools of which informstion is given. These have 210 teachers and 2,809 pupils. There is an increase over the number reported last year of 40 schools, 91 teachers and 1,178 pupils. Forty-one schools for the deaf and dumb are reported. These have 298 instructors, 30 of whom are semi-mutes, 5,087 pupils. There are 29,040 volumes in libraries; value of grounds, buildings and apparatus, $0,136,815; amount of State appropriations during the year, $1,049,524; amount received from tuition fees, $94,530. Twenty-nine schools for the blind, with 498 instructors and other employes, and 2,054 pupils, report. The value of grounds, buildings and apparatus is $3,893,467; appropriations during the year, $551,780. A statistical table affords information of 378 other institutions, classed as follows: Orphan asylums, 154; soldiers' orphans' homes, 17; infant asylums, 13; miscellaneous charities, 71; industrial schools, 24. The number of inmates reported in these institutions is 54,204, under the supervision of 1,789 teachers and officers. The income reported for last year was $2,794,264; the expenditures $3,633,887. Eighteen states and the District of Columbia report 47 reform schools. Reports were received from nine schools for the feeble-minded. The whole number of inmates is 1,372, under the supervision of 317 instructors and other employes. The Commissioner remarks that the effect of the financial depression throughout the country is seen in the reduction of the amount of benefactions for educational purposes during this year now closing, the total being $4,126,562. In 1874 it was $0,053,804, and in 1872, $11,226,977. In educational benefactions Pennsylvania nearest to this is New Hampshire, with $470,700.

Agricultural.

AN EXPERIMENT IN CO-OPERATION.

In 1872, a large manufacturing firm in New York called its workmen together, and announced that after a certain date every man would receive over and above his wages a share in the profits of the business, be they more or less, according to the sales. The men received the statement with incredulity and returned to their work. Six months passed, and the firm announced that it had $4,000 to divide among the men in proportion to their wages. The immediate result of the actual division of the money was gratifying to all concerned. The men resumed work with remarkable animation and industry. Every one became jealous of his neighbor's work, every ons became his fellow's overseer. No idleness now, no "one-handed work," no shirking and dilatory pipe-lighting, no guards to watch for the foreman, no waste of material and time. Never before had so much work been performed in a day; never had such skill, economy, aptitude and intelligenee been shown at the benches, and never had better goods been made. The men were apparently satisfied, and the firm was more than compensated for the increased outlay by the improved quality of the goods. Several months passed, and the house announced that in a few weeks it would have a surplus of ten thousand dollars to divide among the workmen. Suddenly led away by some epidemic of unreason, the men struck for a reduction of time to eight hours. The proprietors would not consent to this, and as a consequence for two weeks the shops were closed. In vain were the men shown the money coming to them; in vain was it demonstrated that they were making more than men in the same line in other shops. They persisted in the strike till they could hold out no longer, and then resumed work as before The firm declined to proceed further with the co-operntive experiment, and what had been fair with promise was thus brought to a disastrous end.—*Charles Barnard, in Scribner.*

VALUE OF TREES IN TOWNS.

Mr. Griffiths, the medical officer of health for Sheffield, England, in his report upon the sanitary condition of that town during 1874, makes the following interesting remarks in reference to street trees: "Whoever has visited the boulevards of Continental towns or even the square of London, can testify to the advantages of verdure as offering pleasure to the eye and gratification to the mind. Morever, from a sanitary point of view, the benefits are of incalculable valne. It has been asserted that the aggregate surfaces of the leaves of well-grown elm, lime, and sycamore trees, with their 5,000,000 to 7,000,000 leaves, equal to about 200,000 square feet, or about five acres; and these are almost constantly absorbing and digesting the carbonic acid and various exhalations given off by the putrefaction of animal and vegetable matter, and, as if grateful for such support, return into the air pure oxygen, which re-invigorates and renews animal life. Trees thus remove poison from our midst, and to be without them is an oversight. Trees can be had which will exist, with suitable attention, in any part of the city. Why not, with all the above facts before us, have them and try them ?"—*Boston Journal of Chemistry.*

HEN MANURE IN THE GARDEN.

One of the best fertilizers, within easy reach of the farmer and villager, is the contents of ths hennery. This often goes to waste, and the hens find their own lodgings in trees, and on sheds, and other out-buildings. But on most farms there is a roost under cover, where the droppings accumulate, and are kept in a dry state. As a ruls, not much care is bestowed upon it. Often it lies upon the floor without absorbents, the ammonia constantly escaping, to the injury of the fowls. Sometimes it has an annual cleaning, but oftener it lies for years only wasting. Analysis shows it to be exnsnally find it. If all its good properties were carefully gathered, and saved by the use of absorbents, it would be worth much more than this. There are two ways of doing this, equally effectual,—daily sweeping and gathering into barrels or boxes, or by frequent deposits of absorbents under the perches. The former method involves a good deal of labor, and is resorted to only by those who insist upon the utmost neatness in the hen-house. The droppings deposited in the barrels are covered daily with plaster, dry peat, or some other good absorbent. Our own method is to apply the absorbents frequently under the roosts. The hennery has a cemented floor, and is built into a bank, fronting on the south, with a large supply of windows to give light and heat. Spring water is brought into the poultry-house by a pipe, and by the turning of a faucet a constant supply of fresh water is secured. The whole floor is covered with absorbents of various kinds, in which the fowls scratch and dust themselves as freely as they please. The staple absorbent in summer is dry garden soil or road dust, gathered as the state of the weather permits. In the winter it is sifted hard-coal ashes from the furnace. In addition to this, sea weed, and the wrack from the shore are frequently thrown in, which furnishes food for the fowls, as well as helps the manure heap. As soon as the smell of ammonia is detected, more earth is added, and thus the pile of manure grows gradnally throngh the year. It is removed as often as manure is wanted in the garden, at planting, or to assist growing crops. It needs to be used with caution, either in the dry or liquid state. We have large faith in the economy of liquid manure, applied to fruits and vegetables in the summer. It is very good in dry weather, and not much less good in wet, if the soil is well drained. The quantity of water that plants will take up in the growing season is wonderful. We keep a large tank, which is supplied with manure and water from the hennery, lined with brick, stone, or cement, so as to be fire-proof. The sill of the shed crosses it on a level with the ground, nnd as the ashes are never permitted to reach this sill, there can be no danger that fire may be communicated to it by live coals which are somstimes thrown out amongst the ashes. The larger part or the bin is outside of the shed, and it would be well when making it to have it large enough to hold at least a wagon load. When this quantity has accumulated, it should be removed. Where earth closets are used, fine *coal* ashes are an excellent substitute for dry earth, and they may then go from the earth closet to the compost heap. The ashes make useful material for walks and roads abont the farm or garden, and when employed for this purpose, it is desirable to have a large quantity at once.

A GREAT NATIONAL WORK.

The Illustrated History of the Centennial Exhibition, with a full description of the Great Buildings and all the objects of interest exhibited in them. By James D. McCabe, author of "The Centennial History of the United States," Etc. Embellished with over 300 fine engravings of buildings and scenes in the Great Exhibition.

The National Publishing Co. of Philadelphia have issued a large and handsome volume bearing the above title. The intense interest everywhere manifested in the great Exhibition, and the eager desire to obtain a complete and connected account of it, will unquestionably cause this book to have a very extensive sale.

This History of the Centennial Exhibition is not a dry list of the articles exhibited. It is a superb volume of 874 pages, from the pen of one of the most popular authors of the day. Mr. McCabe received the constant and sympathetic assistance of the Centennial authorities, and enjoyed peculiar advantages in the preparation of this work. He went, note-book in hand, through every department of the Exhibition, and the result of his labors is a work abounding in brilliant descriptions of the great World's Fair. He traces the history of the great enterprise from its inception, to its triumphant closing day. He then takes us through every part of the Exhibition grounds, giving brilliant accounts of every building and other feature of interest within them. We are taken through the Main building, Machinery Hall, the Agricultural and Horticultural Halls, the Art Gallery, the Government Building, and all the other structures, and our deepest attention is held all the time by the descriptions of the rare and beautiful objects contained in them.

The book is written with a vigor and brilliancy which render it a complete and life-like picture of the great World's Fair, and which make it invaluable to all classes of our people. There is not another book in print which gives one-fourth of the information contained in this work. To those who have visited the Exhibition it will be a pleasing souvenir of their visit, and enable them to recall the magnificent scenes they have witnessed. To those who could not make the journey, the book is a necessity, for it will enable them to enjoy the delights of a thorough acquaintance with the great Exhibition in the quietude of their own homes.

The work is superbly illustrated. The price is low and within the reach of all. It is sold by subscription only, and the publishers want agents in every county.

The Penny ye Meant to Gi'e.

There's a funny tale of a stingy man
Who was none too good, though he might have been worse,
Who went to his church on a Sunday night,
And carried along his well-filled purse.

When the sexton came with his begging-plate,—
The church was but dim with the candles' light,—
The stingy man fumbled all through his purse,
And chose a coin by touch, and not by sight.

It's an odd thing, now, that guineas should be
So like unto pennies in shape and size.
"I'll give a penny," the stingy man said;
"The poor must not gifts of pennies despise."

The penny fell down with a clatter and ring;
And back in his seat leaned the stingy man.
"The world is so full of the poor," he thought,
"I can't help them all; I give what I can."

Ha, ha! how the sexton smiled, to be sure,
To see the gold guinea fall in his plate!
Ha, ha! how the stingy man's heart was wrung
Perceiving his blunder but just too late!

"No matter," he said; "in the Lord's account
That guinea of gold is set down to me.
They lend to him who give to the poor;
It will not so bad an investment be."

"Na, na, mon!" the chuckling sexton cries out;
"The Lord is nae cheated; he kens thee well;
He knew it was only by accident
That out of thy fingers the guinea fell.

He keeps an account, na doubt, for the pair,
But in that account he'll set down to thee
Na mair o' that golden guinea, my mon,
Than tha one bare penny ye meant to gi'e."

There's a comfort, too, in the little tale,
A serious side as well as a joke,—
A comfort for all the generous poor,
In the comical words the sexton spoke,—

A comfort to think that the good Lord knows
How generous we really desire to be,
And will give us credit in his account
For all the pennies we long to gi'e.

—*H. H., in St. Nicholas.*

CENTENNIAL VIEWS.

LIBERIA'S EXHIBIT.

The little republic of Liberia is the child of the United States republic as this is of England, in sentiment though not in race. If the child left home because it could not be happy there, why so did its mother before it, yet England is proud now of America, and America will yet be proud of Liberia, if she is not so already; while, as America, when she set up for herself could do no better than arrange her household government on the basis of the good old English common law, so Liberia has shown her filial respect by framing her constitution upon the model which the forefathers of America gave her.

She is a little republic still, it is true, only about half as large as the state of Pennsylvania, but she is only thirty years old yet, and she has plenty of room to spread in; she can say as well as the old Revolutionary poet could:

"No pent-up Utica confines our powers,
But the whole boundless continent is ours."

She was invited to her parent's birth-day party and meant to come, but having a *little* "*unpleasantness*" on her hands just at that time with an Aboriginal tribe on her borders, —in frontier difficulties the U. S. can sympathize—she had to use up her spare pocket money, and was obliged to decline the invitation.

Fortunately for her, and her friends, her Resident Commissioner to whom she had entrusted the charge of her exhibit, when she expected to make one, was Mr. Edward S. Morris of Philadelphia, a man whose heart is in his hand and his hand in Liberia's. Most of the commerce between America and Liberia is carried on through the firm of E. S. Morris & Co., and it is a firm after an original pattern, its prime motive being not personal aggrandizement, but the development of a country and the elevation of a people. It has warehouses in Liberia, at Monrovia, Half Cape, on Mount River, and Lutheran Mission, and a farm, "Morris Farm," on St. Paul's River. To the Liberians its motto is "A School-house every year," and its watchword is "Plant coffee." Schools have been established, the condition of membership of which is that every pupil shall plant a certain nnmber of coffee trees a year. "The Liberia Advocate," published in Philadelphia and Monrovia, is translated into Arabic, and circulated among the tribes of the interior to induce them to join in the industry, the price of the paper in Africa being "one bushel of unhulled coffee per year, in advance." The commerce thus developed is already a success and will be a magnificent one. Already the firm have found it necessary to build a steamboat, the "City of Philadelphia," to run on the St. Paul's river, Liberia, for their trade.

When Liberia was forced out of the Exhibition by the war on her hands, Morris & Co., nnwilling to see her lose the great opportunity of this introduction to the markets of the world, resolved to put the enterprise through themselves. The great exertions which this resolve necessitated occasioned the death of one of the members of the company, Mr. J. O. N. Stockham, and it is entirely to the enterprise and indomitable energy of this firm that Liberia owes its very creditable and interesting exhibit that it was visited by thousands daily. The diploma of merit awarded by the judges to Morris & Co. is the least of its success, and of small account compared with the verdict of the multitudes who will carry the news of the superiority of Liberian products all over the world and create a demand for them in distant countries of the globe.

As Liberia is a tropical country lying only four degrees north of the Equator, with a calendar from which autumn and winter have dropped out, and having but two seasons, a rainy warm one and a dry hot one, of course its products are tropical. Its principal ones, and those which thus far form its commerce, were thus set forth on the Liberian "Bulletin Board" at the Centennial.

LIBERIA OFFERS:—Coffee, Palm Oil, Palm Kernels, Indigo, Cocoa, Ivory, Iron Ore, Sugar, Palm Soap, Palm Kernel Oil, Arrow Root, Ginger, Cam-Wood, Hard Woods.

In exchange for these

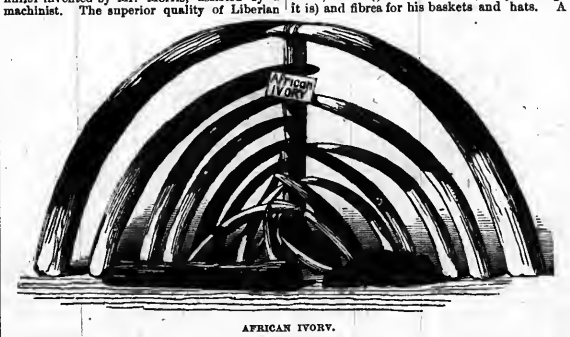
LIBERIA WILL TAKE:—School Books, Agricultnral Implements, Dry Goods, Provisions, Shoes, Notions, Hollow-ware, Hardware, Canned Fruits, Brass Kettles, Tobacco,—*Everything but Rum.*

COFFEE DISPLAY.

The head of the list, as you notice, is coffee. This is the most important and valuable of Liberian products, and the one on which she challenges the world. One of the most striking features of the exhibition, over which the Lone Star flag waved proudly, was a framework on which were ranged two great pyramids of glass jars filled with ten or fifteen specimen varieties of coffee—Mocha, Brazil, Java, &c. —compared with the Liberian, which decidedly excelled all others in size and color and fragrance. Near it stood the great steam coffee huller invented by Mr. Morris, assisted by a machinist. The superior quality of Liberian coffee depends largely upon the new process of hulling by this machine, of which she has exclusive possession.

Coffee grows wild in Liberia but is much improved by cultivation. The grains are planted in a nursery, and the young tree is transplanted when a foot and a-half high. Some trees get their growth in five or six years, the average height being eight feet. The grains grow in pairs covered with a hull—though some of the Liberian berries on exhibition boasted three grains. The trees begin to bear in three years from the planting. At the end of the fourth year, the average yield is one pound to each tree, at the end of the sixth year, four pounds; occasional trees have yielded from ten to twenty pounds of coffee at one picking, and a story is told of one giant tree in Monrovia, above twenty feet in height, which yielded at one picking four and a-half bushels of coffee in the hull, which, on being shelled and dried, weighed *thirty-one* when it starts off hulling and sorting and bagging, it seems as if it must have brains. So it has—in the head of its inventor. By this invention alone, Mr. Morris would have conferred an incalculable benefit upon Liberia, and deserves her lasting gratitude.

The coffee blossom is small and white and very fragrant; the berries when ripe for picking are a beautiful red, and grow in thick clusters at the foot of the leaves When picked they are dried on out-door drying floors, the hull shriveling and turning brown. The next thing is to get this hull off. In Cuba this is done in the "pulping mill," a circular trough in which the berries are fermented in a bath for twelve hours to soften the hull which is rubbed off by a large wheel revolving in the trough. A second drying and pulping is necessary to take off the inner skin, and to restore the color lost in the process, lamp-black is added, or some planters use charcoal, soapstone, or white lead. The Liberian hulling machine makes an immense saving, not only in time and expense, but in the quality of the berry which cannot but deteriorate in the repeated fermentings, dryings and colorings. The bag of red-ripe, well-dried, unhulled Liberian coffee is poured into the huller and almost instantly hulled, sorted by sizes and bagged for sale with its natural color and full strength untouched. The Morris and Woodruff huller will thus dispose of thousands of pounds a day, and is kept running by the use of the coffee shells as fuel. It is an unwieldy looking affair, but



AFRICAN IVORY.

palm tree with its tall, notched stem, and feathery crown of great leaves, under which the red nuts cluster, is a graceful and beautiful object. It is shelter, food and raiment to the native, and the wild Arabs of the desert are said to love their date-palms next to their horses. The variety of palm from which the oil is made usually grows to the height of about twenty-five feet. The nuts grow in bunches under the leaves. They are about an inch long, and have a fibrous covering, inside of which is a deep red pulp, and inside of that a stone. The natives climb the trees by the aid of loops of rope. A red oil is made from the pulp of the nut, and a milky white oil from the kernel of the stone. It is used by the natives as olive oil is in Italy, as a substitute for butter and lard, and kerosene. We do not want it for these purposes, as it grows let right rind it can furnish. Neither do we care to make our faces and bodies shine with it as the natives do, anointing their skin to preserve it from the burning tropical sun, and the attacks of stinging insects. We use it to some extent in medicine, as a liniment for bruises and rheumatism. Its principal value in commerce, however, is when manufactured into soap. It is exported for that purpose in large quantities, but as it is always rancid by the time it reaches foreign markets, it is very much better to manufacture it in Africa while it is sweet with a fragrance like violets. Morris & Co. manufacture it upon their estate, and warrant it free from all adulteration. They also import the oil in jars sealed closely to keep it from spoiling. The soap is of a brownish yellow color. It is very pleasant for toilet and shaving purposes, being smooth and excellent for the skin. All these palm products were exhibited, and attracted much interest.

The palm cabbage we have spoken of as a costly native dish is the head of young leaves starting under the old ones. When boiled it tastes something like cabbage. The natives are fond of it, and sometimes cut a tree down to get it, and they might as well get it this way as to take the trouble of climbing after it, for cutting it off kills the tree in either case, and this tree cabbage is, therefore, a very extravagant luxury except where the trees are in very great abundance, and the market too far off to send the oil to it. This difficulty of getting to market is, as you may well suppose, the great obstacle to commerce in Africa. The opening up of good roads and railroads will be one of the most efficient and absolutely necessary means of the civilization and development of Africa. Mr. Morris is fully alive to the importance of this, and his steamer City of Philadelphia, to run on the St. Paul's, and schooner the "Go-Ahead," which will ply on the smaller navigable rivers, are expected to stimulate trade till a railroad becomes a necessity that will bring about its own realization.

OTHER PRODUCTS EXHIBITED.

The cacao, from which chocolate is made, grows on a tree about thirty feet high. The fruit is pulpy, containing numerous seeds resembling almond kernels, which are ground into powder which made into paste and sweetened forms the article of commerce. Indigo grows like a weed in Liberia, but its manufacture requires considerable care. The arrow root is abundant. It takes its name from the shape of the root which is straight and tapering, sometimes eight inches long. In manufacturing it, the roots are washed and beaten to a pulp. This pulp is stirred in water, when the fibrous refuse sinks to the bottom and is removed, leaving a milky fluid. This is allowed to stand several hours when the starch sinks in fine white powder to the bottom. After repeated washings and settlings it is dried in the sun. A bushel of roots produces about eight pounds of powder. It is used in Liberia as a substitute for wheat flour, and though it has not all the nourishing properties of wheat, is a good food for that tropical climate.

Ginger root of a superior quality was exhibited. This is one of the most abundant, easily cultivated and marketable of the products of Liberia.

A very handsome collection of native woods was exhibited, polished to show their grain and color; among them the cam-wood—a very hard, close-grained wood, susceptible of a high polish, and making beautiful ornaments, crosses, sleeve buttons, necklaces &c. It is, when fresh cut, of a brilliant red, clouded and veined with yellow and black, but turning gradually darker on exposure to the air. Its principal use is as a dye wood. It is one of the most valuable dye woods in the world, and hundreds of tons are exported annually for this purpose. Another valuable tree is the caoutchouc or India-rubber tree. Specimens of the gum natural and manufactured were exhibited.

The sugar-cane is abundant enough in Liberia to make her independent of the rest of the world, and of a quality which will make her a competitor of the West Indies when her commerce and manufactures are developed. Good specimens were among the exhibits.

A group of elephants' tusks, arranged in an arch, made an effective display. The elephants used to abound near the coast, but are now only found in the interior where they are numerous and hunted by the natives for their ivory.

One of the most suggestive exhibits was that of samples of iron ore from native beds yet scarcely begun to be developed. So rich is this ore that the natives hammer their rude implements from it without smelting it first. It contains from eighty to ninety per cent. of metal.

NATIVE CURIOSITIES AND MANUFACTURES.

Knives and hunting javelins, and swords thus hammered with stones from the ore were shown. With the javelins or spears the natives bring down the largest game.

An African canoe, or dug-out, fifteen feet long, and but fifty pounds in weight, was shown. It had been hollowed out of a log

with implements of native manufacture. In such canoes, paddled with one short, broad oar, the natives, fifty or more, swarm out from shore on the arrival of a trading vessel. Each has his bag of coffee on board, and the first who lays his hand on the ship claims and is allowed the sole right to trade with it till he sells out his stock.

War horns made of elephants tusks were exhibited, and a deep, mellow blast was blown for us on one of them by a young Liberian who was one of Mr. Morris's clerks.

A loom and shuttle, weighing together but one pound and fourteen ounces, was shown, with some of the narrow strips, four inches wide, of the cloth the natives weave upon it, sewing them together to form the width they desire. Among the curiosities were a chief's robe embroidered with Arabic characters, war hats of leather tanned with the hair on and trimmed with shells, and a gree-gree or charm made of folds of paper covered with Mohammedan words, and believed to preserve the wearer's life from accident.

An African mail-bag, large enough to hold not more than two letters, was indeed a curiosity. It is worn round the neck of the runner who carries it. When the distance is great or great speed is required, the runners are relieved in every two miles.

YOUNG NATIVE STUDENTS.

Certainly one of the most interesting and hopeful of the exhibits was that of photographs of young native students now at school in this country—at Lincoln University—and expecting to return as teachers and ministers to their own people. One of these photographs was taken just after their arrival in this country, the other recently, after they had been some time at school. The improvement in their faces and bearing is very marked. It was to be expected, and it is very encouraging. Of all the products of Liberia, her men and women are those it will pay best to cultivate and develop—and all other development is accessory to this.

The Liberian exhibit, as a whole, could not fail to excite the interest of all concerned in the world's commerce, and to gladden the hearts and strengthen the hands of all who hope for Liberia's future prosperity, and are laboring to hasten it in its time.

HOUSE AND HOME.

PUDDINGS AND CAKE.

TROY PUDDING.

One cup milk; one cup molasses; one cup suet chopped fine, or butter; two cups raisins; flour enough to make a thick batter; one teaspoonful saleratus. Boil four hours, eat with sauce.

BERRY PUDDING.

Two cups molasses; one cup milk; three cups flour; one-half cup butter; two cups berries; two eggs; one teaspoonful saleratus. Bake.

POP-OVERS.

Two teacups flour; two of milk; two eggs; salt; a piece of butter the size of a walnut (melted). Bake in cups in a quick oven.

RICE PUDDING.

Mix two cups cold boiled rice with a quart of milk, a little sugar and salt, and the grated rind of one lemon. Bake in a slow oven.

TAPIOCA PUDDING.

Six tablespoonfuls tapioca soaked all night in one pint cold water. In the morning turn off the water; add a little salt, the yolks of three eggs, one cup sugar, one quart milk; boil like custard. Put it in a dish, and when cool stir in lightly the beaten whites; flavor with vanilla, and eat cold.

ANOTHER.

Put one quart tapioca in one quart cold water. Set it in a warm place till it becomes clear. Pare and quarter apples; put them in a pudding dish with a little sugar and nutmeg. Add a little salt to the tapioca; pour it over the apples and bake till they are tender. Serve with sugar and cream or milk.

APPLE PUDDING.

Pare and grate eight apples. Measure in a cup or bowl and add same quantity bread crumbs, three eggs, one and a-half pints milk, and a little sugar and cinnamon. Bake, and eat with cream, or omit the cream and eat with sweet sauce.

ANOTHER.

Pare the apples and stew till tender; beat up light with a little sugar and cinnamon. Line a mold or baking dish with slices of buttered bread; pour in the apple and cover the top with buttered bread. Bake and eat with sweet sauce.

BREAD PUDDING.

Cut the bread into small, square pieces. Make a custard of a quart of milk, the yolks of two eggs, sugar and a little nutmeg; add half a cup of seeded raisins. Mix all in a deep dish and bake a very light brown. Beat the whites of the eggs very light with just enough sugar to stiffen, and, when the pudding is cool, drop this in spoonfuls on the top. Put it back in the oven till the white of the eggs is lightly browned.

ANOTHER.

Two cups bread crumbs; one quart milk; three well-beaten eggs; a little salt; one-fourth teaspoonful soda dissolved in a little warm water. Bake and eat with sweet sauce.

SPONGE PUDDING.

One-half cup butter; two cups sugar, three eggs; three and one-half cups flour; one cup milk; one teaspoonful soda; two of cream tartar. Bake in cups and eat with sweet sauce.

INDIAN PUDDING.

One quart milk; one teacup molasses; one cup suet; one heaping cup Indian meal; one egg; a little ginger, cinnamon and salt. Heat the milk, and stir into it the meal wet with cold milk. Let it boil for two minutes. When cold add the other ingredients.

HARD SAUCE.

Beat together one cup fine sugar and one-half cup butter. Flavor with vanilla or nutmeg.

SOFT SAUCE.

One pint hot water; one tablespoonful butter; three full tablespoonfuls sugar. While boiling stir in one tablespoonful cornstarch dissolved in cold water. Flavor with vanilla or lemon and nutmeg.

PASTRY.

Take equal parts butter and lard and *chop* them into the flour; add sufficient cold water to moisten, a little salt, and roll as little as possible. For one pie the proportions are one cup flour, butter and lard the size of a small egg. Pastry which is chopped in this way is much lighter than if mixed with the hand; but, however made, it is an unwholesome and expensive food and should be very seldom eaten.

CRULLERS.

One cup milk; one cup sugar; five eggs—whites and yolks beaten separately; teaspoonful soda; two teaspoonfuls cream tartar; butter size of an egg; a little nutmeg; flour enough to make a thick paste. Cut into shapes and drop into boiling lard or beef fat.

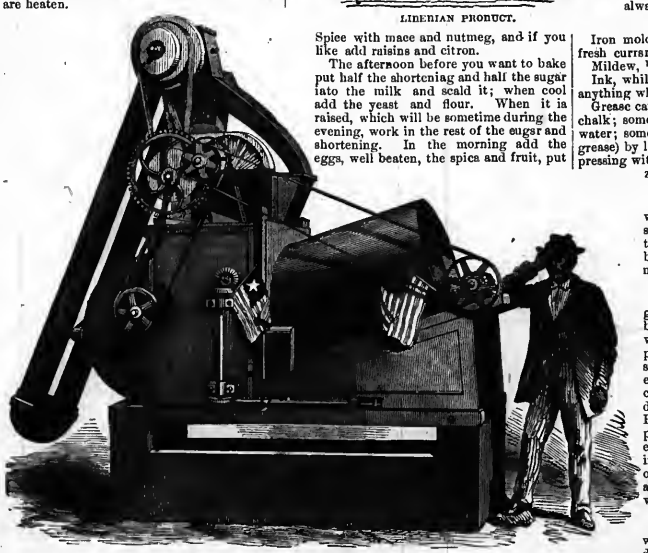
DOUGHNUTS.

One pint milk; three eggs; two cups sugar; one cup butter or lard; one gill fresh yeast; grated orange peel and nutmeg; flour enough to make a stiff paste. Roll into balls and cook like crullers.

SPONGE CAKE.

One lb. sugar; one-half lb. flour; ten eggs; one lemon. Mix the yolks of the eggs with the sugar for about ten minutes, then add the whites well beaten; sift the flour in quickly and put at once in a hot oven. Bake twenty minutes. The peel of the lemon to be grated and the juice to be squeezed in while the eggs are beaten.

LIBERIAN PRODUCT.



COFFEE SHELLING MACHINE.

BOSTON TEACAKE.

Two cups white sugar; two cups milk; two eggs; one-half cup butter; one teaspoonful soda; two teaspoonfuls cream tartar; four cups flour; spice.

GINGERBREAD.

Three cups flour; one-half cup butter; one cup molasses; one-half cup milk; one egg; tablespoonful ginger; one teaspoonful soda; two of cream tartar.

GINGERSNAPS.

One large cup butter and lard; one large cup sugar; one large cup molasses; one-half large cup cold water; one teaspoonful soda dissolved in a little warm water; flour enough to make a stiff dough. Roll very thin and bake quickly.

SUGAR COOKIES.

Two cups sugar; one-half cup butter; one-half cup lard; one cup milk; one teaspoonful soda dissolved in a little warm water; flour to make it just thick enough to roll out. Mold as little as possible.

CUP CAKE.

One-half cup butter; two cups sugar; three eggs; four cups flour; one cup milk; one teaspoonful soda; two of cream tartar. Flavor with vanilla or lemon.

FRUIT CAKE.

One cup butter; four cups sugar; two cups milk; yolks of six eggs well beaten; two teaspoonfuls soda; four of cream tartar; eight cups flour; one cup of citron and one cup of raisins, both chopped fine. Spice with nutmeg and cinnamon.

BREAD CAKE.

Three cups light dough; one cup butter and lard; three eggs; two cups sugar; one-half cup milk; one-half teaspoonful soda; nutmeg and cinnamon; one cup raisins and citron. If not stiff enough, add a little flour.

ANOTHER.

Three lbs. flour; one and one-half lbs. sugar; one-half lb. butter; one-half lb. lard; three eggs; one pint milk; one-half pint yeast. Spice with mace and nutmeg, and if you like add raisins and citron.

The afternoon before you want to bake put half the shortening and half the sugar into the milk and scald it; when cool add the yeast and flour. When it is raised, which will be sometime during the evening, work in the rest of the sugar and shortening. In the morning add the eggs, well beaten, the spice and fruit, put it in tho pans and let it rise again before baking.

HARD GINGERBREAD.

One cup molasses; one-half cup butter; tablespoonful ginger; one teaspoonful saleratus dissolved in half a cup warm water; flour enough to roll.

HARRISON CAKE.

Two cups molasses heated with half a cup butter and lard and one cup sugar; one teaspoonful cloves; two teaspoonfuls saleratus; one cup sour cream if you have it, if not, one cup sour milk and a little more butter; flour to thicken as gingerbread; raisins.

MISCELLANEOUS.

BEEF TEA.

Cut fresh beef into pieces an inch square, remove all fat and boil slowly for three hours in a tin or porcelain-lined saucepan. You can add more or less water as you want the tea weak or strong. When sufficiently boiled take out the meat, and when the broth is quite cold skim off all the grease (if you are in a hurry and cannot wait for it to cool, strain through flannel); heat with a little salt just before you want to use it.

INDIAN MEAL GRUEL.

Two quarts boiling water; one cup Indian meal; a little salt. Wet the meal to a smooth paste and stir it into the water when actually boiling, and boil slowly half an hour, stirring all the time. Oatmeal gruel is made in the same way.

MILK AND RICE GRUEL.

Wet two heaping tablespoonfuls ground rice with cold milk and stir into one quart boiling milk. Boil ten minutes and add a little salt. Sago and arrowroot are made in the same way.

APPLE WATER.

Take one large juicy apple, pare and quarter but do not core it. Add three cups cold water and boil (closely covered) until the apple stews to pieces. Strain at once, squeezing the apple through the cloth; strain this again through a finer rag; sweeten and drink with ice, and, if you like, a very little lemon juice. This is excellent in fevers and colds, as are also drinks made from acid jellies dissolved in water.

SOFT SOAP.

Two bars common yellow soap; two lbs. washing soda; two oz. borax. Dissolve in eight quarts warm water. The water must be kept warm (without boiling) until the ingredients are thoroughly dissolved.

BURNS AND SCALDS.

Cover at once with soft linen wet with sweet-oil. Do not remove the linen until the burn is healed, but wet frequently with the oil.

CUTS.

Bind up carefully with soft linen and keep wet with laudanum. If the blood flows freely, put on cobwebs.

POISONS.

For any poison drink at once a glass of cold water in which has been dissolved a teaspoonful of ground mustard and one of common salt. This is an emetic, and should, after its action, be followed by the white of two raw eggs. A physician should always be sent for at once.

STAINS.

Iron mold can usually be taken out with fresh currant juice, but is very troublesome.

Mildew, by oxalic acid.

Ink, while wet, by milk; when dry (from anything white), by oxalic acid.

Grease can be removed sometimes by French chalk; sometimes by borax dissolved in warm water; sometimes (as in the case of candle grease) by laying thin paper on the spot and pressing with a hot iron; sometimes by benzine,—and sometimes not at all.

MEASURES.

One heaping quart sifted flour weighs one pound; one quart fine sugar and one quart softened butter weigh one pound; one quart brown sugar or one quart Indian meal weighs one lb. two oz.

INSECTS.

Cockroaches and beetles may be got rid of by sprinkling powdered borax on the shelves, sinks, etc., which they frequent. Ants, by putting almond kernels on the shelves, etc. The ants will leave everything else for these, and you can brush them off into hot water, destroying hundreds at once. Bedbugs will yield to nothing but perfect cleanliness. Moth will not eat anything in a chest or trunk in which there is a strong odor of camphor. Brush all woollens and furs carefully and sprinkle with camphor gum.

SALT PORK.

Cover the bottom of the barrel with salt an inch deep. Put down one layer of pork and cover with one-half inch salt, continuing thus till the barrel is full. Then pour in as much strong pickle as the barrel will hold. Pack as tight as possible, and keep the pork always under the brine.

HAMS.

For six hams make a brine strong enough to bear a potato; add one-fourth lb. saltpetre dissolved in warm water, and sugar enough to make the mixture slightly sweet. Soak the hams in this for ten or twelve days, take them out, and, when thoroughly dry, smoke until they are of a deep brown. Then wrap in cotton cloth or brown paper and pack in a box or barrel with coarse salt enough to completely cover them. Hams cured in this way may be kept for two or three years.

COFFEE.

The best coffee-pot is one so arranged that the grounds do not get into the coffee at all, and this end is reached by means of a little cylinder with a fine sieve at the bottom which

stands on top the coffee-pot. The grounnd coffee is put into this cylinder, and the boiling water being ponred npon it drains into the pot below. This ensures clear, strong coffee without further trouble and is the simplest possible method.

TEA.

Pnt the tea, in the proportion of one teaspoonful to each person, into the pot (which should first have been heated), pour boiling water oh it and set it for five minntes where it will keep hot without boiling.

FINIS.

MESSENGERS OF SPRING.

Holding her court among the jasmine flowers,
Thne epoke sweet Spring upon one ennny day:
"Who loves me well enough to leave these bowers
And bear glad tidings np the northward way,
To set green fields a-growing,
And farmer-folk a-sowing,
And hearts aglee with knowing
I bring the sunshine and the flowery May?"

"I will go first," the sweet South Wind replied,
"And kiss the treee and make them dream of leaves,
Fill with rich prophecies the welkin wide
Of daisied meadows and of harveet sheaves,
Of happy cattle straying,
And men and maidens haying,
And little children playing,
And scented gardens, and bird-hannted eaves."

Then sang the birde: "We to the North will go,
Each bird a promise on a glaucing wing;
For men do know we wander to and fro,
Hannting forever thy swset presence, Spring;
All trust our ancient token,
Our songs so long bespoken,
Our promise never broksn,
And our glad newe shall make the wildwoode ring."

So sven when south winds begin to blow,
And elms with tiny epears ealnte the flowers,
And maples on the lawn blush red and glow,
And the bright sunshins smilee away the showers,
From woods with mossee hoary,
And isles of tropic glory,
Birds bring the old, sweet etory
Of Spring'e retnrn to appie-blossom bowers.

On every tree there is a clnging bird,
In every grove euch joyful melody
That the song-sparrow, anxious to be heard,
Singeth on tip-toe in his ecstasy:
"The Spring is coming! greet her!
The Spring is coming! meet her!
For, oh! she is far sweeter
Than Summer's rose or Autumn's luxury!"

HAMPTON INSTITUTE LECTURES ON TEACHING;

BY PROF. F. A. ALLEN.

LECTURE VII.

RECITATIONS.

1st. Teacher's preparation for recitation.
2d. Pupil's preparation for recitetion.
3d. Objects of recitetion.
4th How to conduct recitation.

What! has a teacher to prepare for a recitation? Certainly; just as much as a pupil hes to, and that all of you who have been teachers need not to he told. A tcacher who comes to a recitation unprepared, suffors and so do his pupils.

But what ought to be a teacher's preparation for a recitation? Not all teachers know that, or there would ha fewer poor teachers and poor scholers.

We should say first: that to be a good teacher he must have a general knowledge of the subject taught. Wa considered this somewhet in our last lecture. You cannot teach what you have never learned. It is painful and pitiful to see a teacher attempt to teach a class and have to look at the book every time the pupil gives an answer, to see whether it is the right one or not. His pupils vary soon find out that he knows no more about it than they do, and that idea is fatal to the confidence and respect without which the pupil cannot improva, and without commanding which the teecher cannot succeed. Of course the wider and more solid and thorough this general knowledge of the subject the hatter. Therefore whenever you hava a chance to learn something—either from hooks, or people, or observation—about any subject you expect to teach, improva the opportnnity.

Secondly, to be thoroughly prepared for conducting a recitation, you must be familiar with the toxt-book which you use. This is not so important, of course, if you hevo a solid general knowledge of the subject, gained from other sources. If, for instance, you have studied grammar thoroughly from one hook, and are in the habit of talking grammatically yourself, you need not be frightened because you are obliged to use a new text-book which you have not seen before. But avon here, you will feel the need of acquainting yourself familiarly with the peculiar method, end way of putting things nsed by the euthor of your new text-book. If you don't, you will soon find yonrself in tronble. You will tell your pupils something—"Our hook saye diffcrent," they will say; or a pupil will give you en answer to some question,—"That's not right," you say. "Tho book says so"—he will cry. You look. Sure enough it does say so. What are you going to do about it? If yon had made yourself familiar with the text-hook, you would have seen that what seeme, at first sight, a contradiction of what you hed learned before is not a coatradiction, hut a different way of expressing a fact; or you would have learned on what minor points of the construction of onr languege, or explanstion of its idioms, grammarians disagree.

Thirdly, having a femilier acqusintance with the text-book you use, and a somewhat generel knowledge of the euhject frou that and other hooks, and practice of their rulee, the good teacher will not be content to appear before his class without a special preparation on the lesson for the day. If the pup.l ought to know hie lesson, you certainly ought to. You should know it so well that you could change places with him and recito it as well as he does, or much better. If you think this is hard work I am proposing to you, just try it once, and see whether it does not save you much more work and worry then it costs you, to say nothing of the gain to your pupils, which a good teacher considers before his own ease.

Now to recapitnlate what we have said.

Teacher's Preparation.
1. General knowledge of subject.
2. Familiarity with text-book.
3. Familiarity with lesson.

The pupil's preparation is, of conrse, stndy of the text-book. Where he has access to other books, it is often well to let him hunt up further information, after learning what the text-book says. It is well to teach him how to use books of reference, if such are within his reach; how to use dictionaries and encyclopedias. It is a very good thing to get into the habit of using such hooks. But your pupils, I suppose, will seldom have such books at hand, and all they can do will be to study the lessons from the text-books. Now remember that they don't even know how to study till they are taught, and this is for you to teach them. Don't let them move their lipe when studying, or study out loud. To study is to think, and such tricks, or others like them, are only distracting to thought unless they become habits, and they are very disagreeable and unnecessary habits. Teach them to study quietly; to read the lesson over till they are sure they understand it, and then commit the ideas to memory by going over and over them. In case of rules and definitions of terms let them, as I have said before, commit them to memory word for word. It will help them very much, and indeed be often absolutely necessary for their proper learning of the lesson, for you to read over the next day's lesson with them, and explain it to them. They cannot learn properly whet they don't understand. You can generally save enough time for this from the close of a recitation period.

Now, the pupil having understood and studied his lesson, and the teacher also having made himself familiar with it, what is the object of having it recited. It may be stated thus:

Object of Recitation.
1. To test the pupil's knowledge.
2. To teach hin expression.
3. To impert instruction.

Tha first object is a vary avident one. You cannot judge of a pupil's understanding of tho lesson, and know what assistance or discipline to administer, without hearing him recite the lesson.

The second object is almost or quite as important. It is one thing to know a fact, and mother thing to know how to express it in good, clear-cut English. The pupil's favorite excuse "I know, hut I can't tell," is not always entirely a false one, though it is of course true thnt the more thoroughly and clearly he knows it, the more clearly he can express it. Still, he needs to learn the proper use of words as much as to learn anything—or more—and this is what you must teach him.

By the third object, I mean that much instruction may be imparted in the class, instruction that is not in the hook, by a teacher who has a good general knowledge of tha subject himself, and this is another object of a recitation.

You will see by what I have seid, that in a recitation, both the teacher and pupil may learn. The pupils learn the facts of the lesson, and any others you can tell them, and also how to study and how to express themselve in good English. They also learn—or ought to—to have confidence in their teecher. The teacher learns more of his subject, or gete more familiar with it, and he also learns his pupils and how best to teach them.

In our next lectnre, we will consider the question How to conduct a recitation.

EDUCATION IN CHINA.

BY THE REV. DR. LEGORE.

This gentleman, for many years a Missionary of the London Missionary Society, and translator of the works of Confucius, is now on e visit to England. From an address, which he delivered at e school, we copy the following extracts.—"*Education in China.*"

This will form the mein eubject of my address. I might almost he, I suppose, the grandfether of the oldest of you, and yet I feel a measure of respect and awe in standing before you. A good many of you will remember what we are told ehout John Frebonius, one of the masters of the school which the boy Luther attended et Eisenach. He always raised his cap to his pupils, when he entered tha schoolroom; and when asked why he did so, he replied:—"There are among these boys men of whom God will one day meke hurgomasters, chancellors, doctors, and magietrates. Although you do not yet see them with the hadges of their dignity, it is right that you should treat them with respect." This was well spoken by Frehonius, and, more than thirty yeers ago, I was delighted to find the same sentiment recorded of Confncius, the sage of Chine. "A youth," said he on one occasion, "is to be regarded with respect. How do we know that his future will not he equal to our present?" He then added, in worde on which I may have something to say, ere I have dobe—"If he reech the age of forty or fifty, and has not made himself heard of, he will not he worth being regarded with respect." Well, you know that education is very much prized in China. It is much more prized in some of the provinces of that vast country than in others; but I do not think I exeggerete in saying that to-day there are more boys and students in schools and under masters in China then there are of men, women, and children all together in Great Britain. I hold here in my hand a Chinese Primer, one of the first lesson-hooks which hoys have to learn when they go to school. Its author, a Mr. Wang Pih-heon, died in the year 1296, so that it must have been written fully 600 yeers ago. He prepared it for femily use; but it has long been taught all over the empire. There must be upwards of a hundred millions of Chinese now living who could repeat it all over from beginning to end. You see it is printed in large characters, the hetter to impress the form of each on the eye and mind, and it is in a sort of doggerel rhyme, each line consisting of six words, with a cæsural peuse exactly in the middle, that it may be the more easily remembered. It is not long, and I will try to giva you some idea of its conteuts. After some preliminary remarks to the effect that all men are good at first, and very much alike, and that it is their being educated or not which makes them differ as they subsequently do, and illustrating this hy exemples, the keynote of the trentise is struck in the following linee.—

"The child fed but untaught,
To ths parent is shame;
To teach, and not be strict,
In ths teacher is blame.
If ths boy do not learn,
Very wrong sure is he;
If in youth he be idle,
When old, what will he be?
As the gem, when uncut,
For nothing is good,
So ths man who's unlearned
Knows not what he should."

Having thus opened his snbject, the author sets forth the rudiments of Chinese learning; good manners, filiel piety, brotherly duty; the elements of arithmetic; the more conspicuous heavenly hodies; tha three honds of society—ruler and subject, father and son, husband and wife; tha names of the seasons, of tha cardinal points and of the fiva elements; the five virtues of benevolence, righteoueness, propriety, conscientiousness, and truthfulness; tha six graine; the six animals good for food, including the horse and the dog; the seven passione; the eight instruments of music; the nina degrees of kinship; and the dutics of the social relations—affection between parents and children, mutual accommodation between husband and wife, kindnees on the part of tha elder brother, and submissive consideretion on the pert of the younger; strict regard to age between elders and juniors generelly; endeavors to promote one another's virtue between friends, respectfulness on the part of the ruler, and leal-heartedness on the part of the subject. These rudiments being supposed to he mastered, the pupil goes on to the higher school, and, through a very small portico of grammar, advances into the field of Chinese literature. Then he begins with a work on filial piety and its duties, hy Confncius, from which he proceeds to the Four Books, which ara chiefly occupied with the sayings and doings of tha doctrinas of the sage. Some analogy has been fancied to exist between them and our Gospels. The Primer contains a santence or two about the metter and authorship of each. The boy learns to read all these books, and, in the course of years, to understand them more or less; and he has to commit them all to memory. When he has done his duty on them, he is prepared to go on to the higher classical books, which Mr. Weng Pih-heon seys are six. The first is called the Book of Changes, to the meaning of which, efter more then twenty years' study, I have hitherto failed to find the clue. The second is the Book of Ancient Historics! Documents, relating to events end individuels during a period of nearly 2,000 years, though the latest document helongs to the 7th ccntury before Christ. The third and fonrth embraces various most voluminous compilations on the ancient rites, ceremonies, arts, and music of Chius. The fifth is the computation of encient poems or odes, said to have been made hy Confucius, and many of the pieces of which are reelly very intcresting. The sixth is the history of his native state of Ivo, for 242 years, drawn up in short sentences hy Confucius. It would hardly he worth reading, hut for three commentaries and enlargements of it, mede not long after the time of the siege, and with which the Primer says the student must also make himself familiar. One of them is as full of graphic details as Scott'e "Tales of a Grandfather." When the student has got through these classical works the Primer says he must turn himself to the five philosophers, some of them orthodox and some heterodox, partly comprehensible and partly incomprehensible. The latest of them lived and wrote in the first century of our era. Only one other lahor is laid on the Chinese student, hut it is a Herculean one. "When thoroughly up in the classics and philosophers," says Wang, "he must take the historians in hand;" and he proceeds to give a bird's eye view of Chinese history from B. c. 2852 down nearly to his own time. Then the standard histories were seventeen. Now, hringing the records of the Empire down to the year 1644, when the present Tartar dynasty gained possession of it, they are twenty-four. I had my copy of them bound in English style, in thick volumes, royal octavo size. How many volumes do you think they make? *Only* fifty-six! A book as large as the last edition of the "Encyclopedia Britannica" would hardly suffice to contain a complete transletion of them. There is no method of education in the world that so tasks the memory as does the Chinese, and in the case of the mejority of pupils, so far as I have heen acquainted with them, it is simply a gigantic system of cram. Still, in those who have strong bodies and exceptionally strong minds, it develops men of a more then ordinery acuteness, often associsted with a more than ordinary grasp of mind; while among the people generally it develops an appreciation of filial and fraternal duties of euhordination, of whet is proper and decent, and of industry end thrift, which no unprejudiced observer can regard without edmiration. China has e history, a veritable history, extending nearly over 4000 years. No other nation has subsisted so long esscntially unchsnged, and growing, upon the whole, from century to century in resources and population. Various cnuses have contributed to this; and one of the most powerful among them has been the general education of the people. From time immemorial this was prized and inculcated in the country; and in the latter half of our seycuth century—about A. D. 631—the competitive system hy the examinetion of literary candidates was established. Since that time learning has been the pessport to official distinction.

LETTERS FROM HAMPTON GRADUATES.

This is from Newbern, N. C.:

Dear Teacher:—I guess you have often wondered why I had not written to you. My first month was out Saturday. The first day I opened school I did not hava but four scholers, now I have thirty-three. This place is close to the mountains, and thet makes it very cold; we have had two enows. I am seven miles from Newbern.

The colored people ere doing very well; they own large quantities of stock, hnt no land. They have had free school nhout eight years, and the children have a good understanding; some can work common fractions very well. The Superintendent seems to be a very nice man; we have to meet the school hoard at the end of every month. White and colored teachers all meet together. I met the hoard last Saturday. The white teachers asked me a great many questions about my mode of teaching; they seemed very social. Addie and Maria did not go before the hoard for an examination. McAdoo and I went, but we were not examined. They looked at our diplomas and asked a few questions about Hampton. I like teaching better than I thought I would. McAdoo spent the last Sunday with me; I am going to spend the next with him.

W. U.

Another writes from Swansville, N. C.

Dear Teacher:—I am more than obliged to yon for the *Educational Journal* of Va. I have been taking it twelve months, this month; I like it very much. I want some good

books to read. I expect you know better what I need than I do. I want something for general information!

I am well and am getting along nicely. Remember me to Mr. Tolman, tell him that I am leaning on this Lord; He is my friend and deliveror. I look to God for all my help and assistance; he has enabled me to do that which I thought that I could not do. I have worked hard since I left Hampton, trying to improve the condition of my race. I would be glad to receive some temperate instruction through the paper, such as you used to give us every Sunday night. If I could have two more years at Hampton I think that I would be able to do something. Nothing more.

Your friend and pupil, Y.

One who has already done much good work as a teacher, most acceptably to all concerned, writes from York Co., Va.:

Dear Teacher:—I opened school to-day with nine scholars, and expect to teach here five months. There are about seventy-five children belonging to this school. The trustees have promised to give me an assistant teacher if my school gets too large. It is a country about two miles from Williamsburg, as I told you on the postal, and is very lonesome. I am very sorry that I could not take the school in Maryland that you offered, but I had signed a contract when I got your postal and letter. I had rather to have had my school in Tappahannock, Va., but did not get an answer in time. Our Co. Supt. (Col. Jas. H. Allen) wrote to me last spring to make an application for the school in Williamsburg, which I did in August, and would have gotten it, but through some means the man who taught it last term got it again. The term is nine months, salary only $30 per month, with one assistant teacher.

I do not board at home, but can go home any afternoon and return the next morning if necessary. I am not acquainted with the people yet, though I think they are quite friendly from what I have seen of them. Notwithstanding the loneliness, I shall endeavor to make things as pleasant as possible during these five months, after which I would like to take another five months' term.

I shall be very glad and feel comforted every time I have a letter from you, or any of the teachers or scholars. News from Hampton is always reviving to me. Though I may not have improved my time as well as I *might have* done, yet when I think of separation I feel solitary. I find the Sabbath-school here uses your S. S. lesson papers. C.

The writer of this thinks for himself; his views do not prevail among his associates and render him liable to some ill-feeling. He is a most capable and earnest worker for the benefit of his people:

Dear Teacher:—It is with much pleasure that I write to inform you that the *Educational Journal* has been received, and I am very much interested in it. I have read it nearly through, particularly the Official Department, and find that it contains a good deal of valuable information concerning the colored race.

As we have all, through the providence of God, become the citizens of one grand republic, living under the same common law, and must remain, I feel that it is our indispensable duty to promote as much as possible the happiness of our neighbors as well as ourselves, and even to deny ourselves to do so if necessary; and there is no doubt but we shall gain their affection. I have always preferred white officials under the present circumstances of things. It is not reasonable to suppose that we are competent of administrating the laws, since it was our misfortune to be educated by two hundred years of slavery, while the whites were educated in the schools of law. I hope that our people will act prudently, regardless of race, color, or political opinion, and elect those who are competent, and that we may do nothing in the future that shall bring a disgrace upon us.

I am now at home. My teaching in this country has all been under white officials, and I have not heard a word of complaint either from white or colored. W.

SCOTTSVILLE, VA., *Jan. 8th*, 1877.

Dear Workman:—This is the third letter that I have started to write to you. I wish that I were able to write one each month; but I am unable to do so. I want first to tell you about S— and then my school. S— is situated on the canal that leads from Richmond to Lynchburg, about eighty miles from R—. It is a beautiful place, though very small, not as large as Hampton. My school is little out of town, and is situated on a hill by the roadside. It is small now in number to what it once was. One of the first teachers that taught it told me that he has had eighty pupils on roll and averaged sixty. I have on roll forty-three with those that came in since Christmas. There is one thing that hurts my school (and not only mine but most all the colored schools), that is the people don't send their children as regularly as they ought. Albemarle county has the best school system that I have seen in any county, and the Superintendent is anxious as any Superintendent that I have ever seen to have the schools what they ought to be. In fact, all the trustees that I have met with seem to have a great desire for the progress of the schools. The colored people here ought to be farther ahead in regard to civilization than they are, to see what has been done for them in this place by their friends. I have talked with the leading colored men of the place, and they have told me what theirs and their children's chances have been. I asked myself the question why they are so far behind the time still. They have had good help there is no doubt, for the man who is now acting as the Supt. of our S. S. told me that the Supt. of public schools (who is one of the head Sunday-school teachers in the place) used to go to his school Sunday morning and start his school and then take his own children and come and help them (the colored people) in their school work. Why it is that the S. S. is so far behind the times I cannot tell; but the reason for the day school is that when the people send their children they only send them one or two days in the week, and they look for the teacher to teach those scholars as much as he does one that goes every day in the week. And when they get so that they can read in the third and fourth Readers they take them from school for educated girls and boys. I have a few, I am happy to say, who are anxious to send their children to school and have them learn, not only their books, but everything that goes to make them what they ought to be. I am also happy to say that the people are very kind to me, both white and colored. When I first came here, it was a good while before I got acquainted with any white people but the officers of the school. But now most all in the place seem to know me, and are very polite indeed.

We are having one of the coldest times that has been since 1857, and some say that it is the hardest weather that has ever been here. It commenced snowing New Year's day and it fell till late that night, and on the second the snow was very deep, and almost as cold as I ever felt it. On Saturday, the 6th, it started to raining and rained till late that night; on Sunday it was almost impossible to walk the streets. Now we are under the dread of high water. If it were to turn warm and melt the snow we would be sure to have high water. We are a great deal higher than the people in Hampton or any of those cities or towns, yet there is more danger here of high water than there is there. The weather is so bad that I have closed my school till the middle of the week and then I hope to get to my regular work. It is a hard matter for me to find a day to do nothing, for I have almost as much work to do outside my school as I do inside. I find that temperance is very much needed here, more so than in any place where I have ever taught. I have been trying to get up a society of temperance; but find it hard work to do it. With kind wishes,

Your pupil,
A. E. WHITE.

NEWS OF THE MONTH.

POLITICAL.

THE Cabinet of the new administration consists of the following officers, nominated by the President on March 7th, and confirmed by Congress by the 10th:

Secretary of State—William M. Evarts, of New York.
Secretary of the Treasury—John Sherman, of Ohio.
Secretary of War—George McCrary, of Iowa.
Secretary of the Navy—Richard W. Thompson, of Ind.
Secretary of the Interior—Carl Schurz, of Missouri.
Attorney General—Charles Devans, of Massachusetts.
Postmaster General—David M. Key, of Tennessee.

AT THE first meeting of the new Cabinet on the 12th the subject of appointments to office was considered, and two members were appointed to prepare a set of rules to govern such appointments, in accordance with the principles declared in the President's inaugural address.

FREDERICK DOUGLASS was appointed by the President, March 18th, to be United States Marshal of the District of Columbia. His appointment was confirmed by the Senate on the 17th by a vote of 30 to 12; of those who cast the 12 negative votes every one disclaimed basing his opposition upon the race or color of the candidate. Republicans and Democrats were included on both sides. The *Tribune* correspondent says, "The debate is said to have exhibited throughout some of the loftiest, broadest and noblest patriotism that has been witnessed in the proceedings of Congress for many a year." Senator Pinckney Whyte of Maryland is reported to have said that though a native of Maryland and a member of the strictest sect of the Democracy, it was his proud boast to-day that he had never been a slave-holder, and that he voted against Mr. Douglass for no other reason than that he thought him poorly qualified for the place. General Morgan, the new Democratic Senator from Alabama, supported Mr. Douglass's appointment, and said that he did so gladly—that he was himself a Presidential elector in the late contest, and had received the vote of 10,000 colored men, and that it did not lie in him when the representative man of their race was nominated to the American Senate for confirmation in an office he was well qualified to fill to vote against him—that he has determined to cast no vote against any worthy nomination this Administration might make, and to place no obstacle in the way of the successful accomplishment of the patriotic purposes set forth in the inaugural address.

THE special session of the Senate was adjourned *sine die* on Saturday, March 17th.

AN EXTRA session seems inevitable. Nearly 2,000 offices are about to become vacant by the expiration of commissions. The President and his Cabinet will, in the interim between the sessions, devote themselves to careful examination of all changes to be made in important offices, especially in the matter of filling the vacancy on the Supreme Bench.

GENERAL GRANT is to go to Europe in May, for two years, after a trip to the West.

GEN. GEORGE B. MCCLELLAN has been appointed Superintendent of Public Works of the State of New York.

UP TO the 19th inst. the President had not taken any decisive action relative to Louisiana or South Carolina. His Southern policy, as early as it has been defined, seems to be this, The withdrawal of troops from the State Houses in Louisiana and South Carolina to their barracks, and for the present, complete non-intervention and non-recognition of either of the organizations pretending to be the legal governments. The representatives of Nicholls have already guaranteed that in that event there will be no armed demonstration against the Packard government; no attempt to dispossess it of the State House, and no attempt to overturn the Packard administration except through the courts and the process of impoverishment from non-payment of taxes.

ALL THE colored members of the Packard Legislature in Louisiana have signed an appeal asking for the recognition of the Packard government.

FREDERIC SEWARD, son of the late Wm. H. Seward, has been appointed Assistant Secretary of State, and Mr. Tyner, Assistant Postmaster General.

GENERAL.

OWING to want of funds, the Bible and Publication Society of Philadelphia have recalled their missionary in Rome, Italy, the Rev. Mr. Van Meter. His schools there which are in a flourishing condition will be left in the care of the Wesleyan Mission, and Mr. Van Meter will try to raise funds in this country for their aid.

THERE are 500 colored preachers in the Baptist Home Mission Schools of the South. Large-hearted men in the Baptist churches at the North have given four-fifths of the $400,000 invested in these schools.

MISS MARGARETTA SCOTT, a lady formerly connected with the Protestant Episcopal Mission in Africa, visited Hampton last month, and addressed the school on the subject of their duty to that land, and to interest them in her project of building, at some point in Liberia, a boarding school for girls, to give them a higher education than other schools to which they have access afford. Miss Scott has the endorsement of Bishops Whittingham and Pinckney; Rev. Dr. Barten of Norfolk, Hon. J.H.B. Latrobe of Baltimore, and other prominent gentlemen, and of influential and benevolent ladies. Her purpose is certainly a good one, and with the small contribution the members of Hampton Institue were able to make, she has their best wishes and prayers for her success.

FOREIGN.

THERE seems to be a better prospect of peace in Europe. Russia represents herself as averse to war, and desires the co-operation of the European Powers in signing a protocol, arranging negotiations with the Turkish government.

INTEREST-BEARING CERTIFICATES OF DEPOSIT.

The Home Savings Bank, Norfolk, Va., issues Certificates of Deposit, payable on demand (pnyable either in New York, Boston, Baltimore or Norfolk), drawing interest at six per cent. These certificates are transferable by endorsement, and may be drawn for any amount desired. They are becoming a popular form of investment with many who cannot conveniently visit the Bank in person. Certificates are mailed to any address on receipt of funds by mail or express. Make all Drafts payable to H. C. PERCY, CASHIER.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases. That the afflicted might satisfy themselves that this remedy would save them from those fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

THE HYGEIA HOTEL,
OLD POINT COMFORT, VA.

Situated on the direct route of the Atlantic Coast Line, and within 100 yards of Fort Monroe. Open all the year; accommodations for 500 guests. All modern improvements. Six daily mails, and telegraph office. Fifteen to twenty first-class steamers land daily, except Sunday, 150 yards from the door. Rooms and Hall comfortably heated, and every comfort provided for tourists and health seekers. Desirable accommodations for winter and spring at moderate rates. Send for circular describing hygienic advantages, stating terms, &c.

H. PHOEBUS, PROPRIETOR.

ZELL'S
ENCYCLOPEDIA.

New Revised Edition—150,000 articles, **3,000** engravings, and **18** splendid maps. The BEST BOOK of universal knowledge in the language. Now in course of publication. *SPECIMEN* with map sent for 20 cts. Canvassers who wish terms and territory will please address the Publishers.

PAYS FOR ITSELF EVERY WEEK. SAVES TIME, POSTAGE AND STATIONERY.

Bankers, Schools, Commission Merchants and all Public Offices need it.

☞ Send for circular giving full particulars. Address **The Papyrograph Company,** P. O. Box 173, Norfolk, Va.

THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the obstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

ZUCCATO'S
PATENT PAPYROGRAPH.

The simplest and cheapest means of producing **facsimiles** (equal to manuscript) of **Price Lists, Specifications, Designs, Examination Papers, Notices, &c.** It saves time, labor and money. From one to n thousand copies are made from one writing, at rate of five hundred per hour.

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The *best* in the market. In simplicity of construction, excellence of manufacture, perfection of finish and ease in operating it has *no equal*, while its REVERSIBLE FEED enables it to sew forward or backward without stopping the machine—it being the *only* machine that *can* do each work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between SIDE FEED and BACK FEED machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe*, *odorless* and *durable* Oil Stove for all who want PURE, MOIST, WARM AIR in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

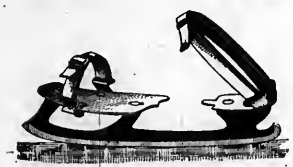
—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.



We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. Try Them!

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

H. PHOEBUS, PROPRIETOR.

TERMS: Transient $4.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the Chesapeake Bay Steamers.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate of this locality is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 66°, 74°, 76°, for Summer; 70°, 59°, 46°, for Autumn; 50°, 44°, 49°, for Winter; and 48°, 52°, 68°, for the Spring months. —Open for guests all the year.

HAMPTON, MAY, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 32 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE backbone of the South, industrially, will be formed in good part from the poor whites. After the terrible leveling brought about by the war, the aristocratic class was, for the most part, helpless and discouraged. A few have struggled manfully up to prosperity, and are the coming leaders.

The plebeian inured to hardship, accustomed to work, and bereft of no fortune in slaves, had, for the first time, a fair field. Although multitudes of them were demoralized, and took to outlawry, as a class they were compelled to work for a living. They are the purchasers of agricultural implements now imported freely into the South; they hire but little; their produce is nearly all *plus*; they feel the hard times slightly; they cultivate "one-horse" and "two-horse" farms.

In the tide-water region they raise truck, besides what meats they need, and in the mountains are "one-hogshead," and "two-hogshead" men—owning farms that produce that amount of tobacco, which they are able to hold for good prices. They are most numerous and thrifty where slaves were scarce. They vote solidly for free schools and teach their children to work. While the lowest and most pitiable forms of humanity are among the "dirt-eaters" and "sandhillers" and "crackers," there is a grade above them of whom much is to be expected.

THERE are signs of a new party in the South. Liberal Southerners and "Last Ditchers" cannot march much longer under the same political banner. A ten years' residence in the South has convinced us of the existence of radically opposing elements among the whites, that nothing but race feeling could keep together.

The passions that massed the races along the color line, and parslyzed progress, are, in the new order of things, cooling off. Liberal, enterprising men, who suffer from disorder, will not much longer follow those whose profit is in "regulating" negro affairs and "firing the Southern heart."

Those who ahhor negro snffrage, and those who will make the best of it, those who oppose education and insist on limiting the freedman's freedom, and those who believe in education and will protect the rights of all, are nearing a division. The new move is full of hope for the colored race. Its leaders will be really representative men. The division has long existed in the hearts of the people, and only awaits its opportunity. Hitherto it has been impossible; now it may be hoped for.

In the South, in the far South especially, political questions have been social questions. On both sides holting the regular ticket has been at the expense of comfort, and often of safety. Ostracism on the one side and ex-communication on the other have generally been the penalties of independent action—no matter how conscientious. The usual social consequences of this sort of political honesty may, in respect to severity, be compared with the major excommunication of the Roman Catholic church. In consequence of this partizan spirit immigration has been arrested. Settlers have been disheartened by party *shibboleths*. Northern men who have capital invested in the Sonth, seeing the folly of their own party, and the intolerant spirit of the other, have sickened of their conrse and prevented hundreds from getting into the same scrape.

Prosperity will dawn when intelligent men shall find on coming to the South a liberal party, incinding many of the best citizens with whom they will at once be in sympathy; then families will feel at home, and in time thousands will follow. The solid ranks of race voting are fatal to progress. They mnst hreak; the liberalism which exists extensively in the hearts of Sontherners must be organized into outward form ere Northern men and capital will cross the border lines of the Sonthern States which they now so generally shun.

PREJUDICE, persecution and hull-dozing lead to scarcity of capital, demoralized labor, bad crops, burnt barns, and end in ruin.

Sontherners mnst make the best of negro labor; they cannot afford to do otherwise; with them it is that or none. Their enlightened leaders are aware of this; they see that there is a direct ratio between race feeling and comfortable living, that the interests of both classes are identical, and that all members of the body poltic must prosper or snffer together. This class and the "Last Ditchers" will not pull together always. The President's challenge to the spirit of Southern liberality may not disintegrate the party, but it must give the control of it to better men. The men whose ancestors were of the best Enropean stock, and took so noble a part in the war of the Revolntion and throughout American history, are not likely to fail ntterly in the task now before them. Slavery extinguished the germs of true prosperity, blighted morals, formed many evil habits, and, by the necessities of self-defence, generated false ideas. This disturhing cause is removed, cut out by the sword—the only possible remedy. A natnral order of things is being restored. The fire-hrand of Southern politics has been put out. Intelligent men will, in time, be divided, as elsewhere, on questions of political economy; and instead of crying for deliverance from the U. S. Army they will appeal to the nation for help to escape from a far greater tronhle—the illiteracy and degradation in their midst.

A CORRESPONDENT of the *New York Tribune* gives an interesting account of a recent trip South, which we summarize:

The negro as a politician has proved a failure, bnt everywhere he is the workingman. The Southern white avoids manual labor; from Richmond to Charleston not a white man seen working in the fields.

The negro is the honse servant; he plows, plants, drives, handles goods and farm products, does all city service and much of the skilled mechanical work.

The white man keeps a store or practises a profession. But in the region of the Blue Ridge Mountains where negroes are scarce, whites do nearly all the work.

Instead of going on to possess the land with his sinewy arms, the negro accumulates bnt little. In South Carolina they are not mnch better off than they were eight years ago—there are exceptions, of conrse. After the stimulns of freedom they relapsed to thriftless ways. They live in hovels, apparently without ambition to improve themselves or their snrroundings. They do not work steadily—are fond of holidays and merrymakings. The average negro, when assured of corn and meal enough for his family, lapses into laziness and enjoys sitting on fence-rails and dry-goods boxes. This is to be expected nntil the white man sets him a better example, and by competition forces him out of snch habits.

The negro is the criminal of the South as well as the laborer.

The State Prison at Columhia contains four hundred colored and thirty white convicts; this in a State where the majority on a jnry is usually negroes, and where jndges are the creations of colored legislators. Nearly all negro criminals were guilty of crimes against property, and the whites, as a rnle, were guilty of crimes against the person. The lower class of South Carolina whites do not steal; they are quick to use a knife or pistol, bnt the lowest of them respect their neighbors' property. Negro prisoners are very tractable. There were hut few mulatto prisoners. Mulattoes either do not steal or are too quick to be caught at it. There is a colored boys' reform school remarkahly well managed, in whlch indnstrial education is given.

SENATOR HILL of Georgia delivered an address before the State University five years ago, in which he said:

"And whnt shall we do with the negro? He is still among us. His capahilities still form a problem. But our duty is plain, and our interest is equally plain. We must do all in our power to educate, elevate, protect, and advance the negro. If his capahilities prove sufficient to enable us to promote him to an intelligent laborer, the country will reap the benefit. If they prove insufficient, we shnll have demonstrated the fact, and others will take their place. We must have an educated labor. We must have multiplied industries. We must have schools of agriculture, of commerce, of manufactures, of mining, of technology, and, in short, of all polytechnics, and we must have them as sources of power and respectability, and in all our own sons must be qualified to take the lead and point the way.

"Then why, with such vastly superior natural gifts, is Georgia so far behind other yonnger and smaller States not mentioned? Only because the art and skill which utilize natnral advantages have been npplied there and and have not been npplied here. We hnve looked almost exclusively to the negro as our laborer. We have, by law, kept even the negro an ignorant laborer. We have thus fixed a social brand on labor itself, and have thus made it promotive of social caste to be nhle to live idly, and one of the greatest of misfortunes—entailing a sort of social exclusion—to be compelled to labor.

"Thie system has rendered our own people unwilling and unqualified to multiply our fields of industry, and this same system has kept nway the educated laborers of other countries. The result is, that almost the only field of labor occupied in our State is that one of agriculture, supposed to be adapted to the capacities of the nneducated negro slnve, and in that field we find our natural strength greatly lessened by the perpetnal wear of ignorant muscle, instead of being, as in the Stntes mentioned, improved by educated skill. We have not only refused to mine our metals and give employment to our water powers, hut we have been cutting down and hurning up our forests; we have so stirred our soils that the rains which kindly came to fructify them were compelled cruelly to wash them awny; we hnve converted into the flesh and the bones of the slaves the wealth which God plnced in our lnnds, and then carried the slaves West to repent the process; and in all the nntional elements of agricultural wealth we nre weaker to-day than we were in 1787.

"Now this process cannnt continne. Our coal and iron will not nlways sleep in the shallow earth because we think it unbecoming the social position of an educated gentleman to wnke them up and lift them out. Our magnificent trees will not always grow and fall into decay because our young men think the style of a gentleman is a soft hand in a kid glove. Nor will the educated lnborers of other States and conntries alwnys, or much longer, send here and freight away at great expense and labor our raw material to foreign shops for manufncture. No; that snpposed necessity which enacted the law that lnbor as a thing of muscle must be kept ignorant has been swept awny forever. Its consequences, social nnd otherwise, muet cease. The time is coming, and now is, when professional gentlemen will not be regarded as the only class of occupied society who need a first-class education and who may compete with the more fortunate idle in social excellence and matrimonial preference."

THE Annual Report of the Commissioner of Agricultnre for the State of Georgia, for 1876, states that

"Mnch attention has been given to the subject of the inspection and analysis of fertilizers and to the careful "soil-test" of the various brands offered for sale in the State. With the analysis, selling price and commercial value of each brand before him, the farmer has all the information which can be given him except the actual results of soil-test on his own farm."

From this, and from the competition between mannfacturers, fertilizers sold in Georgia during the last season six dollars per ton better in quality than the season before. Farmers were thus saved sixteen per cent. on the valnes of the year previous, in their purchases of fertilizers.

Formulas for composting manures saved on the farm, showing the advantage of composting over the use of commercial manures, were pnblished in circulars and scattered over the State. The saving of farm manures has been stimulated as well as a spirit of inquiry into the economy of fertilization. The productive capacity of the State has been increased, money has been saved to farmers, multitudes of whom have taken advantage of the information snpplied by the State, and in letters expressed their gratitude for it.

The State devoted, last year, five hundred dollars to fish culture—too small an amount to begin with, hut it indicates that the subject of restocking its rivers with fish has some attention.

A Hand-book of the State has been prepared to meet the demand for information upon its resources hy those desiring to immigrate.

"A general improvement is reported in the conduct of agricultural labor throughout the State. This is attrihntable to two causes.

1st. The increase in the provision crop of the State has so reduced the cost of living as to remove the laborer to some extent from temptation, the cost of the necessaries of life being now but little more than half that of five years since.

2d. Farmers have perhaps given more personal attention to their business and, with their sons, performed more manual labor on their farms, this year, than during any previous year in the history of Georgia agriculture."

Laborers have been stimulated hy example. There is a quiet and contentment among all classes favorable to industry. As farming has become more concentrated and fewer hired men employed, the demand for them has fallen off. Farmers are counting costs more than formerly. Cotton is low, hut the price of goods and provisions has heen more than proportionately reduced, so that present wages go farther than the higher rates of five years ago.

"Labor is the moet perplexing question with which the Georgia farmer has to denl.

"The freedman is now becoming accustomed to his freedom; is no longer deceived hy the warning of designing men that his liherty is in danger; no longer allows his credulity to be imposed upon by the deceptive promisee of designing parties, hut recognizing the fact that the acquisition of property depends upon industry and frugality, is gradually retiring from politics and devoting himself with greater persistency to productive industry. Many of the more restless annually migrate to the Southeast, allured by the promise of higher wages on the cotton and sugar plantations of that section."

The increased grain crop of the State has stimulated stock-raising, the advantages of which are little understood, attention having been absorbed in the production of the great staples. It is claimed that equal results with Northern States can be attained with far less labor and expense. There has been in a year a decrease of ten per cent. in the area of cotton, but an improvement of seven per cent. in the preparation of the soil. The farmers of Georgia are in a far better condition than at the end of last year owing to their unnsnal prudence and economy in the production of supply crops. In addition to rent and fuel the average wages paid men for the year is $100.00 and board. Total cost of a man $160.00. Laborers are reported as seven per cent. more efficient than last year.

The negro laborer objects to an "overseer;" he rebels against the supervision of any one hnt the landlord, who in many cases resorts to the share and renting system, not always however with advantage to either party, owing to the unsteadiness of colored workmen. The year previous, twenty per cent of the farmers bought exclusively for cash; last year, twenty-eight per cent. The reduction in one

year of supplies purchased on credit was $7,000,000.00.

The vigor and good sense of Georgia legislature in respect to her agricultural interests has been excelled by that of no State in the Union, and it is to be hoped that all the Southern States will follow her shining example.

We have to thank the Messrs. Harper Brothers of New York for the excellent likeness of President Hayes in this issue. For onr other pictures we are indebted to our friends of the N. Y. Christian Weekly.

Agricultural.

CULTIVATION OF HOED CROPS.

The following constitutes part of a treatise on Hoeing, in the editorial columns of the New-England Farmer:

To have easy hoeing and clean fields at hoeing time, requires a little forethought and good management early in the season. It does not matter much whether the plowing was done last fall, early in the spring, or in May, just before planting, provided it was well done. For several reasons we prefer fall plowing, hut land may be turned over late in the spring, and be so handled that the hoeing will not be difficult. Too many farmers spoil their work hy cross plowing their greensward in the spring. They plow their fields in the fall, and, then, fearing they cannot get the mannre in deep enough hy harrowing, they re-plow, and for the next few weeks have a field of sods and turf to contend with. The soil is so coarse and rough that the crops are slow in coming forward, and the labor required in tending them is really discouraging.

Plow a field to a good depth with a good plow, and then follow the plow with a pulverizing harrow that will gradually mellow the surface inch after inch nearly to the depth to which the plow ran, without hanling the turf back again, and one can have as easy hoeing as upon old gronnd; hut re-plow the field, and the soil is left in square blocks of tough sward, which no amount of harrowing can make fine, until they decompose under the influence of the hot weather of a whole summer. Easy hoeing in June requires a start in the right direction in April or May. To have easy hoeing, we must plow well, and then follow the plow with a suitable harrow; and to have clean fields all summer, we must start the cultivator and hoe early, and use them frequently, till the crop is grown. Whatever may be the condition of the weather or the crop, the cultivator should go through the rows as soon as the weeds start. It will do a two-fold work—will kill the weeds, and help pulverize the soil, and mix up the fertilizers with it, and hasten the development of plant food in both the soil and the mauure. But in a rough, cloddy field, one dreads to start the cultivator early, for fear of tearing up or covering up the crop planted, and this affords one of the strongest arguments in favor of performing all the preliminary work in a thorough and correct manner. A field properly plowed, harrowed and planted is ready for the cultivator or horse-hoe between the rows the next day, if desirable. We frequently cultivate potatoes before they break the ground, and also any other crops which may require it. With a good steel-tooth cultivator or a horse-hoe, with outside teeth reversible, one may do at least nine-tenths of the work with the horse, if it is properly handled—but it must he properly handled. It will not do to let it remain in the tool-house until the land is awarded over hy grass and weeds—it must be used often and little. Two cultivatings a day or two apart are worth nearly twice as much as if made the same day. Our rule is, never to cultivate hut once in a row the same day, and never to use the hoe upon field crops until the cultivator has been through several times. Then, when the hoe is used, we know just where to use it, and no time is wasted in doing what the horse and cultivator can do just as well, or even better. The hand-hoe should be used only where the horse-hoe cannot do the work.

Some may think that it will he necessary to follow the cultivator immediately, to uncover hills and re-set plants that the onltivator has disturbed. So it would, if the surface were all clods and turf, bnt where all the previous work has been done as it should be, this will not be the case, and the field may be cultivated ont a half-dozen times if desirable, before the hand-hoe tonches it. Then the work of the hoe will only be to cnt ont the weeds immediately around or between the plants, and these, if left where the cultivator will catch them the next time it is used, will be sure to be destroyed even if they are left there in bad weather, when many people would think it too wet to hoe. We dislike to find so much fault with the common methods of doing farm work, for it can hardly be pleasant reading for onr patrons; but when we see so much bnngling, hlundering work done in the gardens and fields, and so little accomplished, we feel it a dnty to speak plainly. The majority of farmers who work to a disadvantage in the cultivated fields, do so because they have not learned a better way, hut there are some who follow the old course from a pure attachment to old ways and habits. The cultivator was formerly considered an *aid* to hoeing, and when it was found to be time to hoe a field, the cultivator was used to make the hoeing easier. But hy the improvement in cultivators and horse-hoes, as well as in plows and harrows, the time has really gone hy for the cnltivator to aid the hoe, and now the hand-hoe should be considered the aid or accompaniment to the horse-hoe or cultivator. The horse-hoe must now do the most of the work, and the hand-hoe bears the same relation to it that the little hand-rake bears to the other tools with which we now gather the hay crop. The hand-rake is handy to trim up a cock or a load of hay, and gather the scatteriugs hy the fences, hut no one thinks of doing his rakiug with it. Neither should any one do his entire hoeing with the hand-hoe, but use it only for trimmiug out close to the plants, and in the corners where the horse-hoe cannot reach

FARMING AT THE SOUTH.

Ens. Country Gentleman—After a residence of nearly four years in the South, a few notes may not be uninteresting to the readers of your paper, and may beuefit some who are desirous of removing hither. It is pretty generally believed by Northern people that the negro alone can stand the heat of our summers at work in the field, hut this impression is erroneous. It is abnndantly hot, no one will deny the fact, hut a gradual acclimation, which usually culminates before our hottest season, makes it to be endured as to heat, leaving perhaps a more languld feeling than in a cooler climate. But what we suffer from the heat in summer is more than compensated for hy our mild and delightful winters. We have sudden and sometimes severe changes, hut they rarely continue more than a day or two, and the green grass and grain growing during the entire winter make a beautiful picture in comparison with the ice-bound fields of the North. To those suffering from a rigorous climate the change would be pleasant indeed.

Immigration does not flow very rapidly into the Sonth, from the simple fact that everything in the shape of government has been so demoralized since the war. Unscrupulous and unprincipled men, holding offices simply for the sake of plunder and without the good of their country in view, have repelled many who otherwise would have invested here. To the agriculturist many inducements are offered in the way of cheap lands, and good prices for all kinds of grain, grass and other farm products.

Then, too, it is a grand country to raise stock and wool, stock being self-snpporting nine to ten months in the year. All that is required is a small amount of money, plenty of energy, enterprise and industry, and the road to affluence is plain and easy to any such man. All the different grasses that grow in the North can be grown here. I have tested this sufficiently to satisfy myself; and at no time in the past four years has hay sold at less than $20 per ton, more generally $25 to $30. Good cattle hring from $8 to $10 per 100 pounds dressed, and are in demand.

P. S. B.

Montgomeru, Ala.

TO HAMPTON GRADUATES.

Dear Young Teachers:

In contrast with tha disorderly school described in my last letter, Mr. Page gives an account of a visit he paid to the same school after it had passed into tha hands of a very differant teacher. "On another day we presented ourselves at tha door of this same room for admittance. We knocked and, presently, without our hearing the footstep of the person who approached, tha door opened and we passed in. The children looked up a moment as we entered, and then bent their eyes upon their lessons. The teacher softly handed us seats, and then proceeded with tha recitation. His manner was quiet and deliberate, and the school was orderly and husy, and everything presented the strongest contrast with tha former scene. Tha hour of dismission arrived, and tha scholars quietly laid hy thair books, and as quietly walked out of the house, and all was still. 'How have you secured this good order?' said we to tha teacher. 'Have you had no difficulty with noisy scholars?' 'A little, at first; but in a day or two they seemed to become quiet, and we have not been troubled since.' Now the secret was, that this teacher had learned to govern himself. His own manner gave charscter to the school. So it will ever be. A man will govern more hy his manner than in any other way."

It is not to be expected that, with the undisciplined pupils who will compose tha larger part of your school, you will be able to secure the quiet and order which Mr. Page commends. At the same time, he does not advocate a deathlike silance, tha stillness of forced constraint, hut the cheerful quiet of industry when each pupil is diligently uttending to his own work.

You may be surprised at my saying so much about order. You will find, the longer you teach, thnt it is essential to your success. "Order is Heaven's first law," says the poet, and, as far as we can see, throughout God's universe law and order reign, except where they are disturbed hy man's wickedness. How to secure good order must he learned hy each one of you from his own experience, after reflecting much on the subject and obtaining from hooks and other teachers all the information they can impart. You have a guide in the example of your Hampton teachers. Somo persons have, naturally, the power of controlling others. You see it even in young hoys in their plays. This gift is, of course, a great help to a teacher; hut, if you do not possess it naturally, you may acquire much influence over your pupils hy deserving their respect, confidence and affection. If you would gain their esteem, you must he *worthy* of it. It is not hy assuming an air of superiority, as if you were at an immense height above your pupils, and they, on a plana greatly below you; it is not hy laying claim to vast knowledge and infallihla judgment, that you will obtain the authority you desire. By your kind interest, your impartiality and firmness, your truthfnlness and self-control, your steadfast aim to walk worthy of your vocation, yourselves exemplifying the virtues you recommend to them, you will in time gain over these unhounded influance. While you require obedience and maka your pupils feel that you are absolnte rulars over your little domain, let them feel at the same time that you are like good and loving parents, concerned for their true welfare. Endeavor to interest them in tha affairs of tha school; let them realize that it is in one sense *their* school; that its success and reputation depend in great measure upon *them*. You will discover who are the most influential among the pupils; win them over to your side, and interest them in trying to elevate tho moral character of tha school hy co-operating with your efforts. Dr. Arnold, the master of Rugby school in England, whose memoirs I hope you will read when you have the opportunity, was greatly aided in the government of his school by his highest class. Although no teacher can follow implicitly tbe course of others, however successful they may have been, useful suggestions may ba obtained from their experience. More than all other helps seek the wisdom that comath from above; it is freely offered hy One whosa promises never fail. Pray to *be*, through tho indwelling of His Holy Spirit, what you wish your pupils to becoma; your example will he more powerful than any precepts you can give them. As the leaven acts upon the meal in which it is hiddan, so will your presence, even without words, affect your associates. Great is our responsihility for this unconscious influence; when we think of it, we tremble; but ought we not to rejoice, that without eloquence, without performing great or glorious deeds, without a lofty position, we may, with God's help from hour to hour, exert a heneficial influence upon those around us, and, thus, promote tha cause of truth and righteousness in the earth.

"Yon cannot see the waters
By which the grass is fed;
Yon cannot see the brooklet,
Within its little bed;
Yon cannot even hear it,
So quiet is its flow;
And yet those hidden waters
Have made the grass to grow."

"Then, 'planted by the waters,'
O Saviour, let me be,
That I may thns be fruitful,
And glory bring to Thee!
Not nnto me be glory!
Thy praises would I sing;
Yes, for the grass were nothing
Without the Secret Spring!"

I am your sincere friend,

M. A. L.

BEAUFORT S. C., *February 2d*, 1877.

Editor Southern Workman—I have been receiving regularly a copy of your valuahla paper for the past few months, and am highly gratified as well with the object and scope of its labors as with tha apparent success of its efforts. If I know anything of the wants of tha South to-day, or, rathar, of those in the South whom your paper designs to reach and benafit, the highest is a higher and more thorough cultivation of the head and tha heart, that they might appreciate more highly and fully their relations and duties alike to themselves and the State.

I have read with interest tha columns of tha Southern Workman, and particularly the letters from tha Hampton graduates. In them ona sees at a glance an inkling of tha reward of tha labor bestowed upon that institution, which has not been bestowed in vain. The spirit and purposes of Hampton will not fail to exart their just influances upon those who are *educated* within har walls, and they in turn will in lika proportion influence those among whom thay labor in tha future. We need just such an institution in avery county of our State, and especially hare in Beaufort, where a large majority of tha people hava been naglected and denied the privileges of education in tha past, and allowed to grow up in almost abject ignorance.

Taught always to depend upon others, and reared to old age as children—looking to a pareut for everything, the people of this section feel keenly the need of that *self-reliance* which it is the endeaver of Hampton to instil in tha minds of her students. It is wonderful, however, to see how readily the freedmen of these islands have conformed themselves to the new order of things and with how much fasilty they have performed their new and untried duties. That there are many who have shown themselves ftnworthy of the great boon of freedom I regret to he forced to admit, but they are comparatively few, and obtain neither countenance nor respect from tha great body of the people.

The progress, present condition and prospects of the freedmen of this and tha surrounding islands is a theme fraught with interest to most of your readers, and one which I shall take peculiar pleasnre in developing in future articles from time to time. There are facts in the history of these people that will go far towards overthrowing the belief that amancipation has proved a failure in tha South, and that the freedmen would he hetter off nndar their former master.

I see many reasons for encouragement among those who are laboring to elevate and enlighten tha freedman, and who have done so much in their behalf since the war. Whatever may be said against them, they are indeed a grateful people, and appreciata keenly whatever is done for their benefit and amalioration. More anon.

Respectfully,

Iris.

IMMIGRANTS—DO THEY PAY?

We are frequently in receipt of letters asking us our views upon the quastion of immigration, and we have heretofore answered them generally so plainly that with some hesitation we again reply to a recent inquiry, "Whare would you advise ona to procure immigrants?"

We are a "burnt child" on tha question of immigration. We have tried white employees, beginning with tha natives, and going all through the catalogue, even to those from tha vary back-doors of the Continent of Europe, and we are free to confass we have never found one that netted us a dime, while we know we made money out of Sambo, aven though he persists in voting the Radical ticket.

Tha principla we lay down is this: Any white man in this country who has attainad to the age of maturity, and has never accumulatad enough to buy him a home, will be more of a charge than a profit to ma on my plantation. And this principle is adhared to because it is founded upon tha experiance of the past.

Secondly. Field hands coming from another country to the "Sunny South" hring with tham no experiance as to tha cultivation of our crops, are not climatized, hava lass muscle and andurance under our climata than the negro, have far more wants, which require a cash capital that tha Southern farmer has not; and for these reasons are lass profitable, aven with thair superior anergy, than the thriftless negro to whom we hava all our lifa long been accustomed.—*Charleston News.*

Do it at once. Never wait to be told a second time. Do just what you are told to do. Do not try to have your own way. Do it cheerfully. Do not go about it in a surly, cross, peevish way. Don't fret, and grumble, and talk back. Only cheerful obedienca can be pleasing to God and man.

LITTLE THINGS.

BY S. M. H.

It was only a smile of welcome,
Or a whispered word of cheer;
But it smoothed the path for the tired feet,
And lightened the load of care.

It was only a loving visit,
Perhaps but a loaf of bread;
"But ye visited me" will the Master say,
"'Twas your Lord whom ye clothed and fed."

It was only a tender message
To a heart bowed down with woe;
But from that one seed by the wayside dropped,
Shall a harvest of blessings grow.

It was only a few words spoken,
We thought they were weak and poor;
But they told of Christ and his wondrous love.
As the guilt of the world he bore.

And the Lord from His height of glory
Hath listened our words to hear;
For us is a book of remembrance kept,
And our names are engraven there.

It may not be ours to render
The service our hearts would crave;
He may give us no words that shall win a soul,
Or a life from destruction save.

But often along the wayside,
As we journey life's rugged road,
We shall find some hearts that have need of help,
Who are faithful beneath their load.

And though small is the help we can offer,
If it only be offered in love,
It will carry a blessing to earth's sad ones,
And be known and remembered above.

And the dear Lord when he cometh,
Will bring us great reward;
"Thou hast faithfully done the few things I gave,
Enter into the joy of thy Lord."

WHAT WE CAN DO FOR OUR PRESIDENT.

The fine portrait of our new president which we are enabled, by the courtesy of Messrs. Harpers Brothers, to offer to our readers this month, was taken from recent photographs, and is said to be an excellent likeness. It is a good and strong face, in which we seem to read hopeful augury for the future as far as it depends upon our chief executive.

We have perhaps already exhausted all the details of President Hayes's life that would be of particular interest to our readers, and the best thing left to say is to suggest to them, and urge upon them, a duty well set forth in a recent *Tribune* editorial; the duty of every man and every woman in the country to "help the President," for in his inaugural he asked the help of all. The *Tribune* well says that "whatever may be finally the success or failure of President Hayes's policy, one thing is certain: he will never bring back peace and justice to the country if he has to work alone. The defect in our social system is the shirking by the majority of individual responsibility. The public business of the country is left to a minority, while the honest citizen sits by his hearth swearing that the country is going to ruin. For five years the great mass of just and educated Northerners have been willing—nay, anxious—for a hearty reconciliation with the South. The desire for peace among the Southerners, at least among the older, more rational men, has been just as sincere, but the mob of office-holders and politicians have stood between and blinded them.

"In short, the reader of this paper to-day, be he in Massachusetts or Georgia, has no right to complain of the deplorable condition of the country and then shove its redemption off on the shoulders of the President or any other man. Every effort he makes at just, economical management of his own household lessens the weight of financial pressure just so much; every honest outspoken word in favor of more liberal party action lightens the load which the honest leaders must lift; every friendly meeting between individuals of the South and North hastens the completed Union; every child reared by a Christian mother to be truth-telling and honest is so much golden capital for the next generation."

These are truths for colored citizens as well as white ones. The President is pledged to protect them, and to encourage and assist the spread of general education while hastening the restoration of local self-government founded in justice to all, without which no permanent safety can be assured. Every colored man who shows himself worthy of citizenship, every parent who makes sacrifices to send his children to school, every student who works his way up to an education, and then gives himself to the need of the hour—the teaching of his people, every graduate who proves that education need not make a colored man vain or lazy, every new home founded in morality and an enlightened religion,—will help the President, and the race, and the country.

HAMPTON INSTITUTE LECTURES ON TEACHING.

BY PROF. F. A. ALLEN.

LECTURE VIII.

RECITATIONS.

How to conduct a Recitation.
1. Establish a suitable relationship between teacher and pupil.
2. Secure undivided attention.
3. Ask questions, individual and class.
4. Commend for effort.

In conducting a recitation, the very first thing is to establish a suitable relation with your pupils. To do this, never scold. Do not put your pupils out of your power by speaking to them in an irritable, cross manner. A scolding tone of voice even will break the line of communication between ourselves and our pupils. That electric line of communication is Sympathy. If it seems broken sometimes by a reproof you have had to give, give the pupil time to recover his temper before you ask him a question. If the class looks irritable, tell a story or say something pleasant before you begin the lesson. Remember that you feel irritable yourself sometimes, and indeed when you do, there is no better way to recover your own spirits than to say something kind and pleasant to your class. Try to exercise self control, and not visit your own bad feelings upon the little ones you have to teach.

LITTLE THINGS.

Arrange your class so that you can see every pupil. I think it is the best plan to place your pupils so that the different sexes will alternate, first a boy and then a girl. Girls generally behave better than boys, and, seated thus, they will influence the boys to behave well and need not be injured themselves. Of course you must keep them under your eye. I have tried the plan in district schools myself and found it works well.

Second, to hear a recitation properly, you must have the undivided attention of your pupils. Your success in gaining this depends very much upon yourself. A thorough preparation for the lesson, and a real interest and enthusiasm in it will excite a corresponding feeling in your pupils. There are, besides, various devices for rousing and fixing their attention, such as telling a story or asking class questions, &c. The great thing, however, is always to have something to teach them, so that they will come to you expecting to learn something new, and then to have your manner wide awake and enthusiastic.

Don't let the pupils put each other out by holding up their hands. It is enough to confuse anybody. Give the one reciting a fair chance; then call for the hands, but don't let them criticize him unkindly. Let them tell the good points he has made sometimes instead of the mistakes.

Third, what kind of questions shall you ask? Well, don't ask ambiguous questions, that is, questions with doubtful meaning. Let the pupil know just what you mean to ask, make your questions clear, and then don't be satisfied with a doubtful, indistinct answer. Do not ask leading questions, questions, that is, which include the answer so that any sharp pupil would know by your question what you want him to say. For instance, do not ask, "Is the numerator the number above the line?" Ask rather, "What is the numerator of a fraction?" or "Where do we place the numerator?"

Do not take Yes or No for an answer, or any simple word; but have the pupil embrace your question in his answer. This will show that he has understood your question and knows what he is answering, and it will accustom him to the use of words. Thus, for instance, "What is the capital of Virginia?" Let the answer required be, "The capital of Virginia is Richmond."

Never ask a pupil a question until he has assumed a proper position. Ask him sometimes several questions in succession, but none that can be answered by yes or no, and let him stand till you call the next pupil, if you have seats for your classes.

Individual questions are best to test the pupil's knowledge. The danger of class questions is that lazy pupils will take advantage of them. They are good, however, to wake up your class when it becomes dull. When a pupil is dull or indifferent, be sure to fire a number of questions at him—without scolding or remark—till he gets ashamed of not answering.

Be sure, if you can, to give some instruction at every recitation—about the subject of the lesson—which is not contained in the book. This will be the dessert to the hill of fare, and the pupils will come for it with appetites keen as young robins.

Be sure not to say, merely, "Take the next lesson." Assign something definite.

The fourth point is to *commend for effort*. Be sure to commend the pupil for trying faithfully, even if he, after all, does not recite as well as some others can. This is encouragement that he needs. A simple approving smile or nod may be enough to make him try his best for a week. It is a great deal better than whipping.

Seek for something to commend, not for something to condemn. This will reclaim many a lazy or mischievous pupil. Just watch him till you see some smallest thing that looks well. He sits studying quietly you think. Take for granted he is. Put your hand kindly on his head as you pass, and say, "That's right, sir; you'll make a scholar," or some such little pleasant word of approbation. How his heart will send the blood up into his face! How he'll straighten up! "What! he thinks I am studying—well, I will, *now*." It's worth trying.

LECTURE IX.

PUNISHMENT.

1st. Proper objects.
2d. Proper characteristics.
3d. When—Where—How.

Proper Objects
1. Reformation.
2. To deter others.

Of the proper objects in punishment you can have, I trust, but one idea. You should never punish a pupil except for his own reformation, or to prevent others from doing wrong. To punish from spite or temper, to wreak our own vengeance, or to gratify our own anger makes us the offender. We are the ones that ought to be whipped rather than the boy, for we are old enough to know better. If we can't keep our tempers ourselves, how can we ask our pupils to?

As we are agreed upon the objects of punishment, and also upon its necessity, no doubt,—it takes but a little experience to prove that,—let us carefully consider what its character should be. This is an exceedingly important question if we would succeed in its objects. We may state its characteristics as follows.

Characteristics.
1. It must be certain.
2. Proportionate to the offence.
3. Natural, not artificial.

Yes, first of all it must be certain. Valuable teachers lose all their power by repeating threats every day. Threats should never be made by a teacher. Let your rules be clearly understood, and their penalties certain. Not, of course, that a punishment may not sometimes for a sufficient reason be remitted, but that should be done with judgment, not from weakness or favoritism; only when the proper objects of discipline can be as well or better secured by the pardon. The objects you should have always before you. Do not fear that this firmness will bring you the dislike of your pupils, if it is joined with kindness and sympathy. They will respect you and trust you the more and like you the better, and you will find that the necessity of punishing will diminish. A boy likes to feel he has a master—he will love him all the more for respecting him.

Second, the punishment should always be proportioned to the offence. This will take time and trouble, but it is well worth it. In judging all cases, you want to find out what prompted the pupil to do wrong. Be careful not to destroy the moral balance which the pupil has formed in his own mind. Just the moment you forbid a boy to do a thing, he instantly decides in his own mind whether it is right or wrong. So be careful about the prohibitions you make in school. Make a distinction between things which are wrong in themselves, in their very nature, and things which may be in themselves innocent and only inadvisable from circumstances. Acts which are in themselves sinful should be punished as such.

Third, punishments should be natural, not artificial. If a boy comes in fifteen minutes late with no good excuse for it, a natural punishment is to keep him fifteen minutes after school. If two pupils will keep whispering together in school, separate them. If a boy makes too much noise at recess, deprive him of the privilege of recess. If a boy ill-treats his companions or uses bad language before them, separate him from them; give him his recess all by himself at a different time from the others, for a certain time.

Now then, the question is, Where, when, and how to punish.

When and where shall punishment be inflicted? Seldom or never at the moment the offense is committed, and seldom or never in the presence of the school. When you call a boy up and punish him before the school, you rouse all the spirit of resistance there is in him—he isn't going to give in. But take him alone, where it will be either the whip or give in, and he will soon choose the latter. Shall you whip? If you can get along without it, so much the better. The best teachers do the least of it, I think. But don't threaten and not perform. If it becomes necessary in school, use the rod. But remember that true government rests in the power one mind has over another. Even a colt is better to be broken without the whip. Tact goes farther than force. You should not fly out at a boy and excite his anger. Use management and try to bring out the good there is in the boy and not the evil.

Remember that all resistance that comes up in school comes from the animal nature, the lower nature of the child that resists. Remember that he has also a higher nature and this is what you must *educate*—or draw forth.

THE FAITHFUL WATCHER.

BY EMMA BURT.

A traveller hurried along by the sea,
On an errand ell unknown,
The cottagers wonder:d whetever might be
His errand along by the slumbering sea,
Save hie dog, a traveller alone.

The traveller came, end the traveller went;
And the fishermen fished in the sea,
Shouldered their nets when the dey was epent,
And climbed the cliff, by their burden bent,
These fishermen etalwart and free.

And lo, on the cliff they sew a sight
As sad as ever you sew:
A lonely dog, on a lonely height,
Thet turned him never to left or right,
Nor lifted en eye, nor a pew,

But patiently gazed in the fathomless pit,
Bent motionless over the brink,
As if his master was fast asleep
Below, and faithful wetch he must keep;
While the waters flow. and shrink.,

And the fishermen never heve known to this dey
Aught of the traveller's fate;
Bnt upon the cliff, they solcmnly say,
A lonely dog does evermore stey
And wetchee eerly end late.

Oh if as faithfully every trust
On mortals by love bestowed,
Wes guarded end cherished, I think it must
Be, life would grow sweeter, by far, and more just—
And never a debt be owed!

INTEMPERANOE IN WEST AFRIOA.

BY REV. DAVID H. DAY.

The greet curse of this country is spiritous liquors, brought in by unprincipled men. By the united exertions of Christian nations the sleve-trade—the blight of Africa—has heen henished, hut its handmaid, the rum-trade, remains to ruin and curse end hlest. For it the pegens of West Afriee will give their all, end once under its influence they become demons. Liherin boasts of her instrumentelity in quelling the elave trade, why does n't she make some efforts in this direction else? During our voyage, looking over e number of speeches and papers mede and written hy persons visiting the coast, I noticed in their descriptions this nnd similer phrases "One thing especielly we noted was the ehsence of all intoxicating drinks." These men either know nothing ebou it or have no regard for the truth, for in Monrovia alone, great quantities of it are sold hoth wholesele and retail. We could point out a dozen places—little low, dingy eahins filled with rows of dirty bleck bottles labeled "Pure Brandy" a dollar e quert, end pure Hollend Gin at sixty-two cente e bottle. On this there is e profit of from one to two hundred per cent. It is as had ae the femous "Jersey lightning," which was ineured to kill et long range. Some of the natives call it "hot water," others, "salt weter." And not only do the netives use it, but more civilized people drink greet quantities. Brandy is at the bottom of e great many of the fatal diseases of the West coast. "Died of brandy and weter" is e common saying, while the men sick with the fever tells you he "is e bottle ehead." I heve been in houses where the family could give you e drink of elmost enything end could not give you e piece of bread or e disb of rice. In one house you are offered chempegne, in another brandy end water, in another Hollends, and in euother Jameice rum. At some pleces it is brought out in fancy decenters, at others in bleck bottles or dirty-looking stone jugs. Go to e physician for edvice in fever end the usuel advice is "drink brandy and water or you can't live." In Sierra Leone we were horrified et the idea of drinking weter with "seasoning," and one quite prominent man told me he had not tasted weter for two yeers. Of course there ere some nohle exceptions, but they ere few.

Lest year some one geve some of the netive boys et the mission rum end made them drunk. We could get no lew to punish the seller, end could do nothing but heap on him a few epithets, not very pleasent to the man's feelings, and let him go. Most merchents sey they cannot do husiness without it. G. Moore & Sou is, I think, the most prominent merchant and treder with the netives in Liberia, and he does not sell e drop, nor ever hes. E. S. Morrie & Co., of Philedelphia, who for some time have been doing quite a large business here, creeted e sensation hy emashing up e lot of bed gin letely brought here from Europe. Mr. Morris is thoroughly e temperance men, end most hitterly opposed to the whole rum business. Some one conaected with his budiness here ordered out e lot of gin unknown to the firm, and Mr. Morris did not find it out pntil his agent in Englend sent him the bills. He et once sent the following circular to his agent, just arrived in Liheria hy the *Jasper:*

Hanging of the Well-known Murderers:
Old Rye—Old Tom Crooked Whisky and Home's Worst Enemy—Rum.

The axecution will take place on board the steamboat *City of Philadelphia*, in the port of Monrovia, on the 1st of January, 1877. Tha pnhlic are respectfully invited to attend and witness tha axecution.
E. S. Morris.
By order of

Accompanyieg this was a letter instructing the ngent to place ell the gin in the store on boerd the boat, invite the mission children of Muhlenberg to a free trip down the river, so as to be present, and smash every hottle, and empty the contents into the herbor. Mr. Morris's directions were cerried out, and twenty-six cases of gin found e wetery grave. Quite a crowd of people witnessed the operetioe, end listened to the temperance speech which the agent made on the occacion. The destruction of the rum called forth from the crowd expressions of different kiads. The Krumen suid: "Det hot watcr all live must." "Poec e men heve all dat make him feel good too much." From the Americo-Liherians were beard such expressione as "Amen!" "God be praised!" while some of the thirsty ones seid, "Oh, what a pity!" After it was over, a numher of the prominent men, among whom were ex-President Werner end President Peryne, personally congratuleted the agent, Mr. Litchfield. We sey, Bravo! Go aheed, Mr. Morris, until you henish the vile thing from the country. *Muhlenberg Mission, Jan.* 11, 1877.

IDOLATRY IN SPAIN.

BY REV. THOS. L. OULICK.

Zaragoza, the nacient capital of the kiagdom of Aragon, derives its nnme from Cesnr Augustue which has been corrupted into Zara-goza.

THE FAITHFUL WATCHER.

Thie city hae just passed through her great yearly festivel of "La Virgen del Pilar," lestieg ten days, when thousands of pilgrime come to Zaragoza from ell parts of Spnin to worship nt the ehrine of this fnmoue, miracle-working Virgin. For it must be understood that there is greut rivnlry betwece different Virgins. In fnct, rivnl processions carrying rivnl images of the virgin hnve somatimes encountered each other in the etreete and fonght pitched battles for the hoeor of their reepective idole.

Bnt the "Virgen del Pilnr" is confeseedly without rival in all Spain, and her shrine is the moet famous plnce of pilgrimage in nll the Paeinenle. It is to Spain whet the shrine of Lourdes is to France, what the temple of Dinnn was to the Epheeians. "There is, ie fact, n remarknble reeemhlance between thie Virgie end Diaen of the Epheeiaee.

The story is that this imnge of the virgin ned child, together with the jasper pillnr on which she staede, were brought here hy angels some time in the first century, and at tha requeet of the virgin a chapel was huilt on the very spot where the image was deposited.

October 12th is the aeniversary of the descent of the virgin. Oe thnt dny fifty thousand pllgrime sometimee pour ieto the city. "God aloee," saye Pope Inocent III, "can coust the miraclee which are then performed here." Cardieal Retz saye thnt here in 1649 he sew n man who had lost his leg which grew ngain on being rnhbed with oil from the lamp of the virgin. The anniversary of this miracle was loag observed as a holiday. The othar day I was ie the Cathedral oxamieing the picture of thle miracle, with perhnps nn incredeloee expression on my face, whee an ueknowe woman stepped up to me and with the utmost aarneetneee assured me that it was certaiely true,—was well authenticated and I must believe it. A large portion of the girls ie Aragon end many other parts of Spain are named Pilar from the jaspar pillar on which this image of the virgin stande.

Zaragoza eboeeds in the etoree of silversmiths nnd jewellere, aed the priaeipnl articlee for sale in nll their ehops are huedreds and thoasands of images of the "Virgee del Piler." They are mostly of silver, but there are also thoesaeds of wood, stone, merble, brase, gold nnd precious stones. They are of all sizes, from an inch to six feet high. The silversmithe make their chief gaine from the sales of these imagee and their shrinee, of which their shop wiadows are full. They are all es fierce opponents of the protestent heresy as were Deinetrius ned his fellow craftsmee of Ephesus. When the gospel hegan to be preached here a short time ago several attempte were mede to kill the preacher.

Zaragoza is, I believe, the only city in Spain which has two Cathedrale. In the Cathedral called "La Seo," which is n eohle gothic pile whose many lofty pillnrs give it the nppearance within of n mighty, hranching forest, *Pedro Arbues*, the terrible inqnisitor, wes slain hy the maddened popnlnce of Zaragoza. Thoegh the Roman church counts him es one of her famous martyrs, his eame is still repeated in Aragon as a synonym for relentless cruelty. He has been immortalized hy both Keulhach eed Murillo.

Kaulhach represents Pedró Arhues in the act of coedemning a high-born girl to the stake, while her fether, mother and brother plead in vain for the life of their loved one. An attendant clutches the confiscated gold and silver of the family, and in the dietance two merturs of the iequisition are seen suffering at the etake. The ecene of the picture is repreeented as on the eteps of "La Seo" Cathedral. Photographs of this famous picture are now being sold in vnrioee parts of Spaie.

The largeet of the two Cathedrale of Zaragoza, which is also said to be the largest in Spain, is the shrine of the famoee virgin. Its name is "La Catedral del Pilar." From this Cathedral there came processions early every day of the festival of "La Virgen del Pilar" last week. The city was filled to overflowing with thonsands of etrnngers who poured in couetless numbers into tha great hasilica, many to hear the music aed see the imposing shows le mnch the same spirit as people in protestent countries go to the theatre. At the same time hundreds of devotees are constantly to be seen either kissing the jasper pillar, where only three square inchee of it nre cautiously left expoeed for the lips of the faithful, or kneeling before the venerated idol nad muttering their vain repetitione, nad the jiagling of coie is constently to be heard as it ie thrown hy the worshipers through n strong iron railing npon the marhle pavemeet in front of the image.

Every day there were hull-fights, or fireworks, or balloon ascesions. The principal etreet was lined on both sidee with temporary booths for the enle of all kinds of wnree. These are still in operatioe. There were also circeese, paeoramas, puppet-ehowe, giants, dwarfe, charlatane nnd n manngeria. Every night the city wae hrilliantly illuminaeted hy fire-worke or hy lenterne placed on all the hnlconjee of theee tall, five-story houses.

We improved the occacioe hy eending a good mae to eell Bihlee nnd othar religioue booke on the etreets, and hy holding a preaching service every evening for two weeks. Although the distraction of fire-worke, hull-fighte nnd all the

CENTENNIAL VIEWS.

THE COLORED RACE AT THE CENTENNIAL.

JAMAICA.

The Island of Jamaica in the West Indies has five hundred thousand inhabitants, only fifteen thousand of whom are white, and all the rest are black or colored. The white population is said to be decreasing, and the Island coming more and more into the possession of the colored race.

Its interesting exhibit at the Centennial must certainly be considered as chiefly representative of this race, and it indeed did them credit, and bore valuable and abundant testimony to the good effects of emancipation upon the interests of labor in the long run, however disturbing its first changes may be. Since slavery was abolished by Great Britain in 1847, it has grown to be the most valuable of the British West India colonies, and its exports are more than £1,000,000 ($5,000,000) a year.

The beauty and richness of the country is well described by Mr. Richard Hill, one of its most distinguished colored citizens, a man of great learning and ability, of whom Mr. Gosse, one of the first naturalists in England, said, "it was worth a journey from England to Jamaica to meet Richard Hill." Mr. Hill has written several books, and in one of them upon the history of the Island, he says:

"Few spots of earth present scenes so Eden-like—so picturesque and bland in beauty—as the Island of Jamaica. No one who has visited the cascades of the White River and of the Roaring river, with the intermediate waterfalls of Chorreras, can ever forget the scenery. Earth has nothing more lovely than the pastures and pimento groves of Saint Ann's; nothing more enchanting than its hills and vales delicious in verdure, and redolent with the fragrance of spices. Embellished with wood and water—from the deep forests from whence the streams descend, to the ocean into which they fall, the blue haze of the air blends and harmonizes all into beauty."

Let us see, then, what this Island of Jamaica has sent of its riches to the Centennial Exhibition:

Here was a very beautiful display of native woods, of great value in commerce, for building, for dye-wood, or ornaments. Mahogany for our tables, rosewood for our grand pianos, and ebony for their keys, delicate satin-wood to line our jewel boxes, fragrant cedar and blood-red logwood. The exhibitor called our particular attention to the Logwood Extract, manufactured by the Jamaica Dye-wood Extract Company. It is said to contain only the pure coloring matter of the wood. The refuse of the wood after the dye is extracted furnishes sufficient fuel for the manufacture. Manufactures of this character deserve encouragement, and must become a source of wealth to the Island. Another manufacture which is likely to succeed is that of paper from some of the fibrous plants of the island. Pine-apple is used in the manufacture of delicate woven fabrics. Some specimens of cotton were also exhibited.

Sugar and coffee are the chief exports, and many samples of each were shown, with cocoa and chocolate, and a great variety of spices, the meal of plantain and bread fruit and rice and Indian corn and cassava. A very attractive part of the display was the row of luscious West India preserves and fiery West India pickles in their glass jars. That of drugs and medicine, quinine and aloes and castor oil, was not so inviting. We saw very pretty cups carved from the calabash gourd and elaborately engraved, and combs and ornaments of tortoise shell. But the most beautiful, though not the most useful of all the special exhibits, were the delicate articles made by the women from the lace bark of the inghetta tree. Charming hats and shawls and fans were made of this fairy lace from Nature's loom.

No representation of the schools of Jamaica was made. We were, however, told by the exhibitor that there are two large public schools in Kingston, where many of the negroes are prosperous and wealthy, and since then we have heard many interesting particulars concerning these and other schools in Jamaica, from friends who have visited them within the last few years.

The schools of Jamaica were founded generally by missionaries of various denominations, and are still sectarian in their character, but all receive Government aid from Great Britain irrespective of sect. Some of them are assisted by private benevolence, some by the Society of Friends, in England, and some by individuals, as the Mico-schools—named like our Peabody schools from their benevolent founder. Some of them are free schools, and some, the parents of the children help support.

The city schools are, peturally, better than those in the country. Two agricultural and industrial schools, one of them founded by a teacher from the American Missionary Association, which had five stations in the Island, were in a flourishing condition and had done much good at the time of our informant's visit.

Their success has been such as to show that the system of combining manual labor with education is the natural and best means of combatting the indolence and immorality which still prevail.

A correspondent of the Tribune during the exhibition remarked that when he "came to that of Jamaica, the Commissioner regretted that the school exhibits had not yet arrived." At our last visit during the closing weeks, we were told by the gentleman in charge that the schools of the Island were not represented. There must therefore have been some disappointment of the Commissioner's own expectations, which is to be regretted. The Tribune correspondent was further informed by the Commissioner that, "the British Government spends about $10,000 per annum on the schools of Jamaica, that the attendance is not compulsory but the blacks are eager to learn. Many of them go through the higher courses, and become physicians, clergymen, &c."

The great curse of Jamaica since the abolition of slavery has been the introduction of the Coolie trade, by which Coolies, or laborers, from the East Indies are imported to serve for a term of years under oppressive contracts which they do not understand when they make them, and find ont too late that they have sold themselves into what is little better than slavery. The friends of humanity in Great Britain are making earnest efforts to bring about the abolition of this traffic.

A CENTENNIAL LETTER, BY A SOUTHERN LADY.

MEMORIAL HALL.

One enters the portals of the beautiful marble "Memorial Hall" determined not to be lost amidst the sea of pictures that hang in every apartment, and the multitude of statues that adorn its corridors, but to maintain control of one's eyes and senses, and concentrate his attention upon a few studies of art, the opportunity to see which may never come again. As well might the tempest tossed mariner determine in mid-ocean to keep his eye fixed upon the land he has left. When the eye has wandered over miles of canvas and multitudes of figures, the weariness of eye and brain is so great that it is almost impossible to discriminate between a master-piece and a daub, a lovely landscape, or gaudy attempt at one, and the only thing that you do feel certain of, is that you don't want to see another of any kind.

But there are some pictures that shine out from the mass, that will be seen and remembered as long as life lasts. Such were two of Murillo's, in the Spanish department, "The Crucifixion" and "The Divine Morales." The Crucifixion was grand, but so dark, so terrible, that the soul shuddered at the realization of the great mystery — the holy, spotless God-man *dead*, hung upon the accursed tree, to secure heaven for the sinful, blood-stained, ingrate man. But the "Divine Morales" represents the Saviour of men, bearing the heavy cross up Calvary's weary hill, with a face full of agony, yet fuller still of love. You know the burden was one voluntarily assumed. A light, as from a sacrifice of self, willingly offered, and at last accepted, shines over the face so wan and worn, and yet so beautiful, so divinely lovely. Standing in rapt attention before it, thinking that the lesson there taught is the one, the only one all the nations of the earth should long and strive to know and understand, that they might receive it in their hearts and illustrate it by their lives, I was roused by hearing the person standing next to me exclaim in tones of love and thankfulness, "I could look at my Saviour all day long." Involuntarily I answered, "Yes, and love him more for such tremendous sorrow;" then started at having spoken so freely to a stranger, and turned to see a plain looking colored woman, simply dressed, but her face bright, with faith and love. When all other memories of the great Exhibition have been dimmed by time, that picture of our Lord will shine upon my soul and go with me, I think, to the "valley of the shadow of death."

The "Christian Martyr" is a lovely picture. The "Marriage of the Prince of Wales" is a collection of good portraits." Most people will remember the horrid picture of "Rizpah Protecting the Bodies of her sons" when they would gladly forget it. Most, too, have heard the incident—said to be founded on fact—of a strong, perhaps (?) *rather* too bitter, Republican woman, of course, who on seeing the picture commented thus, "Yes, there's some of them Rebels strung up as they ought to be, and their kind old colored woman keeping the buzzards off 'em. Good picture too" But from this painful picture one would gladly turn to the beautiful "Christian Martyr," or lovely "Madonne and Child," or the sweet, cool picture, "Misty Morning," or "The Anxious Mother" which though only a group of three sheep, a ewe and two lambs, is so life-like, that it is really a fine picture Either the rising of the tide on the sea-shore where she stands, or the distant mutterings of a storm, or some other danger, threatens her little ones, which "the anxious mother" is evidently quite ready and willing to resent, and protect them from. The face is as expressive as possible of keen anxiety, and, at the same time, of desire to quiet and soothe the little ones who stand near her unconscious of danger, or, at least, confident of her ability to guide and watch over them. The long wool looks heavy with the moisture from the sea, and from the half-parted lips you almost hear the low bleat. How wonderful is the art of the painter!

But it is impossible even in your own mind to recall the beautiful faces or scenes of that wonderful "Memorial Hall." Fervently would we repeat "Lord keep our memory green."

The statue of "Liberty" in bronze, which stood in the central hall, was impressive. The light of freedom, longed for, *prayed* for, watched for, "as one doth watch for the morning," shone all over the strong, manly figure; tears of joy and gratitude stood in the eyes raised to heaven, from the uplifted hands the shackles were falling, while the "Proclamation of Emancipation" was held out as if to show to every one where our colored brother got his "free papers." The lovely little piece of sculpture called "Study and Work," which showed a little girl reading and knitting, was beautiful, and a wonderful illustration of the power of genius over cold, hard stone. The child's face of rapt attention, the thread, *real* thread made of marble, as the children say, was carefully and most naturally drawn over the finger, the needles were in their proper place and position, and the stocking was half finished, while the open book upon her knee was evidently not the *least* interesting part to the little girl. The folds of the dress, the simple shoe, the very shoe-string carefully tied, were wonderfully life-like. "The Veiled Nun," "The Blind Girl, Nydia," "The Shower Bath," and many, many other fair and graceful figures come to fill the chamber of memory, but time will not allow even a passing mention.

Our Centennial year has closed! Let us with one heart and one mind begin the new century, with earnest effort to go forward, upward, onward, as our fathers have done in *their* century of which we have witnessed the grand, triumphant close; and with earnest prayer to God that he will bless our efforts as he has done theirs, and lead us on in every good work, we must bid adieu to our Centennial Exhibition.

—"A Primary Speech," delivered 4th of July, 1876, at Pleasant View Sunday-school Celebration, by Tommy Murray.

These lines were written by an old gentleman for his little grandson. He is a New Yorker and was once employed in the office of the N. Y. Tribune. He is a very interesting person.

Our Native Land! free, fair, and grand,
We count our greatest treasure:
And celebrate this Day of State
With patriotic pleasure.

We boys and girls, soon in the whirls
Of life will be contending.
Now, train us well, and time will tell
Our triumph, at the ending.

Our souls seek food;—examples good,
Of honest, noble living,
Will win you praise, from future days,
And bless you, in the giving.

We con the Book of Daily Life,
Each man and woman spelling.
At every turn, we look and learn,
Attaining or excelling.

Heart, body, head, well taught, well fed;
The coming generation
Your worth will feel, your glory seal,
And God exalt our nation.

OAKLAND, CAL., *Feb.* 13*th*, 1877.

Dear General Marshall:

I was very much pleased to receive a few days since the stereoscopic views which you kindly forwarded me. The group of teachers looked so natural, in spite of the few new faces, and recalled so vividly the days I spent at Hampton, that I felt that I ought to be in it.

My whole manner of life since I came to California has been so different from that at Hampton that I cannot help living over again in memory my experience on the "ole Virginia shore." I look over my copy of the Southern Workman with interest on its monthly arrival, and though it will soon be two years since I left Hampton, my interest in the school has in no degree abated. The more experience I have in teaching and the more I think upon the prevailing methods of education, the more I am convinced that the Hampton School is one of the best in the country, and is conducted on the soundest of principles. It is fully a generation ahead of most of our best American colleges, for it succeeds far better than they do in attaining the great end of education, that of strengthening and developing character and fitting students for the battle of life. Of course the test cannot be in a comparison between the graduates of Hampton and those of Harvard, for instance, because the latter has so much better material to work upon; but when we look to the *transforming process* of education, I know of no institution which ranks above your school at Hampton. In the best schools and colleges of the country, those for both sexes, the teaching is sadly lacking in the practical, and young men and women graduate but poorly fitted to do any of the rough work of life. I may be a visionary, but I hope to see the time come when no young man can graduate from our colleges without a thorough training in some handicraft, and when the education of young ladies shall include something of a more practical nature than music, German and dancing. My life in California runs on in a rather monotonous way, and I have nothing very stirring to relate. I enjoy my work at the University, finding the material to work upon good if it is crude. We have now some 300 students, including about fifty young ladies. I have become a firm believer in the one-man power since coming to California.

Very sincerely yours,
EDMUND H. SEARS, JR.

LETTERS FROM HAMPTON GRADUATES.

One of the ablest and most reliable young men who have graduated here writes as follows from Augusta, Georgia:

"*Dear Teacher:*—I went North after leaving school this spring, but in such haste that I hardly had time to look about me to much satisfaction; however, I saw enough on the way from Norfolk to Boston to convince me that people living under free institutions will ever outstrip in prosperity those living under systems of bondage. I reached home in time to take a three months' school, which I taught during the summer, and am glad to say that I got on very well.

"Immediately after closing my school on the 6th of October, I went to Columbus, was married there on the 10th, started in less then two hours afterward for Macon, staying there one day, and arrived at Augusta, safe and sound with bride and baggage, on the morning of the 12th, and went to work in cotton the next morning. I assure you I've been kept hard at work ever since, so much so that I am very tired at night, which accounts for my not writing to you since arriving in Augusta. Of course I might have done so during the summer while teaching, but thought I would put it off until I got married.

"As to politics, neither Mr. nor myself have taken any active part therein, nor would it profit us or our people anything in Georgia, for here the Democrats have everything their own way, and while there has been but little open violence, there has been sufficient cause for it, and would have been were it not for the endaring patience of the colored people, enforced by e knowledge of their helpless condition. There is no such thing as a free ballot here for them, when they go to the polls in such numbers as to endanger democratic success; but if we offer to vote with them (that is, for their man) we can do so without being questioned; otherwise, you are asked to show your poll-tax receipt for the previous year; failing to do this, although your tax may have been paid, you can't vote. By this and many other such frivolous excuses, they cheat thousands of colored people out of voting.

"Had I the time, I would thank you for the kind interest you manifested in my welfare, temporally and spiritually, while at school, but will probably speak of it again when its fruits are more manifest. I have a good Christien wife, am getting on tolerably well, and am quite heppy. We are boarding with a minister's family, and very nice people they are too,—just like parents to us. F."

A graduate, whose voice has been heard by thousands in the Hampton Students' concerts, writes to a teacher from his field of labor in Virginia:

"I feel that I am indebted a thousand times to the Hempton Institute, a thousand times the value of your hill, for my present position, the society in which I enjoy myself and *above all* for what it is still doing for my ignorant and forsaken people.

"My school is now graded and I have an assistant. I heve one hundred end thirty on my roll; average ettendance, one hundred and fourteen.

"My superintendent is a real Democret but treats me with great respect and likes my way of teaching. E. and W. ere also teaching in the county with much success. I am glad to say that the Hampton graduates make special efforts to train their pupils morally as well as intellectually, which the southern people appreciate. My white friends in the vicinity seem to be social, and speak kindly and politely to me even in this bitter election time."

A highly intelligent gentleman in California writes in a private letter as follows of the condition of the colored people in and about San Francisco.

"The darkey mind seems to be getting bewildered on political questions. The Democratic majorities in the Southern States must have been swelled largely by negro votes. But I suppose this was to be expected. Sambo is neither a sage nor an angel yet, though the potencies may lie within him. I noticethat the colored people have no social position in Cali-

fornia, much less so than in the East where there is some slight approach to such a thing. Here they prosper tolerably, but are rather despised, are always called niggers, though they are never abused. I do not think there is so much destitution amongst them as amongst the Irish and some other foreign elements who are cut out by 'the heathen Chinee.' I have never seen colored men at work upon the farms. I think they find employment as porters, janitors, hostlers, and as waiters in the hotels. I have attended their churches several times and always found the same order of things that prevails in the South, only more civilization and refinement. Preachers used good grammar; both they and the people were a little less demonstrative; sometimes there was singing only by the choir. I think the whole posse of them went the Republican ticket, almost without a break."

A very intelligent and earnest graduate who is working in a true missionary spirit gives this experience. It is only by realizing the exact condition of their people that their teachers will do the best work. There are churches and churches, and it is not a reproach to the more enlightened colored people that in some sections negro worship is semi-heathenish in character:

SCOTTSVILLE, VA., *Nov.* 6, 1876.

"*Dear Teacher:*—The clock has struck ten, but I cannot go to bed till I say a few words to you. Miss H., if I have ever felt the need of Christ's help I feel it now. I have been in a good many places, but I do think that the colored people are more behind the times in this place than in any other place in which I have been. I will say that there are some very nice people here; but the rest are bad enough to pay for it. The most of them don't seem to know what a Christian duty is. Those that belong to the church are as bad as those who do not belong to any church. I have never been to any of their church meetings, but I have had the history of them. The deacons have been after me to unite myself with them, and I told them that I didn't know how long I was going to stay and it would be useless for me to send for my letter from Hampton to unite with them, and almost as soon as I get it I would have to go somewhere else. They said they would take me in without my letter; but I don't care to unite without it, because they cannot give me full membership without I do get my letter. I want to do all the good I can here, and I think as they do, that if I am in the church and have a voice in the church matters, that will do more good. So I will ask you, what do you think about it? So I am doing good I don't care. Mr. Powers told me how they were when I first got here; but he doesn't know half. Sometimes when the minister is preaching you can't hear anything he says for the people shouting and knocking over the benches, and on other times the minister can't preach for their laughing and talking in church. Last night I went to church, and the minister started to preach and they laughed and talked so that one of the deacons had to stop the minister and ask the people to keep order. After the minister had finished and they were passing the baskets around, I asked the deacons to let me say a few words, which they did. I first spoke of my day-school and then my Sunday-school, and after that I spoke about the way they acted there—and I gave it to them as they ought to have it; and they being members of the church I asked them if they were setting an example for those who were not members. And to-day I had some of them that know how to behave themselves come and tell me that what I said was worth ten dollars to those that heard it. The deacons are afraid of saying anything to them, they don't want to hurt their feelings; but I told them if the truth would kill them they must die, for I would tell the truth.

"I am getting along nicely with my school. I have thirty-four scholars on roll, and they are coming in every week. I hope that I will not have many, but the school numbers seventy in the winter. The white people are very kind to me as so far; I go to their church when there isn't any preaching in the colored. W."

JAPANESE VIEWS OF EDUCATION.

"It is incumbent on every citizen to understand the nature of the public institutions of his country, and to become familiar with the duties pertaining to his position in society.

"The principles of law exist in all things and have so existed from all time. They show themselves in the natural relations which bind society together, and in the cardinal virtues of humanity, uprightness, propriety, wisdom and sincerity. In public affairs they serve to secure good administration. A school is an institution in which these principles are taught so that they may be practically followed throughout the country.

"It is essential that the young men of a nation should be taught the principles of filial piety, brotherly love, of the just relations between master and servant, parent and child, husband and wife, and brethren and friends. It is equally essential that they should be educated in all the domestic and public virtues, so that the duties which relate to the state and to individuals may both be faithfully performed.

"The acquirement of knowledge and the cultivation of talent are essential to a successful life. By education, men learn to acquire property, practise learned professions, perform public services, and make themselves independent of the help of their fellow-men. Schools are designed to provide this essential education. In their various capacities they are intended to supply to all classes of men the knowledge necessary for a successful life. The simple forms of language, the methods of writing, the principles of calculation, the highest knowledge of law, politics, science and arts; the preparation of the officer for his duties, of the farmer and merchant for their occupations, the physician for his profession, all of these it is the proper function of schools to supply. Poverty and failure in the careers of life find their chief cause in the want of education.

"Schools and colleges are by no means the only agencies by which the education of a nation is advanced. The circulation of books and newspapers, and the establishment of libraries and museums are now everywhere recognised as exerting an important influence upon the progress of human knowledge."

A Hint:—

"In 1869 a lecture-room was opened in Tokio at which the court nobles, the daimios, the lesser nobles and public officers attended. This was designed as a method of mutual improvement, in order to give the leading men of the day an opportunity to increase their culture and their knowledge of affairs. There seems to have been a division into classes for the better attainment of their purposes. There was the class of *explanation*, the class of *mutual improvement*, the class of *inquiry*, and the class of *debate*. The attendants were allowed to choose which class they would join."

LET IN THE SUNLIGHT.

Throw wide the doors, the windows wide,
And let the sunlight in;
With Heaven's first smile upon our home
Let us the day begin.

The sunlight, with its warmth and cheer,
How gladly at our will
It throws a flood of golden light
The darkest rooms to fill!

Throw wide the doors, the windows wide,
And let the sunlight through;
Let in the glory of the morn,
The day so fair and new.

Let in the incense of the flowers,
The sweet life-giving air,
Let in the matins of the birds,
The gladness everywhere.

Throw wide the doors, the windows wide,
Make haste to greet the day,
Make haste, before her fragrant bloom
And freshness fade away

Throw wide the windows of the heart,
And let the morning light
Into the darkened chambers, where
We hide our grief from sight.

Throw wide the windows of the heart,
And let the morning fair
Chase from the sunless spirit all
Its weight of brooding care.

Look through the windows of the soul,
Up to the blue of heaven,
And meet the Father's answering love,
To all so freely given.

Fling wide the doors, the windows wide,
And let the sunlight in;
With God's first smile upon our home,
Let us the day begin.

—*E. B., in Liberal Christian.*

COMMUNICATED.

IN MEMORY.

Departed this life, at the residence of her husband, near Swansonville, Pittsylvania Co., Va., March 11th, 1877, Mrs. Fanny Francis, aged 33 years, wife of Mr. Humphrey Francis. Mrs. Francis leaves a husband and seven children. She was a devoted wife, and loving mother, a true and faithful friend, always to be found on the side of right and truth. Besides her bereft family, she has left a host of friends who mourn her death. Those who knew her best seem to love her most.

She told her husband the day before she died that she was ready and willing to go at any time, that he must not not grieve, but try to raise her children in the way she had begun. We feel that our loss has been her gain, and that she is safe in the arms of Jesus, sleeping that blessed sleep.

A FRIEND.

NEWS OF THE MONTH.

POLITICAL.

APRIL 15th. The Louisiana controversy is practically settled. The project substantially agreed upon is a Legislature to which shall be admitted all members with claims according to parish returns. As this will have a majority of Conservatives, Governor Nicholls will be recognized. It is not expected that Gov. Packard will accept this willingly if at all, but the Commission are assured that as soon as it is announced, a break will occur in the Packard Legislature so large as to leave him no support. The Commission will recommend the withdrawal of the United States troops from the State House, and the Packard government will come to an end.

APRIL 16th. The Nicholls Senate passed joint resolutions as part of the plan of adjustment, endorsing the President's inaugural, and pledging their support to his policy, and declaring as an earnest of this endeavor, that it is and will be their purpose—first, to accept in good faith the Thirteenth, Fourteenth and Fifteenth Amendments to the Constitution of the United States, in letter and in spirit; second, to enforce law rigidly and impartially for the suppression of violence, so that the humblest laborer on the soil of Louisiana, throughout every parish, of every color, shall receive full and equal protection of the laws in person, property, political rights and privileges; third, to promote kindly relations between the white and colored citizens of the State, upon a basis of justice and mutual confidence; fourth, the education of all classes of the people being essential to the preservation of free institutions, we declare our solemn purpose to maintain a system of public schools by an equal and uniform taxation upon property, as provided in the Constitution of the United States, and which shall secure the education of white and colored citizens with equal advantages; fifth, desirous of healing the dissensions that have disturbed the State for years past, and anxious that the citizens of all political parties may be free from feverish anxieties of political strife and join hands in honestly restoring the prosperity of Louisiana, the Nicholls Government pledges itself to discountenance any attempted persecution, from any quarter, of individuals for past political conduct.

Sixth, that the Governor be requested to forward a copy of these resolutions to the President.

THE Tribune reports a conversation with President Hayes in which, speaking of his Southern policy as to new view of his, he said with emphasis "My belief is that this course tends to give good government to the South; it tends to secure peace between the sections and between the races or parties of the South, and it tends to secure the rights, interests and safety of the colored people; therefore I am in favor of the policy. I do not know whether I shall succeed in carrying it out, because there are Northern and Southern men who in various ways may possibly thwart me, but of one thing I am confident, namely, I think it my duty to try and carry out the policy and I am going to do it."

OVER 300 clerks have been discharged from the various bureaus of the Department of the Interior, in carrying out Secretary Schurz's plans for Civil Service Reform, and reduction of expenses.

APRIL 14th. The non-Mormon inhabitants of Utah territory, in convention at Salt Lake City, passed resolutions to so amend the territorial constitution that bigamy or polygamy shall be a bar to citizenship.

APRIL 19th. By order of the President, the United States troops were removed from their guard of the Packard legislature, the President in his order stating his conviction that the state of affairs is not such as the Constitution specifies as warranting the interference of the United States government, but merely a question of legal claim to the government of the State, to be settled according to the State constitution and by its own laws in a peaceable manner. No disturbance followed the removal of the troops. A number of members of the Packard legislature went over to the Nicholl's, giving it more than a quorum.

THE Massachusetts Senate has passed a bill to be engrossed, granting the suffrage to women.

GENERAL.

APRIL 1. Ground was broken for a new hall at Fisk University, Nashville, Tennessee. It is to be called Livingstone Hall, and to cost $50,000, which is contributed chiefly in England, and is built with the understanding that it is to be used for training missionaries to Africa. Jubilee Hall is overcrowded with students.

APRIL 11. The Southern Hotel in St. Louis burned down, with a large loss of life, and a loss of property estimated at nearly a million.

THE hostile Indians of the Northwest are surrendering in great numbers.

GRASSHOPPERS are lively in TEXAS. A commission appointed by Secretary Schurz to investigate the prospects in the West report that there is not much to fear from their devastations there next summer.

TWEED is to make full confession, and give up his property to the city in exchange for his freedom. Ex-Mayor Oakey Hall of New York has gone to England, it is supposed to avoid the disclosures.

MEXICO is still in a state of revolutionary disturbance. THE states of Central America are reported at peace.

WAR seems to be inevitable and imminent between Russia and Turkey.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from those fatal diseases. No persons has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

INTEREST-BEARING CERTIFICATES OF DEPOSIT.

The Home Savings Bank, Norfolk, Va., issues Certificates of Deposit, payable on demand (payable either in New York, Boston, Baltimore or Norfolk), drawing interest at six per cent. These certificates are transferable by endorsement, and may be drawn for any amount desired. They are becoming a popular form of investment with many who cannot conveniently visit the Bank in person. Certificates are mailed to any address on receipt of funds by mail or express. Make all Drafts payable to H. C. PERCY, CASHIER.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

BY

PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR

BY

W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY

BY

MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The *best* in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its REVERSIBLE FEED enables it to sew forward or backward without stopping the machine—it being the *only* machine that *can* do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between SIDE FEED and BACK FEED machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe*, *odorless* and *durable* Oil Stove for all who want PURE, MOIST, WARM AIR in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

VOL. VI. HAMPTON, VA., JUNE, 1877. NO. 6

"BETSY AND I ARE OUT."

"BETSY AND I ARE OUT."

Wading knee-deep in daisies and clover,
(Sunshine so bright and breezes so cool)
Large-winged butterflies hovering over,
Puck and Betsy are going to school.

Pretty the butterflies' airy dances,
Up in the balmy summer weather;
Pretty the smiles and sweet coy glances
Of Puck and Betsy walking together.

Under long lashes, bright eyes shining,
Curly brown heads leaning each toward each—
Arms so lovingly intertwining—
Puck and Betsy are easy to teach.

They readily learn what Nature, sweet mother,
Teaches by many a gentle rule:
"My little children, love one another."—
So Puck and Betsy are going to school.

—M. B. S.

DOCTOR JUNE.

[Office hours, every day. Sundays *not* excepted. Consultation free.]

BY LUCY B. WIGGIN.

Dr. June is going his rounds;
Over the house his summons sounds,
But, ere we can answer his cheery call,
He springs up the stair,
With a confident air,
And enters the sick-room, bags and all.

"Well, how is the patient?" we hear him say.
"Very high fever, sir, to-day;
Pulses rapid and eyes too bright;
Appetite poor?
Yes, yes, to be sure;
Lucky I know what will set you right.

"This is the medicine you must take:
Every day a bath in the lake,
Night and morning a cooling draught,
(Repeat at will),
From the spring on the hill,
With an easy stroll when the cup is quaffed."

Entering next a darkened room—
Door or window, how did he come?
Mrs. Neuralgia starts and sighs
At the flood of light
Which dazzles her sight,
As she makes a feeble attempt to rise.

"Tonics, Madam, are what you need;
Oh! yes, very low state indeed.
Doses of sunshine every hour;
And don't be spare
Of the morning air—
A strengthening drink of the greatest power."

For sad Asthmatic, with wheeze and whine,
He orders the balsam of fir and pine,
Warm brown needles beneath his back,
While the sun-warmed air
Which the pines prepare,
Inhaled, will do what the balsams lack.

His medicine chest is a sight to see;
The sick little children laugh in glee,

As they scan the labels with eager gaze,
Then, relieved of dread,
Drop each tired head,
With a smile at the dear old doctor's ways.

Double Extract of New-mown Hay;
Honey of Clover, made to-day;
Essence of Dewdrop, thrice distilled;
With Apple-bloom
In each bit of room
He finds in the morning yet unfilled.

From place to place he hurriedly goes,
For even now it draws to a close—
His brief engagement of thirty days;
And one and all
Should give him a call
Who hope for benefit while he stays.

Business Manager.

HAMPTON, JUNE, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

COMMENCEMENT DAY at Hampton Institute, this year, has been honored by the presence of Mrs. President Hayes, accompanied by her sister Mrs. Anstin of Cleveland, Ohio, Mr. Rogers, the President's private secretary, and Mr. Mead, a relative of the President, and escort of the White House party. President Hayes had accepted an invitation to be present, but telegraphed that his New York trip had taken so much time that he should be obliged with regret to give up his intention.

The interest thus manifested by the Chief Executive of the nation and his representatives, in a Freedmen's school, is a cheering and encouraging fact, in keeping with the spirit of the inaugural pledges of protection to the interests of education and the colored race, and one of the evidences that our new President is a man of his word.

The moral support of this visit, and of the cordial spirit which prevailed among all present at the commencement exercises, is worth very much not only to this school but to the two-fold cause it represents.

Besides the White House party many people of position and intellect from both North and South attended the Hampton Commencement. Considerably over two hundred were present. Among them many of our neighbors and friends from Hampton and Old Point, a party of about one hundred and twenty-five from Norfolk and Portsmouth, and a good many, though fewer than last year, from the North.

Among those present from outside were Mr. Frederick Marqnand of New York, Mr. E. B. Monroe, Pres't of Y. M. C. A., New York, Mrs. Monroe; Mr. W. K. Spence of Baltimore, Misses Gilman, Garrett, King and Burnap of Baltimore; Miss M. A. Longstreth of Philadelphia; Mr. White of the New York Tribune; Deacon Ezra Farnsworth of Boston; Rev. J. B. Pinney, of the American Colonization Society, just returned from a visit to Africa; Rev. Jonathan Edwards of Mass., Rev. John W. Harding, Mass.; Mr. and Mrs. Foster of Meriden, Ct.; Mr. and Mrs. Throop Martin, Auburn, N. Y.; General Emery Upton; Gen. Getty, commanding Fort Monroe, Mrs. Getty, many of the officers of the garrison; Rev. James S. Boyd D.D., wife and daughter, Geneva, N. Y.; Rev. Charles Southgate, Mass.; Major and Mrs. Gibbs, of New York; Mr. and Mrs. Hugh Auchincloss, and Mrs. Lewis Child, New York; Captain P. T. Woodfin, Deputy Gen'l, National Soldiers' Home; Col. Thos. Tabb and wife, Dr. Semple, Dr. J. T. Boutelle and wife, and many citizens of Hampton.

In the Norfolk party were Commodore and Mrs. Stevens, Rev. Dr. Barten, Rev. Mr. Ryan, Judge Gannett, Hon. J. B. Goode, Col. R. W. Hughes, Gen. and Mrs. Pegram, Professor Webster, Rev. Mr. Woods, Rev. Mr. Rose, Col. Wm. Sharpe and Mrs. Sharpe, Captains Franklin, Truxton, Quackenbos, and Loyall, and the Captain of a Prussian corvette lying in Norfolk harbor, Mr. T. R. Williams, and Mr. H. P. Worcester.

The following gentlemen present were elected trustees of the school: Rev. A. N. Arnold, D. D., Chicago, Ill.; Mr. E. B. Monroe of New York; Judge F. N. Watkins of Virginia; Rev. James H. Means, of Boston, Mass. The other trustees present were Rev. M. E. Strieby, New York; Col. R. W. Hughes, Norfolk; Mr. Alexander Hyde, Mass.; Rev. T. K. Fessenden, Farmington, Ct.; Mr. Robert C. Ogden, Brooklyn; Mr. Samuel Holmes, New Jersey; Mr. Anthony Kimber, Phila.; Mr. Edgar Ketchum, N. Y.; Mr. Z. S. Ely, York City; Dr. Lewis H. Steiner, Maryland.

The Senior examinations and other recitations in Academic Hall from nine to noon were attended by crowds of visitors, and were well sustained. The class in Agriculture seemed to attract special notice from its novelty and practical bearing, and the intelligent interest which the pupils themselves took in the subjects under examination. The seniors were examined also in Algebra, Ancient History, and Elocution. The examination in Civil Government had to be given up on account of the illness of the teacher.

The lower classes recited in Arithmetic, Natnral Philosophy, United States History, Reading and Spelling and Grammar. As far as such examinntions can be a test of progress, these were encouraging, and it is believed by the teachers that good progress has been made this year both in study and the development of character. Specimens of the pupils' penmanship, and geometric drawing, introduced this year, were open to inspection, and copies of the Senior "Herald" and "Palladium," the manuscript journals which the class has sustained this year as a variation upon composition writing.

An interesting exhibit was made of the little composition books and maps drawn with colored pencils, the work of a primary school in Norfolk, tanght by a Hampton graduate.

The visitors took special notice, as nsual, of the industrial departments of the school, which were arranged as conveniently as possible for inspection. Some of the farm stock, the colts, and some sheep and cattle were collected in pens near the Academic Hall, a handsome table of farm prodnce was set ont inside, and two knitting machines, worked by two of the students, were in operation running off mittens.

There were no more attentive and evidently interested visitors than the party from the White House, listening to examinations, inspecting the various departments and asking questions about everything. As they stopped to look at the pretty Alderney cows, Mrs. Hayes asked the farm manager what their names were, and thonght it a pity that such beautiful creatures should not have names of their own. It was but natnral, of course, to beg that the lady would name one of them, and she smilingly complied, saying, "I will nme this one Elizabeth Fry, because it has such a gentle Quaker face."

At twelve the Senior class were escorted to Virginia Hall by the band and the other classes. After the usual lunch on General Armstrong's piazza, the visitors repaired to Virginia Hall to attend the afternoon exercises. Before they began, Mrs. Hayes kindly went to meet the school in the girls' parlor where the Senior class and the other students were presented to her, and had the pleasure of a hand-shake and kind smile, each one.

The teachers and many of the visitors were also presented. Northerners, and Southerners, white and colored seemed alike charmed by the unaffected womanliness and affability of Mrs. Hayes, and glad to think that such a true woman presides over the White House, and is the nearest friend and helpmeet of our President.

The afternoon exercises were conducted according to the following programme. The music was chiefly the singing of plantation melodies by the choir nnd school, Mendelssohn's Lark wns also given, but other glees were omitted on account of the illness of the director of the glee clnb.

MUSIC.

Salutatory: With the "Hampton Students" — Maria Mallette.

Valedictory: Virginia in the Revolution, — Wm. M. Reid.

MUSIC.

A Post-Graduate's Experience, — Frank Tyler.

PRESENTATION OF DIPLOMAS.

MUSIC.

Contrary to the custom of the school, prizes were awarded for the essays and orations best written and delivered. They were the kind gift of Dr. R. H. McDonald of New York, who requested that they should be distributed as follows: $20, $10, and $5 to the young men, and the same to the young women. In accordance also with the wish of the giver, two committees were selected by the Principal, one of two ladies and one gentleman to award the girls' prizes, and one of one lady and two gentlemen to award the young men's. On the first committee were Mrs. Rutherford B. Hayes, Miss M. A. Longstreth, and Hon. J. B. Goode. On the second, Mrs. Commodore Stevens, Col. R. W. Hughes, and Mr. Alexander Hyde.

Hon. J. B. Goode in announcing the decision of the committee on the girls' prizes, said:

"Permit me first to say, I am glad to be here to-day. I feel that it is good for me to be here. It is a rare enjoyment. It is impossiblo to over-estimate the benefits to your race of an institution like this. It draws out all the powers of the mind. It teaches you to think, investigate, reason for yourselves. It prepares you for the duties of life. There is as much difference between uneducated and educated men and women as there is between the rough ore and the polished metal. Both have the same essential properties, but one is rough, unsightly and useless, the other fitted for use and ornament.

How important, then, to improve these golden opportunities. If unimproved, then like Esau you will have to mourn the loss of your birthright when tears will not redeem it. The great Webster used to say that he had seen more than Methuselah. It is not the number of years but the opportunities enjoyed and improved that make life long and full. What a responsibility to live in this wonderful nineteenth century in a country like this. We all have opportunities; we may not all become great, but we all may become useful in our sphere of life.

You have been taught that a stone cast into the ocean communicates motion which spreads and spreads until it is felt on the remotest shore. So from every heart spreads influence which shall never cease to spread. Soul reacts on soul—the spark that fires a single breast is conveyed to other bosoms. Let us be careful to exert a good influence.

Having the honor to be associated with that excellent and distinguished lady, Mrs. President Hayes, and that honored friend of this school, Miss Longstreth, on this committee, I have to announce that, after much embarrassment to discriminate and even with some disagreement, we have at last agreed to award the prizes as follows:

$20, to Della E. Irving; $10, to Maria Mallette; $5, to Caroline Roberts; and $5, to Alice Harris."

It was announced by Gen. Armstrong, that the last named $5 had been kindly added by Mrs. Hayes herself, to reward the writer of the original Temperance story. The cause of Temperance, as our readers know, is one in which our President's wife takes great and practical interest.

The girls came forward and received their prizes from the hand of Mrs. Hayes, who gave with each a kindly smile, and then the young men's prizes were announced by Col. Hughes, with the remark, that the committee designated had had great difficulty in making any distinction where all had seemed in one respect or another equally good. As it was necessary to decide they had at last done so in a somewhat arbitrary but not invidious manner, as follows: $20, to Robert Hamilton; $10, to William Reid; $5, to Henry B. Rice. These prizes were distributed by Mrs. Commodore Stevens.

REV. MR. RYAN of Norfolk, an Irish gentleman, pastor of a prominent church in that city, was introduced, and said,—

"Though I have been for many years associated with similar institutions, and though the same principles have been involved in their work, I must say that these principles have been presented with more force, and with more significance to the future here to-day, than in any f have ever seen before. The very place itself—calling up remembrances, first of all of the emigration of noble men from the old country to hew out freedom here, —then of the manly struggles of a free people against the oppression of George IIf. And let it be remembered that every Englishman to-day feels proud that the language in which Chatham and Burke spoke for your freedom, and all freedom, is his own mother tongue. When I remember the later struggle in which your Principal and the colored people took so important a part, and then learn that many statesmen and officers of the side opposed to you in that struggle now contribute to your school, with profound wisdom,—I look on the scene of to-day as prophetic, not of a distant future only, but of an immediate future.

"I see waving above us here the flags of *all* nations. You have sympathy for all. Grand-hearted—large hearted people of America, it is in this that your greatness consists. When we subjects of Her Majesty are away from home, our Queen's birthday always thrills our hearts with loyalty.

"But when I see your President's representative here to-day, this honnred and beloved lady moving so graciously, kindly, sweetly among her sisters, my heart thrills like yours. Ah, that lady needs no household troops, no Horse-Guards. She lives in the hearts of this people!

"Sir, I feel that this height to which we have climbed through years of war and tumnlt is a sort of Mount Sinai with its terrors gone, its thunders silent. Its lightnings are passed. We have come to that other mount, we are come to Mount Zion, to the spirits of those who have brought us to this height, to the general assembly of the First-Born.

"Your Principal has told me, and it is a pregnant thought, that nearly every one of this graduating class of fifty, he believes, goes forth with the love of Christ in his heart. That is a blessed and beautiful thought. I remember an address of Sir Edward Bulwer Lytton to the Alumni of Edinboro' University, in which he said: 'Yonng men, allow me to tell you, as a man of letters in the world, that religion, in its simplest form, as it flowed from your mothers' lips, is the best thing you can have, better than philosophy and learning. Having this you have the converging lines to Mount Calvary, the glory of God, the good of men.'

"The brightest gem of the British regalia is the Koh-i-nor diamond, valued at £4,000,000. But richer than the Koh-i-nor, my dear young people, is God's peculiar treasure. The King of Kings has nothing more precious—God himself can give you no greater thing—the fear of the Lord is His strength."

The presentation of diplomas to the Senior class was made by Rev. M. E. Strieby, president of the board of trustees since the death of Rev. Dr. George Whipple. After an eloquent tribute to the memory of this one of the most honored and self-devoted laborers in the American Missionary Association in the time of its early struggle for existeuce and through many years after, Dr. Strieby thus addressed the class:

"Dear friends, you are going forth to the battle of life. A Spartan mother who sent her son into the fight and gave him his shield, said to him, 'My son, come back with your shield or borne upon it.' This is the spirit

you need as you go to the great conflict before you.

"Why do I speak of conflict? Has not the boom of cannon ceased? Does not the sunrise of peace crown all the hill-tops of Virginia and reach even South Carolina and Louisiana? It does—and it is the effect, as I honestly believe, of this blessed, growing fraternity brought about by the deep political sagacity of our new President of these United States.

"My friends, I had a speech all prepared to deliver to you, but I am saved the trouble. Every one of your orations and essays takes the wind all out of my sails. You have told us your duty better than I can tell it to you. All I need say is, go forth and do as you have said. Sweet singers, go on and sing until your songs die in Heaven's chorus. Go on, young friends, to do your work as men and as women, for Virginia, for our common country, for Africa. You know your work—go do it.

"These lands, this beautiful site on which your buildings stand, and which you cultivate, are the combined gifts of Old Virginia and the North. I am glad to be told that here are white representatives of this neighborhood in increasing numbers every year to behold the progress of your people.

"It was this wish of your trustees that the President of the United States might be here to-day. I am told that he had great regret in not being able at last to come, but I am happy, in your name, to welcome Mrs. President Hayes. Her presence with us, and that of these friends, and all that is seen to-day, are evidences of encouragement to your race in the conflict of life.

"But I am happiest of all to believe that almost every one of this class has an intelligent hope in our Lord Jesus Christ.

"O young friends, go forth to do the work of your Father, on this earth, and to meet Him in heaven."

PRESIDENT HAYES'S PRIVATE SECRETARY

was then introduced by General Armstrong, with the remark, "I think Colonel Rogers has been doing some thinking to-day, and that he will be willing to say a few words to us."

Colonel Rogers responded as follows:

"I believe I must say Yes to the statement of General Armstrong, and I say it with all my heart. It is so late, however, and we have been saying so much, and hearing so much, that I fear I shall trespass too much upon the time that is left if I comply with General Armstrong's request. And yet I should certainly do injustice and violence to the emotions of satisfaction, the emotions of pleasure with which I have witnessed and listened to these exercises in this beautiful Hall, and in Academic Hall, unless I should in some brief way respond to General Armstrong, to tell you how deeply, how earnestly I have been thinking, as he said. Certainly, they have been a theme for my earnest thought. Interested as I have been all my life in Normal Schools, and many of their closing days as I have seen, I have never attended an examination of any Normal School where the pupils gave marked evidence of more thorough training, and the teachers decided evidence of more conscientious discharge of their duty, than I have seen here to-day.

"I have been accustomed to think of Normal Schools as of first importance among educational institutions. I say this with deep heartfelt interest in Common Schools, but I place the Normal School first, not only in its intellectual training, but its interest in training of characters. I looked on the map which General Armstrong showed us in Academic Hall, where stars were marked, dotting the surface of Virginia all over, showing the places where graduates of this school are doing their grand, good work; and I said to myself—Well may the State of Virginia foster and cherish, as I understand she does, this institution. She has no interest within her borders—this great State, Mother of States, as we love to think her—she has no interest North, South, East or West, through all her beautiful hills and valleys, from where the Atlantic laves her shores to the mountains of her western boundary, no interest to compare with this work that is being done here; no institution—and I mean every word I say—not one she can foster and cherish, that is comparable to the institution whose commencement exercises we have witnessed here to-day.

"I was glad to hear your post-graduate say, in giving us his experiences, that his duties, and his sphere of work while a teacher, had not been confined to his own race. For while race duties are substantial and significant, they are secondary altogether to the larger interests which make us one in a common humanity, in a common purpose to live for all in our land.

"We have all races here: let us remember that as citizens of this free land, one flag waves over us, and we have a common interest in that flag. The time is coming, I trust, when we shall feel that common interest more deeply.

"In the name of those who are with us, and whom we represent, I thank you, pupils, I thank you, teachers, I thank you, friends of this Normal School, for the very great pleasure you have given us to-day."

THE YEAR'S GROWTH.

The growth of the school this year compares favorably in all respects with that of previous years. It closes with 274 on its rolls, and has had an average attendance of 245, a gain of fifteen per cent. over any former year. Of these, 210 are boarders from all parts of the country from Massachusetts to Louisiana, though the greatest numbers are, naturally, from Virginia and the neighboring States. These come into the full atmosphere of the school, its moral and religious training, military inspection of clothes and quarters, and general personal influence outside as well as in school. The day scholars are naturally less under it, but are invited tend the Bible classes and other services and do so to some extent.

The comfortable new cottage, erected last summer for lodgings for the young men of the Middle class, by the generosity of a gentleman of New York, is occupied by thirty-five students, and makes room in Academic Hall for the recitations of the Preparatory class, heretofore held in the Butler school-house. A fine new barn is just started, to cost $5,000, which is nearly provided for, and with these buildings the needs of the school in this direction will be met for some time to come.

The examinations have shown good results of the year's work in the school-room. The Senior class have studied this year—Algebra, Ancient History, Civil Government, Grammar and Composition, Elocution, Book-keeping and Agriculture.

The industrial departments of the school have increased in number and value. Several industries have been added giving employment to many more students. Ten hand knitting machines are kept in constant operation filling orders from a Boston firm, which supplies the yarn and takes the mittens. A hand loom keeps two young women in work, weaving rag carpets to order and for sale. The broom factory is closed for the present, but will be opened again. The brick kiln makes 200,000 bricks a year, for which a ready sale is found. The carpenters among the students have found, as always, abundant occupation on the place. There is a clothes-cleaner among them and other trades are represented and find room.

The girls' industrial room has turned out 1332 articles during the year. Most of the tailoring as well as plain sewing and all the mending for the students is done here. The girls of the Senior class have had instructions every week in cooking in the different families on the place. They have also, as usual, done the laundry work of the school.

The trustees' committee to inspect the farm report great improvement. The stock has been improved and increased. Early produce and fine Cotswold lambs are sent to Northern markets.

The Printing Office gives more employment to students than last year, having obtained since January the printing of the "American Missionary," a monthly paper published by the American Missionary Association in New York. The "American Colonization Society" at Washington, D. C., has also decided to have its quarterly magazine "The African Repository" printed in this office. Outlays have been required to provide for this increase of business, but the office report promises to show a small profit at the end of the year.

The Engineer's department reports the addition of two large water tanks to those already provided, and the steam pump, fire engine and all apparatus in perfect order, and that the agents for the board of under-writers say that this school has the best fire apparatus of any institution in the State. This department has made this year for school use, 40 iron bedsteads and 45 tables, more substantial than any that can be found in the markets and at a third less cost.

The Librarian reports 1996 book in the library, chiefly the gift of friends, and including many valuable works. There have been drawn out during the year, by the young men, 896; by the young women, 429, which is in about the proportion of one sex to the other in number.

The Senior class add 51 to the 196 former graduates of the school, of whom 95 per cent. have been engaged in teaching. The seniors remain after graduation to take a three weeks' course of special instruction in teaching, conducted this year by Professor Johonnet of Ithaca, N. Y. Fifteen post-graduates have come to attend this course.

The church connected with this school has had constant though quiet religious growth. Nearly every one of the Senior class not previously connected with any church, has already united with it, and it is hoped that all will go forth to their field of labor as Christian workers.

THE Southern Workman, like most folks, likes to be appreciated. Its increasing circulation is one cheering sign of rich appreciation, and still more pleasant are such sympathetic words as the following letter contains. Once in a while we like to lay one of these encouraging notes that come to us before our readers believing that many of them will enjoy it as much as we do far the sake of the same good cause

"SALTVILLE, VIRGINIA, *Feb. 26th*, 1877.

"*J. B. F. Marshall Esq.,—Dear Sir:*

"You are no doubt aware that my term of subscription to your paper, 'The Workman,' expired last December, but you were kind enough to send me the *January* number, for which I return many thanks.

"The 'Workman' is such a good paper that I think it behooves me to give my testimony in regard to it.

"It is better suited to the wants of colored readers than any paper I have ever seen. A good many of the colored people of this place are already subscribers to the 'Workman' and I think it is gaining popularity every year and will soon gain a large circulation in this vicinity. I have not succeeded in getting up a club as yet, but hope I will soon I have concluded to subscribe to it another year, and a few days ago I sent you the price of subscription, &c., which I suppose you have received ere this. With the best wishes for the welfare of your paper, I remain

Yours truly,
CHARLES CALIVER."

Agricultural.

CHICKEN CHOLERA.

A number of years ago, when our flock was very much afflicted with this disease, a noted poultry fancier was asked the remedy for it. He replied that no poultry yard was ever visited by it, where a convenient supply of clean sand was always accessible to the chickens. Acting on this hint, a flat box was filled with coarse sand, and the epidemic has disappeared entirely. Ever since a box of sand has been at hand for the use of the poultry, and they have kept in perfect health. They sometimes stand over the box and pick at it for several minutes, as if the contents were corn, or other feed. It is also good to keep a water vessel of cast-iron, the rust of which is very healthy for the chickens that drink out of it. If small quantities of slaked-lime are mixed with the sand, the effect is good. In prairie soils poultry cannot get enough either of lime, or sand, such as is imperatively necessary for health, unless the supply is specially and regularly made for them.—*T., in the American Farmer,*

THE BEST BREED.

There is scarcely a week passes that some correspondent or friend does not ask us the question:—"What is the best breed of fowls now raised?" This is a question that no person should attempt to answer. Did they ask which breed we considered to be the best, then we could give our personal opinion in the matter; but let us see how this would work.

We go over to neighbor A.'s and ask him which breed he considers the best, to which he replies:

"The light Brahmas, beyond question. They are hardy, prolific layers, very large size and an excellent table fowl."

Mr. B. thinks the dark Brahmas are best; thinks they lay more eggs in the winter. C. will breed nothing but Cochins, making the Partridge variety his specialty; while his neighbor D. across the way will breed nothing but Buffs, and thinks they are the best. E. says the Leghorns beat them all, and F. thinks the Game fowl has no superior, if an equal.

And so we might go on until we had found a champion for every breed mentioned in the Standard, and several others beside, all of whom see superior qualities in their own birds.

To the beginner in poultry raising, who is anxious to obtain the best breed, we would say that, in our opinion, more depends upon the person having charge of the birds than upon the particular variety kept. Smith may be breeding Leghorns, while his friend Nash breeds Brahmas. They conclude to keep exact accounts for a year, and see which one realizes the largest profit. At the end of the year it is found that Nash is considerably ahead of his neighbor, who comes to the conclusion that Brahmas are more profitable fowls to keep than Leghorns, and he wishes to exchange all his Leghorns for Brahmas. To his surprise Nash offers to trade fowls with him, which is done. Again they agree to keep accounts for a year. The year draws to a close and Smith is confident of winning this time, for are not his the very best birds that made the largest profit last year? But to his surprise and chagrin Nash is ahead again, which only proves that Nash is the better breeder of the two, and knows how to manage his fowls so as to realize the largest possible profit.

In making your selection to commence breeding, it is much more advisable to consult your own tastes and fancies than the relative merits and demerits of different breeds. A farmer who was about to engage in breeding pure bred poultry recently said to us that he wanted a profitable breed, but that it must be large and white in color, for he didn't like any other color, neither did he like a small fowl. To this we replied that he had better get either white Cochins or light Brahmins. Better results will generally be obtained if beginners will consult their own desires and inclinations in making their selections of a breed.—*K., in Poultry Argus.*

POULTRY RAISING.

When so many find it difficult to make a mere sufficiency for life's support, it seems unaccountable that the pleasant and profitable business of poultry raising should be seldom or never resorted to for the purpose of gaining a livelihood, and establishing a paying and permanent business, while an eager, struggling crowd are jostling each other in every other avenue of industry, no matter how difficult or how meager and uncertain the remuneration promised. Poultry raising for profit is a light employment, requiring no particular adaptability, and but a modicum of real work, with, of course, that regular and ceaseless attention which must be given to any business to ensure success, and it is a paying visit from the day of investment. The one secret of success is thoroughness. The chickens must be well and regularly fed with a variety of good food and fresh water.—*Poultry Nation.*

KINDNESS TO CATTLE.—A neighbor recently remarked to me, "You have a faculty of charming steers." I replied that it was a mistake. I simply study their nature and adapt myself to that nature. In approaching home (whether they are in yoke or not,) though I may come with a "rod," yet I always come with love. If I am in a hurry and a steer is in my path, I never give him a kick or a thrust, with a yell, "Get out of my way," but instead I allow him the path, while I pass quietly by, gently rubbing him with the hand as I pass. The pressure of the hand on the animal has a powerful influence in treating him, and I had rather engage to bring two yoke of steers to a stage of good working discipline than tame one pair that had been taught to fear the presence of man.

—*Maine Farmer.*

THE WORKMAN ORATOR.

What think ye boys? Beneath each workman cap
Is set a gift—such as it is—mayhap
A royal one, a Reason great and stout,
To hold the rein within, to reach without—
Through hand of iron sinew, cunning taught
Through hand and arm for conquest deftly wrought—
And smite the rugged elements of earth,
And smelt and fuse until there cometh forth
The wealth of seas, the treasure of the hills,
In giant forces tamed to our wills.
For man is man, and he hath ever been
A somathing better than a live machine!
As God is God, the world had come to naught
Without the workman's sturdy arm and thought.
I tell ya too, under a ragged vest,
A strong heart strongly beats time with the rest;
For blood flows warm in every land and age,
And children are the workmen's heritage.
Oh i when a face is from tha hearth-stone took,
A man of iron is to the center shook.
But over heart and hand our God hath set
This prince of Reason to restrain or let.
What think ye of this kingdom of the head—
The poor man's palace, honor and his bread?
O, comrades, listen! When we drunken be
We fire tha palace, give a fiend tha key.
Our honor lies, all naked, in tha street;
And stones for bread we give our own to eat—
Aye, worse than stones, to them we love so well:
We crush their hearts, and feed them upon hell!
And shall we throw our birthright, lads, away?
Give our manhood? Nay! Forever nay!
The man who gives to drink the reign and rule,
The wise man, wisely branded as a FOOL.

E. B.

At Home.

WHERE IS GOD?

BY MINOT JUDSON SAVAGE.

"Oh, where is the sea?" the fishes cried,
As they swam the crystal clearness through.
"We've heard from of old of the ocean's tide,
And we long to look on the waters blue.
The wise ones speak of the infinite sea;
Oh, who can tell us if such there be?"

The lark flew up in the morning bright,
And sang and balanced on sunny wings;
And this was its song:—"I see the light,
I look o'er a world of beautiful things;
But flying and singing everywhere,
In vain have I searched to find the air."

—*Scribner's Monthly.*

SUNLIGHT A NECESSITY.

The Journal of Health says:—Sun-baths cost nothing, and are the most refreshing, life-giving baths that one can take, whether sick or well. Every housekeeper knows the necessity of giving her woolens the benefit of the sun, from time to time, especially after a long absence of the sun. Many will think of the injury their clothes are liable to from dampness who will never reflect that an occasional exposure of their own bodies to the sunlight is necessary to their own health. The sun-baths cost nothing, and that is a misfortune, for people are still deluded with the idea that those things can only be good or useful which cost money. Let it not be forgotten that three of God's most beneficent gifts to man—three things the most necessary to good health—sunlight, fresh air and water, are free to all; you can have them in abundance, without money and without price, if you will. If you would enjoy good health, then see to it that you are supplied with pure air to breathe all the time; that you bathe for an hour or so in the sunlight, and that you quench your thirst with no other fluid than water.

WHICH WAS THE LADY?

We have heard of an old person in a Northern poor-house who having once been rich, has now been supported by the town for many years because ever since she lost her property she has absolutely refused to labor, thinking it degrading to a lady to work.

The daughter of one of the rich Barons Rothschild of Europe, the Jewish family whose enormous wealth makes them money-leaders to nations, the supporters of governments, has just received a well-earned diploma in Paris as a teacher.

BATHING.

Bathing should always be avoided under the following circumstances, namely: Within two hours after a meal, and when exhausted by fatigue or any other cause; also when the body is cooling after perspiration—the bath to be taken when the body is warm, provided no time is lost getting into the water; bathing in the open air should be avoided altogether if, after having been in the water a short time, there is a sense of chilliness with numbness of the hands and feet. Vigorous and strong persons may bathe early in the morning, on an empty stomach, but young persons and those who are weak are safer in bathing three hours after a meal, the best time for such being two or three hours after breakfast. Those who are subject to attacks of giddiness and faintness, and those who suffer from palpitation or other sense of discomfort at the heart, should not bathe without first consulting their medical adviser.

To Can Strawberries.—The following are reliable rules to be followed in putting up strawberries: 1. To a pound of berries add one-quarter pound sugar, which should be sprinkled on the fruit and remain over night; then place them in a porcelain kettle, let them come to a boil, and can them at once; keep them in a dark, cool place, as the light will discolor them, but will not injure their flavor. 2. Make a syrup of white sugar and water, bring to a boil, skimming if necessary; throw into the boiling syrup enough berries to fill one can, and as soon as they boil up skim out the berries into the can and seal up; continue this till all the fruit is disposed of. The syrup that remains makes a beautiful jelly. 3. After removing the hulls, weigh the fruit and then the sugar, taking pound for pound. Put the sugar with a little water on the stove, let it boil twenty minutes, put in the fruit and let it just boil, taking care that each berry gets scalded. Have the cans ready and seal immediately. Keep the fruit in the cellar in the dark. 4. To one quart of berries take a tea cup of white sugar with enough water to form a syrup; when the sugar is perfectly dissolved put in the berries and cook fifteen minutes. Can immediately in tin and solder tightly. Keep in the cellar. In general, the berries should be canned as soon as possible after they are taken from the vine.

"HE WON'T BITE YOU."

To make a dish of ham and eggs as good as possible, cut the ham nearly half an inch thick, boil it in plenty of water till barely cooked through, pour off the water and put the pan in a place just hot enough to brown the fat part of the ham slightly, but not hot enough to make smoke, or to brown the lean meat much. When this is finished remove the frying-pan from the fire, take up the ham, pour off the fat into a cup, and wipe the pan till it shines like a mirror, without a single speck to mar the polish. Then put in a spoonful of the clear part of the fat, break in the eggs, and set the pan in a place scarcely hotter than boiling water; cover it, and let the eggs cook as slowly as possible for four or five minutes, taking them up as soon as they can be lifted out. Place them around the ham, and do not pour any of the fat on the dish. Eat with mashed potatoes.

HE WONT BITE YOU.

No, don't be afraid, little one, good old Charley won't bite you. He has been treated kindly all his life, so he is kind himself to everybody. If he had been beaten and abused as so many poor animals are, he would have learned ugly, vicious tricks in self-defence. He would lay his ears back on his head when you came near him, and look at you out of the corners of his eyes, expecting every moment to receive a blow or a kick, and he would show his teeth, and kick at us himself. Poor beast—how should he do any better? Could you expect him to be so much better than men had been to him? If you want to make your horse gentle and willing, you must be gentle and kind to him.

The horse is a very intelligent animal and very responsive to kind treatment. Many pleasant stories are told about horses. We have heard of a horse-trainer in California who is so fond of his horses and spends so much time with them that he thinks they can understand what he talks to them, and it really seems as if they did understand a great deal of it. A gentlemen who visited him says, "He turned to a slender, light-built grey pony and said, 'Billy, we are talking about you; if you know what I am saying, turn your head round on the off side.' The pony did so and then went on feeding. 'Billy, tell us on which side of you is your friend Vesta.' The pony whinnied and then, being loose in his stall walked into the next one occupied by the mare Vesta. 'Now,' he said, 'do you and Billy walk down together to the trough, while I make up your beds.' Vesta and Billy walked quietly out and went straight to the trough."

We have seen a horse pump water into his trough to drink. He had learned this all by himself, simply, it must have been, from seeing it done. He would put his nose under the handle and knock it up, and then either knock it down or seize it with his teeth and pull it down, we forget which. But he did not think far enough to pump all he wanted at once. As soon as the water ran, he would stop and drink that up before he pumped again. The pretty colts—good old Lion's colts—growing up on the Hampton Normal school farm are all trained by kindness. We do not mean that their faces shall grow into the pitiful look of patient, hopeless misery which so many horses wear.

Charley's has a happy look, hasn't it? What soft, kind eyes. Come, give him the grass. He won't bite you.

MY LITTLE GENTLEMEN.

BY MARY D. BRINE.

There are five of them, and I presume all strangers to each other. One of them I met in the street-car one day—the ten-year-old boy who respectfully offered his seat to a lady whom no other occupant of the car appeared to see. The boy looked tired and had with him a heavy parcel which could not be trusted out of his hands. The seat was comfortable and he had thoroughly enjoyed it.

But this boy was too full of gentlemanly instincts, and too truly one of Nature's little noblemen, to retain his seat while a lady was standing. And, by the by, had you seen how poorly she was dressed, and noticed the shabby purse from which she took her fare, you would have thought her only a poor woman, a seamstress, may be. Perhaps she was; I only called her a lady because she did as ladies usually do—accepted the seat with a smile and a "Thank you, my boy!" which must have made my little gentleman well content to have yielded his place, and happy notwithstanding the fact that his small feet had only the ghosts of shoes upon them and his jacket was a coat of many colors, where loving mother-hands had patched it.

Another of my little gentlemen I saw in the street soon after. He was dressed in the style of the season, and *looked* the little aristocrat that he was. Several of his stylish little companions were with him, and they were having a grand sledding time as I approached. A beggar woman just then turned into the area of one of the handsome houses. I don't know whether she received help or no. But as she turned to come out a second after, her foot slipped, and, basket and all, she fell flat amongst the merry and wild boys. They laughed, as what boys would not! But my little gentleman—the best dressed of the group—checked his laugh and kindly assisted the forlorn woman to her feet. Then he lifted the basket and with his daintily gloved hand gathered the cold pieces together until the basket was filled; and with a polite bow he handed it to the woman who stood grateful and speechless before him. When I passed a minute after I could not resist saying, "Your mother has a noble son, my boy!" and he answered confusedly, "O, that's nothing!" But it *was* something, little readers, was it not, in the eyes of those waiting angels who carry our good deeds to the Great Throne above?

My third little gentleman I found also in a street-car. I had an armful of packages and sank wearily into the seat two ladies rather unwillingly made for me between them. Standing in front of me was a little fellow about twelve years of age. Poor and very scantily clothed he was, but I noticed his face and hands were clean, and his eyes had an honest straight-forward look that one likes to see.

Older passengers shoved him here and there, but he patiently clung to his strap and allowed others to sway him about as they liked. I had some difficulty in getting my fare out because of the bundles, but presently a low and rather timid voice said, "Please, ma'am, *I'll* hold yer bundles if yer likes," and my little gentleman took them from me as I thanked him. The passengers about him looked pleased at such an unlooked-for act of politeness on the part of the ragged boy, and *he* looked confused. But *I* shall never forget the little thankful act of this little gentleman of mine, and have no fear for the future of a boy whose heart is so noble.

The fourth of my class of noblemen was only a newsboy, quite unconscious of the title I soon gave him.

A blind man, with his cane and the brushes he was trying to sell, came feebly along the street, hesitating now and then as the blind must, uncertain as to what might be before him. Down the street came a crowd of newsboys just from the offices of the different papers, and screaming at the top of their lungs. One among them—a bright-eyed little fellow—only nine years old, I judged, noticed the blind man. "Hold on, fellers!" he cried, "don't run agin that old cove now. What's the use of hurting him when he's blind and can't look out for hisself!" I paused to watch the result. The other boys checked their speed a little and then hurried on, crying, "Oh, bother!" So my little gentleman stood beside the blind man until the crowd had passed and then silently withdrew. The old man, little dreaming of the youthful protector who had shielded him, moved slowly on, and I opened my heart to take in *another*, whose small head was already laurel-crowned in my opinion.

The fifth little gentleman was one of the better class of boys, that is, so far as station goes. He was passing along the street whistling and jingling a pocket-full of marbles. He seemed in haste—probably hurrying to join a comrade at their favorite game—but a little girl, thinly clad and crying bitterly, was crouching beside a cellar grating and peering down into the darkness below. I had just left the editor's office and stood a few minutes to wait for a car. The girl's sobbing attracted my attention and I turned to watch proceedings.

"Hallo! what's up?" asked the boy, pausing.

"I dropped my pennies down there, and—and—mother'll beat me sure when I go home, oh, dear!"

"Never you mind, sis," said the boy. "I bevee't much time, but I'll see if I can find them for you. Wait here!"

Then he entered the store and asked permission to go down in the cellar. Leave granted, he searched for the pennies until they were found, and returned to the weeping girl. Her tearful smile was pleasant to see, and though she hadn't time to say "thank you," so speedily did the little boy run off, yet it was in her heart, no doubt, and *I* had one more to add to my adopted family of "Little Gentlemen."

Little gentlemen make *big* ones, we know, and fine clothes are by no means necessary to prove that fact. Only an accident of birth makes the difference between a nobleman and a noble man, and the first, perhaps, may hold his nobleness only in his title, while the latter receives from the hands of his Maker the title which makes him one of the great court above.

—*Wide Awake.*

A FOOT-HOLD.

Hardly a steamer that crosses the sea
But carries one traveller more,
For a little time, out on the shoreless sea,
Than she counted when leaving the shore.

Blown far away from his mate where she sings,
By the pitiless sea-bound gale,
Lost, and plying his patient wings
Till heart and courage fail;

Lost on the shoreless, unknown main,
Blinded with salt white spray,
Dazed with the endless, waving plain,
Scared by the lengthening way;

Lost on the sea, and no land in sight;
Through the heavy and misty air—
Struggling on through the dark and the light
To terror and mute despair—

Till on the horizon a cloudy speck
Clears to the mast, like a tree,
Clears to the solid and ground-like deck,
And he follows it wearily.

And clings and croaches, a welcome guest,
An eager and tremulous bird,
With the green and blue on his neck and breast
By his heart's hard pantings stirred.

Then came pity, and food and drink to the brim,
And shelter from wave and cold;
But the quick head droops, and the bright eyes dim,
And the story all is told!

Pitiful comfort, yet comfort still
Not to drop in the hungry sea,
Reeling down out of the empty height
To that terrible agony.

Bitter and hard to be driven to roam
Between the sea and the sky,
To find a foot-hold and warmth and home,
And then——only to die!

Yet it was harder, God He knows,
Who counts the sparrows that fall,
For the birds that were lost when the wild winds rose,
When the sea and the sky were all;

When the sky bent down to infold the sea,
And the sea reached up to the sky,
And between them only the wind blew free,
And never a ship went by!

—By Anna C. Brackett, in Harpers' Magazine.

PLAYING SCHOOL.

Straws show which way the wind blows, and children's plays show what will be the next generation's work. They love to imitate in their games the doings of older people, and to anticipate the occupations of their own manhood and womanhood. When a great wave of patriotism is swelling over the country, even the little children shoulder mimic arms, and that is sometimes rather a sad sight, for there is something strangely incongruous between childish innocence and red-handed war. But the children, whose big brothers and sisters trot happily off to school every morning, like to play at school themselves, dolly and all. The children of the world vote for school-houses.

HAMPTON INSTITUTE LECTURES ON TEACHING;

BY PROF. F. A. ALLEN.

LECTURE X.

THE ELEMENTS OF GOVERNMENT.

The elements of school government, as of all government are

1st. Ability to govern one's self.
2d. Scholarship.
3d. Skill.
4th. Honesty and integrity.
5th. A right use of eyes and ears.

Let me say here, as I meant to say before, that it is better to use the word pupils and not scholars for the children we teach. A scholar means rather, a learned person. So we speak of a great scholar—a scholarly person, meaning one profoundly versed in learning, A pupil is a youth under the care of an instructor.

Without self-control, it is impossible to really control others. A man who cannot rule his own spirit cannot conquer a city—and if it is conquered for him he cannot govern it. In the long run, if he had not honesty and integrity behind it. We all know our own weaknesses—just how far we are honest and true. And let me tell you, you can't live up any higher than you *are*. You may pretend to, and deceive some people for a while, but by and by, down you come. If you want to seem good, *be* good. If you want to raise your position, raise yourself.

Remember this—that the eye is the born governor of the school-room. Don't have reporters and tale-bearers in your school. The teacher's sentinels are his eyes and ears. In the proper use of these, therefore, lies your greatest power to govern your school. You must train yourself to see all that goes on in the school-room without turning your head from side to side. While your head is turned to face one side of the room, the other side may be throwing balls on the ceiling. A little practice will enable you to turn your eyes sufficiently to see nearly all about the room without turning your head at all. Arrange your classes so that no pupil will be out of your range of vision, and cultivate quickness of sight. The law, by the way, has decided that the teacher has control over the pupil going to and from school as well as in the school-room.

"PLAYING SCHOOL."

CENTENNIAL VIEWS.

WHAT THE WORLD THINKS OF EDUCATION.

THE FOREIGN EDUCATIONAL EXHIBIT.

It may seem to be nearly time to bring our Centennial Views to an end, but they would be very incomplete if the Educational exhibit were left out. To all concerned in the subject as are we and our readers, it is interesting to know what the great nations of the world in general think of this question of free schools, and universal education, upon which there seems to be a diversity of opinion of late in some corners of our own country.

They, at any rate, thought enough of it to take good care to be represented in this department. No one could walk down the brilliant aisles of the Main Exhibition Building without being struck with the display under every national flag, of school-books and school-apparatus. Silks and satins did not crowd out the spelling-books. Model school-houses and children's copy-books were shown with as much national pride as the richest products of industry and art, and each nation's display was examined with as great care and interest by the commissioners of other countries.

THE BRITISH EMPIRE.

England.

The educational methods of the great British Empire were represented in greater detail in its provinces than in England.

A very interesting and beautiful exhibit of mechanical and other drawings was made from the Science and Art Department of the South Kensington museum, London. This art school, which is free to all, has done a vast deal to raise the standard of domestic art in England. It was an outgrowth of the World's Fair there, and we look for similar results from the museum which our own Exhibition has given birth to in Philadelphia.

Besides this great one at Kensington, hundreds of art schools have been established in the cities and country districts. One of the most notable ones is at Lambeth, and the students, nearly three-fourths of whom are women, are employed in decorating the beautiful Doulton pottery, every piece of which is a work of art, and no two of which are alike. Fine school-maps and illustrated charts of Botany, Astronomy, Natural Philosophy and Natural History, were shown, and magnificent art-instruction books in drawing and painting and studies in design.

CANADA.

The Canadian educational exhibit was very thorough and interesting. Models of city and country schools—completely furnished with tiny desks and blackboards—the roof off so that all can be seen at a glance. So are exhibited, with the grounds laid out around them, many of the colleges and schools of Montreal, Quebec and Toronto. Full cases of elegant philosophical apparatus from the government schools of Toronto, and photographs of the Normal school and University. School work from all the Provinces was shown. Among the apparatus for object teaching was an exceedingly useful series of specimen cards. These could be easily copied for our own schools, or even made up in a rough way by our pupils under a teacher's direction, very profitably to themselves. They were simply large cards with real specimens of plants fastened neatly upon them, and the botanical description below. Thus a tree was illustrated by a bit of the wood and bark, a pressed leaf, flower and nut. Another valuable aid to instruction was the handsome relief-maps, by which the student gains an idea of the physical features of different countries, their mountain elevations and slopes of the continents. Education is compulsory in the Provinces as in England, and there are excellent Normal schools for the training of teachers.

When the Hampton Students visited Canada, one of their most interesting visits was to the University and High school of Toronto, and the beautiful collections of the very complete apparatus of the Government schools.

FRANCE.

In the French Department were found models, charts, maps, school-books, and specimens of work from the various classes of schools, with full statistics of the progress of education in the State. Paris exhibited portfolios of elegant specimens of art work, designs and drawings from its higher schools.

quisite work in designing for fabrics, and specimens of embroidery and sewing. From 1860 to 1870, seventy-five new school-houses were built in Paris, giving places to 8,500 children of both sexes, of primary school age, and since 1871, 28,670 more have been provided for. France is said to be now spending 71,000,000 francs ($14,000,000 in gold) yearly for primary instruction, part paid by the central government, and part by the communes, or districts, and part by the parents. This is more than is spent for this purpose by any other nation in Europe.

GERMANY.

What Germany thinks of common school education for the masses is well known to all the world. Her very thorough and rigorous system of compulsory public education is closely connected with her military system, and its result is an army trained from childhood to self-control, obedience to orders, and love of "Father-land," and a peasantry intelligent and thrifty. The training of teachers is as systematic as that of the students, and under strict governmental supervision. After leaving the common school, a student who would become a teacher must spend four years in a "preparatory course in a training school or with a private tutor, and three more years in a seminary; the first two to be spent in an elaborate course of study of the subjects he is to teach, the third devoted to teaching under supervision of the director of the seminary in the nearest primary school. He must pass a severe examination, oral and written, and then gets his certificate and is appointed to a school on probation. The exhibit of Germany in the Centennial was not in any respect quite satisfactory to herself though interesting; and her educational department was not so fully illustrated as we would have liked. School-books and maps, however, were of interest as showing her system of teaching by objects and pictures. The school-books are full of illustrations, and reading and writing are taught simultaneously. The exhibit, of course, included a set of the pretty "Kindergarten Gifts," the balls, blocks, straws, colored slips of paper for folding and weaving into ingenious designs, which enter into the system of object lessons invented by the great German, Froebel, to educate little children's minds and hands in accordance with Nature's laws of development.

HOLLAND.

The little Dutchmen are well represented. Drawings from the boys of Rotterdam, models and plans from those of the Artisan's school at Amsterdam. Every commune of Holland has its free schools of several grades which it is bound to support. Drawing and needle work are taught in them in addition to the common branches of learning, and several modern languages. Normal schools for training teachers are also maintained by the Government. The sturdy energy which has won this country from the encroaching Northern ocean will not let it be swamped by the sea of ignorance.

SWEDEN AND NORWAY.

One of the most thronged attractions in the Exhibition was the pretty Swedish school-house on the Landsdown Terrace. A building sixty by thirty-six feet, of yellow pine, polished but unpainted, framed in Sweden, and put up here, filled with the drollest little desks with carved wooden seats, bright and cheery and alluring, with wall-maps and pictures of Swedish scenes and life, globes, pressed plants, and stuffed birds, counting frames and a small organ. This is a sample primary free school-house, and in 1873, 218,616 children were taught in such. Besides these are higher free schools of every grade up to the University. There are also many industrial schools founded by the nobility, where all who wish to work are thoroughly trained to the trades or arts they have capabilities for.

In 1875, 2,523 applied for admission, 788 of whom were women. These art schools were represented at the Exhibition by very interesting specimens of work in wood-carving and designing, moulding, in clay, cabinet-work, &c. Education is compulsory in Sweden, and Government aid is freely given to all who need it. Sweden turns her paupers into artisans. Her vote is for educated laborers.

Norway's little school-room is smaller than Sweden's, but as picturesque and real, with desks and ink-stained copy-books, and pictures, statistics too which tell us that primary education is compulsory in Norway, and that in 1867, 32,682 children were in the common schools. There are also peasants' high schools, and a free university.

SWITZERLAND.

Very full reports of the Swiss schools were sent, with school-books, and models and specimens of school and industrial work. The Swiss, who have always been noted for their love of freedom, and their intelligence and thrift, believe to the full in general education. It is compulsory and the schools are free, and of the finest character. That of Zurich for example has a world-wide reputation, and attracts many foreign pupils by its superior advantages.

This great country of the Czar, towards which all Europe is now looking for war or peace, shows its interest in the cause of general education by an exhibit of specimen school apparatus and books from the "Pedagogic Museum of St. Petersburg." This is a Government Institution, and collects educational models, books and plans from all other nations to compare with Russia's own, and introduces the best into the country. The Russian collection was rich in pictures, charts and models for object teaching. Admirable exhibits were also made by the Imperial School of Mechanic Arts of St. Petersburg, where the arts of working in wood, stone and metals are taught theoretically and practically; and by the School of Technical Drawing at Moscow, which furnishes skilled designers for the national manufactories of furniture, jewelry, silverware, woven goods, &c. And this progress has been chiefly made since 1851, when at the French Exhibition Russia was lectured by the French commissioner of fine arts, for being "contented with a place at the tail of the schools and factories of Europe."

JAPAN.

The educational exhibit of this remarkable country on the other side of the world from us was fuller than that of almost any other. Such a detailed account of the educational progress of Japan has been already published in our columns, that we need only remind our readers that a country, which fifteen years ago was without a newspaper, has now over one hundred, with eight hundred and sixty free elementary schools, ninety-two foreign language schools, and fifty-two normal schools for training teachers; a university opened to all classes, and a woman's college of first rank.

We will not enter again the solemn portals of Egypt as we have so lately examined its fine educational reports, in considering the representation of the colored race at the Centennial. We are ready to leave the continents of the old world, and look to find out whether the school-master has found the way to the distant Islands of the sea.

HAWAII.

The beautiful Island kingdom of Hawaii, lying midway between the old world and the new in the sunny Pacific, seems to have been brought nearer to us than to China, by the labors of our missionaries and the influence of our civilization. The American missionaries set the school-house beside the church. The Hampton Normal and Agricultural Institute was framed, as many of our readers know, upon the model of the Manual Labor school established by the Rev. Dr. Armstrong in Honolulu, 40 years ago. The Hawaiian exhibit was one of the most tastefully arranged and attractive in the Exhibition, and was under the charge of Prof. H. R. Hitchcock, the Inspector General of schools in the kingdom. The last educational report states that it has two hundred and two common schools with an attendance of 6,274 pupils, chiefly native, and many boarding schools, some of them supported by Government, and seventeen seminaries and colleges; in all giving instruction to 8,287 more pupils. Photographs of schools and pupils add to the interest of the display.

BRAZIL.

And now we are around the world and on our own side of the globe once more, though we should hardly have known it among a people of a foreign tongue and faith, and governed by an emperor. Such an emperor as Don Pedro, however, we might think next best to a President. His intelligent, wide awake tour through the United States, last year, won the hearts of our people and prepared them to watch with interest for Brazil's appearance at our Centennial. Brilliant as her display was in works of art and industry, and tropical birds and butterflies, and rich marbles to furnish a palace, the department which she made most prominent and took most pains with was that of education. Her schools are supported by government and attendance upon them is compulsory. There are various grades from Primary to High, Technical, Religious and Special. Teachers are paid from $200 to $900 per year. The government furnishes them houses to live in and after twenty-five years of service, if invalid, they are retired with a pension. Very excellent specimens of school work were sent from the various classes of schools. Fine photographs of buildings, and school books and apparatus were also shown. Brazil is still a slave country, as our readers may know, though she has begun a system of gradual emancipation. Her policy in regard to educating her slaves is not the same as the South's was, however. Planters frequently establish schools upon their own grounds for their servants, and some of the free schools are taught by educated colored men who have been slaves. That is what Brazil thinks of educated labor.

THE UNITED STATES.

What the United States in general thinks of common school education is too well known to need repetition here, and without going into wearisome statistics, and details, we may say that the American exhibit was one of the principal features of the great Fair, and was studied with the intensest interest by our visitors from abroad. Most of the thirty-six states were represented, some of them very elaborate—indeed several were most complete. New Jersey's was the largest. Massachusetts the richest in higher grades of work, especially in art education, in which she holds a foremost place. Maryland showed an admirable map or chart of schools, showing among other things the proportion of colored and white schools in the State; 1,524 white, with 120,000 pupils, and 322 colored, with 105,760 pupils.

Varied and rich as the educational exhibits of the different governments were, we did not find ons of the few without them who gloried in the deficiency, or prided itself upon having no free schools. The world thinks that wisdom is a good thing; therefore "get wisdom, and with all thy getting get understanding."

TO HAMPTON GRADUATES.

Dear Young Teachers:—

By this time most of your schools have been closed for the season. Some of you have obtained other schools for a short term, but the greater part have probably gone home to rest and recruit for another year's work, if your lives be spared. I hope all of you can look back with satisfaction upon the labors of the past year. While we realize that not only does God give the increase, but from Him must come

"Man's high endeavor and his firm resolve,
His strength to suffer and his will to serve,

we may humbly rejoice when our efforts have been successful. With you the result has, of course, varied in different fields of labor; while some have accomplished all that they hoped to do, others have been disappointed. Some of you have had the pleasure of reaping where patient laborers had previously sown, and tilled the soil; others among you have had the more difficult task of breaking the fallow ground and removing weeds, stones and rubbish, before you could plant the precious seed. But, if you have been working to serve and please your Divine Master, looking at duty more than at profit or pleasure, you will not fail to receive your reward. The Lord of the harvest will recognize the value of your labor notwithstanding its imperfections. It has been missionary work, as truly as if you had been in a heathen land. I have sympathized heartily with you in your various trials, especially in the tardy payment of your salaries; your school-houses have been poorly furnished; you have needed maps and other aids in teaching; parents have, in some instances, thwarted your honest efforts to benefit their children. But these difficulties and hardships are slight, compared with those which were encountered by the men who have risked their lives in carrying the gospel to the heathen, or even by the pioneers of civilization in our own country. A brave heart, joined to a missionary spirit, hears present trials with patience, and forgets them when they are past.

Now, how will you employ your vacation to the best advantage? Money is so important to you that you will try, of course, to obtain some employment that will be profitable in a pecuniary point of view. I hope you will succeed. The rest you need is not idleness, but may be found in a change of occupation. Do not, because you have been teaching school, feel above working in the harvest field or in any manual occupation. Do not waste an hour of precious time; idleness is the parent of mischief. When you are not at work, review the studies of the past year, and, if you can obtain suitable books, pursue those studies further, that you may be more thoroughly prepared to teach next year. Take time every day not only to read your Bibles, but to commit portions to memory, especially some of the Psalms, the Sermon on the Mount, the Parables and the discourses of our blessed Saviour. You will find it of great advantage to you in teaching in Sabbath School to be able to quote from the Holy Scriptures accurately and fluently. If you have leisure, I would advise you to store your minds, also, with hymns and selections from the writings of our best poets. Wherever your lot may be cast, I hope you will teach in a Sabbath School, and not fail to attend a week-day prayer-meeting. Should you be where these do not exist, persuade your associates to unite with you in commencing them. On every occasion be faithful to your Lord and Master. Stand up for Jesus. Never be ashamed of your allegiance to Him.

"Ashamed of Jesus, that dear friend
On whom my hopes of heaven depend?
No! let my this my glory be,
That Christ is not ashamed of me."

Next to your allegiance to your Almighty Friend, be true to your Alma Mater, under whose Christian instruction and influence, with the Divine blessing, many of you were brought into the fold of Christ. May it be your constant desire to prove your gratitude by walking in the way in which you have been trained. The Hampton Institute will be judged, justly or unjustly, by the conduct of its Graduates. You have met, and will again meet, with opposition and ridicule. You find professors of religion who are unworthy to bear the name of Christ. Be gentle toward them, when duty calls you to refute error and denounce sin. Let the beauty of your lives of your motives, while they attract the careless and erring to the religion that enables you to overcome temptation. Remembering continually your weakness and need of a strength beyond your own, be humble and watchful. Look upward while you press forward; and let every evening find you not only "one day's march" nearer your heavenly home, but nearer the mark of your high calling.

In bidding you farewell, my earnest desire for you is that "Our Lord Jesus Christ himself, and God, even our Father, who hath loved us and hath given us everlasting consolation and good hope through grace, may comfort your hearts and stablish you in every good word and work."

I am your sincere friend. M. A. L.

LETTERS FROM HAMPTON GRADUATES.

HOPE FOR THE NEXT GENERATION. SMART LITTLE BOYS AND GIRLS AND TOO SMART LITTLE BOYS AND GIRLS. TEMPERANCE WORK. THE NEW SOUTHERN POLICY. WORK NEEDED AMONG PARENTS.

THE following letter was received some months ago, but was crowded out of our columns. We hope to hear further from the writer—one of the original band of our Hampton Student singers, who has given himself to the life work of a teacher with all the enthusiasm which he gave to shout singing.

NORFOLK, VA.

"Dear General:

"With many thanks for your kindness I received the maps and papers. They were just what I wanted to make my school more interesting, as it is now a graded school, and I have an assistant to teach those scholars who are beginners. I was thinking how and where I should get some maps.

"I know that General Page will be quite pleased with your kind offer and let the maps and papers be put up. I shall distribute them among our students as you have told me. The students will be glad to receive them from you.

"I am a great deal better and can carry on my school now all right. I have lectured my people and worked them up to a high pitch of enthusiasm for the education of their children. My school-house is overrun, and my superintendent has given orders to have another room built, which will be finished about next Wednesday. I have had all of this month over one hundred scholars present every day. I feel as if my work has been and is a great and good one. I have taken all pains to train my scholars morally as well as intellectually. I see a great change in my scholars now to what they were when I first took the school. My white friends seem to be quite pleased with my manner of teaching. I teach them politeness, cleanliness, promptness, and everything that will make them true and intelligent persons.

"I have not time now to give you a full statement of the colored people in this vicinity, but the rising generation will be superior to the present if we can fill the public school-house with Hampton graduates or their equals.

I am yours truly,

T."

THE writer of the following has discovered for himself that *too* little learning is a dangerous thing. We have abundant evidence to confirm the belief that a manual labor system of education is the surest safeguard against that conceit which is the temptation of all the newly rich in learning as well as money:

"VIRGINIA:

"Dear Teacher:

"It has been so long since I heard from you, I thought that I would write to you again. This leaves me well and getting on finely with my school. You see that I am teaching at the same place. I have a large school at present, some fifty odd pupils. The children have made rapid progress both in their studies and manners. I have some very smart little boys and girls, whom I hope may come to Hampton some day. I have some boys who are far enough advanced to come to Hampton now, but it is hard to get them off. Whenever they get so they can read and write a little, they become conceited. The old people tell them that they have a good education, then they get careless.

"I am getting on very well with my temperance society. It met the second Sunday in this month, and we had a good time. Yesterday, I went to Whitmel (a town about five miles) and delivered my second lecture on temperance in that place and organized a temperance society, with twenty-one members. Whitmel used to be one of the most wicked places I know, but now the people have reformed a great deal. They have a good church and the members all seem to be very much interested in the work of the Lord. Write soon, I am anxious to hear from you. Remember me to Miss H.—— and tell her that she owes me a letter. If you have any temperance tracts and papers please send me some. I remain your friend and pupil, ever in Christ

Y."

TEMPERANCE work, and work among the parents in communities to which they go are important part of our graduates' work, in which they often exert as great influence as in teaching the children.

"VIRGINIA.

"GEN S. C. ARMSTRONG—

"Dear Teacher:

"I am getting on very well with my work; my school is quite full, and is in a prosperous condition. The children continue to grow in the understanding of their studies and the purpose for which they were made. The parents, too, are beginning to see things differently to what they used to. They seemed to have opened their eyes in many directions and take more pains in fixing up themselves and providing for their families. In fact they appear to have more regard for themselves generally. I feel that my labor has not been in vain, though sometimes I do feel discouraged because of the carelessness of some. The people are getting on very well in this vicinity; they made considerable progress in a religious movement last year. There were two churches built last summer; a Baptist church, about two miles from my school, and a Methodist, about five miles. When I first came to this neighborhood, Oct. 7th 1873, there was only one church here; now there are three. Some of my pupils made profession of religion last year. We continue to have our temperance meetings which have done much good in this vicinity. I hardly ever see a drunkard here. My regards to your family and all the teachers and students.

"Yours most obediently,

Y."

THE following letter of one of our most reliable students has just been handed us, and though of old date, is offered now as giving a vivid representation of what the young colored teacher has before him of work and struggle.

"NORTH CAROLINA.

"My Dear Teacher:

"I send you an account of my school. I commenced my work here as a teacher with eighteen pupils. I have enrolled at this time sixty one, with an average of about fifty. I was obliged to give notice, last week, that no more could be admitted on account of not having room. It is always with reluctance that I refuse to admit pupils, knowing how our country is perishing on account of ignorance, but it is impossible for me to comfortably seat these I have. My little school house is only about ten by twelve feet, that will give you an idea how I am crowded. It is also very uncomfortable. Several of my scholars are complaining of chilblains now. I have been trying to rent a house but find none convenient. I am sure that if any of my Hampton friends could step into my little school room which can hardly be said to have floor or roof, they would pity me sadly. I have plenty of fuel but the chimney is partly made of logs, which prevent my having large fires. The colored people here promised to build me a school-house if I would teach for them this winter, but I was very much disappointed to find the same old log hut standing that I taught in last summer and fall. And there is no need of these troubles. The gentleman on whose land I am teaching is an experienced lawyer of very extensive wealth. He has given the colored people as much timber for building school-houses as they want, and the county pays half the expenses. But the point that troubles me so much is that the people here seem to take such little interest in the education of their children. I am satisfied that if they had to support the school their children would grow up and die ignorant. They seem to think of nothing but drinking whiskey, and having what they consider a jovial time while under its influence. The most encouraging point is the great desire on the part of the scholars to learn; it matters not how inclement the weather is, I most always have full schools, and considering what unfavorable circumstances they are placed in, I think they are getting along very nicely. The parents, and officers of the school are very much pleased with the progress they are making.

"I received a letter from Mr. Geo. Dixon some months ago asking me to join that Missionary band to go to Africa, and I appreciated the offer very highly indeed, but I can think of no place on earth that my services are more needed than where I am. Though in the midst of these discouragements, I have many things to be proud of. I have a very nice boarding-place. The school committee allow me good wages; I have no trouble in getting my pay, and I believe I have gained the the universal esteem and confidence of the people here both white and colored, and with these advantages I am persuaded to continue here until I exterminate many of the evil practices that are so prevalent in these parts and inculcate that desire for education which ought to fill the hearts of every country-loving citizen. I expect to have a comfortable house put on this ground before the first of May, if I have to pay the expenses myself. It is quite a tedious undertaking to try to convince these people that they must be educated to understand the laws of our common country, and also the laws of God.

"Respectfully yours,

W."

WE do not intend to make this column one of appeal for aid—but the need of which the writer of the following letter speaks of books and Bibles, is one which is felt throughout the colored Sunday-schools of the South, and we could distribute hundreds every year to advantage if we had them.

"VIRGINIA.

"Dear Workman:

"I feel it my duty to let you know how I am getting along with my school, and the present condition of the people in this vicinity. I commenced here Feb. 12th with thirty pupils; now I have fifty-two and no assistant teacher. Two-thirds of the pupils can read and spell very well; but few can write or work arithmetic. A great many of them are anxious to get an education, and seem to be striving with all their might to learn what they can. Most of the colored citizens here are renters. Some have accumulated property of their own and seem to be getting along very well. There is not any difference between white and colored children in regard to education. The colored people have a church of their own with nine hundred members. Their pastor has some education, but not much.

"Our Sunday-school is very large and all seem to take an interest in the school; but the trouble with us is, we have not books such as Bibles and Testaments. Now, we do not like to ask alms when we can do without; but this is a case of necessity. We do hope that some of the dear readers of this paper, in casting their bread upon the waters, will think of us while it is well with them. In regard to temperance, I believe that the men are more temperate than the women. I have been working very hard among them trying to get up a temperance society, but have not succeeded yet.

"White and colored seem to appreciate the President's policy toward the South. We believe that he will discharge the duties of his office regardless of the distinctions of race, color, or previous condition of servitude. I find the Educational Journal very instructive; especially the General Department.

"I remain your old pupil,

H.

"P. S. I hope to return next term and graduate."

EXTRACT of Letter from Mr. Geo. S. Hillard.

Feb. 27th, 1877.

* * * * * * *

My thoughts go back frequently to you and your associates and the beautiful spot which is the scene of your philanthropic labors. The songs of your pupils often sound in my ears in the solitary hours of the night. How I wish I could do something to express my deep interest in your progress. It is no more than the plain truth when I say that no Institution I ever visited touched me so profoundly as yours. May God prosper it and you.

* * * * * *

Better late than never, as the proverb says, I return you the number of the Planter and Farmer containing Mr. Chamberlayne's address, which I have read more than once with renewed admiration for itself and respect for its author. It is bold, able, and, as far as I can judge, true. I regret much that I did not fall in with this address till just as I was leaving Norfolk, last year, and so had no opportunity of knowing Mr. Chamberlayne.

* * * * * *

NEWS OF THE MONTH.

MR. FLETCHER HARPER, of the well-known publishing house of Harper Brothers, New York, the last surving member of the original firm, died at his residence, May 29th, aged 71 years. In his death the country loses one of the men of whom it may well be proud; whose long and successful life, crowned with a death of honor and peace, proves the value of sterling business integrity and honor and industry, and is a lesson to all young men that it shall surely be well with the righteous.

From the broad windows of the business palace on Franklin Square Mr. Fletcher Harper has pointed out to us the spot where more than sixty years ago his father had his printing-press and little store. The present firm was founded in 1817 by the four well-known brothers, whose partnership is perpetuated in the firm name. From its small beginning the business has grown until it is now, undoubtedly, the largest publishing house in the world, with a business of over five millions a year. Two more generations are now included in the partnership, and the same harmonious spirit pervades it. Mr. Fletcher Harper was an active member of it almost up to his death. He was the founder of all the most important enterprises of the house, of *Harpers' Monthly*, and the *Weekly* and *Bazar*.

A large-hearted, generous friend of letters, always ready to take young men of genius by the hand, a genial, noble Christian gentleman, his memory will be ever green in the hearts of hundreds.

For many acts of courtesy and generosity, the Southern Workman has been greatly indebted to Mr. Fletcher Harper as to other members of this firm.

HOME NEWS.

A DELEGATION of merchants from the Western States—150 in number—have been visiting Norfolk and other cities to determine upon the most advantageous port for their goods. While in this part of the country they visited Fortress Monroe, the Soldiers' Home and Hampton Normal School. They expressed great interest and enthusiasm over what they saw at the school, and since their return several good letters have been written by one of their number for the *Cincinnati Gazette* and copied into the *Norfolk Landmark*.

MR. HASELY, the lecturer from Africa, a native and "proud to be," has given two lectures on his mother country at Hampton Institute, greatly to the pleasure of the students.

EDUCATIONAL.

FISK UNIVERSITY has just had its commencement, and graduated a class.

AMONG the graduates of the Auburn Theological Seminary at the recent commencement was Moses Aaron Hopkins, the first colored student who has completed the course of study. He is a graduate of Lincoln University, and ten years ago could neither read nor write. His graduating address was on "The Problem of Race Reconciliation in the South." Mr. Hopkins goes to North Carolina, where he will engage in preaching.

FOREIGN.

THE great news of the day, as many of our readers know, is the war now going on between Russia and Turkey. The Czar's troops crossed the Danube on the 24th of April, and the same day 50,000 Russians crossed the Pruth, into Turkey.

It is a war which concentrates the gaze of all Europe, both because of the questions involved, the causes which have led to it, and the possibility that it may yet draw all Europe into a general conflict. The Czar's manifesto declares that its object is to protect the Christian races in the provinces of Turkey—in Bosnia, Herzegovina, and Bulgaria—from the cruel oppression of the Turkish rulers which is continued in spite of the protests of Russia and the other Great Powers of Europe. These provinces, as our readers also know, revolted in 1875, and the atrocities with which the Turks put down the rebellion sickened the humanity of the world. Whether Russia is actuated by the purest motives in this war, or thinks also of enlarging her own territory, the sentiment for which she has taken up arms is one which appeals to all civilized nations. The Turks who have held dominion in Constantinople for four centuries have not in all that time become such a nation; though, within a year, the great pressure brought to bear upon them has forced them into creating something like the form of a representative government.

If the question were only of driving the Turks out of Europe into Asia Minor, there might be but one voice in Europe about it, and the "sick man," as the Emperor Nicholas called the ever-corrupt and tottering Turkish government, after having a fair chance, would long ago have been decently buried. But there is something called the Balance of Power in Europe to be considered. We who have still room to spread ourselves, do not comprehend how nations living at such close quarters as the nations of Europe watch with jealous eyes each other's growth. If the Turks leave Turkey who will take it? All want a slice, and more than that, every one wants no one else to get too large a share. England particularly fears that Russia grown too great may cast an eye upon India, or that, if she does not actually encroach, the half-subjected, half-tamed East Indian princes may be encouraged to revolt against Victoria's sway. Then the Black Sea and the Danube are two of the great highways of commerce between Europe and Asia, and it is essential to the interests of trade to keep them open to all. These considerations have made the present English administration under Lord Beaconsfield cautious, and inclined to look on the Turkish side, while Sir William Gladstone, former prime minister and now leader of the opposition, has introduced resolutions in Parliament (finally rejected) that the "Porte," as the Turkish Government is called, has forfeited the support of Great Britain by its conduct to its subject population, and its refusal to give guarantees for their better government. So the great sea of humanity in Europe is heaving with coming storms, and it is good to think that out of it all God will bring His own plans to pass.

Thus far the successes are on the side of the Russians, though the Turks have taken one Russian town near the border. The Russians have sunk a Turkish monitor in the Black Sea and taken the important fortification of Ardahan. The Turks also fell back from Kars another citadel, to Erzeroum, an important post.

Roumania, a province already partly self-governed, has declared its independence of Turkey, and assists Russia. The Turks have now four strongly fortified towns guarding the angles of a quadrilateral of about fifty miles on a side, which the Russians must penetrate to get command of roads and effect any successes. Turkey has declared the Danube closed and the Black Sea blockaded.

THE great famine in India and China still continues and must until the next grain crops. Hundreds of thousands have perished miserably from hunger and disease.

AN earthquake in South America May 10th, on the coast of Peru.

IN Cuba a decree has been issued pardoning without reserve all banished for political reasons, and raising the embargoes on the property of insurgents with some exceptions.

DOMESTIC.

AN extra session of Congress is called to meet on the 15th of October.

THE public debt statement of May 1st shows a reduction in April of $4,315,500, leaving the total debt at $2,-181,565,887.28.

CONGRESS having failed to pass appropriations for the army for next year, it has been reduced to 25,000 men.

THE Sioux Indians have surrendered.

DESTRUCTIVE forest fires have been prevailing in various parts of the Northern, Eastern and Western States.

JAPAN is, and Brazil and the Portuguese Colonies are about to be admitted to the Postal Union, by which the postage for prepaid letters to Japan, via San Francisco, is but 5c. per half oz.

THE greatest invention of the XIX century is the latest one—the telephone. It is a simple apparatus by which, through delicately vibrating plates and wires, in some instruments with the aid of electricity—in others without it, the tones of music, and even of the human voice, may be transmitted over a hundred miles. It is believed that when the invention is perfected, the distance may be greatly increased. As it is, an audience in New York has been able to distinguish tones and hear sentences and even recognize voices whose source was in

THE Permanent International Exhibition was opened in Philadelphia, on May 10th, at the Centennial Main Building. The display is mainly American, but it includes most of the forty foreign nations represented in the first exhibition. There is a large educational exhibit.

THE great temperance revival which swept Western Pennsylvania in the winter, has extended over Ohio and into Indiana. In Columbus, Ohio, 7,000 men have signed the pledge.

MRS. PRESIDENT HAYES excludes wine from all entertainments at the White House.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Points Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The *best* in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its REVERSIBLE Feed enables it to sew forward or backward without stopping the machine—it being the *only* machine that can do such work.

The *load* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between SIDE FEED and BACK FEED machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe*, *odorless* and *durable* Oil Stove for all who want PURE, MOIST, WARM AIR in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

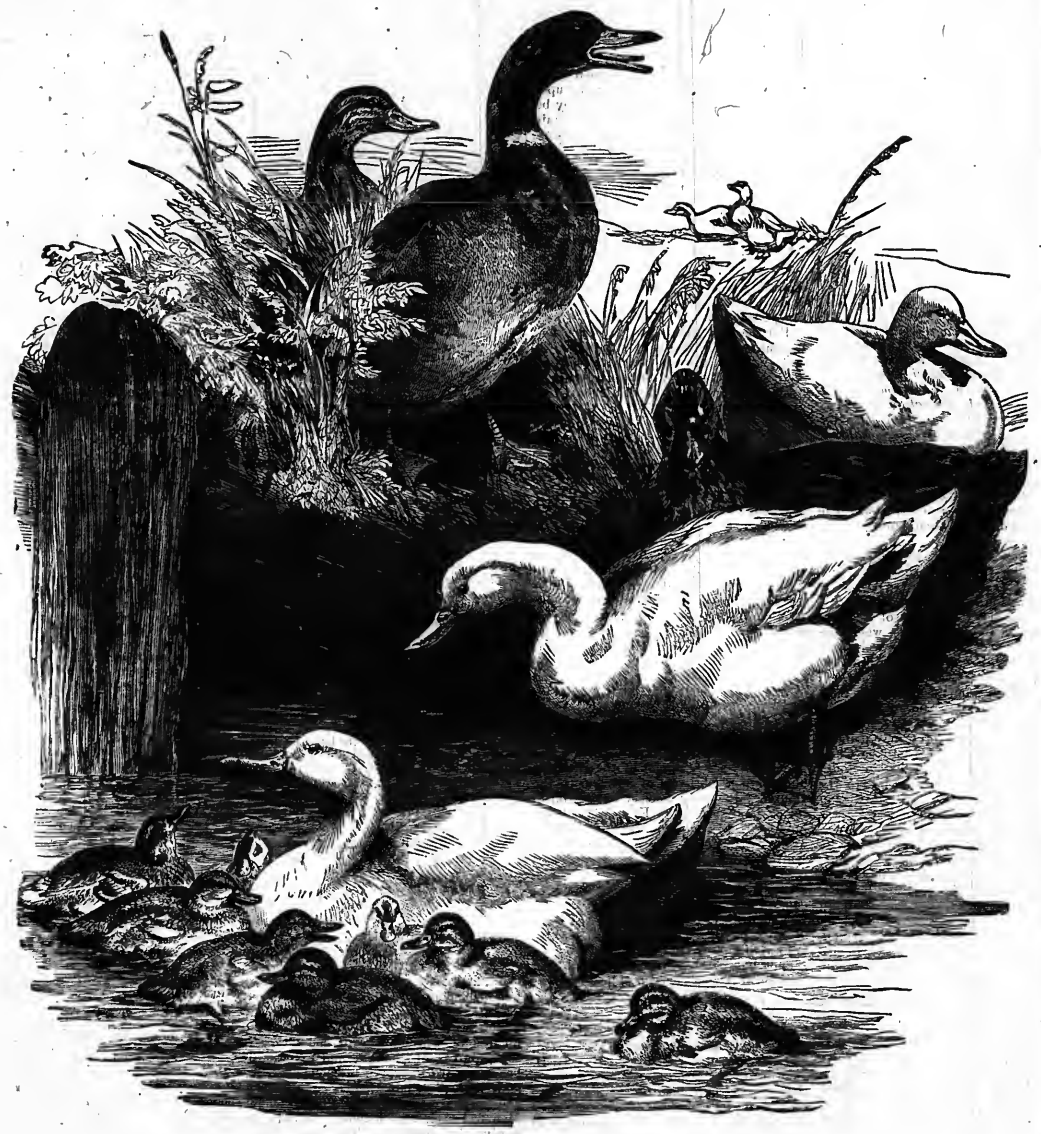
VOL. VI. HAMPTON, VA., JULY, 1877. NO. 7



DUCKS.

One little black duck,
One little gray,
Six little white ducks
Running out to play;
One white lady duck, motherly and trim,
Eight little baby ducks bound for a swim.

One little white duck
Running from the water,
One very fat duck—
Pretty little daughter;
One very grave duck swimming off alone.
One little white duck standing on a stone.

One little white duck
Holding up its wings,
One little bobbing duck
Making water-rings;
One little black duck turning round its head,
One big black duck—guess he's gone to bed.

One little white duck
Walking by its mother,
Look among the water-reeds,
Maybe there's another;
Not another anywhere?
Surely you are blind,
Push away the grass, dear,
Ducks are hard to find.

Bright little brown eyes
O'er the picture linger;
Point me all the ducks out,
Chubby little finger;
Make the picture musical,
Merry little shout!
Now, where's that other duck?
What is he about?

I think the other duck
Is the nicest duck of all;
He hasn't any feathers,
And his mouth is sweet and small;
He runs with a light step
And jumps upon my knee,
And though he cannot swim,
He is very dear to me.

One little lady duck,
Motherly and trim;
Eight little baby ducks
Bound for a swim;
One lazy black duck,
Taking quite a nap;
One precious little duck,
Here on mamma's lap.

Business Manager.

HAMPTON, JULY, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE courage and sagacity of the present administration is causing Southern society to enter upon its third great period of emancipation. The first Republican President cut out the cancer of slavery; the second deliverance came when the strong hand of the general government ceased to sustain alien adventurers in Southern States. Last and not least of all, Southern extremists are losing their power; the voice of reason, of liberty, of fair play and of self-interest is asserting its right to be heard. We may point to the election of A. J. Willard to be Chief Justice of the Supreme Court in South Carolina as a handsome rebuke to the baneful spirit of proscription. For being a Republican and a Northern man he was fiercely assailed. But the epithet of "corrupt carpet-bagger," so freely hurled by State Senator Gary, was answered by a Democratic vote in favor of Judge Willard. The spell had lost its blinding power. It was now safe for Southern Democrats to remember, as the Charleston *News* has it, that "their platform was opposition to thieves, not opposition to citizens of Northern birth." And in recognizing the fact that there were some good men outside their party lines, they have taken a long stride toward convincing the world that Bourbonism has had its day, and done its worst, in the South. Extreme men may be of use, but they have committed the greatest crimes in the history of the world. And the emancipation of Southern politics from the control of such, will be the crowning triumph of the century; the chief glory of President Hayes's "Policy."

Wherever ignorance ceases to be massed to menace property, there we see independence of the party lash. Says the *Norfolk Virginian*, on a recent Charter election,—"When the party is unopposed we hold to the perfect liberty of every member to vote for the Conservative of his own choice. It is as citizens, and not as politicians, that we are to vote today." This much of manly independence has a new ring for Norfolk ears.

THE present lull in the political storm is enabling good men of all parties to see how much they have in common. Sectional animosity before and since the war has made partisans overlook all the good traits in their opponents. The truism has been lost sight of, that Anglo-Saxon human nature carries the same sort of beams in its eyes wherever it may happen to go.

In the case of the Indians, the Northern conscience, by a practice of two hundred years, has become callous to the violation of every principle of justice. Utter indifference to means has arisen from a deep conviction that the suppression of the Indian was necessary; that all measures tending thereto would aid civilization; that the better elements of society could not afford to check the evil instruments of so grand an overthrow of barbarism.

Precisely analogous is the argument which has led good Southern men to belittle outrages committed, not only upon the negroes, but upon those who they believed to be malignant or misguided traitors to the Anglo Saxon race, to the cause of honest government, and to civilization itself.

Blinded by party zeal, many Republicans cannot yet understand how there can be enough good men in the South to be worth counting. They forget how little influence good men in the North have exerted upon the treatment of the Indians. They forget that financial ruin and contemptibly weak governments would have been the result of negro and alien domination in the South.

For the first time since the war has it become safe for Southern men to be liberal and just toward Northern settlers. And we who live in a Southern community can testify that we feel the breath of a kindlier spirit.

THE opening up of Africa to commerce, civilization and Christianity, so long a dream of the church, and a problem of the philosopher, seems nearer realization today than it ever has seemed before, simply because of the growing and spreading interest excited on the subject, with increasing knowledge of it. The brilliant discoveries of Baker, and Speke, and Livingstone, and Stanley, and Cameron, have given glimpses of its wonderful riches, and resources, and possibilities, leaving still more to the imagination. European states are looking up the subject of colonization; we hear plans for roads and railroads, and even of turning in the sea, and flooding the Great Desert, to make a highway for commerce.

The church is not behind in ardor. The crude and doubtful desire of a savage king for missionary instruction as reported by Stanley, has been met by the gift from one English Christian of $60,000, to the Church Missionary Society for establishing mission stations in King M'Tesi's dominions. Livingstone Hall for which ground was broken the other day at Fisk University, Nashville, to be erected at a cost of $50,000, for training colored missionaries for Africa, is one of our own country's responses to the new call. The freedmen of the United States have plenty of work on their hands at home, and we are not anxious to get rid of them; but it cannot but be, that they will feel the attraction of Africa's special appeal to them.

HAMPTON IN AFRICA.

Africa will be civilized and christianized. The only question is—How? Rev. G. D. Pike of the American Missionary Association, who accompanied the Jubilee Singers on their first brilliant tour in Europe, after talking with the many earnest men who are interested in the subject there, came back deeply impressed with the belief that the two-fold work of the Christian civilization of Africa can be best accomplished by native workers, prepared by such a two-fold system of instruction and manual labor training as that of Hampton.

This plan, which has been earnestly advocated by Mr. Pike since his return, was a few months ago presented in the columns of the *Advance*, by Rev. M. McG. Dana of Norwich, Ct., who sets forth its various advantages very clearly and forcibly, in the following words:

"The need of a school for training native teachers and preachers, is bringing just now before the American public, the project of founding at some central place, an institution similar to the one at Fortress Monroe. A Normal and Agricultural Institute, planted on the now opened highway to the interior of Africa, through the Nile basin, would supply the Christian agencies wherewith to evangelize Central Africa. Khartoum seems to offer the desired point, for it is half way to the equator, on the line of railway soon to connect Cairo with the Great Lake system, which is said to be seven hundred miles in extent. Here it would be under the protection of a stable government, and would from the start secure for itself the favor of the Khedive of Egypt. Moreover, if located at Khartoum, or possibly Sondokoro, it would be in a climate favorable to the Europeans required as teachers, and could procure the necessary supplies more economically than if off the line of travel. An institution of this character is exactly what the best authorities say is needed. For it must be a practical Christianity, embodying the industrial features, as our school at Hampton does, if it is to take hold of African chiefs, many of them most eager to improve the physical condition of their people, and keenly appreciative of aught likely to enhance their agricultural and trade facilities. One school of this sort, we are confident, would not only become an untold power as a Christianizing agency, but would train up a most capable and practically influential body of native missionaries.

"It is because we have the knowledge and experience, that to us American Christians comes the privilege or duty of giving to Africa its first Normal and Agricultural Institute. Were the means at hand this could be established at once, and officered by those already eager to be identified with such an enterprize. It is the one thing that we in this country who are friends to the African, can do better than any one else, while it would prove the best memorial of our faith in the future of this race. What is wanted now is to find the person or the society that will furnish the funds for this institution; and unless we move promptly, and with enthusiasm and hopefulness, this project will be taken up by some one else, and the opportunity of doing for Africa after a pattern most peculiarly American, be lost by us.

"The earnest feeling prevailing throughout Great Britain in reference to the Christianization of this continent is quite remarkable, and yet we are confident there is far more in this country than has found expression. There is a latent enthusiasm for African missions in this land that it will take but little to develop, and nothing will bring it out like new effort in the line indicated. We ought to have a share in this movement in behalf of Africa, and what better can be proposed to American Christians than to furnish to that people the duplicate of the broadly-planned and effective institution at Hampton? This would not only prove to be just the kind of training-school needed, but would embody the industrial features of Christianity. It would become a conspicuous center of Christian good, and meet the necessity hitherto felt by missionaries, regard for which the latest explorers testify has been overlooked, that of an institution which should exemplify a practical Christianity, and provide for the instruction of its pupils in the knowledge and arts of Christian civilization.

"*Norwich, Ct.*"

The progress of thought in the last fifty years has not failed to affect the conduct of missionary enterprises, as well as that of secular affairs. To throw the whole heart and life into the work, to "labor in season and out of season," and leave results to God, was the whole idea of missionary exertion in the past; and a grand idea it was, producing some of the highest types of Christian manhood and womanhood, and not merely acting upon heathen nations, but re-acting upon the missionary nations as an inspiration, lifting them to higher planes of life and heroism. With no less of Christian ardor and heroism, the progress of thought and experience has suggested improved methods of work, and a more discriminating economy of men and means, adding to zeal, knowledge. Men feel their responsibility not only for motives but methods. The value of the manual labor system of education for raising new races into civilization, has been proved again and again, in the Sandwich Islands, in Jamaica, and even in Virginia among the freedmen. We fully agree with Mr. Pike and Mr. Dana in the conviction, that it will prove the right line of work in Africa.

THE SENIORS' HERALD AND SENIORS' PALLADIUM.

We are glad always to notice any young contemporary when we are not *too* much afraid of a rival; and so take pleasure in acknowledging the receipt of several numbers of two pretty manuscript semi-monthlies, the *Seniors' Herald* and *Seniors' Palladium*, which have been sustained the past year by the class of '77, of Hampton Institute.

Remembering with a sigh, the "tears we wasted" in younger days over the bugbear of composition writing, when it was the fashion to set the infant essayist to discussing "The Good, the True, and the Beautiful," "Grief and Happiness," "The Realms of Thought," "The Human Understanding," and kindred abstractions and profundities, about as much within his reach as "The Domestic Policy of the Peruvians," it is refreshing to glance over the neatly written pages of these little sheets, and note the common-sense topics, and the simple, straight-ahead way in which they are generally treated.

How many prize essayists in our colleges are ever heard of in print? How many champion composition writers in our schools could write a column that would be accepted by a city newspaper?

We do not imagine that the contributors to these little manuscript school journals are preparing to rush into print, but the practice of writing on subjects of which they know something, and in which they are interested, and of expressing themselves in few and simple words, is a mental discipline which was never supplied by old fashioned composition writing. We are glad to see that in many colleges and academies, the school essay is supplanted by the school-journal.

We quote with pleasure a specimen contribution from each paper, and give one of their tables of contents:

A SUGGESTION.

To the Editors of the Seniors' Palladium:—

The subject of forming companies for the purpose of making settlements in the Southern States is being very favorably considered by people in various parts of the country, and, indeed, it has often occurred to my mind that it would be a good thing for a number of the young people from this, and other institutions, to form an association for the purpose of buying a tract of land in some convenient locality and settling themselves there. In this manner intelligent communities might be formed, where we should have not only the government of the place in our own hands, but the additional opportunity of demonstrating our ability to build up and maintain a well regulated town. There are special and peculiar advantages to be gained by such a step. For any people to become respected and maintain a proper position among the intelligent classes, they must show that they are able to build up a high sentiment among themselves; they must amass wealth, and I know of no way that is better calculated to start the money, that is earned by our people, to circulating among each other, than the formation of companies where we should have the entire management of the affairs of the town. The place would be ours, and everything in it would be ours; all the business of the settlement would be in our hands, and, by careful management, we should soon have a prosperous village distinctively and thoroughly *negro*. I would not have any one think that I wish in the least to keep up a feeling between the races, but I think it would be to the advantage and interest of the company to allow none but negroes to settle in the village until it had been set firmly on its feet. Having gotten thoroughly established, we would not fear Irish, Indian or any other nationality settling in our midst.

To build up a race sentiment is one of the things that the colored people of America have got to do; and though we may not live to see the work accomplished, we can give it a start and leave its completion to our children.

I have merely broached the matter, and should be glad to have some of the other contributors to the *Palladium* give us their thoughts on the subject.

HAMPTON, VA., *April* 17, 1877.

A LECTURE ON AFRICA.

BY MR. HAZELEY.

Mr. Hazeley, a native of Africa, gave two interesting lectures on Africa last Wednesday and Thursday, at 3 o'clock, P. M., in Academic Hall. Mr. Hazeley was educated at Sierra Leone in Africa. He speaks three or four different languages. His words of introduction were as follows:

"Friends, allow me to introduce myself to you. I am an African, a full-bred African, and I am glad of it." He said that he did not want us to think that the whole of Africa was uncivilized, by any means, because it was not. It was only the western coast that was uncivilized. In the interior they have corporated towns, high schools, colleges, and institutions of learning, just as we have in America. The people are thrifty and industrious, both in-

tellectually and physically. This is near the centre, on the rivsr Niger; this river is about 1,500 miles long, and its banks are thickly inhabited by commercial people. Its population is about 200,000. They are busily engaged in exporting the produce which is very abundant,—such as ivory, gold-dust, cocoanut-oil, palm-oil, sheer-butter, olive-oil, dates, etc. These articles are sold to English merchants and many other traders, in large quantities. Many thousand tons are exported annually from the banks of this river.

This is the bright side. But, on the other hand, we find on the western coast the uncivilized inhabitants. They have no institutions of learning, no corporated towns. They are found in large crowds along the shore, doing comparatively nothing toward the ameliorstion of their race. These people are found in large companies riding horses. You can sometimes find as many as five hundred riding horseback, fighting with each other. When these people see travelers passing by, they hail them and ask them the news of the dey, and next they ask you to give them tobacco, and if you tell them that you haven't any they will say you lie—"You have got tobacco." Bishop Payne asked some of these people one Sabbath why they didn't come to church, and their reply was that "You didn't give us any tobacco to smoke, and how can we pray without tobacco?" If you give them a leaf of tobacco they will attend church, and if you don't they will not. The men think more of their donkeys than they do of their wives. If you ask a man how his wife is, he will not speak to you, or he will tell you he doesn't know. But if you ask him how his donkey is, first, he will speak to you very readily. On one occasion a man spoke to a minister to marry him, and the time was appointed to meet the minister, but the man failed to come. A few days afterward, the minister met the man in the street and asked him why he didn't come; he told him that he had but a small sum of money, and after considering the matter he thought "it would pay him better to get him a donkey than a wife."

Although these people are very ignorant, we see that they have very strong ideas of manufacturing. To prove this Mr. Hensley showed several specimens of their own manufacture,—such as willow baskets, carpets, mats, combs, also palm soap which is made from the palm-tree, rice baskets, and the greatest of all he showed was a nicely-carved gold ear-ring and finger ring. They are also very honest in their dealings with each other. In many cases these people put their corn and rice out to dry, and the neighbors come and get it and there leave the money, and no one will take it. This is the place where enterprising men are wanted.

Carrie's Influence.
Class of '77.
Pictures.
Parting.
Pampering the Body and Losing the Soul.
Hampton's Industry.
Objections to the Emigration of the Colored People to Africa.

OUR PORTRAIT GALLERY.

Several pictures, mostly life size, of eminent men, have recently been presented to the Normal School by its friends, and now adorn the walls of the assembly-room in Academic Hall. We hope through the kindness of other friends, to make this collection of historic characters more complete, and shall be glad to receive donations of such. We already have Sumner, Greeley, Everett, Clay, Clarkson, Wesley, Lee, and others; and among the living, Grant, Hayes, Whittier, Phillips, &c. Miss Longstreth of Philadelphia presented a fine portrait of the late Rev. Geo. W. Whipple, first President of the Board of Trustees; and through the kindness of Francis G. Shaw, Esq., we have an excellent likeness of his son, the late Col. Robt. G. Shaw, who commanded the first regiment of colored troops sent by Massachusetts to the war, and who fell bravely fighting at their head, in the assault on Fort Wagner.

We have also received from Messrs. Hurd & Houghton, publishers of the "Atlantic," the admirable portraits of Longfellow and Bryant, a most valuable addition to our gallery, for which we are under many obligations. These pictures, bringing our students face to face with eminent historical characters, both of the past and the present, are valuable object-lessons, adding largely to the attractions of the school-room.

A THINKING DOG.

The recent publication of the Rev. B. T. Wood, both in book form and in Harper's monthly and weekly publications, has excited unusual interest in the scientific and literary world. The reverend author insists that animals possess each and all the higher characteristics and qualities of man, only differing in degree or development, and that their immortality is as well assured as that of the human race. We claim, however, for Deaver the honor of having the reasoning and human animal, *par excellence*, and feel satisfied that in Professor Wood's future writings he will establish our dog in a high and honored place. The animal in question is of pointer breed, some sixteen months of age, and the property of Joseph H. Skillman. From infancy the dog has exhibited unusual intelligence, and this has been so wonderfully developed, that the name of "Baby" and her exploits have become as a household word in our city. To close or open doors, to carry, fetch and find; to go regularly for her meals, and not touch a mouthful until permission was granted; to do every conceivable errand, with only the shadow of a hint to draw an inference from; to deposit letters and receive her master's mail; to take the milk from the milkman; to bring in and pile up the kindling—all of these so-called "tricks" are a mere matter of course for "Baby." The other day, Mr. Skillman was out walking, and his knife fell from his pocket. Some time afterward he discovered his loss, and made mention of the fact to a companion. The word "knife" was no sooner pronounced than "Baby" came forward and laid the missing article at her master's feet. In getting her meals she uses a little basket. First asking permission to go, the dog takes the basket handle carefully in her mouth, and proceeds to the rear of Charplot's. The meal received, "Baby" returns, and, having satisfied her appetite, takes back a proper recompense to the cooks. At times her master will ask "Baby" to talk, and her attempts at language are then actually painful. It must be kept in mind that "Baby," as yet, is hardly out of her "teens" so to speak, and what she may become when her faculties have been maturely developed, it is impossible for us to predict.—*Denver (Colorado) News.*

Agricultural.

WATERING STOCK.

WATER is not often looked upon as food, yet it plays a part in the nourishment of an animal either directly or indirectly, in much larger proportions than any other, or indeed all other aliments. An animal deprived of water will perish very much sooner than it would when deprived of solid food. As about 75 per cent. of the flesh and blood of an animal is water, and as evaporation from the skin and lungs is incessant and copious, it may be readily conceived how necessary to health is an adequate supply of water. It is very true that if anything that is necessary to health is withheld, disease and death will follow; and it being very true that an ample supply of pure water is necessary to health, and equally true that this is withheld to a very great extent, the consequence is unavoidable. There are many farms well supplied with water, where the appliances for using it are insufficient or badly managed. Ponds of stagnant water are nurseries of disease, and do much mischief. Streams, unless of a peculiarly favorable character, are almost as dangerous and objectionable. Where the banks of a stream are muddy and marshy, and the current slow, the water is apt to carry germs of disease, or the eggs of dangerous parasites. Streams that are swift of current and flow over gravelly or sandy beds are less unsafe, but still not altogether safe, as they may become the means of conveying infection. Springs are not altogether safe, and in some cases are positively dangerous, as when their margins become fouled by trampling and the droppings of stock. Wells are the safest source of supply that can be had. The water of wells is generally filtered through a considerable depth of soil, and is free from contamination by either dead or living impurities. For sheep, especially, no water is safe but that from wells, and as pigs are almost equally subject to parasitic diseases as sheep, well water should be provided for them whenever practicable. The cost of a well, with the requisite power for elevating the water, and some safe, convenient and economical method of presenting the water to the stock, should be considered as a necessary outlay upon every farm where stock is kept.

—*Am. Agriculturist.*

FRUIT AS A MEDICINE.

THE irregular eating of unripe fruit is well known to be unwholesome. The regular and moderate use of well ripened fruit is not so widely appreciated as contributing to health. Residents in regions where more or less malaria prevails, have discovered that nothing is a more sure preventive of its deleterious effects than a regular supply of fruit. A case is well known to us, where a man with a family removed to the West. He had provided large quantities of well-dried fruit, and this was used regularly during the first summer. Although suffering many privations and exposures to hardships, this family escaped the prevailing epidemics. The second year, the supply of fruit being exhausted, the added comforts which they had secured did not protect them from disease. Many other similar cases have occurred. It should therefore be made a special object with all about to remove to newly settled regions, and in fact to any other localities, to take with them or make provision for the immediate planting of an ample supply of early bearing fruit plants and trees, such as strawberries, currants, grapes, raspberries, dwarf apples and pears, and the well-known early bearers among larger sorts, such as Bartlett pear, Early Strawberry, Baldwin and Porter apples, and many other sorts which will give crops while yet small.

But the fruit will not only prevent disease, but in some instances it has proved one of the best medicines to cure it. Many years ago, a chronic cough which had excited a good deal of uneasiness, was cured by daily eating ripe raspberries, recommended by a medical writer of high authority, as an excellent expectorant. Severe colds are more apt to occur on the first cool and damp days of autumn, than at other seasons. We have often cured these diseases on their first attack, by eating copiously of ripe watermelons. The beneficial effects of drinking freely of cold water on such occasions, are well known. Watermelons supply a larger quantity than one could easily swallow in any other way. We have not found these or the raspberry expectorant, an unpleasant medicine to take. When visiting the Centennial grounds at Philadelphia, we had taken "a bad cold." Knowing that many had been made sick by drinking the bad water at that place, we resolved to secure both a benefit and a pleasure by using ripe watermelons instead, which happened to be abundant at that time. Their copious use performed a surprisingly rapid cure, with an escape from all the bad effects of the water. But it must be remembered that the common moderate eating will not answer the desired purpose; nothing but the "heroic" consumption of this fruit will effect a prompt cure.

We mention these various facts as an additional inducement for the planting of fruit-bearing trees and plants, in addition to the claim of comfort, and the luxury of a constant succession of fruit through the year, as well as its important contribution to economy, by reducing the expenses of the table.—*Country Gentleman.*

OXEN VS. HORSES FOR FARM-WORK.

BY F. R. ELLIOTT.

Bred, as I was, upon a farm, and familiar with all kinds of stock, when I left good old Connecticut and came west, it was about the first I knew of horses being mainly used for the purposes of farm-work. I had been educated to use the horse for pleasure, and reaping wheat, grass mowing machines being then unknown. The horse was used on the farm only to plough or cultivate between rows of corn or potatoes, and for raking hay. It was counted policy in farming at that time, and I think it is yet, to train all the males of neat cattle to the yoke, and from them obtain service yearly, to meet the cost of their support, while the growth was part and product of the farm. I learned the training of calves—ere they were weaned—to obey the order of haw, gee, whoa, back, etc., and have traveled in ploughing, behind a yoke of steers of my own training, as fast as ever I saw done with horses. A good farmer should know how to train cattle to walk fast, yet true, so that the draught be even, whether upon level land or a steep side of hill, with soil mingled with rolling stones. In my practice since my early days I have always found a team of well-trained oxen superior to horses, and especially for side hill or stump land work. On the prairies, where the plough is run on wheels, and a man doing the work, rides and imitates the race-course, I do not suppose oxen would be profitable; but even then, if trained, they would take heavy loads of manure, or hay, etc., out and in as rapidly as the horse, while their yearly growth would be a gain rather than a loss, as with the horse.—*Mass. Ploughman.*

DIGGING POTATOES.

To a casual observer who passed through the Agricultural Department of the Centennial Exposition, it would appear that digging potatoes was one of the easiest of jobs; one has only to hold the lines, and the potatoes are placed on top of the ground. In the United States Patent Office is to be found a model of a potato-digger, which is not only to dig the tubers but also to separate them from the earth, assort them into two or three sizes, and measure them before dumping them in piles. In theory it works well, but any practical man can see that if the inventor had ever dug an acre of potatoes, he would never have wasted his time with the model. After trying several machines gotten up for this special job, I have again gone back to the old-fashioned plow, as the best under *all circumstances*, and in all conditions of the soil.

A sort of double-mouldboard plow, with steel prongs extending out behind, does well in loose soil; but in soil such as I have turned to-day, it is "nowhere." My plan is to run the plow under the row, and after picking all which are to be seen, (and if properly done there are few left), run a double-shovel plow up and down the row. After the plat has been gone over in this way, I give it a thorough harrowing with a light steel harrow, and, except a boy to follow the plow when plowing for the ensuing crop of wheat, call the job done. If due care has been exercised in regulating the depth of the furrow, and in guiding the team, it will not do to pay very high wages for the latter part of the job. In picking, it will pay to put the unassorted tubers into old guano or phosphate sacks, as it will save much time in removing them from the cart or wagon; the assorting may be done in wet weather or at leisure times. Some speak highly of the common single shovel or "hull-nose" plow, but we have never found it to answer the purpose as well as our steel plow, with a good, sharp share.—T. J. E.

—*Country Gentleman.*

A FROG BAROMETER.

Out at the Lafayette Park police station they have a weather prophet which eclipses Tice and all the barometers in the neighborhood. It is a frog of the genus *Hyla*, more familiar to the general reader as the tree-toad. Hunt, the superintendent of the park, was mildly abusing his barometer one day for misleading him, when the officer on the beat, an old frontiersman, said he would show him a trick. He took a glass jar and threw into it some stones and a couple of inches of water. Then he whittled out a little wooden ladder and put it in the jar. After some lively scrambling a tree-toad was caught, chucked in, and a tin top screwed on. The weather indicator was complete. When it is going to be fair weather, that toad roosts on the top round of the ladder, solemnly blinking the hours away. From twelve to fifteen hours before a change to bad weather "the general," as they call him, begins to climb down, and hours before a storm sets in, he squats himself on a stone, and, with his head just above the surface of the water, peers aloft at the coming storm. Let the weather be changeable and "shifting," as "Old Proh" says, and the toad goes up and down that ladder like a scared middy. When it is fair and the toad roosts aloft, his skin is of a light grayish green. When the change comes, the skin turns black as the toad goes down the ladder, becoming a jet, shining black by the time he reaches the bottom. The fame of the toad has spread through the Lafayette Park neighborhood.—*St. Louis Times.*

SUPPOSE.

Suppose, my little lady,
Your doll should break her head,
Could you make it whole by crying
Till eyes and nose were red?
And wouldn't it be pleasanter
To treat it as a joke,
And say you're glad 'twas dolly's
And not *your* head that broke?

Suppose you're dressed for walking
And the rain comes pouring down,
Will it clear off any sooner
Because you scold and frown?
And wouldn't it be nicer
For you to smile than pout,
And so make sunshine in the house
When there is none without?

Suppose your task, my little man,
Is very hard to get,
Will it make it any easier
For you to sit and fret?
And wouldn't it be nicer
Than waiting like a dunce,
To go to work in earnest
And learn the thing at once?

And suppose the world don't please you,
Nor the way some people do,
Do you think the whole creation
Will be altered just for you?
And isn't it, my boy or girl,
The bravest, wisest plan,
Whatever comes or doesn't come,
To do the best you can?

PHOEBE CARY.

HAMPTON INSTITUTE LECTURES ON TEACHING.

BY PROF. F. A. ALLEN.

LECTURE XI.

EXAMINATION OF PUPILS.

In regard to this, I will ask you to remember six things:

1st. Teaching is causing one to know.
2d. In teaching we are to proceed from the known to the unknown.
3d. Children know *something* before they enter school, in all the branches taught.
4th. Examination is necessary to see what they know and where their knowledge ends.
5th. Begin to teach where the pupil's knowledge ends.
6th. Teaching is like grafting.

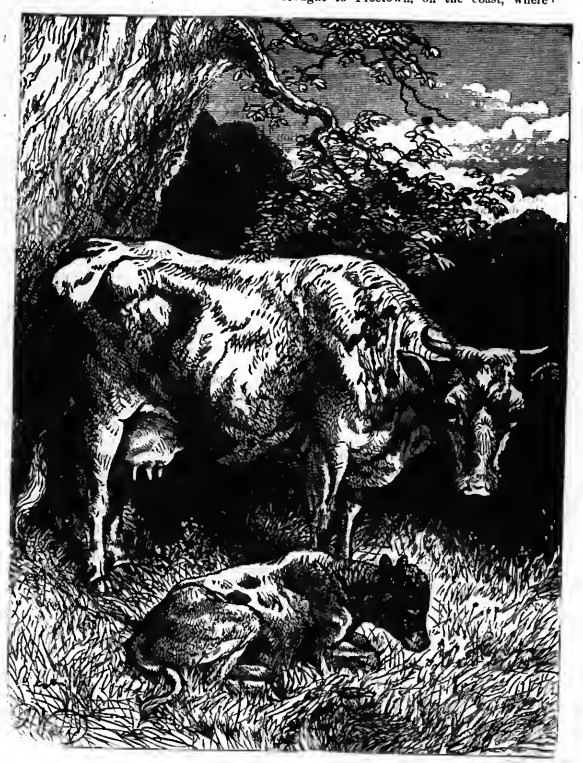
In the first place, teaching is not merely *telling*. It is causing to know something not known before. I may tell you that the angles at the base of an isosceles triangle are equal to two right angles, but that is not causing you to know it. You may tell a child all there is in the grammar or arithmetic, but until you cause him to know it for himself, you have taught him nothing. Many teachers do too much talking; they recite most of the pupil's lesson for him. Now that may be a smoother, pleasanter recitation to listen to than the pupil's would be, but it does him no good. Only so far as you can get his own mind to act upon the lesson, and take it in and grow by it—make it a part of his own knowledge,—have you really taught him anything.

No child enters your school without knowing something of the subjects taught there. Do you say—how can that be? Well, let us see. Of course the child does not know that it is Arithmetic he is practicing when he is sent to the closet to get a certain number of knives. When he is sent to get six apples, then to get enough more to make a dozen, and then told that he may share them with his friends, he does not know that he is numerating and adding and dividing, but he is doing just that. He doesn't know it is geography he is learning, when he learns how the branch runs by the school-house, and through the woods and into the river; or chemistry, when he discovers that iron will rust, or philosophy when he learns that fire will burn and water boil, but it is no less. This is perhaps as new an idea to you as it is to him, but you see it is a fact, and a useful one for you to remember; you can greatly delight and interest him in the discovery that he is going to learn something more about that of which he already knows something. A French writer tells an amusing story of an ignorant man who, on becoming suddenly rich, employed a private tutor to make up the defects of his education. He wished among other things to learn to make both poetry and prose, and was very much astonished to find that he already knew how to speak in prose. "What!" he exclaimed, "and so I have been speaking prose all my life without knowing it?"

Examination therefore is necessary to discover the limits of a child's knowledge. Ask him simple questions first that he can answer—that will make him proud and interested. Then stimulate his natural desire to know more.

Remember the natural law of Likes. There isn't *anything* a child doesn't know, but that he wants to know. Teachers often make the mistake of thinking that children dislike knowledge. Why it is what they are most eager for. If you doubt that, just bring into your school-room some day a big locked tin box, and set it on the table, saying nothing. How the eyes will open wide, and the little necks stretch out, and what a buzz and stir. "What d'ye spose he's got in that box?" "Don't I wish I knew what's in that!" How many questions do you suppose you'll be asked in five minutes if you let them speak. "Oh, but that's only curiosity"—do you say? Well, all our desire to learn is curiosity, and that's one reason a child learns so fast—he's brim full of curiosity, and everything about him is new and strange to him. You haven't to excite in your pupils a desire for knowledge. You have only to direct it and satisfy it and take care not to crush it out. Encourage questioning, for it helps the pupils to learn faster.

"Johnny—where does the sun rise?"
"Over there"—
"Where does it set?"
"Over there."
"Which way is your house?"
"There."



BLOSSOM AND HER CALF.

"Could you find your way to it in the night?"

"Could you find your way towards sunrise in the night?"

"I suppose perhaps you'd like to know how to?"—

Ah—then he wants to know how to tell the points of compass and the North Star.

Encourage questions. Don't snub the child, or tell him not to ask tiresome questions.

Knowledge is power. Ignorance is weakness. Ignorance is the father of indolence. This is its geneology—its line of descent:

Ignorance,
Indolence,
Pauperism,
Crime.

BISHOP CROWTHER OF THE NIGER.

When a boy of eleven, playing around his father's hut in the forest of Benin—not unlike St. Patrick in the legend—he was carried off by a gang of slave-hunters, along with his sisters, cousin, and mother. His father fell with most of them in the defence of the village. After a horrible march Adjai was bartered for a horse, but was sent back again, and was put in irons along with his mother and sisters. He was soon sent to a slave-market, where a Mahommedan lady bought him to wait on her household. The poor young slave fretted so, that often he wished to die; once he even tried to strangle himself with his belt, but the God as yet unknown to him had other work for the forlorn captive: and the lady, afraid of losing his value, sold him to some Portuguese slavers for some rum and tobacco; and he was handed over to new masters who traded him to Lagos. When he saw the great sea, he was so terrified that he fainted, and had to be carried on board, where a hundred and eighty sick and hungry wretches were assembled, to be led like sheep to their markets.

The slave-ship was captured by two British cruisers, and Adjai and the others were rescued from a life of misery. When they stepped on board the English vessel they trembled, for the Portuguese had told them they would be killed and eaten; and the great pile of cannon balls on board the man-of-war was pointed out as the dried skulls of negroes already devoured by the English. Soon, however, the fear and horror wore off when they found themselves kindly treated, and that chains, blows, and starvation were things of the past. They were brought to Freetown, on the coast, where little Adjai showed wonderful aptitude in learning. He begged a half-penny with which to buy some alphabet cards; in three days he knew them all, and in six months could make out most of the Testament.

In three years the poor little heathen was baptized as Samuel Adjai Crowther, afterwards to be crowned a minister, as his people call it. He translated the Bible into the African language. His first service, however, was to accompany the Admiralty Expedition up the Niger in 1841. A second expedition followed; and the third, projected by the late Macgregor Laird, Esq., was so successful that the Church Missionary society, which had a station at Sierra Leone, determined to commence a Niger Mission. The wreck of the steamer Day-spring gave the Rev. S. Crowther, who had meanwhile been ordained, increased opportunities for becoming acquainted with the country and the people. He eventually found his way overland to the coast, passing through several important towns, and among others Ilorin, which had been first visited by Lander. To this and other places on this overland route fresh attention has recently been called; for in 1871, by the steamer being left high and dry on a sand bank in the Niger, Dr. Crowther found the river route closed against him, and was obliged to return overland to the coast. Notes of this journey are to be found in a separate publication issued by the Church Missionary society.

One point of special interest connected with the Niger Mission is, that from its first commencement, in 1857, up to date, it has been conducted wholly by negative agency, and has prospered in spite of special difficulties, for the most part unknown in other countries which enjoy the blessings of a settled government. In 1864 the quondam slave-boy and zealous missionary was created D.D. by the University of Oxford, and set apart as Bishop of the Niger, in Canterbury Cathedral. The Niger Mission and Bishop Crowther have been identified with the policy, new to Protestant missions, of creating a self-developing and self-extending native Church by means of native converts alone. In this respect Bishop Crowther is a representative man. It was in 1804 that the Church Mission first sent agents to Africa, and in 1854 the Church of Sierra Leone undertook the whole pecuniary responsibility of its own support, and of mission work beyond. It is the same system introduced into South India, at a later period, that is working out similar results here.

BLOSSOM AND HER CALF.

In a certain quiet New England village lives a round and rosy baby boy, one of whose best friends is a pretty, soft-eyed Alderney cow. For many a month the cow's rich milk has gone to the making of the baby's roundness and rosiness, while all that was left from his abundant and frequent meals fell to the share of the little brown and white calf, who, I have no doubt, was proud of her position as baby's foster sister. Old Blossom had plenty of milk for both her hungry children, and the arrangement was a satisfactory one on all sides till the calf grew big enough to understand that a little skilful pushing would sometimes open gates, and a little maneuvering enable her to go through or under bar-fences. From the day of that discovery poor Master Baby was at a disadvantage, for it is a sad truth that his foster sister would neglect no chance, or leave no stage unturned by means of which she could get to her mother's side and appropriate with naughty appetite not only her own, but Baby's share of the day's milk. Not a bit of honor had this greedy calf, and Baby's chubby hands and dimpled feet, and even his imploring screams, stood no chance against the quick-growing strength and sagacity of his four-footed rival.

Every day Blossom must be put into some safe pasture, and the calf carefully penned up out of reach, and even then we would sometimes hear at evening that the calf had contrived some new way of reaching its mother, and had, as usual, stolen its last drop. Then Baby Harry's supper would have to be taken from some other pail, and Harry knew as well as any of us that no milk was so rich and sweet as Blossom's. So then he would cry and scold in his baby fashion, and everybody was very sorry except the naughty calf, who did not care a bit.

LIKE JESUS.

Grandmother told Sally to go out in the yard and pick up a basket of chips. Sally was making a doll-house in one corner of the room, and she did not like to go at all.

"I do not want to go," said Sally, keeping back a tear in her eye, "but I will go, grandmother, because the Bible says Jesus pleased not himself, and I want to be like Jesus."

So she went, and went cheerfully. Trying to be like Jesus will take all the selfishness and willfulness out of a little child's heart.

TO THE BOYS.

"*Don't be laughed out of your money or your prayers.*"

A distinguished English admiral, who rose to the high station as the effects of his meritorious exertions, used to be fond of relating that on first leaving a humble lodging to join his ship as a midshipman, his landlady presented him with a Bible and a guinea, saying, "God bless you, and prosper you, my lad; and as long as you live never suffer yourself to be laughed out of your money or your prayers." The young sailor carefully followed this advice through life, and had reason to rejoice that he did so, while thousands have regretted that they have pursued a different course.

At Home.

A WOMAN'S HAND.

Only a little, soft, white thing
Made for wearing the costly ring;
Made for flirting the daisty fan
As only the belle of the season can;
Made for the stolea pressure or kiss,
(Long Branch fashion), raising to bliss,
By merely the touch of fingers white,
Her escort down by the hcach thet night;
Made for a "prize" for the highest hid,
(And uader the roso a thorn lies hid).
A thing which the honest summer sun
Has taught his ardeut beams to shun,
Lest freckle or tea its beauty spoil,
And makes it too near a hend of toil,
Instead of only a dainty thing,
Made for ease aad tho diamoad ring.

Only e suabnrned, uscful thing
To which the hearts of thc needy cliag;
To which they turn who have learaed the worth
Of a womea's hand on tbis weary earth;
Made for healing, for soothiag o'er
The hearts of those who ere faint aad sore;
Made for honest work each day,
For driving the shadows of life awey;
For holding the "cup of weter" to all
Who, faint and thirsty, for succor cell;
Made for leeding the timid on;
For blessing all it may rest upoa;
Mede to be woa by a loyel heart,
Who in its labor will hear a part;
Made to be clasped by a loyel hand,
Which chooseth the best in ell the lend,
Worth—O! double its weight in gold,
This useful hand thet can never grow old.

—*Harper's Weekly.*

GLASSWARE OUT OF THE RAG-BAG.

"What a pretty little chintz beg you are making, Faaay, aad how aicely you arc trimmiag it with that pink cambric. What is your idea ia running that bit of an old steel sprig in the top?"

"To make it haady, Mary. This is a scrap-beg, or, to speek plainly, a rag-beg, to heng in the sitting room. I made it look nicely, so we would aot be ashamed of it."

"Onr rag-bag is a piece of old bed ticking, and it hangs in the cellar way," said Mary laughiag.

"That is too far off; wa are such lazy folks we should make a small collectioa if we weat there with every scrap we saved."

"Ours is not visited so very often. It is much handier to drop thiags ia to the stove, we all find. It is aot much use to save them, any way, tha rag men give so little for them; ouly two or three cents a pound."

"I knnw it does not seem much, but where you sava all your cuttiags and your old papers, you would be surprised to see how fast it counts np. Mother gives them to me this summer, and I am getting my glassware with them, just now. Coma into the pantry and look at my shelf." And with the self-conscious smile of a prospective housekeeper, Fanay opeaed the door aad displayed her simple treasures. There was a baker's dozea of good commoa tumblers, a set of daiaty preserve plates, two jelly dishes, a covered butter dish, and a spoon glass.

"Haven't I made a beginning?" said Fanay, with a smile and a blush.

"I should say you had," said Mary. "I em quite eavious of you. And you don't say that those were bought with just such scraps as I drop into the stova every day?"

"I can say that they were all bought with scraps which I save every day. I have a plenty of scrap-bags about the house, up stairs and down, to catch aaythiag, aad I take paias to hava them aot uasightly. When they are full, I put them into the rag-barrel, and 'set' them again, just as I do tha mouse-trap. I fiad it a great deal easier way to dispose of them thaa say other we have ever had. They are hard to sweep up, they look uasightly lying about, and I fiad tha saviag of them helps to maka mo thoughtful about other little savings. It is certaialy a great satisfaction to me to convert them over iato these pretty forms, instead of turniag them iato ashes."

"You hava certainly mada a success of it, and I meaa to try the experimeat for a month, anyway, aad see how I make out. Take care that my glassware doesn't take all the shiae off from yours," she added, as sha bade her friend a laughing good-bye.—ELSIE.

—*New England Farmer.*

"GRANDMA'S" TOMATO CATSUP.—To two galloas of peeled ripe tomatoes udd eight tablespoonfils of fine salt; eight tablespoonfuls of groaad black pepper; six tablespooafuls of groaad mustard; ona tablespoonful of groaad allspice; sixteen pods of red peppers, pounded fiaa; aad tea quarts of good vinegar. Simmer these together for four hours; strain through a wire sieve, aad thaa bottla. It will be ready for use in two weeks, but will improve hy age. It will keep ten years.

LETTERS FROM HAMPTON GRADUATES.

ROUGH EXPERIENCES—BRIGHTER VIEWS—FINE EXAMINATIONS PASSED—MEETING FELLOW-WORKERS.

Comparisons are odious; and while the statements of the following letter are no doubt honestly and truthfully made, the writer might have formed other impressions in other places. It is fair, however, to give both sides of a picture, and it is true enongh that the yoang colored teacher often finds his field a very rough road. We are glad to say, however, that this does not make him work the less, but the more.

"*Dear General:*

"I feel it my duty to write you, and to thank you kiadly for your kindness in sending to me the 'Educatioaal Journal.' It came to me the same night that I received your postal card. I have read it, aud am ready to send it to my nearest Hampton teacher. I fiad it my best companion after my Bible. It is just the thiag I have been looking for; and I think as it says—that every teacher should reed it for his own benefit.

"I thought while I was thanking you for the paper, that I would say a few words about this place and people as a whole, which I think you will be pleased to know about. Those whom you sea at Hampton cannot be tokea as an example of the whole race. You may think that some of the new pupils you receive oa the first of every October are far behind the times; but the worst of them are better thaa the best here. You who live in Hamptoa have no idea of the coadition of our people in other places. You scc a few uf the very best of them, and only a few. You may think that you caa judge from knowing the condition of our peoplo in the town of Hampton; but there's a mistake there, for tha folks in Hampton are far above most of the people wherever I've been, in every respect. To tell tha truth, tha peopla here are far behind any that I hava ever met with. In religious matters, they don't think that religioa stops them from keeping up all their old low-down ways, and brace themselves on the verse which says: "Religioa never was designed to make our pleasures less." They seem to think that there is nothing that they want to do after they hava become Christians but what they caa do without harm to their religious integrities. Oaa of their worst faults is intcmperance. They don't think that there is any herm ia "taking a dram," as they call it, oace in a while. Oftentimes, one can see members of the church who are hardly able to walk the streets because of intemperance; yet they say there is not any harm in it. One thing that has been a great pull-back to them is, that they have never had any one to lead and instruct them in regard to their religioa. The superintendent (who is a very nice and good man) has tried to do something ia regard to teaching them; but as he is a white man, they have no faith in him or his teachiag. He told me how far behind they were in religious matters, and I have been waiting a long time, or ever since I've been here, for a chaace to say something about Christianity; finally, two Sunday nights ago, I lectured on Christianity. The people here do not think that they have had a meeting unless they have shouted and knocked down the benches, aad half killed or hurt some one. There are times when the minister is preaching, you cannot hear anything he is saying for the noise of the people. Since I've said *something* about the minister, I will say a little more. He has been a preacher (in his own way) a long time. He is an uneducated man, and his flock seem to think more of him than they do of Christ. I think that what has caused so much darkness throughout the land is, that every man that

Will it make it any easier
For you to sit and fret?

cau read the 25th Chap. of St. Matt. imagines he can preach, and the consequence is, that the country is flooded with uneducated ministers who are trying to preach, and in nine cases out of ten, don't know what they are preaching about.

"The people here don't seem to take any interest in sending their children to school. The place is large enough to have a large school here, and it could, but the parents are negligent, and only send their children to school until they are able to read in the fourth reader, when the parents considering the childrea are educated, take them away. The school has numbered eighty scholars and averaged sixty-three; and now I caaaot make an average of thirty. They act as if they dida't care whether they send their children to school or not. Some few are very anxious to send, while a large number look as if they don't care anything about the school. Some keep their children home—or sending them around on business till 9.30 or 10 A.M., aad then sending them to school; and, of course, if they come later thna 9.15 A.M., I have to send them home again. I have had great trouhls in regulating my school; but um happy to say that I have it in as good shape as I can get it this term. I have tried some of Prof. Allen's ways of teaching, and found them quite successful.

"Please remember me to all the teachers.

As ever, your pupil,

"W."

Here, for instance, is a brighter experience than that of the writer of the above letter:

"N. C.

"*Gen. Armstrong,*

"*Dear Sir:*—As I em one of your students from Hampton, sent out as a teacher emong my people, you would like, no doabt, to heer of my progress since I left the school. Well, sir, I have heea getting along very well indeed. When I first came home, I took a short vacetion of two months, and then left Wilmingtoa and went up into Pender Co., where the people received me with ell marks of kiadness. Then I taught for six months without stopping. The people among whom I was teachiag were so ignorant, aad thought so much of whiskey aud tobecco, thet a paper like *The Southern Workman* would find a slow sale, for the people in some parts of N. C. are very much behind the times. Now, I am ont of Peader Co., ead am teaching in New Hanover Co., oa the Souad, eboat ten miles from Wilmington. I heve beea five moaths already at this place, aad expect to teach uatil aext May. I expected to heve beea teachiag in Wilmiagton this winter, but was on the Sound at the time the schools commeaced teaching, at the seme place that I am et aow. They pay me forty dollars per month where I am teaching, end General, I get along very well emong both white end colored. Hoping to heer from you soon,

I am, yours truly,

"H."

The occasional meeting of our gradnate teachers is a pleasant experience, and they frequently make it a useful one, establishing reading circles and meetings for mutual benefit, when a number of them are settled within convenient distance.

"VA.

"*Miss H:*

"I had the pleasure to write you a short letter on the way, at the same tima promising to write again as soon as my journey was completed. You will see by the above that I am now in my aew quarters. Found everything quiet and working in a systematic way as usual. I have a much better location hera than I had before; wages are better, aad we are much better provided for.

"No doubt you would like to know of my success in teaching, &c. I cas't complain at all, for tha Lord has accepted me as a laborer in his vineyard, and I have been quita successful in my Sabbath school work, teachiag, aad temperance reformation. I am weak, but Ha is stroag. I am tryiag to do with my might what my haads fiad to do.

"I often think of each of you at Hampton, and, as I go from place to place, I behold soma of your work—some young man or womaa employed with, or in a school. We should feel very grateful towards you all, which I must confess I do. I hava oftea regretted aot taking your advice, which was to stay and finish at H. But I hava entered into life's wide ocesa, with a frail bark aad poor rudder; tha curreat is strong, and good oarsmen must pull or perish. I have aot fonnd any trouble yet in teaching. I have passed the board of examiners five times; was successful in all, yet I know that I am incompetent. I will meet you at the school in its next session, if aothiag happens. 'Time is more precious far than gold—the worth of moments can't be told.' If, 'Then we idly waste our time,' we are not, 'guiltless of a crime.'—EPH. v: 15-16.

"I subscribe myself as

Your humble friead aad scholar,

"O."

BAD BARGAINS.

Oace a Sabbath-school teacher remarked that he who buys the truth makes a good bargain, and inquired if any scholar recollected an iastance in Scripture of a bad bargain.

"I do," replied a boy; "Esau mada a bad bargain when he sold his birthright for a mess of pottage."

A second said, "Judas made a bad bargain when he sold his Lord for thirty pieces of silver."

A third boy observed, "Our Lord tells us that he makes a bad hargain who, to gain the whole world, loses his own soul."

"Boy, what will you taka to tell a lia for me?" asked a mate of oaa of the cabin boys on board of a fine English ship. "Not all tha gold of California, sir," he replied.—*Missionary Visitor.*

"O MOTHER, I did want ona of those big oranges oatside Dick's shop-window."

"You did aot tonch oae, I hnpe, Eddy," said his mother.

"I did not, mother; but I had to watch my hand *hard* not to let it grab," replied Eddy.

That's right, my boy, *watch.*

THE PEASANT BOY.

BY CHARLOTTE CUSHMAN.

[A volume of the New York Mirror of 1874 contains the following poem, written by Miss Cushman. A note states that it was written on seeing a picture of a peasant boy, with a spade on his shoulder, trudging to his daily toil.]

There's poetry, boy, in that step of thine,
Firmly and free on the green sward pressed;
And the locks that over thy temple shine,
Flow wild in the wind of the soft sou'west.

Care lurks not, boy, in that laughing eye,
No frowns o'ercast that forehead's snow;
And the mellow tints of the morning sky
Lend to thy cheeks an eloquent glow.

Thy heirloom is pure, unbroken health,
A cheerful heart to endure thy toil;
And all thou needest of this world's wealth
Thou can'st sturdily win from the grateful soil.

With the lark's first song thou art up and away,
Brushing the dew from the glistening sod;
And chanting the simple roundelay
Which innocence sings to the ear of God.

From the ardent sun of cloudless noon,
Thou seekest the shade of a sheltered nook,
Where the ring-dove murmurs its amorous tune
To the answering sound of the gushing brook.

There, resting thy limbs on the mossy brink,
Thou takest in peace thy poor repast.
Bending thy feverish lips to drink
From the wave that glideth so cool and fast.

Then to labor again, till the waning sun
Fadeth away in the western sky,
And the shades of twilight are creeping on,
While the birds on the covert nigh

They are coming to meet thee, the peasant band,
The fair-haired girl and tawny boy,
While the hahy prattler clasps thy hand
And breathes thy name in lisping joy.

To the cottage away—to thy mother's knee;
To thy father's side, thou art welcome there;
That mother's smile is ever for thee,
That father gives thee his warmest prayer.

And thou shalt rest in slumber sweet,
Pillowed beneath the rafters eaves,
While the summer rain-drops gently beat
And the night wind stirs the wood-hine leeves.

There's poetry, boy, in that form of thine,
And the gazer covets thy painless life,
Would that thy stormless lot were mine—
Passionless, careless and free from strife.

IN A NUTSHELL.

BY EMMA BURT.

First, a beautiful long white tassel came on the tree, along with a thousand others. The wind brushed it off, and it floated away down into the meadow-grass—then a wee hurr was left.

Already within this hurr a nut was crving to be free.

"Let me out! Let me out!" It prayed of the tree.

"Wait a little, dear, until you are grown," said the tree.

"And *how* may I grow?"

"Ask the wind, and the rain, and the sun."

"O wind, and rain, and sun, how may I grow?" cried the nut.

And they all replied: "TIME only can tell, for we are but the servants of Time."

Then the young nut called, "O Time, tell me how I may grow, for I want to be free."

Then the kingly Time made answer:

"Little nut, you have only to wait, sweetly, trustingly, patiently, and you will grow great, and at length be free."

So the little nut shut its eyes and began to wait, so sweetly and so full of trust, that by-and-by, before it knew it, the wind and rain and sun had done their work, and the prickly hurr began to open,

Then the nut opened its eyes and was surprised at its own exceeding beauty, when the sun shone in upon its rich brown coat. It was very glad and very proud indeed, and said:

"Yes, I am beautiful, and I am also almost ripe; and I am very rich in myself. How very pleasant it is to live! And how lovely are these Indian-summer days!"

The hurr opened wider and wider. And, when the nut had become quite accustomed to the light and air—the wind gently nudged the hurr, and the hurr sent the nut where the tasselled blossom had gone before—down in the meadow-grass to be free.

It was extremely happy for a little time. The grasses and asters, and golden-rod, were very polite to the nut, and the nut was polite to them—so they got on nicely together. The flowers chatted with it about all the strange and charming things they knew in the world—for *they* had always been out in the world from the time they were born. And while they chatted, the brook ran gayly by; and the sun shone brightly, and music was in the air.

After many days, this odd little brown nut grew very strangely sad.

"What? Not satisfied yet?" said the kingly Time, who had been watching the nut attentively.

"Oh, *more* than satisfied, and yet—"

"And yet what?"

"I cannot see what is to come of it."

"Of what?"

"Of all the good you have given to me."

"Ha! ha! How funny!" laughed Time. "If *that* troubles you, I can very soon take it all away!" For Time, who is very wise, was amused, and wanted to tease the young nut a little.

"Pray, do not laugh at me, good time! for, really, I am not quite happy, though I ought to be."

Then said Time very kindly and seriously:

"It is not enough, dear child, to be free, in order to be happy. The richer one is in himself, the more he will suffer if he does not give himself away; but you are too young to understand this now."

Many days the small nut pondered over these wise works—until the flowers, and grasses, and crickets thought it grown quite stupid.

At length it pulled the hem of Time's mantle, to draw his attention, and said:

"Tell me, good Time, *how* I may give myself away?"

Time was so surprised and touched at this, that, grown though he was, the tears came. He said:

"My child, you have only to do what I before told you to do, 'Wait and trust, the way will surely open.'"

So the nut ceased to be sad, and sweetly waited and trusted. The sun went behind clouds, the cold rain beat down upon the meadow and spoiled the grasses and the flowers. The brook froze over, and all grew dismal and chilly. The nut *was all alone* and its beautiful coat was ruined.

Yet it patiently waited and trusted.

By-and-by, after a long time, what do you think happened?

Out of the heart of this same little nut sprang something wondrously lovely. Delicate was the stem, and fair were the tender leaves. It grew and grew until all of the nut was absorbed into its curious root and delicate stem and leaves. Taller and taller it grew until its shadow sloped way across the meadow, until the pretty flowers half twisted their heads off, in looking up to see it. And oh, this nut, which was no longer a nut, was gladder than the gladdest thing on earth; and so it continued to be to the very end of its days.

And so you see the whole story is, after all, in a nutshell.—*Christian Weekly.*

SPEED OF RAILWAY TRAINS.

The following are the highest authentic instances of high railroad speed with which we are acquainted: Brunel, with the Courier class of locomotive, ran 13 miles in 10 minutes, equal to 78 miles an hour. Mr. Patrick Sterling, of the Great Northern, took, two years back, 10 carriages 15 miles in 12 minutes, equal to 75 miles an hour. The Great Britain, Lord of the Isles and Iron Duke, broad gauge engines on the Great Western Railway, have each run with four or five carriages from Paddington to Didcot in 47½ minutes, equal to 66 miles an hour, or an extreme running speed of 72 miles an hour; the new Midland coupled express engines, running in the usual course, have been timed, 68, 70 and 72 miles an hour. The 10 A. M. express on the Great Northern, from Leeds, we have ourselves timed, and found to be running mile after mile at the rate of a mile in 52 seconds, or at 69.2 miles an hour. The engines used are Mr. Stirling's outside cylinder bogie express engines, the load being ten carriages.—*Engineer.*

HAMPTON'S ANNIVERSARY.

PRESS NOTICES.

THE following accounts of the recent anniversary exercises at the Hampton Institute are published in the SOUTHERN WORKMAN for the benefit of those who may not have seen them, and in the hope that good will result. This institution is an important interest, costing annually about $30,000; of which, through state aid and income from endowment fund, $12,000 yearly are believed to be assured. For the balance of $18,000 annually it looks to its friends in the North. The following items are given to answer questions likely to be asked by those interested in the cause:

Number of teachers, 21; of whom 14 are ladies and 7 are gentlemen. Total enrollment last year, 274 (of whom 105 were women and 169, men; average age, 18½ years). Average attendance, 240; Number of boarders, 221. About 200 graduates and ex-students have engaged in teaching; 90 per cent. enter the school work; children taught estimated at 7,000.

Course of study three years, confined to English branches. Manual labor is a special feature.

Cost of educating a student one year, $70.

Students pay their own board bills, partly in cash, partly in labor. The institution provides the board of the 221 boarding students at $10 per month, and gets what it can from students whose payments (half in cash and half in labor) in much non-profitable and unskilled work, to say nothing of arrears of cash payment, make the boarding department a serious but necessary expense; it being a means of many civilizing and improving influences. The work is to lift up the race by self-help and by helpful surroundings, and to bring the benefits of education within the reach of its poorest youth. Scholarships of $70 a year are especially solicited, and sums that will go to make up scholarships.

An endowment fund is indispensable. The chief reliance of the Institute for income and endowment fund will be by spreading information, and not by a costly system of collecting. Contributors receive complete details of receipts and expenses.

Correspondence, Springfield Republican. (*Mass.*)

BY REV. JOHN W. HARDING.

Coming back to my own observations, which as *The Republican's* correspondent, have been continuous for several years, I found on arriving at Hampton a gratifying advance in various particulars: improved grounds; a malarious marsh drained, and converted into an ornamental pond connecting with the sea; two new dormitory cottages, one a $5,000 gift of Mr. Frederic Marquend of New York, the generous benefactor of Yale. New industries: broom-making; a rag-carpet loom, which has turned off over 200 yards; ten Lamb knitting machines, on which the girls learn to make good work in three days, turning off 150 pairs of mittens per month, and under contract with Pratt, Porter & Co., of Boston, for 3,000 doz., they sending the yarn, and paying 40 cents a dozen for the labor. I found the printing-office enlarged by new material, having done work during the year to the amount of $3,400. The student farmers have grubbed up five acres of waste land; the brickmakers made some 200,000 bricks at a good profit; the mechanics have made 40 bedsteads and 45 tables; 40,000 lbs. of fresh beef, pork, and bacon have been put to the credit side of the farm account, one-fourth of it raised on the farm, the rest purchased. While a final balance of $500 against the farm must be acknowledged, the offset should be weighed of splendid permanent improvements; and, better yet, the industrial educational benefit to the students and to the whole adjacent region, as abundantly manifest in the appreciation of real estate, the increased value of farm stock, and the general improvement of agricultural methods. The students are not profitable laborers, except in the large prospective view of their educational value as the future teachers of their race. They have earned during the year about $8,800 by their labor of all kinds, at wages from 5 to 10 cents per hour. *All* must work. It is a predetermined feature of the institution for the combined purposes of industrial instruction, and the formation of staunch character.

At 5 o'clock this morning, we were aroused by the stirring music of the students' brass band on the lawn in front of Virginia Hall. It is the usual rising hour. Breakfast is at 6; a study hour from 7 to 8; inspection of men, in ranks, at 8.20; and so filling up the day with variously continued exercises, till the evening study hour from 7.15 to 8.45; and lights out at 10. It is a first principle with Gen. Armstrong, to give the negro so much to do, with the recreation of variety, and the stimulus of necessity, that there will be no opportunity for his idle passions to consent to sin.

But this is a gala-day, and the routine changes. The steamer Nettie in her frequent trips from Old Point Comfort, brings crowds of expectant visitors; sail-boats and row-boats ply across Hampton Creek; carriages from Fortress Monroe, mule-teams from the country, and a steam barge from Portsmouth, bring in a curious assortment of ranks and colors. Officers of the army and navy with their lady friends; judges, honorables, and divines of the Virginia *elite;* members of the press, and among them Mr. White, Washington correspondent of the Tribune; the colored ministers and curator; the proud old folks who have boys or girls in the graduating class; the young people of color from the region for whom the day is an inspiration; and, most welcome of all, Mrs. Rutherford B. Hayes and her party from the White House. Led by the band, the visitors follow the procession of students, 250 strong, and pass through their open ranks to the assembly room in Academic hall, where Gen. Armstrong opens the forenoon examinations with the usual morning devotional exercise of responsive scripture reading, singing and prayer. In contrast with the Hampton singing "to the manner born," was a splendid rendering of a "gloria" in perfect harmony and time. Everywhere crops out the large-minded catholicity of the management here. While decidedly "evangelical," there is no narrowness of form, or dogma. At the last anniversary, a Congregational clergyman baptized by immersion several students. Rev. Phillips Brooks offered an extemporaneous prayer at the close of the anniversary. Gen. Marshall, the treasurer, who is a Unitarian of the conservative type, often conducts the devotional exercises.

The forenoon was spent by the throng of admiring visitors in inspecting the various recitation rooms, and hearing the classes in agriculture, and civil government, universal history, natural philosophy, United States history, algebra, arithmetic, grammar, reading, writing, spelling and book-keeping. The object of the teaching throughout is simply to give a practical, thorough drill in the elementery branches that belong to common-school education. Competent *common-school teachers* are the present pressing necessity of the South, instead of illiterate poor whites and worthless colored quacks. And this teaching is, as Col. Rogers, the President's secretary and old law-partner, said in his afternoon speech, the very best of normal teaching. He testified, emphatically, that he had never seen it equaled, and I think every intelligent observer of normal schools would assent. The secret appears to be mainly in three things—first, the spontaneous interest of the pupils pressed by the peculiar motives of their *esprit de corps;* second, the philanthropic motives of the teachers, making them keenly alive to the object and the situation, and so a constant moral and personal inspiration to the pupils; and, third, a persistent drill in the art of expression by rapid and continual oral questioning, and the mutual questioning of the pupils by each other. *Ideas,* clear and distinct, before words, and then, the alert and ready expression of ideas, out of the pupil's own mind rather than the text-book. As Rev. Mr. Boynton, correspondent of the *Christian Union* said, it was, from Gen. Armstrong down end all through, "brainy." In this fine corps of accomplished teachers, the majority are "Vassar" girls.

In the main hall attractive specimens of farm products were exhibited—vegetables, fruits, cereals, etc.—and some of the Lamb knitting machines were at work; and on the lawn adjoining Academic hall were temporary sheds containing fine specimens of the farm stock, horses, colts, Ayrshire, Jersey and graded cattle, pigs, and Cotswold sheep—the prize animals of the county. The Hoe steam-press was at the same time working off the June edition of the *Southern Workman* in the basement of Virginia hall, and from 12 M. to 12.25 the girls' industrial room was open, and the girls at work—under the charge of Mrs. Eudora C. Atkinson, formerly of Boston, about 80 of the girls are taught machine and hand sewing, cutting out garments, etc., and, while they work, somebody reads aloud from some book like Rollo's Travels in Europe, or Higginson's United States, or Longfellow. The girls in the room have made during the year 1,332 articles, and earned $468.78.

At noon, the graduating class and visitors were escorted by the middle and junior classes, led by the band, to Virginia hall, and after a collation for the guests on Gen. Armstrong's broad veranda, in which civil rights and social equality were blended and illustrated in a manner never dreamed of under the old *regime,* and as they could be by any other occasion, the anniversary exercises proper commenced in Virginia hall. Previously, Mrs. President Hayes had given an informal private reception to the young men and women of the school, and, at the close of the exercises in the hall, she again delighted them by presenting to the girls the prizes of $20, $10, and $5, respectively to the first, second, and third best speakers; Mrs. Commodore Stevens following with like awards to the boys. Mrs. Heyes conferred great pleasure and honor upon the whole occasion by her sweet and womanly presence.

The essays and orations of the students by about an equal number of young men and women, respectively, were very creditable. Self-possessed, of manly and womanly bearing, modest in their attire, with well-trained voices and sensible thoughts, they treated appropriate subjects: "Our Duty as Graduates," "My Log Cabin School-house," "Shall we go to Africa?" "Our Work as Women," "Virginia in the Revolution," "With the Hampton Singers," being travel sketches, and "A Post-graduate's Experience," by Frank Trigg, a stalwart alumnus, who had got his A. M. degree by practical experience with the world—and he did much credit to his alma meter—as indeed they all did—and the singing seemed more electrical than ever. But enough, though I might say much more about the school. It ought not to depend, as it does now, upon the precarious provision of annual $70 scholarships from individuals, to pay the tuition of individual pupils, but to have the permanent endowment of $300,000, which Gen. Armstrong has set his mind upon, and, if he lives, with his will there must be a way.

From the Congregationalist of Boston.

BY REV. JONATHAN EDWARDS, GRANTVILLE, MASS.

Ten years ago an article by General Armstrong earnestly set forth the need of normal schools for colored people. Nine years ago this Institute opened with twenty pupils and two teachers. To-day it sends out fifty-one

graduates from a school of 250, with nearly twenty instructors.

It has a farm of 200 acres in a high state of cultivation, on which nearly 3,000 fruit trees are coming into bearing; and a large variety of crops, some two or three a year, supplying the school and shipped to the markets of Baltimore, Philadelphia, New York and Boston.

Buildings have already been erected valued at $150,000, of which the newest, Virginia Hall, is one of the best in the state.

This morning of anniversary day (May 24th) opens bright, with a pure fresh breeze. The scene on entering Academic Hall for morning devotions is inspiring. The room is spacious. The open windows on one side look out upon the wall kept fields and orchards; upon the other, over the water front of Hampton Roads. On the platform sits Mrs. President Hayes—and how tasteful, simple and attractive she looks!—with her party from Washington, attended by Colonel Rogers, the President's private secretary.

After prayer by Rev. Geo. M. Boynton of Newark, comes one of the liveliest exercises of the day, in elocution, reading, defining, etc., under the charge of a lady, one of the best of trainers and leaders. A more spirited, accurate, or entertaining recitation I have heard nowhere. This was followed by General Armstrong's vigorous and practical instruction in agriculture, of which the fine farming to be seen out the windows was an illustration of the best kind, especially when one understands that the value of land in the neighborhood has been doubled by the example set here.

The variety of employments here is something worthy of note: besides study, fruit and vegetable growing, dairying, stock-raising, brick-making, carpentering, knitting by machines, printing, painting, coopering (the barrels for shipping produce being made on the place), shoe-making, blacksmithing, general repairing; also sewing, cooking, and housework for the girls—the plan being that all the students shall be instructed in some handicraft, as well as in books.

At two o'clock the new and handsome Virginia Hall was crowded with students and visitors from different parts of the land, the greater number citizens of Hampton and Norfolk. All shades of complexion were represented, from midnight to noon, and "color line" there seemed to be quite lost. The music had its own peculiar melody, sometimes plaintive, sometimes frolicsome, but always pleasing. The reading and speaking, of both sexes, revealed the most encouraging views of life and desire to be useful. The pieces were delivered with a quiet self-possession and a clear utterance; and no one could help feeling some enthusiasm for the welfare of an institution which is doing so much, and doing it so well, to fit these youth to be the guides and helpers of their race.

Rev. Dr. Strieby was chosen President of the Board of Trustees, in place of the deceased Mr. Whipple; Rev. Dr. J. H. Means of Dorchester was elected a trustee; and the institution, becoming constantly more respected in its own state, will start on a new year with the best hopes of good men everywhere.

From the N. Y. Christian Union.

BY REV. O. M. BOYNTON, NEWARK, N. J.

As early as November, 1861, the first school in the South for the education of the then "contraband of war" was opened by Mrs. Peake, a freed woman, at Hampton, Va., under the auspices of the American Missionary Association. In contrast with that humble beginning, there stand now tha large and commodious buildings, the farm, tha various equipments, and, more than all, the faculty for instruction in the various departments of learning and labor of the Hampton Institute.

It was tha privilege of the writer to be present at its recent anniversary, May 24th, and to learn something of its organization and success; and it was impossible to come away without deep impressions as to the wisdom of its methods and the grand results of its work. It is, as its title indicates, a normal and agricultural institute—not a college, not a university, but a place for training young men and young women of a neglected race to be intelligant teachers and workers.

Two or three features of the school are of such rare excellence that they deserve especial notice. The combination of an intellectual and industrial education has perhaps been nowhere more successfully effected. That the study is earnest and intelligant no one can douht who hears the classes recite. "I never saw such brains-y teaching in my life," said a looker-on. The principal of mutual criticism runs through all the teaching. One pupil is set to correct another in reading, calling for a definition of any word, correcting a false pronunciation; in philosophy, improving on each other's answers, and at times having a quite hearty dabate, with tha teacher as umpire, over some disputed point. All this freedom with great good nature and quick submission to the gentle powers that be. And tha industrial department is not play at work, but good honest labor. The young men and girls do all the work of farm and house, with only a permanent head to each department. The girls cook, tend the tables, wash, iron, learn and practice sewing by hand and by machine, tailoring, knitting by machine (in which department they are now filling a large contract), and making rag carpet. The boys do the plowing and hoeing, the sewing and reaping of the farm, have care of a hard of Ayrshire cows, an excellent breed of horses, a flock of sheep and no end of pigs. Tha cattle for home consumption are bought in the fall, and fattaned and slaughtered on the place, so that their beef costs them from six to eight cents a pound. An agricultural angine, a steam digester (for the bones; the vital digesters take care of the meat), a corn mill, a cooper shop, a printing establishment (in which tha "Southern Workman" and the "American Missionary" are priated), a brick-kiln, a sorghum mill, a nursery of shade and ornamental trees—all these and other sources of employment keep the young men busy.

Every hour's work is credited at so much. For this is not a charitahla institution; it charges ten dollars a month for board, half of which is to be paid in cash or promises, and tha other half in labor; for which, as most of it is quite immature, the average price is eight cents an hour. The students have earned by their labor during the last year, $8,800. But the instruction of this industrial department is counted of far more value than its productiveness.

As the teaching is largely hy mutual criticism, so tha discipline is largely by self-government. Tha male students live by classes, in one of the large buildings and in two cottages. No teacher is with them. They adopt rules by which they regulate themselves, with the consent of tha faculty. They make charges, have courts and trials and inflict penalties, and reach many minor offences and indecorums far more searchingly than the instructors could with propriety or advantage.

Of the religious character and influences of the school it is enough to say that all hut three of tha fifty-one members of the graduating class give evidence that they are disciples of the Lord Jesus.

But we must hasten on to the interesting exercises of the anniverary. Of the 274 scholars enrolled, the graduating class numbered 52, who had coupleted the three years' course of training, and who received diplomas from the hands of Rev. Dr. Strieby, President of tha Board of Trustees. The literary performances were very creditable—would have been to the pupils of any white school of the same grade—and the tone of serious manly and womanly responsibility and appreciation of the peculiar work which was to be thairs was impressive.

The growing interest of tho people of Virginia in the institution is manifest from year to year. Tha graduates, 25 per cent. of whom become teachers at once, are quite too few for the places which apply for them. Gen. Armstrong says: "We are without a grievanee; we have never had a serious complaint of illtreatment by the school commissioners from any of our graduates, nor serious fault found with the graduates themselves."

Col. Rogers, President Hayes' secretary, in a brief address at tha close of the exercises, said: "I have been thinking much to-day. Certainly there is a theme for very earnest thought and feeling here. Interested as I have been for many years in the system of normal schools, I have never attended tha exercises of any where tha pupils gava marked evidence of more thorough training, or the teachers of a more conscientious discharge of their duties than here to-day. I looked at the map of this State an which the stars are dotted all over representing the schools tanght by your graduates, and I said, well may the State of Virginia foster, as I understand sha does substantially, this institution. She has no other interest in her borders comparable to this. I mean every word of it."

A most cordial address, expressing great pleasure in the evidences of the thorongh work done by the Hampton Institute, and of the importance of the edneation given, was made by the Hon. Mr. Goode, Democratic Member of Congress, of Norfolk, Va., in response to the warm reception given him as he arose to announce tha prizes.

On the whole, it was an occasion of great interest, lighting up several of the most important edueational problems of our day, and, not least, the great Southern question of Negro education and tha Nagro vote.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering sceptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

NEWS OF THE MONTH.

FOREIGN.

THE Grand Duke of Hesse, Ludwig III, is dead.

JOHN LOTHROP MOTLEY, the historian, died at Dorsetshire, Eng., May 29th, in his sixty-fourth year.

THE South African Transvaal republic has been annexed to the kingdom of Great Britain.

THIRTY persons were killed and fifty wounded by the breaking through of a wooden bridge over the Avon river in England.

CAPTAIN BURTON, the African traveler, according to the London *Spectator*, has discovered the "Land of Midian." Accompanied by M. George Marie, a French engineer, Captain Burton landed in Midian on the 9th of April and explored a region full of ruined towns built of solid masonry, with roads, lakes and massive fortifications. They report having found mines of gold, silver, tin, antimony and turquoise.

BUT little fighting has been done between the Turks and Russians during the past month. The Russians are slowly but steadily advancing in Asia Minor, and the division on the Danube has already begun to cross. The Montenegrins are struggling hard for existence. They have routed the Turkish army before Martonitza and captured their arms and stores. Austria has about 40,000 men on the Servian frontier and will probably join in the fight. A plot to destroy the passage of the Suez Canal is reported to have been discovered by the Egyptian government. England is considerably alarmed, and, it is thought, will send troops to Exypt to look after her interests; a movement which may eventually cause her to be drawn into the Turko-Russian difficulty.

POLITICAL.

JAMES RUSSELL LOWELL, a professor in Harvard College, has been appointed Minister to Spain, and has accepted.

THE pay of letter carriers is to be cut down five per cent. after July 1st, on account of insufficient Postal appropriation.

MR. NICHOLAS FISH, son of ex-Secretary Fish, has been appointed minister to Switzerland, and Mr. Edward F. Noyes of Ohio, minister to France.

GENERAL.

TWO persons were fatally injured at a recent fire in Boston.

OUTRAGEOUS depredations by tramps are multiplying in the Northern and Middle States.

THE debt of New York City, according to the Comptroller's report for May, is $136,458,815.62.

THE roofs of several mines in the coal regions of Pennsylvania have lately fallen in with fatal results.

ELEVEN so called Molly Maguires were hanged for murder at Pottsville, Mauch Chunck, and Wilkesbarre, Penn., last week.

U. S. MARSHAL FRED DOUGLASS paid a visit to his old home in Maryland, on June 19th, for the first time in forty-one years.

A FRESH Indian outbreak is reported from Idaho and Oregon. Fifty persons were massacred at Salmon River, Cama's Prairie and other places.

MRS. ELIZABETH FRIES ELLET, authoress of "Women of the Revolution," "Domestic History of the American Revolution," &c., died in New York City June 3d.

SEVENTY-SIX cadets graduated at West Point Military Academy last month. This is the largest graduating class that institution has ever had. One of the cadets is colored.

MR. FRANCIS MURPHY, the great temperance lecturer, has returned to Philadelphia and is now holding meetings in that city. It is estimated that over 100,000 persons have signed the pledge through his influence.

VOLCANIC eruption in the Pacific Ocean caused a tidal wave to sweep the entire sea from Peru to Japan. On the coast of South America whole villages were destroyed and many lives lost. The Sandwich Islands also suffered from the wave.

ON June 4th a terrible rain and wind storm struck the city of Mount Carmel, Ill., by which sixteen persons were killed, a large number wounded, and property to the amount of $500,000 destroyed. The tornado demolished everything in its track, uprooting trees, overturning buildings and leveling them to the ground.

A COLLISION occured June 12th at Point of Rocks, Md., on the Baltimore and Ohio R. R., between the regular morning train from Winchester, Va., and a special excursion train from Frederick to Mt. Vernon. Four persons were killed and eighteen wounded.

MR. RICHARD F. HALLOWELL estimates the school population of Georgia in 1876 at 394,037. The State contributed for public schools for that year $434,065.62—only $1.10 per scholar. Although the white population is only one-fifth greater than the colored, there were more than twice as many white as colored children in the public schools in 1876. Mixed schools are not permitted. Of the 4,575 public schools in the state less than 1,800 open their doors to colored children.

THE Pacific Mail steamer, *City of San Francisco*, from Panama for San Francisco, carrying 46 cabin and 91 steerage passengers, 150 officers and crew, and a cargo, consisting of silks, laces, &c., valued at $750,000, struck a hidden rock, on the morning of May 18th, cutting a hole sixty feet in length in her hull, and the board were saved; the cargo and the baggage of passengers were a total loss.

Great credit is due the captain and officers for their coolness and prompt action.

EX-PRESIDENT GRANT has been received in England with more distinguished and cordial honors than any other American who has ever visited that country. While his military fame is soundly appreciated, the honors he is receiving are to be recognized as meant for the country he represents, as tokens of the friendship existing between the two greatest commercial nations of the earth. The General has been presented with the "Gold Box," making him an honorary citizen of the city of London, and giving the holder and his children after him forever the right to live and trade within a certain large portion of the city without having to pay a tax on the goods as they are brought through the gates. It exempts them from naval and military service, and tolls and duties throughout the United Kingdom. Few are fortunate enough to be made freemen of the city of London.

A FIRE broke out in the city of St. John, N. B., June 20th, which proved to be an almost unparalleled calamity. In a few hours the fruits of the active industry of generations was destroyed, and scarcely anything remains of St. John but the crumbling *debris* of its buildings, to which the stateliest edifices and the humblest hovels contribute their share. Banks, churches, hotels, theatres, stores and residences are involved in one common destruction. Even some of the shipping at the wharves has shared the fate of the city, while many vessels only escaped by the activity of their crews in cutting them loose from their moorings. Thirty persons are supposed to have perished in the flames. Thousands are rendered homeless. The loss of property is variously estimated at from $8,000,000 to $15,000,000. The appeal for aid is being promptly responded to.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS

This series of school-books, numbering between three and four hundred volumes, *is known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in unt a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The best in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its Reversible Feed enables it to sew forward or backward without stopping the machine—it being the *only* machine that *can* do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between Side Feed and Back Feed machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe*, *odorless* and *durable* Oil Stove for all who want Pure, Moist, Warm Air in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

VOL. VI. HAMPTON, VA., AUGUST, 1877. NO. 8

HOMEWARD BOUND.

Wildly the storm sweeps as on as it roars,
We're homeward bound.
Look! yonder lie the bright, heavenly abores,
We're homeward bound.
Steady, O pilot! stand firm at the wheel,
Steady! we soon shall outweather the gale.
O, how we fly 'neath the lond-creaking sail,
We're homeward bound.

ENCOUNTER WITH THE INDIANS.

It was a bright, beautiful morning in April that our party, numbering four persons, might have been seen approaching the little settlement of Uvalde upon the Medina River in South-western Texas.

Thirteen houses made up the settlement. They were built upon the prairie, half a mile or so apart, and but a short distance from the heavy growth of timber that skirted the banks of the stream. Near the stream we saw a man and a boy, their rifles slung upon their backs. They were turning over the rich green sward with a huge breaking plow that was drawn by four sturdy cattle.

We also saw the women, standing in and about the doors, watching our approach. From the chimneys of their dwellings, thin wreaths of light blue smoke curled gracefully up, brought into bold relief by the darker hue of the cloudless sky above us.

Groups of cattle were lazily reclining upon the green grass, contentedly chewing their cud, while beyond the line of the settlement a large herd of horses and mules was cropping the luxurient mosquito grass with which the face of the entire country was covered. The scene formed a picture of charming repose.

As we halted for a moment on the bank of the stream before fording it, I said to my companions, "That is as pretty a scene of contentment as one could wish to see."

"Yes, but a mighty careless one though," replied old Jack Thomas, our Guide. "Why, thar aint but one man to hum in the hull settlement, an' he's a whistlin' ez thoughtless as though thar warn't a Injun in fifty miles.

"May be there aint," said Hobart, one of the party. "You're always on the lookout for danger, Jack."

"An' may be thar is. Yer can't tell nothin" bout it," answered Jack.

Riding down to the ford, we suddenly came upon half a score of youngsters, plaving in the clear cold water of the stream.

The sight brought another exclamation from Jack, and a laugh from Hobart, at what he called "Jack's skeer."

"Hi, youngsters, whar's all the men gone?" asked Jack, rather roughly, of the naked little urchins, who were standing up to their necks in the limpid pool, gazing at us with feces alive with curiosity.

After some hesitation, one of the oldest, a lad apparently about twelve years of age, timidly replied,—

"Gone for Injuns."

"Gone for Injuns, has they?" replied the old man. "Wal sonny, my idee is they'd better a stayed hum an' looked for 'em."

"When did they go, my boy?" I asked.

"This mornin'. Thar was four Injuns up on the hill, tryin' for to steal the stock, an' the men folks all rid out arter 'em 'ceptin' dad, an' he's out thar plowin'," replied another boy whose head was the only portion of his body visible above the surface of the water.

"Mighty foolish ridin' too I call it," muttered Jack. "Likely 's any way, the hull thing was a put up job to get 'em out er their way. Them Comanches is mighty cunnin' to plan. But sposin' we rido over an' talk to the wimmin folks awhile," he continued, glancing toward the sun. "It's pretty nigh feedin' time, I reckon."

At this point the banks of the river were quite high, and as we rode down into the stream, I noticed that we were completely out of sight of the settlement, so far were we below the level of the surrounding country.

After permitting our horses to drink, Jack was the first to mount the opposite bank, where I heard him say, as though speaking to himself,—

"I knowed it." Then turning, he shouted to the boys,—

"Run, you young rascals! The Comanches is comin'!"

We spurred our horses up the steep bank, and upon reaching the top, saw the man and boy who had been plowing, running for dear life. They made toward the upper part of the settlement where there was a strongly-built stockade of posts, set firmly in the ground and quite ten feet high. To it also the women and children were fleeing.

In the distance were a party of Indians, well mounted, running for the stock which was still quietly grazing in plain sight.

Seeing that the women would be able to reach the stockade before the Indians could intercept them, we turned our attention to the boys behind us, who, comprehending Jack's warning, were scrambling up the bank.

After reaching the top, one or two stopped to catch up a shirt or some other article of clothing; but most of them, dripping with water, started for the stockade as fast as their

HOMEWARD BOUND.

bare legs could carry them.

Upon discovering our party, a portion of the Indians instantly left the main body, riding toward us with the intention of intercepting us before we could reach the stockade with our charge.

"Them varmints are arter the smell of our rifles," said old Jack, seeing the savages turn from their course. "We kin go fer 'em better on foot than we kin on horseback; so we'll let these ere youngsters take kere 'er our horses, an' go fer the varmints ourselves. Here, little ones; keep close behind us. Take these lariats, an' stick by, whatever yer do.

"Now boys, to the front! Keep yer rifles cocked and ready, but don't fire till I give the word. We'll make the vermints sick, fer they don't like to face a loaded rifle no better 'n anybody else.

"Now, go fer 'em!" And "go fer 'em" we did, although I couldn't help laughing at the thought of the comical appearance we must present, with our horses behind us and the shirtless, bare-legged squad of yelling urchins bringing up the rear.

The Indians had by this time approached so near that we saw that they were armed only with bows and arrows. We could also easily distinguish the long tufts of horse hair streaming from their limbs, and even the plumes and circlets of feathers that floated from their heads.

Whooping and yelling like fiends, they horse swiftly down upon us, rattling their long lances against their shields of hull's hide, trying to intimidate us with their hideous yells.

Suddenly old Jack brought his rifle to his face, aiming it at the foremost Indian, who instantly threw himself over upon the side of his horse, thus bringing the animal's body between himself and the rifle. We managed to slowly advance by keeping our rifles constantly pointed, notwithstanding the frantic struggles of the terrified urchins, who, clinging about our legs, were all the while uttering the most heart rending cries.

When within about fifty rods of the stockade, half a dozen of the savages planted themselves directly before the style leading into it, as though determined to make a final stand at that point. The rest of their number continued to ride about us in a circle, thus compelling us to the utmost vigilance. They were evidently, however, unwilling to approach within range of our rifles.

"Now boys, we've got to start them fellers in front thar, or we shan't get rid of these youngsters to-day, that's sartin. I reckon if two on you start straight fer 'em, leavin' me an' the other to look out for these runnin' varmints, they'll get out o' yer way."

In the mean time, the main body of the Indians, who had been collecting the animals, paid no attention whatever to us. Jack was right in supposing that the raid was to enable the main body of Comanches to secure the stock. Having accomplished this, they now wanted to secure our horses and thus prevent any pursuit.

Securing the lariats of our horses, so as to prevent any escape, Jack ordered the youngsters to follow close behind Hobart and Strong, whom he directed to steadily advance toward the stockade.

Upon seeing the determined bearing of the men, and knowing that if they exposed themselves at least two of their number must fall, the Indians quietly dropped over upon the sides of their horses, leaving exposed only the legs, with which they clung to their saddles.

When Jack saw this, he shouted, "Now youngsters, quick! run fer it! If one of the varmints shows himself, drop him, that's all, boys."

For an instant the little fellows hesitated, and then commenced such a race, under cover of our rifles, as no living mortal ever saw before.

Away they went, ten naked little urchins, the eldest scarcely twelve years old, scampering over the green prairie; their slight bodies gleaming in the sunlight like statuettes of silver. They presented a most attractive target for the arrows of their swarthy foes who were kept at bay only by a wholesome fear of our rifles.

The savages shot their arrows from under the necks of their horses and we watched the course of the boys with anxiety, fearing that one of the little fellows might be hit. They however reached the steps, and then, such a scrambling! We caught a glimpse of gleaming white bodies, little bare legs, black heads and thin arms, all mingled in inextricable confusion, and then the scene became a dissolving view.

"Now the youngsters is safe, boys, less me'n you go fer them varmints," said Jack, vaulting into his saddle.

We followed his example, but before we were fairly seated, the entire party of Indians who, we supposed, were a mile away with the stock, came swooping down upon us like a flock of blackbirds, forcing us to make for the stockade at our best speed, to avoid being surrounded by them.

We reached the style, threw ourselves out of our saddles, and fairly tumbled up the steps and over into the enclosure, as a dozen lances quivered in the posts between which we had passed a moment before.

Our escape from death was almost miraculous. The next instant, with shouts and yells of triumph, the Indians had seized our animals, and were scurrying away over the prairies with them at the top of their speed.

As we picked ourselves up from the ground, Hobart looked about him in a bewildered sort of way, and said,—

"Was we goin' for them varmints er not, boys? Cos if we be, hadn't we better be startin'?"

It is scarcely necessary to say that we all disclaimed any intention of going farther for them. The remark put the party into the best of humor, which even the loss of our animals and the prospect of a thirty miles' walk the following day could not disturb. It has not, however, been definitely ascertained which one of us went "fer 'em" first.

— *Youth's Companion.*

AN HISTORIC QUILL.

Among many novelties and relics of one hundred years ago that were on exhibition at the celebration of the American Centennial is the pen used in signing the declaration of Independence. This ancient pen is now in the possession of Uncle William Floyd, at Westernville, N. Y. He is in the eighty-sixth year of his age. His father, General Floyd, was one of the signers of the Declaration of Independence, with the now nearly one-hundred-year-old pen. This curiosity is made from a quill taken from a Scotch goose, and is twice the size of those which grow in this country.—*Utica Observer.*

A POLITE BOY.

At one of the stations on a railroad, an old gentleman entered a crowded car, and was looking around for a seat, when a boy of ten or twelve years rose and said, "Take my seat sir." The offer was gladly accepted, and the old gentleman asked, "Why did you give me your seat?" "Because you are old sir, and I am a boy," was the quick reply.

Southern Workman,

ISSUED MONTHLY.

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address.

J. F. B. MARSHALL,
Business Manager.

HAMPTON, AUGUST, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 32 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE President's prohibition of office holders from taking an active part in politics is a godsend to the South. Officials have heretofore dictated who should hold office and confined themselves to their own circle. Smartness, pliability, and willingness to "run with the machine" have, as a rule, been the points in view. The sober sense of disinterested men, and whatever has been reasonable in public sentiment, has been secondary to the interests of the managers, who have so discounted the future for the sake of present power that the career of their party is nearly ended.

They are generally respectable men; attending to their duties; in some cases they have won the confidence of men of all parties. But they are not the men to decide who shall be senators and representatives. If there are no others in the party to do this work then it is not fit for power and ought not to have it.

The colored people, incline, as a class, to put forward their best men, but are easily led by demagogues who put themselves forward. Shrewd men will always pull the wires that are so easily worked and so temptingly near. The best of the negroes understand what has been going on as well as anybody and have lost most of their political enthusiasm. On election day they say "Shall we take the trouble to put six dollars a day into that man's pocket?" They see no occasion for pride or hope of better things through the success of the party candidate. An expression of the best sentiment of the colored people is nearly impossible.

TO A CONSIDERABLE class of the freedmen the right of suffrage was taken too much as a dram; it was exciting, the cause of idleness and disorder; it meant to them literally, bread and bacon without work. This wild feeling was not conscientiously checked, but taken advantage of and allegiance to God and allegiance to party were practically regarded as of equal importance. But the stimulus begins to fail. Bread winning is found to be as hard under one party as another; the election of their Congressman does not, after all, mean a lease of life for two years more.

Ostracism, excommunication from church and other varieties of bull-dozing have, heretofore, been the penalties of independent thinking and action on both sides, but intelligent thinking is on the increase in the South.

Experience has done more than schools for the colored people. Their political creed, which assumed that every Republican was "altogether lovely" and every Democrat an enemy has had some rough shocks. They are looking less at words and more at deeds and men and finding that opposition in politics is not always inspired by hatred, and that mean men abound in both parties. There is ground for hope that the races will live more and more peaceably together and that their common interests will prosper.

A PLEASANT sign of the times is the increasing cordiality in the South to those Northerners who are in charge of the leading institutions for the colored race. Slowly but steadily they have gained the confidence of all classes. Hearty expressions of good-will from representative men are now not uncommon.

While the minor schools may have difficulties those that are best known are free from grievances. The refusal of the South Carolina Legislature to pay the professors of the State University for a year's work honestly done, although urged by Governor Hampton to do so, is an exception to this statement.

Real values find their level. Honest, genuine work for the freedmen will win the recognition due to it.

We publish an extract from the speech of the Rev. D. C. Kelly, D. D., of Tennessee, at the recent commencement exercises of the "Fisk University" at Nashville—a noble institution that has sprung into magnificent proportions and great usefulness mainly through the efforts of the famous "Jubilee Singers" in America and in England. It is one of the elder children of the AMERICAN MISSIONARY ASSOCIATION, which is supporting and fostering more than twenty institutions for the colored race.

"Dr. D. C. Kelly was introduced and spoke in substance as follows: He recognized the teachers of Fisk University as co-laborers with him in the great work of building up the cause of Christ. He had from his earliest youth had pleasant recollections of the colored people; his first preaching was to them. The colored people had done good work in cleaning up the forests and tilling the fields of the state. As Tennesseans we are bound together. We stand side by side in the work of the future. He wanted to speak plainly, yet lovingly; for what he should say would be for their good. In order to find out how we stand to-day, let us turn back a little. More than a thousand years ago my own ancestors were barbarians. Other nations, in making incursions upon them, looked upon the natives of Britain as incapable of progress. St. Augustine began the work of Christianizing them and they began to rise.

To-day the Anglo-Saxon race moves forward in the front rank of nations, in every respect. Why? They accepted the virtues of Christianity, and have practiced them and enjoyed the legitimate results. Centuries ago your ancestors were in Africa. You were brought here without your consent, by men whose actions I shall not praise; but God has worked the wickedness of men to his own glory. But you were here; you were brought up side by side with our sons and daughters. Often the association was of the most affectionate and confidential character. From these associations there came good, mingled with the evil of your enslaved condition. A blessing came to you of these associations. There is an elevating power in daily contact with an educated class. To-day the colored people of this country are in advance of the colored people of the world. These young people who graduate to-day—the students of Fisk University—are in the front rank of the grand movement of the great work which is to be done for the colored people of this country and Africa.

The chains of bondage are broken, and thank God they are. I always believed, since I was seven years old, that God intended that you should be free, but I did not think that the time had come. I thank God that you are put where you can make the race of life. Will you make that race? Some people think you cannot make it. It is for you to write the lie to this prophecy. Here you have in your teachers the equipments necessary to enable you to do it. There is no royal road to your future. You must stand to your post. You show that you can in the field. Can you show it in the field of intellect? I don't want you to have any better advantages than my boy; I don't want my boy to have any better than you. There are some fields which it may not be well for you to enter just now. There are fields other than political, which you may best cultivate. In the field of literature, of intellectual effort, you may sweep away all difficulties and prejudice, and having attained high positions among men, political places will come for you. In teaching you will have a great field. Here you have a new source of power. The Christian teacher, baptized with the Holy Ghost, may have an unbounded influence. Many of you will preach. In the ministry you can exert a vaster influence among your own people than I or any of your teachers By teaching you they are multiplying themselves many fold. Fields will open to you. God will give them to you.

In the mission work of Africa there is a vast field for your energies. I almost envy you in your work. I do not mean colonization, but the work of sending missionaries in companies of six, ten, and I hope the time will come when you can send one hundred missionaries a year. You may take possession of Africa, establish stations, stop the slave trade, carry the gospel and the sweet songs of Zion from place to place and from tribe to tribe, until that whole field shall be changed into the abiding place of the Lord. You can stand the climate as none others can. You can have access to the people as others cannot.

Again, I anticipate that from among you will spring a poet, whose name shall live to the utmost time. I anticipate that you will produce a musical composer, whose harmonies shall ring through the ages. I cannot sing, yet I have dreams of a harmony that no one has ever yet expressed. I learned to have those dreams when I was a boy listening to the songs of the colored people in their religious meetings. I would allow the peculiar genius of the colored people to work its own way and would not curb it within the traces of our modern musicians. Music brings heart to heart, and many of your victories you will win by its power. Now I must bid you a hopeful, cheerful good-bye. I shall follow your career with pleasure.

To the officers of this institution, I would say you have peculiar fitness for this grand work. As Congregationalists, you have come among us with no antagonistic relations with the people of the South; there is no prejudice against you. I bid you in this work. I am ashamed that we of the church I represent have not been with you Congregationalists in the grand missionary work which you are doing for the world; but I do propose that we shall have part hereafter in the great work of winning mankind to Christ.

In closing, I promise you that if I can help you in any way, I shall most cheerfully do it with heart and hand and voice.

On closing, the Doctor was greeted with tumultuous applause."

IT IS with pleasure that we have again to acknowledge the receipt of beautiful and valuable pictures and portraits, for our Gallery, of Gen. George Washington, Lady Martha Washington and other distinguished persons, from Messrs. Hurd & Houghton, J. H. Bufford's Sons, and from J. W. Black, the eminent photographer of Boston.

THE season at the Hygeia Hotel at Fort Monroe is, this year, more successful than ever before. Most of its five hundred guests are from Baltimore and Richmond. They find at the "Point," sea food, sea bathing and fresh sea breezes that tempt them to linger; while the brilliant effects of guard mount and dress parade and the tri-weekly open air concerts by the band of the Artillery School, added to the music of the waves give a variety of charms to Old Point Comfort as a summer resort, and are bringing to it a fame even greater than it enjoyed in the ante-war days.

There is a trim, tidy appearance peculiar to a military post. Army and Naval uniforms brighten the gay looking groups that stroll on the piazzas or gather in the pavilion whose foundations are washed by the waters of Hampton Roads. The strains of the orchestral band of the Flagship *Hartford* which lies near by are often heard from the pavilion as well as in it, mingling with the sound of the sea.

Nowhere can be better seen the signs of a true reconstruction than at the Hygeia Hotel. For a period after the war there was, among Southerners, an aversion to the place over which waved the stars and stripes. That feeling has passed entirely; often sixty or seventy passengers arrive in one day from Richmond.

Daily excursions are made from Norfolk from whose hot brick walls and streets the change is delicious.

There is a pleasant commingling of people of both parties, there are no social clouds or thunder-storms, and, to all appearance, other than sectional feeling pervades the place. Nowhere do those who were opposed in war meet more constantly; nowhere could they meet more cordially.

Visitors drive daily to the grounds of the Soldiers' Home and of the Hampton Normal Institute, two miles distant. Many a Southern gentleman and lady have expressed the kindest interest in and appreciation of the work of this negro school. Very recently the editor of a leading Virginian newspaper, after a careful inspection, wrote an excellent account of it to his paper.

The beautiful grounds of the National Soldiers' Home adjoining those of the Institute, where 500 war veterans are generously cared for, are visited two or three times a week by Sunday-school pic-nic parties from Norfolk, fifteen miles distant.

The rising generation of this vicinity, seeing more of the results of changes arising from our late war, are likely to grow up in a spirit of larger liberality than in any other part of the South. The many hundreds who every year visit the "Hygeia" receive and impart, unconsciously, new and better impressions of their former antagonists and more hopeful views of the progress of the colored race.

Agricultural.

THEORY—PRACTICE.

Every science, every art, has its theory and practice, the principles of one defining the rules which shall regulate the the details of the other. Sometimes these are written out clearly and serve as a chart to regulate the operations of the practitioner, but oftener they are unwritten, like the English constitution, and liable to much difference of opinion in their definition and application.

Perhaps no art offers a finer field for such a systematization than agriculture. Based on the tangible facts of nature, its principles are capable of classification, and its truths and errors of easy separation. Many are its axioms, as indisputable as those of mathematics; and as many its contradictions, as easily tested, and the error eliminated from the truth. And why is it to-day pursued with such a reckless disregard of principles, and many of its acknowledged truths overriden to the injury of the former?

All admit that the careful and thorough cultivation of a few acres of land is productive of more profit than the negligent treatment of many. Yet who of those who read this article will resolve that next year shall see his tilled ground reduced to an amount which he can handle with absolute thoroughness? Not a month passes but brings to us, in your paper, a well-written argument against the toleration of weeds, showing conclusively the profit of a positive annihilation of the "pestilent brood" before they acquire age and strength to damage the crop. Yet how many fields do you see, as you ride along, cultivated on anything like this thorough principle. Jethro Tull is admitted to have communicated a great truth, when he proclaimed that a thorough comminution of the soil, and a frequent stirring of it around the growing crop, would largely promote its aeration, and to an extent supply the want of manure. Yet how many farmers, however short of fertilizers, stir the ground any oftener than is needed to keep down the weeds? And so on through a round of violated principles. I have a neighbor who talks with great intelligence, but never acts with thoroughness, nor raises a first-class crop.

The farmer follows a rut from which he has not the courage to escape. He has so much land, and if this is a good year, he may possibly get a good crop on the whole. He has not the courage to sell half, or to double the area of his grassland and put his available labor on the balance, or, if it is rough, to allow a part of it to grow up to timber to enrich the next generation. And yet, if one-half the present extent of cultivated land were tilled on this principle next year, he would admit that the aggregate yield of all the farms would be greatly increased, and with less fatigue, worry and cost. Will not our farmers ponder on these things and act?

J. M. W.

—*Country Gentleman.*

INFANCY.

The fact that nearly one-half the infants, born alive, die before they reach five years of age, and that twenty per cent. of them leave this world before they

have been in it twelve months, is full of meaning. This great mortality does not exist in any other member of the animal world. Did the Creator intend that this strange mortality should occur? Animals are governed by instinct, man by reason. Instinct is nearly unerring, reason is very erring.

Mothers and infants are in a small degree governed by instinct. But instinct, feebly developed, soon gives place to reason. The mother needs instruction in rearing her infants. She must become acquainted with the laws of health and of life. These peculiar laws they must discover or know, from the experience and observations of others. Nearly all young mothers are ignorant of the ways to be pursued, in order to give their children a fair chance of living, and of living to three score years and ten.

In infancy, impressions for good or for evil are made. A newly born infant is a creature of extreme delicacy and susceptibility. A check to proper growth now, may give a stunted growth through all the future. Some slight disorder, neglected, may be the germ of some future fatal disease. The brain, nerves, bones, muscles, the organs of circulation and the organs of secretion are becoming more and more confirmed in their respective functions. A stunted tree, an injured stalk, a diseased vine, rarely completely recovers.

Many men and women trace back their feebleness, or their diseases, to their early days. We often have occasion to see that even slight organic changes, or disturbances, may not only impair the present condition of the infantile structures, but may extend through life, however long it may be.

A very wonderful change occurs at birth. The blood of the infant in utero derived from that of the mother for nine months, ceases to flow in its usual introuterine way as soon as the child leaves the sunless home of its earliest days. In infancy constant developments occur. Hardly six months pass away before the teeth begin to show some signs of their coming and in many cases disturb the brain and spinal nerves, the process of digestion, and the peristaltic action of the bowels, the mysterious secretions of numberless glands, scattered here and there in various parts of the body. In adult life comparatively few organic changes occur. The body with its numerous tissues is complete. At birth an opening called the foramen ovale, through which the blood had passed, is closed. The infant is now an independent being. The old blood tubes gradually dry up and the blood takes a new course. The heart of infancy bents rapidly and the lungs expand and contract fast; the liver is very large, but grows smaller from week to week until it reaches the proper size. The kidneys change their form, but still at birth are able to do duty. During the first fourteen days of life the kidneys throw out uric acid crystals, staining the diapers and fretting the child as they pass away. The stomach is less elongated than it is in the well grown child. The appetite is good. Digestion is good, if it can have the food nature prepared expressly for it. If all the organs are in a normal state, the infant sleeps away its earliest days of life; but as weeks pass away it sleeps less and less, until it needs only seven or ten hours of sleep.

Its senses of hearing, seeing, smelling and tasting gradually become active. At first it notices only brilliant objects, as a bright light; and instinctively seeks for food, like other members of the animal world.—*Prairie Farmer.*

SOMETHING ABOUT FOOD.

Our ancestors were more natural, they were nearer normal. Their sons were large and powerful with endurance greater than that of any animal. Their daughters were lovely and strong, the clear complexion, the beautiful hair, the sound teeth, the roses in the cheeks were all their own property. The artificialities were "few and far between." The dyspeptic was unknown, and when first he appeared he was regarded with contempt by the simple-minded people, who supposed he had done something displeasing to his God—and so he had. The time will again come—it *must* come—when for a man to make a dyspeptic of himself (or of his children) will be generally considered as a most contemptible thing.

Time was when spices and pastry were not used, when fine and concentrated foods were unknown, when the "staff of life" was made of pure grain crushed or coarsely ground, without being deprived of its brain, muscle or bone making elements; when the condiments were little used; when nations were free from the morbific slops of our modern civilization; when drug and literary poisons were rarely used; when dull care and corroding passions were under control; when life flowed on at a measured pace, free from the break-neck speed of the present intensive existence; when Hygeia, the goddess of health reigned, and disease was the exception, and a sound mind in a sound body the rule. But now how changed! Ages have passed and the above points have all been reversed, and as a result health is the exception to the rule of disorder.

One must not only be medically, but hygienically and even experimentally educated, to comprehend the mighty influence of bad diet in causing disease in the individual, or a predisposition to it in the offspring, and the correspondingly powerful influence of good food in curing disease. I would as soon think of raising a good horse on door chips, leaves and rotten straw, as a sound human on the abominable articles recommended in most of the cook books now in circulation.

To cure from any disease we must remove the cause before the effect will cease. Dyspeptics are made by bad eating and inharmonious exercising; regulate these with patience and will, and the victim will gain health if it be within the bounds of possibility. In all my experience with the sick, I have been able to trace a close connection between nearly all diseases and dietetic errors. But whenever I ventured to inform the patient or attendant of the exact truth, my judgment would be immediately questioned. This is one reason why physicians so seldom recommend a change of diet to some articles not so agreeable to an acquired appetite. The voice of medical experience says: "Just so far as you do not indulge human appetite in your advice, you will render yourself unpopular." And this has been my experience.

But I am happy in the thought that the dark night of gross habit is passing away, and the bright light of reform is about dawning upon the minds of the more enlightened. I am thankful the odium that has so long eclipsed the name of Graham, is being dispelled and that oatmeal and graham flour are coming into popular use; that there is a growing repulsiveness in so much animal food and pastry, and that good fruit is coming into more general use as an article of food, at meal times. As the inevitable result of this with other growing reforms, I foresee in the not far distant future better sanitary conditions. I see the elastic step, the bright eye, the firm natural hair, the hard, sound teeth, the unsullied complexion, and all the outward indications of good conditions.—*Maine Farmer.*

HOW TO GET RID OF HOUSEHOLD PESTS.

Mercury exterminates fleas and bugs, but I think cleanliness the best and perhaps the only preventive. The common house-fly I do not molest, believing that it more than compensates for its trouble by clearing the atmosphere of effluvia and the animalcules which always arise from the putrefaction of decaying substances during warm weather.

So also with the birds, they capture a large share of the insects in the larva state, and thus millers are prevented from depositing their eggs for future worms. As to the loss of fruit by the birds, the latter are always sure to be on hand in force in the season of ripe fruit, whether they come early to take the worms or not.

For the residue of insects that infest my vegetable garden, I find that the laboratory of the chemist furnishes materials fatal to them all, among which white hellebore and cayenne pepper are of the most utility. The bug or worm which cannot find vegetation unflavored with these articles will seek its breakfast elsewhere and leave a garden unmolested.

A few drops of carbolic acid in a pint of water will cleanse house plants of lice in a very short time. If mosquitos or other blood-suckers infest our sleeping rooms at night, we uncork a bottle of pennyroyal, and these insects leave in great haste, nor will they return so long as the air in the room is loaded with the fumes of that aromatic herb. If rats enter the cellar, a little powdered potash thrown into their holes, or mixed with meal and scattered in their runways, never fails to drive them away.—*Prairie Farmer.*

MILK DIET.

"I find by experience," says E. N. Capman, "that lime water and milk is not only food and medicine at an early period of life, but also at a later, when, as in the case of infants, the functions of digestion and assimilation have been seriously impaired. A stomach taxed by gluttony, irritated by improper food, inflamed by alcohol, enfeebled by disease, or otherwise unfitted for its duties, as is shown by the various symptoms attendant upon idigestion, dyspepsia, diarrhœa, dysentery and fever, will resume its work and do it energetically, on an exclusive diet of lime water and milk. A goblet of cow's milk, to which four tablespoonfuls of lime water have been added, will agree with any person, however objectionable the plain article may be, will be friendly to the stomach when other food is oppressive, and will be digested when all else fails to afford nourishment. Of this statement I have had positive proof in very many cases. The blood being thin, the nerves weak, the nutrition poor, the secretions defective, and excretion insufficient, the physician has not hand a remedy as common as the air, and as cheap, almost, as water. In it all the elements of nutrition are so prepared by nature as to be readily adapted to the infant or the adult stomach, and so freighted with healing virtues as to work a cure when drugs are worse than useless.—*Am. Rural Home.*

Correspondence.

The following letter from a teacher in Mississippi, touches the point at which all teachers of the colored race should aim: the development and encouragement in them of character and self-respect which will enable them to elevate themselves.

"Bolton, Miss., *May 7th*, 1877.

Editor Southern Workman:—I have received a copy of your paper for some time, and assure you that I have ever found it both interesting and instructive.

Its articles show that the truthfulness of the proverb "wisdom is the principle thing, therefore get wisdom, and in all your getting get understanding" is becoming, to the freedmen, quite apparent; and that many of them, in the last decade of years, have proven willing to labor, study and suffer to secure intelligence, if they have not opened their ears to the voice of wisdom and their hearts to the joyful lessons of understanding.

And, kind sir, after a residence of some three years, as a teacher, in this State, I assure you there could be no showing more descriptive of the growing condition of the colored people in this State than the one just credited to your paper. For with the freedmen here, the time is come when they thirst after knowledge as the wanderer over desert sands hungers and thirsts for the bread that perishes and for the crystal waters at which others drink; when they believe that "happy is the man that findeth wisdom, and the man that getteth understanding; for the merchandise of it is better than the merchandise of silver, and the gain thereof than fine gold." And the sole reason advancement is not at present more common among them is not because they do not know the worth of intelligence, but because they are of opinion their efforts will not secure them mental culture unless aided by the school room, because they lack the unyielding perseverance necessary to acquire intelligence. And believing, as I do, that the colored people know their wants and desire them too, but are deprived of them with the means of acquiring them at their command. I here ask to advise the more intelligent, the teachers in Mississippi and other Southern States to labor unceasingly to convince them that in every man is the power and capacity to elevate, instruct and educate himself, and that the spare hour they give to weakening frivolities or to a little more sleep, is the time for improvement or their school hour. For this done, the time is not far off when the long oppressed race, among which we work, will occupy a worthy place among the learned of the world and be instructors of men.

Respectfully,

D. K. Atwood.

LETTERS FROM HAMPTON GRADUATES.

GROWING IN VALUE—LET US LIVE TOGETHER IN PEACE.

There is an advantage in staying more than one year in a place, as this young man's experience proves. He is one of the most successful of our graduate teachers and doing a good work outside the school-house.

Virginia, 1877.

Dear Teacher:—I have quite a full school. The children are doing very nicely indeed; they seem to understand their studies much better than they did last year. I have enjoyed my work more this winter than ever before. I find that there is more interest manifested among the children. They are beginning to understand that they will be just what they make themselves. I have taught them that they can make themselves useful men and women.

We are carrying on our temperance work yet. The society met last Sunday. There were a great many out. I gave them such instruction as I thought they needed. We will meet again the third Sunday in March,—we will then be two years old. They are not doing much in the work of the Lord; that is, in their meetings. I have a splendid Sabbath School. I do all that I can to make it interesting. Sometimes I feel discouraged at seeing some so careless with themselves. I want to come to Hampton if I can, and study a month, and then go up North and spend the summer, that is, if I can get employment. I think that it would do me good.

Give my love to all the teachers and students, and write soon, if not more than four or five *lines*. I am anxious to hear from you. Hoping that you are well, I remain your friend and well-wisher,

Y.

The experience of our graduates in their relations with black and white is of course a varied one, scattered as they are through various parts of the South. They very generally, however, demonstrate the wisdom of attending to their own important work, and not sacrificing teaching to politics.

Georgia, *April* 10, 1877.

My Dear Teacher:—Yours of the 5th inst. was duly received and I am more than glad to hear from you. I was not fixed in regard to my school wages, and it still remains unpaid. I suppose that you have heard of the trouble of the two political parties in S. Carolina. Had it not been for that my school certificates would have been settled with; but owing to both parties claiming their Governors they were unable to collect any taxes, but as it is settled, I believe, in favor of Hampton, I hope that they are now able to collect taxes and pay the back school funds. The schools of this county (McIntosh) have not been opened for the fiscal year. The examination comes off on the 12th day of May, and I am spoken to as one of the teachers by the School Commissioner. The County of McIntosh pays her school debts promptly. Father is not home now, but I am tending to his business for him, as Ordinary or Judge of Probate of McIntosh Co., until he is present.

We have to work very hard down here to keep out of the way of the ignorant colored people; they don't want to see an intelligent or well-bred young man keep out of ell loafers' company. If you do keep out of all loafers' and drunkards' company they say that you think yourself better than they are. They want you to go about and shake good respectable democratic white men, and also colored men that go along and behave themselves. If the ignorant see you talking with a white man that is a Democrat they will call you a Democrat. I always say to them, Whether he is a Democrat or a Republican, let us live together in peace.

I await an early reply from you, though you are so busy, I shall say at some leisure time. My respects to all, teachers and students. Mother and all send much love for you. With much respect to you, I remain your affectionate scholar,

G.

MODOCS AT HOME.

At Home.

TO-DAY.

Lo, hers hath been dawning
Another blue day;
Think, wilt thou let it
Slip useless away?

Out of eternity
This new day is born;
Into eternity
At night will return.

Behold it aforetime
No eye ever did;
So soon it forever
From all eyes is hid.

Hers hath been dawning
Another blue day;
Think, wilt thou let it
Slip useless away?

—*T. Carlyle.*

A SAGE ON EARLY RISING.

When you find an unwillingness to rise early in the morning, make this short speech to yourself: I'm getting up now to do the business of a man; and am I out of humor for going about that I was made for and for the sake of which I was sent into the world? Was I then designed for nothing but to doze and batten beneath the counterpane? Well, but this is a comfortable way of living. Granting that, wast thou born only for pleasure; were you never to do anything? I thought action had been the end of your being. Pray look upon the plants and birds, the pismires, spiders and bees, and you'll see them all regular and industrious, exerting their nature and busy in their station. For shame! Shall a spider act like a spider and make the most of her matters, and shan't a man act like a man? Why don't you renue your faculties and manage up to your kind? For all that there's no living without rest: True; but then let's follow Nature's directions, and not take too much of it. Providence does not grant force and facilities at random; but everything is made for some end. The sun, as high as it is, has its brightness assigned; and so have the celestial deities. And where's the wonder of all this? But pray what were you made for? For your pleasure? Common sense won't bear so scandalous an answer.—*Marcus Aurelius.*

SLEEP IS THE BEST STIMULANT.—The best possible thing for a man to do when he feels too weak to carry anything through, is to go to bed and sleep as long as he can. This is the only recuperation of brain power; because during sleep the brain is in a state of rest, in a condition to receive and appropriate particles of nutriment from the blood, which take the place of those which have been consumed by previous labor, since the very act of thinking turns up solid particles, as every turn of the wheel or screw of the steamer is the result of consumption by fire of the fuel in the furnace. The supply of consumed brain substance can only be had from the nutritive particles in the blood which were obtained from the food eaten previously; and the brain is so constituted that it can best received and appropriate to itself those nutritive particles during a state of rest, of quiet and stillness of sleep. Mere stimulants supply nothing in themselves; they goad the brain, and force it to a greater consumption of its substance, until it is so exhausted that there is not power enough left to receive a supply.

I suppose every one who goes to the seaside knows how to make sea-weed albums. But for those who go next Summer for the first time I'll tell what they are and how to make them. In the first place the gathering of sea-weed is more successful just after a storm, when the angry waters have cast upon the sand their richest weeds. Gather into a basket your kelps, mosses, and weeds, and when you get home you can set them away for a day or two, as they do not spoil by keeping. Then float them upon thick white or pink tinted paper. Take a pretty and perfect scallop shell—such as you find on nearly any beach—and lay it upon the paper. Trace around it and cut out, keeping the shape as nearly as possible. Take a dozen of these leaves for a book. For the covers use two scallop shells, perforating the flange in two places, inclose the leaves between them and punch holes through them, so you may pass a narrow ribbon or silk cord through. Then tie to the cord a blue or pink bow or ribbon, and your album is finished, and is a charming little souvenir of a seaside visit for yourself or some friend.

WASHINGTON'S INAUGURAL PRAYER.—There came a sunshiny day in April, 1789, when George Washington, President elect of the United States by the unanimous voice of the people, stood on a balcony in front of the Senate Chamber in the old Federal Hall on Wall street, to take the oath of office. An immense multitude filled the streets, and the windows and roofs of the adjoining houses. Clad in a suit of dark brown cloth of American manufacture, with hair powdered, and with white silk stockings, silver shoe-buckles and steel-hilted dress sword, the hero who had led the colonies to their independence came modestly forward to take up the burdens that pence had brought. Profound silence fell upon the multitude as Washington responded solemnly to the reading of the oath of office, "I swear so help me God." Then, amid cheers, the display of flags and the ringing of all the bells in the city, our first President turned to face the duties this countrymen had imposed upon him. In sight of those who would have made an idol of him, Washington's first act was to seek the aid of other strength than his own. In the calm sunshine of that April afternoon, fragrant with the presence of seedtime and the promise of harvest, we leave him on his knees in old St. Paul's, bowed with the simplicity of a child at the feet of the Supreme Ruler of the universe.—*Scribner.*

MODOCS AT HOME.

Our picture, engraved from the drawing of an artist who spent some time sketching in an Indian village, shows us how a young brave gets himself up, with the help of his squaw, for a grand feast or council or "war path." "She takes great pride," we are told, in "adorning her own particular brave in the highest style of savage art." Painting his face is the most important part of the toilet. Black in winter, and red or yellow in summer are the fashionable colors; but for a very grand occasion, streaks of all colors are the proper thing. But whatever brilliant hue is selected, is laid on over the last coat without washing off either old paint or dirt. Then with some dashing eagle's feathers, many strings of wampum and beads, leggins and moccasins embroidered with porcupine quill, the indispensable blanket, and as likely as not some ill-fitting and ridiculously incongruous garment of civilization he has bought at the Agency, our modern Modoc brave is ready for the pow-wow, or the war trail.

Nearly four hundred years ago it is, since Columbus discovered America; two hundred and fifty since Virginia and Massachusetts were settled,—yet these wild men of the woods are as wild as ever. Yet they can be reclaimed and civilized, difficult as that may seem, and our people are more and more coming to the conclusion that it is better to civilize than to exterminate them. The Indian may never have been the noble savage of Cooper's novels, perhaps he is quite as bad, as treacherous and degraded as more recent writers have painted him, but low and fierce as he is, he is not utterly irreclaimable.

The Indian exhibit at the Centennial did much to interest people in the Indians. Besides the curious specimens illustrating his savage life, tents and arrows and war canoes, there were shown many specimens of his industry and skill in the arts of civilization, and even of school work. Carpets and cloth woven at the Yankton Agency, Dakotah, cabinet work, and a double-bladed pocket-knife. Even newspapers, so special a growth of civilization, flourish at several of the Indian stations. The *Cherokee Advocate*, printed and edited by a Cherokee at Tahlequah, Indian Nation; the *Japi Oaye* (word carrier), printed in English and Dakotah; the *Indian Journal*, printed at Muscogee, Creek Nation, and edited by an Indian. There was even a paper, *Our Monthly*, printed by boys in the Tellehasse Station School, who had never seen a printing-press before they undertook this work.

The Cherokee, Creek, Choctaw and Seminole Nations support and manage their own 169 schools, with 189 teachers, and 4,400 scholars. The other Indian schools in this country, among the different tribes, are supported by the United States Government and managed by missionaries, and attended by about 3,000 children.

Agricultural Fairs are held yearly in the Indian Territory, and prizes are given for fine horses and cattle and produce. Some of the wildest tribes attend, and much good is done by encouraging agricultural pursuits among them.

The Cherokees, Creeks, Choctaws and Chickesaws may be said indeed to be really civilized, and this has been brought about by the labors of missionaries of various denominations—Methodists, Baptists, Presbyterians and Friends. The tribes profess Christianity and live in good villages. The Cherokees have a form of government based on that of the United States; the sale of liquor is prohibited, and the observance of the Sabbath enforced. Half the tribal revenue is devoted to the support and education of orphans. They have Bibles and newspapers and books printed in their own language.

The labors of Bishop Whipple and Bishop Hare in the far western stations of Nebraska and Minnesota and Dakotah, have been wonderfully successful.

Even the Modocs, the fierce tribe whose very name was a terror a few years ago, till their leader, Captain Jack, was hung, and his chief warriors either executed with him or sent to Florida as prisoners, are making astonishing progress in civilization. Some beautiful quilts made by Modoc girls who were sent to the Cherokee Nation to be educated after the war, were exhibited at the Centennial. The schools established in the tribe are flourishing; farms and villages and churches are springing up.

The handful of Modoc warriors in Florida, held as prisoners in the fort at St. Augustine, have been astonishingly tamed and improved by kind though firm treatment, under their present commander. He says that he would now rely upon them as upon any garrison should the Fort be attacked. He has trained them to work and admitted teachers and missionaries among them. They seem to have a special fondness for drawing, and like to make up little books of their sketches of braves in war paint, wigwams and southern scenes, done with the brightest of crayon pencils. One sketch we have seen was quite remarkable as being drawn from memory after only one glance at the scene—the unloading of a steamer. As the gentleman showing it to us remarked, "it is curious to see the noted powers of scuts observation which we have been accustomed to associate with Indian scouts detecting an enemy's trail among fallen leaves, now turned to such harmless and civilized uses.

A committee of the Society of Friends called on President Hayes recently and presented to him a report of their work, undertaken eight years ago among the Indians of twenty-six tribes. They feel satisfied that civilization is progressing steadily among the Indians, and conclude their address with these heartful and hopeful words:

"We have faith in the future, and looking to one Father in Heaven with our own earnest exertions we believe that in after years all the tribes under our care will come to be a source of trouble to the Government, and that in due time they may be converted into useful citizens of the United States. Earnestly desiring that God may endow thee with wisdom which cometh from above, and give thee strength for all the duties which devolve upon thee, and assuring thee of our loving sympathy and prayer, we are thy friends."

INTERNATIONAL GEOGRAPHICAL SOCIETY.

BY REV. JAMES MITCHELL.

A Conference at Brussels—Objects stated by King Leopold—Hon. J. H. B. Latrobe invites—Size of Africa—England Claims this Empire—Her Military Lodgments—Our Colored People can find a Noble Field under Her Standard for Honor and Empire—We should organize a Geographical Society.

King Leopold, of Belgium, lately called together an international congress of the friends of African civilization, consisting of about twenty eminent travellers, explorers and learned men—eminent in the work they had done for Africa. They met on September 11, 1876, in the city of Brussels, and were the guests of that enlightened monarch.

The object of the meeting, as stated by the King, was "to discuss the present condition of Africa, the results already obtained and those which remain to be accomplished."

To this congress one or two Americans were invited—among them Hon. J. H. B. Latrobe, the President of the American Colonization Society, whose life long service in the cause of Africa entitled him to this regard. We are sorry to learn that professional duties prevented him from rendering this service, but rejoice that the movement originating in Brussels has been a success, and that auxiliary committees, as Leopold calls them, are being organized, the objects of which are to promote in all proper ways the enlightenment and civilization of Africa.

In examining the maps we discover that there is greater breadth of surface in the Continent of Africa than in that of North America, by near 2,000,000 square miles.

England is alive to the value of this African empire, and bids fair to outstrip all her rivals in her sure and firm plantations along the outer coasts of that wonderful land; as yet she has done little more; for the interior is interdicted to the white man. But let us examine her outworks and draw our inferences therefrom.

Beginning at the north-west, she commands the Straits of Gibraltar, and the guns of that impregnable fortress overlook the Empire of Morocco on the south side of the Straits—sail from thence up the Mediterranean, we find her entrenched in Malta, there her numerous guns overlook Tunis and Tripoli—likewise guarding the way to Egypt, which, when you reach, you find her the commercial and landed partner of the Khedive, by recent purchase of stock in the Suez Canal, that unites the waters of the Mediterranean and the Red Sea. These two sheets of water, about 4,000 miles long from Gibraltar to the "Straits of Babel Mandeb" wash the whole northern shore of this vast continent, and once embarked at Gibraltar, you can sail round this grand country as round an island, without disembarking or changing ship, a voyage of nearly 16,000 miles will encircle that land.

In Egypt, England has territorial rights, lately acquired in connection with the great canal, that will justify her in planting the standard of St. George on Egyptian territory, in the event of war in the East. Sailing down the Red Sea, (called so because of the coral and other formations in the bottom that give the waters a red tinge,) we find the fresh traces of her power in Abyssinia; a haughty and semi-savage Emperor punished, and respect secured, if not a hostage, in the English education of his son, among the scenes of London and Oxford. Then, as you pass out of that long red sheet of water into the Indian Ocean, you find the standard of England commanding the Straits of Bab el Mandeb, as at the western gate of these African waters, thence sailing southward along the eastern shore of Africa, we find English commerce and power lodged at sundry points thereon, for 4,900 miles until you reach her great stronghold in the extreme south, at the Cape of Good Hope, where in that temperate clime she is spreading out her dominions with surprising rapidity—this, by the way, is the only colony of England in Africa that has as yet extended into the interior. Sailing from thence northward along the Western coast 6,900 miles, "to the place of beginning," we find her in the numerous coast factories and trading settlements, with her people well protected by her flag; we find her at "Cape Coast Castle," south of our American colony of Liberia, and in Sierra Leone on the north of Liberia, our little republic sandwiched in between her possessions, and so on "to the place of beginning," as we say when we run off a tract of land, and fix its boundaries so as to make a conveyance of the title.

Such are the lines of England's new and magnificent empire, far exceeding in extent anything she now holds, containing about 11,000,000 square miles of territory, three-fourths of which is of boundless fertility diversified with mountain and lowland; mountain ranges with summits covered with perpetual snow, while on the lower terraces and in the green valleys, the tropical fruits, plants and flowers grow and bloom in perpetual Summer—lakes and rivers that far exceed the lakes and rivers of America—and the land is said to contain ons hundred millions of human beings, a population insignificant for such a territory; it is capable of sustaining eight or ten times that number.

France, Portugal, and some of the German States have small holdings in Africa, but none of sufficient breadth or power to affect the final dominion of England—her African Empire is assured, her travellers and explorers have for many years carried her policy and influence in the interior—in that African stronghold she is safe from all the designs and ambition of her great rival, Russia.

Let her go on and develop Africa, giving it to Christ.

SOUTH AFRICAN REPUBLIC.

HON. W. A. B. CAMERON, late a member of the Congress of the South African Republic, and its commissioner at the Exposition, at a meeting held on the Centennial grounds, Philadelphia, gave a very interesting account of the educational, political, and material condition of that country, which has, since his address, put itself under allegiance to the British government. Mr. Geo. May Powell, the chairman, made the opening address on African topography and climate, and introduced Mr. Cameron, who gave an account of his observations in the diamond fields near to, but not in the Republic. "Over £8,000,000 in value of gems had been secured there within the last few years." He stated that during the last year he had dug about a hundred pounds weight in gold in the Transvaal. He added that a liberal policy was being pursued in relation to education in the Republic; that its financial condition, instead of being weak, as had been represented, was strong. He claimed that the history of Africa showed that republics flourished there better than did colonies.

Miss Russell, Mr. Cameron's sister-in-law, a native of Southern Africa and daughter of an English merchant of Pretoria, the capital of the Republic, read an admirable paper "on the history of the country, and its social, political, religious, educational and material interests."

It was a great gratification to have so much interesting and hopeful information in regard to a region too little known to command, as it should, our active sympathies. Gen Armstrong and others made remarks of appreciation of what had been enjoyed, and after a hearty expression of thanks on the part of the audience, the reception adjourned.

CONGREGATIONAL.

GOING TO TEXAS.—The *American Missionary* appeals to friends for aid to establish a Normal and Collegiate School at Austin, Texas. The appeal says:

Texas is rapidly filling up with people. The drift of the colored population in the Southwest tends strongly in that direction. The educational advantages offered in that State to colored people are meager indeed. As the case now stands there are no public schools in Texas for white or colored, and the new constitution, which is certain to be adopted will secure to colored people only $1.25 per scholar for school purposes for a year, giving them practically next to no educational advantages. The friends of the colored people in Texas are becoming alarmed at their rapid influx into the State, and the danger to it and them, if they are left thus destitute. These friends are ready to welcome any plans for colored schools, and especially schools that train them as teachers and preachers.

A GRADUATE'S EXPERIENCE.

BY FRANK TRIGG.

[Read at the Anniversary Exercises of the Hampton Institute, May 24, 1877.]

BAY VIEW, VA., 1877.

It has been thought that ths experisnce of a teacher identified with the cause of education among the colored people, would be in order npon this, the Seventh Anniversary of the Hampton Normal and Agricultural Institute.

I began ths work of teaching ln the Fall of '74, and havs tanght every scholastic year since. The word teach, I find, as it is used with reference to the colored people has a three-fold meaning, and signifies more than msrely hearing ths children's lessons and attending to the wants of the schoolroom. Thsrefsre I have not been simply engaged in the capacity of a school teacher, in the small confines of a log cabin, but in the world as a practical man and citizen. My fisld of nsefnlness has been broad; my teaching varied and my lnfinsnce extensive either for good or evil. And thns it is with svery teacher among the colored people. To say that there is a great deal of work to do in Virginia among the freedmen, is merely n ropetition of the story of twslve years ago. The question now is, is the work going on and with what success, and what ere the signs of n brighter and more hopeful future for the Negro in Amerina. In 1870 the Free School System in this State employed 900 teachsrs in the colored schools. Many tsught together ln the same school, making a much less nnmber of schools. A third more teachers might have been employed in colored schools to advantage throughout the Stete. Out of this number of teachers I suppose that about two-thirds were preparing to do ordinary tsaching, and the other one-third was laying an imperfect foundation, which must be relaid and re-adjusted by their successors. My owni personal experience has been that the untrained and unprepared teacher is a hindrance to a healthy growing intelligence in eny community. Our back counties are suffering fearfully for teachers. The nnterial is there to meke them out of, but thnt is nll. The under-graduate teachers of this and similar institutions, are far more successfnl in their work than those who have never been under the immediate discipline of a Normal training school; though they may know more of books.

What we want to-day, nmong ns, are men and womm in whom the foundation stones of education havn been lnid, and who will lny well the principles of an American negro civilization. It is my humble opinion so far as I hevn hevn permitted to see; thnt the teachers from this Institution—I say this Institution because it is *the* Institute in thn Stete which fnrnishes teachers for the colored race—are working earnestly, nnd not simply actuated in view of thnir compensntion, but philanthropically. A proof of their work is seen in the fact that the children are growing more in love with their books, and arn learning the lesson: thnt "wisdom is n defence, and money is e defeneo; bnt the excellency of knowledge is thnt wisdom giveth lifs to them thet have it." Thn progress of the colored children in many plncs is very noticeable, so much so that the attention of some of the most embittered and implacable enemies of the Free School system and Negro civilization, has beeu arrested nnd they nre compelled openly to nnnifest their admiration for the zenl and susceptibility which these children exhibit. I noticn wherever I travel, the need of more proficiency in the school-room. Demands for new school house sites are being made yearly. Making it all the more necessary, that the very best materinl our race contains, shell be worked up end monlded in our Normal schools and other institutions, if we would accomplish the grent ends of thn school-room. (And how this may be done, has been a subject of much thought among teachers and others intercsted in the work of edncation among the negroes in Virginia.) There are scattered throughout this State young men and women who have fine telents for cultivntion, but most pitiably, are debarred the privileges offsred them in this and other institutions on account of poverty. They are unable to meet their bills, regularly. Some can pny a portion of their periodical indebtness, and others, nothing. And yet our hope for the negro's salvntion lies right in this class of your boys nnd girls! It is becoming more evident every day, even to the commonalty of freedmen, that they must be their own educators, if they would be educated at all. They are beginning to see too, that of the two races who have been teaching among them, their own color have been far more successful when prepared for the work. The success of the colored teacher has not been in thet he was better prepared intellectually, for the work, but thnt from living with and being among them, his knowledge of the children at home and at school is thorough; and enables him to do them more good than can the teacher who does not meet them at the boarding place and fireside. Much good has been done and is being done the parents through the children. The influence of the children upon thsm has been very remarkable in many instances. Their eyes have been opened to the importance of education and of their being able to do thsir own business. They are tanght by their children in many cases; thus showing great anxiety for improvemsnt let it come as it may. They are learning to read, write and cipher with nppsrent ease notwithstanding the impediments of old age and daily toil.

It gives me a great deal of pleasure to say that I have never been thrown into business contact with finsr men than the officers employed in the Free School system in the State of Virginin. I have met them as acquaintences, and as entire strangers, and nll of my meetings with them, whether social or business-like, have been characterized by the ntmost respect. Their complaint is that they are *unable* to procnre good teachers. And this see ms to be the key-note camplaint of every Superintendent whose acquaintance I hnve have made from the Virginia and Tennessee line, to the Eastern shore of Virginie.

The time seems to be at hand when color is regarded but as n surface matter, and principle the whole men. It is no longer a cause of bnainess separetisn and not a symbel of official incapability. Men are being known, net hy the color of their faces, but hy *patriotism*, fidslity and integrity. I am glad to say that those things which characterize the man and not the face are more and more occnpying the eyss and minds of our American pesple. And we thnnk God for what our eyes ses and hearts and minds feel and know, in this the beginning of another century in American Independence. Tho negro is buying his home by the sids of his white brother here and there, and providing for his postsrity. Many hnve benght farms, and hnve dsne much toward furnishing thsm with suitable conveniences. They show determinstion and great patience in the acquirement of property. And we can have no hrightsr tokens of th ir future stetus and success as a people in America. We thenk God thet they sre not to be taught that sublime declaration that every man shall live by the sweet of his brow; for they already know that work is honest, honorable and thnt every man ought to and must live hy it.

One of their greatest impedlments is the use of liquor and tobacco. They spend e great deel of thnir earnings for these articles which satisfy them not; but rob them of peaceful homes and comfortable livings. I think my hardest tesk has been to meet my peopln simply enough, wisely ennugh, nnd harmlessly enough. Doubtless sonic of my hardest times, since I hnve been teaching have hnd their spring in my own imprudence. And I think too, that their hardest times hnvn come from their nwn blunders; and some their most beneficial lessons havn come out of their hnrdships. These lessons heve appealed to them in tones louder thnn the human voice, and as lasting as the memory.

My people everywhere I hnve been, greatly lack steadiness of character and purpose. In thnir business nffairs and political, and religious opinions they are sadly unsteblo. There is too much discordance and want of unity among us as a peoplo who must be progressive or degenerate. There is too little love of race and rnee nggrandizement and too much jealousy nt each other's worldly gain; too much looking over the benm to see the mnte, and too little pntronege of onn nnother's enterprise, in order to grow strong and self-sustaining.

Our colored church organizetions hnvd mads compnratively litlo progress in their callings. It is true that the colored people are very formal in their religion, and while this is n fact, I firmly believe that their intentions are good, and thnt their errors are of the head and not of the heart. In looking back to the past we find that times have changed and people hnvn changed too; hut the peculiarities of a colored sanctuary of a score of years ago remains to be changed. I think one of the reasons for the inefficiency of so many of our ministers, is that their means of acquiring pulpit proficiency are so very limited. In the first place, as a common thing, they have very small and not very choice libraries, and no other source to look for information. Meny take only one paper, and others none. Thn paper takm is very often thn production our most insignificant presses. Hence much confused teaching in our pulpits; and not enough simplicity; too much surface and sameness, and not mough depth and variety. My conviction has always been that our benevolent institutlons have paid too little attention to this department of civilizing influence in the South. To say that the colored people may be met more to advnntage at the church than eny other place, is simply making a statnment, which verifies itself.

I havn enumerated some the principal errors, thnt I notice among my people, and shnll I stop at that? Nny, I would censure myself without giving a reason for it. I think that there is too little patience exercised with the rememberances of the old institution alnvny. We may reject them with all our nature, yet they are thn results of the condition of these people for over two hnndred years. And allowing that they are offensive, shall we not work and wait for a change to comn? (Yes, I think I hear a response, "we will.") Now to the students of the Institute individually: We are in the spirit of a better day; to us this year has not only been n new year in the order of time, but an epoch which is the beginning of a brighter page in the history of our people. I trust that we shall appreciate the evidences of that time, not far distant, when n better and more perfect reciprocity shall sxist between the classes of this country. And again may we learn all the lessons that may be taught us through the respect recently shown by our President to Frederic Douglass and John M. Langston. May we *adopt* the langunge of king Solomon to the daughters of Jerusalem, "I am black, hnt comely * * * look not upon me because I am black,

Respectfully,

FRANK TRIGG, JR.

CAN WE NOT IMPROVE?

A Letter to the West Va. Journal, from a Hampton Graduate.

Editors Journal:—This question has presented itself to me. "can we not improvs?" I mean the colored people, for I nm a colored men myself, or rather a boy. When I look over the record of the colored people for the last ten years, I see many things for which they ought to be praised, but again when I look on the other side I see many things thet we might improve ourselves in faster than we have done. First, let us take up the matter of education. Does each parent do all in his power to give his child an eduection? Does each parent consider the importance of edncating his child? The time has come when we are expected to play our part in this republic as American citizens. Let every parent then see that his child is led to perform his duty as nn American citizen. The time is fast coming when bondage can no longer be a plea for our ignorance. Onr many friends who have stood by us in the pest, and who are still willing to befriend us, want to see us accomplish something on ourselves.

I know that there are many who will plead poverty as a reason for not educating themselves nnd their children, hut let such look nt Vice-president Henry Wilson, who amid poverty and discouragements, rose from the shoemnker's bench to one of the Nation's highest officers. Let such, alsn, look nt Abrahem Lincnln who rose from the humble log cabin to the Presidency of the greatest republic on earth. Let them remember the old maxim, "where there is e will there is n wey," nnd take courage nnd resolve never to give up in despeir of getting an edncetion till they have exhnusted nll the means in their power. I am afraid that there are too many of our people who do not improve the privileges they hnve within their reach. I em nfraid that there nre too many who spend two great n portion of their time in street walking or in vain or vile talk. I think there are many who, if they would count up the time spent by them in vain and idle street talk, would find it to amount to hours and deys enough in which they might heve nbtnined for themselves n vnluable and respectable eduention. If we expect to make en intelligent netion we have no time to spend in idleness. It behooves us to properly employ every minute of our time. If the colored man will only improve his opportunities and persevere, I believe the time is not far distant when a great portion of them will be equnl in eduention, equal in wealth, equnl in civilization, and equal in overything thet tends towsrd humnn ndvnncement, to any nation or people on enrth.

B. W. T.

A work just published in England, entitled "The Border Lands of Islam and Europe," has thn following statistics in regard to the mixed character of the popuietion of Bulgaria:

"These consist of nbout one million and a half of Bulgarians and of helf n million of Osmnnli Turks, and of 80,000 to 100,000 Tartars. The Circassians are about 80,000, thn Albanians 60,000, and the Roumanians 40,000; the Gipsies nmonnt to 25,000, and the Jews to about 10,000. There are also 10,000 Armenians and an equal nnmber of Russians. The Greeks are 8,000, nnd thn Servians 5,000; hesides a few Itnlians and Germans, not together more than a thousand.

"Thn Bulgariens are of Sclavic origin. The country now known as Bulgaria was, before the year 679, occupied by Sleva, who had driven southwards or exterminnted the old Thracian race. These settlers, known by the the name of the seven tribes, were in their turn, subdued by thn more warlike tribe of Bulgares, who descended from their resorts on the Volga, and who, like the Turks, were of Tartar or Finnic origin. The Bulgares, after giving their name to the country and thn language, became absorbed in ths more numerous Slavic race, but not without blending with it certain Tartar characteristics of feature and disposition, which are still to be recognized in greater or less degree in the existing Slavo-Bulgarians."

IMMIGRATION STATISTICS.

Official information received at thn United States hurean of statistics at Washington, shows that during the month of October, 1876, there arrived nt the port of New York 6,350 immigrants, of whom 3,628 were males end 2,922 females. Netionalities: From England, 1,347; Scotland, 210; Wales and ths Isle of Man, 20; Ireland, 910; Germany, 2,016; Anstria, 289; Sweden, 204; Norway, 120; Denmark, 43; France, 328; Switzerland, 155; Spain, 20; Italy, 228; Holland, 32; Belgium, 14; Russia, 487; Poland, 6; Hungary, 20; Turkey, Guatemala, Venezuela, Persia, Maderia and Australia, 1 each; Greece, Nova Scotin nnd Hayti, 5 each; Japan, 3; Cnnada, 24; Mexico, 12; Chili and Africa, 2 each; Cuba 16; Bermuda, 8; Sicily 10; Gibraltar, 4; born as sea, 4. In addition to the above 3,200 passengers arrived dnring ths month of October. Of this number 2,866 were citizens of the United States and 344 temporary sojourners.

WIND INSTRUMENTS.—Dr. Burg, a French physician, has published n little book in which he endeavors to controvert, hy reference to his own observations end experience, the notion commonly entertained that the nse of wind instruments is injnrious to persons, characterized hy pectoral weakness. He remarks,—"Many philanthropists, on seeing our young military musicians wield enormous wind instruments, heve sorrowed over the few years the poor fellows have to live. Well, they ere mistaken. All the men whose business is to try the wind instruments made at thn various factories before sending them off for sale are, without sxception, free from pulmonary affections. I have known many who on entering on this calling were very delicate, and who, nevertheless, though their duty obliged them to blow for hours together, enjoyed perfect health after a certain time. I myself am an instance of this. My mother died of consumption, eight children of hers fell victims to the same disease, and only three of us survive—and we all three play wind instruments. The day is not far distant, perhaps, when physicians will have recourse to our dreeded ert in order to conquer pulmonary diseases."

PRODUCTION OF SILVER.

The yield of the Mexican mines since the conquest up to 1860 amounted to $2,039,000,000, and all from a comparatively limited district. Thn registered coinage of thn mint of Mexico for the last 135 years ending January 1st, 1874, amounts to $1,942,973,107, and taking into consideration the fact that up to the commencement of the nineteenth century Mexico paid e tribute of one-fifth or twenty per cent. of hnr yield of bullion to the King of Spain, the result seems astounding. The following is thn registered yield of a few silver mines on the American Continent. Many others could be given:

Biscennia Silvnr mines			$16,341,000
Santa Anna silver mines			21,347,210
Valeneta	"	"	81,313,486
Rio Grandn	"	"	650,000,000
Simrra Madre	"	"	800,000,000
Veta Madre	"	"	335,935,736

The silvnr mines on the Comstock Lodn paid their stockholders *the enormous sum of over $20,000,000 dividends for the year* 1873. The Panilian silver mine produced $30,000 per day for five years, when it was stopped by a flood of weter. After being opened again it produced in ten yeare $50,000,000. It again laid idln until 1871, when work was once more resumed, and an annuel yield realized of $13,400,000. The best silver mines are those of high altitudes. This is true of the Mexican and Sonth American mines as well as those of our own country. The Potosi mines, which have produced ovnr one thousand millions of dollars, are about 12,000 feet above the level of the sea. *Those of Colorado*, as the Terrible, Pellean, Moose, and far-famed Caribou, ere abont the sams nlevation.

COMMERCE OF THE SANDWICH ISLANDS.

Thn statistice published by the Hawaiian *Gazette* of the commerce and agriculture of the Sandwich Islands for the year 1876, show that the amonnt of sugar manufactured was 13,336 tons—of which 300 tons were consumed at homn—and the estimated yield for 1877 is 18,000 tons. The United States took about 12,000 tons of the erop of 1876. The growth of sugar planting may be inferred from thn fact that the total exports of this staple in 1857 were hut 500,556 lbs., and as late as 1863 hut 5,292,131 lbs, whiln in 1876, 26,000,000 lb were raised. In rice there was an increased production, of 1,671,733 lbs. of cleansed rice, of which 1,500,000 lbs. were needed for domestic consumption. Thn gain for 1877 over 1876, will fully equal that of 1876 over 1875. The value nxported of domestic goods last year was $2,054,158. The combined value of foreign and domestis exported goods was $2,241,062, while thn total amount of imported commodities was worth $1,811,771, showing a balance of trade in favor of the Islands of $429,271.—*Pacific Exchange.*

HAMPTON INSTITUTE LECTURES ON TEACHING;

BY PROF. F. A. ALLEN.

LECTURE XII.

SCHOOL LIFE.

The school life of the child is divided into
1st. The How Period.
2d. The Why Period.

Or, we may call the first the Faith Period, or the Fact Period, and the second the Philosophical Period.

The How Period is the period when he is interested simply in learning how things are done—the processes of work. This period lasts perhaps, on the nverage, up to twelve yenrs of age. It depends, of conrse, upon circnmstances,—the child's mental ability, and somewhnt upon the degree of education he has had, or the degree to which his mind has been roused nnd matured—by books, or associations, or experiences of life.

The Why Period is that when he wants to inquire into the reasons of things, the philosophy of them; not only to know how you do something—an example in arithmetic, for instance,—but *why* you do it so.

Remember these periods in your teaching. In arithmetic, for example, teach first processes—second, nnalysis. Do not nttempt analysis until the child is ready for it, by being so familiar with the processes that his mind is free to think and be cnrious nbout the reasons for them.

Here are some things to be tanght in the How Period—some convenient processes, and some advice as to teaching them:

Teach your pnpils the mnltiplication table skipping abont. Do not be satisfied with their knowing it only in rotation, though they learn it so first. I was teaching school myself before I conld tell that seven times nine are sixty-three without running through the whole line to myself, 7 *times* 1 *are* 7, 7 *times* 2 *are* 14, 7 *times* 3 *are* 21, &c.

Never teach the nddition or subtraction or division tables. Take the black-board, or a piece of brown pnper and pencil, and form a table or combinntion of figures, something as follows:

4 and 4		6 and 6	
5 and 3	are 8	7 nnd 5	are 12
6 and 2		8 and 4	
5 and 4		7 nnd 6	
6 and 3	are 9	8 and 5	are 13
7 and 2		9 and 4	
5 and 5		7 nnd 7	
6 and 4	are 10	8 nnd 6	are 14
7 and 3		9 and 5	
6 and 5		8 and 7	
7 and 4	are 11	9 and 6	are 15
8 and 3			
		8 and 8	
		9 and 7	are 16
		9 and 8	are 17

Once nccustomed to these combinations, there is no more trouble in adding.

Tnke, then, a combination such as I have given you, or a similar one, nnd drill the children on it till they know it perfectly.

Do not nt first give a child abstract numbers to handle, but let him associate the idea of numbers with thc idea of objects. Then let him see that he can only add liko things—bushels nnd bushels, dollars to dollars. Better not give figures only, but say add so many and so many bushels, or dollars, or whatever you will. Let him see tlnt he can't add chairs to tables, bushels to qnarts, and get one nnswer,—unless you find some common name to call them by; call the chairs and the tables both pieces of furniture, nnd tben you can add them; call the bushel four qnarts, and then you can add quarts to it. By the time he gets to fractions, he will know what is meant by a common denominator, though you hnven't used the word.

If you wish to sbow him bow to do n sum in nddition on his slate, give him the following, and let him find out all he can about it, you simply assisting him. Tell him to add

Bushels.	
49	He will say 4 and 8 are 12, and 6 are 18 and 9 are 27. Let him
36	write it down in full, 27. The
18	next time he adds up 2 and 1 are
24	3, and 8 are 6 and 4 are 10. Let
—	him put that down under it—as
27	10 tens—and add them together,
10	mnking 127. Do not tell him to
—	*carry*,—it would be better if that
127	word could be stricken out of

the arithmetic lesson, because it means nothing to tbe child. By the time he has performed twó or three sums in this wny, he will see that he can add the 2 right in with his other figures and get the sum immediately.

SATURDAY INSTITUTES.

Before I bring my lectures to a close, I want to give you a useful hint about having what I call Saturday Institutes or teachers' meetings.

In Pennsylvnnia we have n law to this effect; that all the teachers shall bold stated meetings, or Institutes, as we cnll them, for interchange of experience and ideas as to the best methods of teaching, and to keep up an interest in the snbject. They do great good, we find.

In States where there is no law to govern such things, it would be a good plan for teachers from neighboring schools to meet at their respective school-houses alternately, every other Saturday, and bring up questions for discussion, in relation to the different plans they may nse in teaching.

A teacher who tries no experiments, who teaches after the same old plan for ten or twenty years, cannot be called an experienced teacher.

We must, as teachers, be well informed as to the plans by which other nnd more experienced teachers are working.

There are several good works on the plan of teaching which I can recommend to yon if they ever come witbln yonr reach. Among them are Page's "Tbeory and Practice in Teaching," Abbott's "Teacher" nnd "School Economy."

A CHRISTIAN LIFE.—A boly life is made up of a number of small things. Little words, not eloqnent speeches or sermons; little deeds, not miracles, nor battles, nor one great, heroic act, or mighty martyrdom, make up the true Christian life.

"DITSON & Co. continue to publish quantities of sparkling songs and pieces. We bave received: 'The Dust of n Rose,' song by J. R. Fairlamb. Also, 'I can't sing for Gold,' by M'Carroll, with beautiful sentiments and golden music. Also, a piqunnt little concert song, 'Little Jack Frost,' liy Mrs. Carlton. Then there is 'The Czar's Mnrch,' which we may enjoy withont tbe discomforts of n campaign. Out in the Green,' n piece with smnth flowing nnsic, not difficult, nnd 'Little Bells,' or 'Gustnv's Glockchen, by Koelling. The last three are instrnmental pieces."

Among the very seasonable lyrics recently published by Oliver Ditson & Co. nre: "Cow Bells in the Lane," by W. S. Hays. Music nnd words are good, nnd tbe picture title is a charming country scene. Then comes a song of the ocean, "Nancy Lee" with a jolly "Yeo, bo !" in it; and a brave song by Miss Lindsay, "My Laddie far nway."

The Pinno music also has n sea-side finvor, being, 1st, "Sailor Chorus," from Wagner's Flying Dutchman, and 2d, "Beantifnl Hudson Waltz," by Nelsou, nfter which we have, for contrast, "Little Jennie Mnrch," with n sweet air in it, and n good deal of brillinncy.

NEWS OF THE MONTH.

FOREIGN.

FIFTEEN thousand soldiers are to sail from Madrid for Cuba in August.

Delegates from the Transvaal Republic have gone to London, bearing a protest from the late Government against British annexation.

A LONDON report says: "Accounts from the Bombay famine districts are daily growing better. Rain is plentiful, and the sowing of crops is beginning. Madras is still suffering, over a million persons are being gratuitously fed."

SIX universities in Germany have more than one thousand students each. Leipzig has 2,780 and Berlin 1,977. In the twenty-one universities there are now 17,143 students and 1,827 teachers. The number of Protestant theological students is 1,019.

THE war in the East seems to be a jumble of successes and reverses without a great deal of severe fighting. The Russians have raised the siege of Kars and the Turkish commander Mukhtar Pasha is within the fortification with about 40,000 men. The Russian campaign in Asia may be regarded as but little better than a failure, while in Turkey in Europe they are gaining ground slowly; having crossed the Balkans and now occupy a strong position before Nikopolis. Political reasons may cause Russia to push on to Adrianople, or even to Constantinople despite military risks, in order to compel the Turks to yield quickly. Decisive battles may, as they have been for a long while, be expected at any time.

ENGLAND is busily engaged in extensive military preparations. It is reported that 500 troops will soon be despatched in the Euphrates and 1,500 more will follow in the troop-ship Crocodile. The destination of these troops is unknown. England's forbearance will most likely come to its limit if the Russians succeed in taking Constantinople—and she is prebably preparing for the worst.

POLITICAL.

COL. MARPHS has been appointed marshal of the North Mississippi district,

CHARLES BLEW has been appointed collector of customs at St Johns, Fla.

RAYMOND, of Mississippi, has been appointed marshal of Idaho.

THE New York Custom House force is to be reduced twenty per cent. before a great while.

Atlanta, July 23—The Constitutional Convention today adopted a bill of rights. The bill recognizes all races of citizens, and pledges protection to all in their rights of citizenship, imprisonment for debt and whipping for crime are prohibited. The bill declares that the right of changing the constitution and form of the Government is the sole and inherent right of the people of the State.

PRESIDENT HAYES has lately issued what is called the Civil Service Order, which says that persons who are members of political committees and are holding federal offices must relinquish one or the other. This order will be rigidly enforced.

A POSTAL Convention composed of delegates from cities and towns in the States of Virginia, North and South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi and Louisiana assembled at the Hygeia Hotel, Old Point Comfort, Va., on Wednesday, July 25, for the purpose of arranging a plan for the improvement of mail facilities in the Southern States. A memorial setting forth the postal needs of the South and calling upon Congress for aid by means of liberal postal contracts and such appropriations as may be found necessary to raise the standard of efficiency of the service without making the same too burdensome to the Government. was framed, and will be laid before Congress for their action.

GENERAL

THE strike of the firemen and brakemen on the Baltimore and Ohio railroad became so formidable and the strikers so demonstrative at Martinsburg, on Wednesday, July 18th, that Gov. Matthews of West Virginia deemed it necessary to call upon President Hayes for troops, the state militia being insufficient to quell the riot. By order of the President through Secy. McCrary Genl. French with 250 men from Washington and Ft. McHenry was immediately dispatched to the scene of of the disturbance. The presence of the military in Martinsburg restored comparative quiet, at least prevented violence, and trains began to move east and west; but fresh troubles were being constantly reported; the most serious from Keyser and Cumberland. The latter city being in Maryland, the railroad company requested the Governor of that State to send the militia to their assistance. Gov. Carroll and Genl. Herbert met at Barnum's Hotel, Baltimore, July 20th, to consider the matter, and it was decided to sound the military alarm to assemble the troops at once. The news of this the alarm had the effect of bringing together thousands of the strikers' friends and sympathizers who assaulted the soldiers with clubs, bricks, and missiles of all kinds while on their way to the depot; the troops opened fire on the mob killing thirteen persons and wounding about twenty. The soldiers were not permitted to leave Baltimore, the track being torn up by the mob and railroad property destroyed to a considerable amount, by fire and otherwise.

The strike was fast becoming an epidemic: freight trains were being stopped on different roads at various places and the news of bloodshed in Baltimore only added fresh fuel to the flame. On the Pennsylvania Line at Pittsburg, July 21st, all freight trains were stopped, the strikers congregated in great crowds and became very threatening. The local militia was ordered out, but the soldiers were slow in making their appearance. At noon about 1000 troops arrived from Philadelphia. They proceeded to twenty-eighth street, where the railroad was completely blockaded and where the strikers were intrenched. About 5 o'clock the soldiers opened fire upon the crowd which so infuriated them that they drove the troops from their position to the railroad roundhouses. By 10 o'clock a mob numbering several thousand had congregated about the roundhouses. After several unsuccessful attempts to dislodge the military it was resolved to burn them out. This order was executed with alacrity, train after train of freight cars were demolished, robbed and burned. Nearly a hundred locomotives were ruined and the shops destroyed. The soldiers forced their way through the crowd and left the city. The mob then turned their attention to the work of destruction they had begun—the union depot was fired and was soon in ruins, as were also an elevator and several other large buildings. Many persons were killed and a large number wounded, and property to the amount of several million dollars destroyed.

The troops and strikers also met at Reading, Pa. with fatal results—eight persons were killed and twenty-five wounded. Several minor disturbances have occurred but all is comparatively quiet now. The situation is still critical, and the successes of the strikers have encouraged them to hold out against troops, yet the law-abiding citizens are becoming so fully alive to the damaging and demoralizing influence of such lawlessness that an improvement may be looked for.

MOB-LAW seeming to be the order of the day, the laborers of San Francisco took advantage of the age in which we live to punish the Chinese of that city for working for low wages. A large crowd gathered together and proceeded to Chinatown intending to "clean them out," but the police, having been apprised of the movement, were in readiness, and when the attack was made disbursed the mob without much difficulty.

THE latest dispatches from Oregon represent that the hostile bands of Indians are thoroughly demoralized. On the 16th, Red Heart, a Nez Perce chief, with 16 warriors from Joseph's and Looking Glass's bands, and 23 women and children surrendered themselves to Gen. Howard. Joseph did not surrender as he proposed to do, but started for the Buffalo country with other hostile chiefs. Gen. Howard is in pursuit. The total loss of our troops is sixteen killed and a large number wounded.

ON July 16th a tornado, accompanied by hail, swept over portions of Dutchess and Columbia counties, New York. Trees, fences and barns were destroyed, and acres of corn and oats were cut down. At Tarrytown, several public buildings were struck by lightning. Great damage by similar storms was done at Quebec, North Bergen, N. J., where several persons were killed, Troy N. Y., Black Rock, Conn., Jersey City, Paterson, N. J., Jamaica, L. I., New York City and many other places, resulting in great loss of life and property.

IT is stated that the loss in the valuation of the real estate of Boston, May 1, 1877, compared with May 1, 1876, will be $60,000,000. It is estimated that the loss on personal estate is about $30,000,000, making a total loss of $90,000,000, and reducing the whole valuation to about $670,000,000, exclusive of bank tax.

SOUTHERN gold mines are again rising to prominence, the product of North Carolina for the fiscal year 1876-6 amounted to $10,498,009, of Georgia to $7,379,000, and South Carolina to $1,881,000,—a total of $19,068,000. Labor is 75 cents a day, and wood $1 a cord.

SEVEN mormon and fifty recruits for Brigham Young accompanied by thirteen "missionaries," arrived in New York July 8. These candidates for future misery consist of Danes, Swedes, Germans, Norwegians, Scotch, Welch, Hollanders, English, Irish, and—strangely enough—Japanese.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering sceptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introdnced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS

This series of school-books, numbering between three and four hnndred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "Wer Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishere that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sert of guarantee which the educational pnblic have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popnlar works:

NATIONAL READERS AND SPELLERS

BY

PARKER & WATSON.

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The best in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its Reversible Feed enables it to sew forward or backward without stopping the machine—it being the *only* machine that *can* do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between Straight Feed and Back Feed machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The Only *safe, odorless* and *durable* Oil Stove for all who want Pure, Moist, Warm Air in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. Try Them!

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. VI. HAMPTON, VA., SEPTEMBER, 1877. NO. 9

THE CAT AND THE GOLDFISH.

'Twas on a lofty vase's side,
Where China's gayest art had dyed
The azure flowers that blow,
Demurest of the tabby kind
The pensive Selima reclined,
Gazed on the lake below.

Her conscious tail her joy declared;
The fair round face, the snowy beard,
The velvet of her paws,
Her coat that with the tortoise vies,
Her ears of jet and emerald eyes,
She saw and purr'd applause.

Still had she gazed, but midst the tide
Two angel forms were seen to glide,
The genii of the stream.
Their scaly armor's Tyrian hue
Through richest purple to the view
Betray'd a golden gleam.

The hapless nymph with wonder saw
A whisker first and then a claw,
With many an ardent wish,
She stretch'd in vain to reach the prize,
What female heart can gold despise?
What cat's averse to fish?

Presumptuous maid! with looks intent
Again she stretch'd, again she bent,
Nor knew the gulf between—
Malignant fate sat by and smiled—
The slippery verge her feet beguiled,
She tumbled headlong in!

Eight times emerging from the flood
She mew'd to every watery god,
Some speedy aid to send.
No dolphin came, no Nereid stirr'd
Nor cruel Tom nor Susan heard—
A favorite has no friend!

T. GRAY.

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager.

HAMPTON, SEPTEMBER, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 32 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE *Charleston News* reports that on inquiry at the office of the Liberian Exodus Association in that city, it was stated that 2,500 colored persons living in Charleston, and over 30,000 outside, had enrolled themselves to go to Liberia. There is no doubt of the fact that the association in that city is making vigorous and successful efforts to induce removals.

It is not surprising that some educated and ambitious colored men should be unwilling to pay the price of the advantages of living in America. Such men are galled by the repressive weight of the Anglo Saxon instinct which will not allow individuals of the colored race to climb much higher socially than the mass of their kindred. It is within the power of the mass to rise to much higher levels, but it must be a work of time; and, meanwhile, these active spirits naturally deem it better to reign in Africa than to fill subordinate stations here. Their personal ambition, mixed as it doubtless is with the noblest desires for the welfare of their race, is creditable to them. But why, under their leadership, the poor and ignorant should abandon their native land, we see no reason so good as to outweigh the objections.

New colonies, if prosperous, offer inviting fields for men of some means, but are full of hardship and battle for those who have nothing. Ignorant poor men will be ruled by politicians whether they stay in America or go to Africa. They can only decide whether white government or black government will best secure to them the fruits of their industry. Is their experience of colored law-makers and justices of the peace such as to encourage them to trust themselves and their families unreservedly in the hands of colored officials? Voting is a misfortune to ex-slaves until they can use it intelligently. Money and education is what they need. And both these essentials are positively within their reach where they are, and wholly uncertain in Africa. America offers them stable guarantees against invasion by predatory bands, or hostile nations of savages. The cotton fields around them offer them paying work. Northern benevolence, cooperating with Southern school systems, is developing the brightest minds among them to a point never before reached by their race. Except social intercourse with the whites, which is by no means essential to their happiness and well-being, every blessing of life they may win here by patient effort, and by the cheerful acceptance of facts, without striving against the inevitable results of living among a more civilized people.

THE case of the people *versus* the politician goes on under the leadership of our good President. Nothing ever deserved to succeed more than the attempt to stop the servants of the people from combining to fetter its sovereign will, and dictate which of them or their kind shall take the place of true representatives of the popular wishes.

Successful politicians are necessarily a positive and aggressive class of men whose power in life has largely come from their faculty of seeing only one side of a question, and acting as if there was only one side. Hence it is dangerous to liberty and to the rights of minorities, as well as highly disgraceful, that professional politicians should ever have been allowed to reinforce their partisan bigotry by any government influence at all.

This fruitful source of evil had, however, become so rooted in our politics that it required the utmost courage in a President to attack it. We have great hopes that the common sense of the country will sustain his hands, and that he may prove the most successful as well as the bravest, morally, of all our Presidents.

ENCOURAGING FROM TEXAS.

The "Workman" is glad to contribute to the fund of facts as to the true condition of Southern affairs by publishing the following letter. It would not hesitate to publish reliable statements as to ill treatment of the ex-slaves, but none have come to hand.

TYLER SMITH CO., TEXAS, *June*, 1877.

We are attempting to establish public free schools for all colors, classes and conditions in our town.

In order to do so, it is necessary to levy a tax upon the property holders. The colored people will not, if the tax is levied, pay more than fifty dollers in a tax of six thousand dollers, while at least one-third of the children to be educated will be colored. They are suspicious, because they see many members of the Democratic party who have heretofore been opposed to educating the colored child, now favoring the present system, and some Republicans whom they have considered their best friends opposing it.

I am a member of the Republican party—have been one since the termination of the war, and a native of the South, can confidently say, the Democrats who favor the education of the colored population are sincere. True, some who still cling to their old prejudices, are opposing it.

Please send to my address a published history of the establishment of your school; also any information in pamphlets or otherwise relative to the establishment of colored schools South and North, for distribution among the colored people who can read.

My object is to endeavor to convince them that the white race are doing and have done a great deal for their education and the improvement of their condition.

Should we succeed in our purpose, could your Institute furnish us with a colored male teacher? If so, at what price per session of ten months?

Very respectfully,
SAM. L. EARLE.

In many of the Southern newspapers of late a kindlier tone towards the negro is manifest. The "Index and Appeal" of Petersburg, Va., not noted for its liberality, in a recent issue refers as follows to the freedpeople:

We have been much impressed with the general easy and comfortable state of the colored brethren, by seeing the display which they made on yesterday, and the immense outpouring which accompanied their excursion to Washington. It may fairly be doubted whether the laboring class of any other country in the world could present such a spectacle. There were hundreds—possibly thousands—it seemed to us a million of the race: men, women and children, at the Appomattox depot, all dressed in their best, and wearing the look of people who had earned a holiday and who meant to enjoy it. Any humanitarian who could detect in the faces or bearing of this great throng any of the unmistakable physical evidences of ill usage, must have had keener eyes for reading that charactery than we possess. A much more forlorn look would be generally found, if we mistake not, on the faces of many of our own poor people, who cannot find employment, who lack for the means of life, and who certainly cannot afford such recreations as are so frequently enjoyed by the colored race. If people have any spare sympathies to bestow, they do not belong, we insist, to so well-to-do and contented a population as those represented in yesterday's excursion, but rather to those who are really much more nearly slaves to the hard conditions of humanity, than is the inferior race, whose wants are simpler, and whose capacity for manual labor is by nature greater. We do not envy the colored people their honest pleasures, but we argue that Northern editors who have so much to say about the hardships and privations of the poor negro ought simply to see some of the sights that are so abundant in the South. Now that the negro is out of politics, he is doing as well as his most ardent friends could desire and if he will but cultivate the graces of industry, sobriety and frugality, there is no reason why he may not possess the respect of everybody in the South. Our people have the kindest disposition towards them, and only ask a fair chance themselves, while they not only allow but encourage the advance of the negro along every line of improvement for which he is qualified by the God of nature.

CORRESPONDENCE FROM THE PACIFIC.

Extracts from a Private Letter.

HAWAIIAN HOME LIFE—KALIHI VALLEY—COUNTRY LIFE IN THE TROPICS—BANANA PLANTATIONS—THE INHABITANTS.

In all my housekeeping cares these past twenty years Akam, my faithful Chineman has not forsaken me; he has been a right hand to me; is far from being a perfect man, yet has good qualities. He is ever prompt, energetic and never fails to hold on; uses no opium, as most of his countrymen do, neither tobacco. With regard to gambling let reticence cover the fault, except in efforts to dissuade him which have thus far failed. Sometimes he sends cash to his aged parents in China—his profits at the gaming table! The kind care of parents and aged people is a noble trait in the Chinese. There are many hundreds of Celestials scattered over these islands, mostly industrious and employed in various ways. The sick and helpless in their number are cared for. The dead are not forgotten. One day last week Akam wished to go with a number of his friends to pay respects to their deceased friends who are buried in *Pawaa* valley; he said he would be fined five dollars if he failed to go. I said go. He did all his work and was prompt in going and returning. I asked him what they had been doing. He said they took cooked rice, cooked chicken and other food for the dead to eat. "Well, did they eat it?" "Yes," was the reply. "Did they eat it all and did you see them do it?" "Yes; they ate, and what was left we ate." "But how could spirits eat?" Reply, "They do in China and they do here." The thing seemed clear in his mind, but I was too obtuse to comprehend. He seemed satisfied and free from doubt. Perhaps he felt as thousands of men, women and children do when they strew the graves of departed friends with flowers. Why do I care for and keep the little cemetery so cheerful and bright en aspect? Not because the silent sleepers inhale the odor of the flowers, or rest more sweetly for having the green grass which covers them in good condition. Is not the feeling of satisfaction similar in the hearts of Chinese and of Englishmen? Surely it cannot be more heathenish in them than in us to respect the dead, though the forms may vary. Akam never goes to church, not even to hear Sit Moon, the Chinese evangelist. In common with many China men, he dislikes the laziness, lying and dishonest habits of natives, and speaks of such things with contempt. He is not lazy, yet would not hesitate to pilfer eggs, wood, &c., on a limited scale.

I sent, some time ago, a picture of good old *Kahina* who seemed to belong to us. O how fervently she used to implore God to take care of you when you were in the army, and when you came out of the fire and smoke of battle unscathed, she rejoiced that God had heard her prayers. She finally had leprosy, was sent to the leper colony and was a faithful missionary to her afflicted kindred. A Romish priest some time since talked to her of the excellencies of Peter and others. The reply was: "Peter told lies; he denied his Master. I will trust Christ who never told lies, and not Peter who did and may do so again."

Anxious for a change of place for a time, I gave Akam his directions, engaged a Theological student to look after the garden, hired Dolf and Freddie to feed the chickens alternately and gather *papaia* leaves for the old horse, and, on the 10th, after the boys were home from school, started with them for *Kalihi* valley and rode to where vehicles are obliged to stop. C. said the boys might go the two miles farther to my friends; she would content herself while waiting for them with *Harpers' Monthly*. The landscape spread out before her was rocky hills, low grounds covered here and there with clumsy cactus, and now and then a grunting swine would come out from its bed under the cactus roof. We started in fine glee among jagged rocks over which horses and donkeys and footmen have long picked their way. The trail led by a milk ranche owned by a Portuguese; the boys chattered incessantly and would not return, because mama was reeding and "Charlie" would like the rest. Guave trees increased in quantity though stunted and dry; the boys thought it so nice to see guava trees which freshened as we reached the rainy region, and they brought me bouquets of guava blossoms—a delicate white little flower, very fragrant, made up mostly of stameus. Partly hidden by bushes we passed several skeletons of horses which attracted the attention of the boys, and they plied me with questions. Thus we fall and die as we journey on. Men and beasts alike fall when life's spark is out. The former are carefully laid away in the earth's bosom; the latter are left to bleach and decay on its surface. Is there no rest in the future for animals? No righting of the wrongs they receive, or the abuses they endure while on earth?

Here came a troop of thoughts unbidden. I will leave this rural place a while and meet you at *Nuuhiwa*, one of the Marquesas group of islands, where our home was in years gone by, among cannibals. O how thoughts of heathenish scenes rush into my mind! In a flash my thoughts are there to dwell, and in a flash they return to this Eden of nature. I will take you to our savage home covered with leaves of the bread-fruit tree; a coarse mat of *pandanus* leaves lay on the floor. True, natives could and did thrust in their heads under the leaves and steal, yet it seemed almost a palace to us after previous discomforts. Two other families had similar houses near us. Old *Hope*, the chief, had been dead several days, terribly diseased from a malady introduced by foreigners. He had said to your father, "Cure me, and I will believe in your God." He was past cure. The body was lavishly decorated with heathenish ornements, with a roasted pig hanging close by for his soul to eat. This was some twenty rods from our house; the stench was intolerable. In due time they took the body to a beautiful stream near by, shaded by lofty bread fruit and cocoanut trees, washed off the putrid flesh and laid the bones on a *heiau* or temple (a large pile of stones elevated some five feet above the ground), and then they were left to bleach in the tropical sun, like the skeleton of the horse that had attracted the boys. Those old bleaching bones wafted my thoughts back to days and years gone by.

The trail led up and down small hills and verdure increased around us, till we arrived, O, so tired, and were warmly welcomed. The house is dumped down on the side of a gulch where the soil is rich and the strong wind broken; the valley stretches away three miles farther, where it ends in a high ridge. As I sit on the verandah in a cane-seat rocker, a mass of foliage is spread out before me, the rocky hills for background, and a point projects out from the hill seemingly just ready to take a leap and roll down upon us. The foliage is of various shades, with here and there a patch of light green, the crests of the *kukui* trees. The *hau*, hibiscus and other shrubbery has been cleared away and the little farm of bananas and other fruit is bringing a comfortable income for its owner. There are perhaps seventy lime trees, from the fruit of which juice is obtained and sold in the markets of Honolulu to ships, as a remedy for the scurvy. Perhaps fifty orange trees are bearing fruit just now; there are several other fruit-bearing trees. Near the house is a large mango tree heavily laden with green fruit; often one is shaken off by the wind and falls on the roof with a *thud*; to be free from that and the too dense shade and the dampness the large tree is under sentence of death. Mango trees are numerous and beautiful. Some one hundred natives of both sexes and all ages are all that are left in the valley, with about forty Portuguese who have intermerried with natives. They are industrious and penurious, but tricky. Mr. M. employed them until he found they would sell off his bananas and limes at night; natives did the same, until he concluded to cultivate what he could take care of himself. He keeps up a regular trade with dealers in San Francisco, clears about $1,500 a year.

My host is a remarkable man in many respects. He was born in Glascow, Scotland, where his father was a flourishing silk manufacturer. The son, intended for a profession, preferred to wander, and has visited various countries; commanded a sloop on the Hudson river, carried granite to New York; was in the lumber business. He married then, returned home, lost after financial troubles he sought California, did well, heard of these islands and came here to raise coffee. Coffee proving unprofitable, he planted a banana field. He loads his horses and mules with fruit and leads them over the rough road to town; he often clears a dollar on a bunch of bananas sold in California, two thousand miles distant. So he trudges back and forth. He has many books, is a great reader and has a wonderful memory. Tough and wiry, he goes about with a woolen shirt, butternut pants and bare feet. Thus he works at home, lives on a simple diet, has excellent health and expects

to live to be one hundred years old—he is now [illegible] seventy. He has been here twenty-four

amusing to see the energy of the chubby, tireless little fellow.

ren gathered from all quarters; while our good people, both white and colored, seem none the less eager to carry the work to perfection. The

selves, and really did not know what they were doing. But now I look at it in the way which I believe to be the true light of the thing, and

to live to be one hundred years old—he is now over seventy. He has been here twenty-four years. They have no children,—now they have with them Jose, a boy sixteen years old, half native and half Portuguese, who reads and spells to me dnily, prints on his slate and draws a little. So fancy us here in this little Eden, talking of things in different parts of the world. Were a choice given me to spend a few days in either place, I would prefer this rural spot to the grandest hotel. An old native man of one hundred and ten years lives a mile beyond here, whom I hope to see. No Protestants to look after the natives, they are mostly Catholics, and a priest does not fail to come here.

Here I am sitting in a rocking-chair by the window. The house is elevated on stones several inches from the ground. Outside is a path paved with stones; then a perpendicular rough wall, five feet high, which keeps the ascending bank beyond from crumbling and falling on the house. The bank rises to the summit of the mountain ridge,—all is covered with coarse, matted grass except when dug out to plant something. Large and small ferns grow luxuriantly on the edge of the bank close by the wall and even project out from among its stones, kept bright and fresh by frequent showers. Some twenty feet beyond the house grows a large cluster of Brazilian bananas; then guava bushes. I just now glanced out and could see the clear blue sky seemingly just behind nature's wilderness. Ten minutes more and the sun may be obscured and the clouds sprinkle down water.

I wish E. could be here for a time to inhale this fresh air and enjoy these grand, wild works of God. I love to think that there is beauty and grandeur beyond this limited life. Now let us pass through the snug parlor to the front verandah and sit in a cane-seat rocker. On the front door is a knocker which Mr. M. brought from the door of their house in Canada as a memento of "Home Sweet Home"; it has an ancient, familiar look. I love to sit and glance over the varied foliage to the projecting brow of a high hill which ever seems about to leap forth from the mountain. The *kukui, koa, koa,* guava, &c., are all in sight, including the leaves of the pandanus. There is a mass of green from hill to hill across the valley. Some three small white wooden cottages built by Portuguese are in sight.

Last evening was spent in looking over Jean Froessart's Chronicles of England, France and Spain. It tells of character and society in the Middle Ages. Its six hundred pages are embellished with many engravings which are interesting and amusing. The writings were commenced about the year 1300. I use the hook as a sort of pump-handle, and with a few questions from it can start a stream of lore from Mr. M.'s brain which is thrillingly interesting. Ancient and modern history and planting bananas are alike familiar to him. He has the best of religious creeds, void of bigotry,—to love God, keep his commands and serve him in spirit and in truth.

After dining on nice roast mutton, Mr. M. and myself, with little Jose for gallant, set off for the house of "Jack" who lives with his daughter a mile farther up the head of the valley. She is married and takes care of him. The old man is about one hundred and ten years old; his hair is white, and limbs all bones—his legs are like sticks. A blanket was wrapped around him as he sat on his mat; his hands looked like claws. He cannot walk and can hardly hear. He was born near where Captain Cook was killed, and remembers the time well: thinks he was about ten years old at that time.

The whole width of the valley to the mountain top on each side and in front was a mass of green verdure. There was a small church and a school-house, not in sight. I had been misinformed — there is Protestant worship here.

Amelia, a nice looking native, married to one of the best Portuguese, lives on the other side of a deep ravine over which we crossed to her house. She took her three children and went with us. Her wooden cottage has in the parlor an oil-cloth carpet, walls neatly papered and decorated with pictures of Mary, Joseph, Jesus, St. Peter and others, all in gilt frames; a mirror, neat white window curtains, a small *koa* table with a scarlet cover. In the bedroom is a large *koa* bedstead, mosquito nets and a fanciful quilt which Amelia had made. While we rested from our tramp through the ravine, Amelia donned a black, loose dress, but with flowers and feather, and in a few moments John, Mary and Immanuel were ready to start off and escort us. Baby wore a clean light muslin, with a pure white starched sunbonnet; Mary, a pretty hat with flowers, and a clean muslin slip; Johnny, a clean boy's suit. All went barefoot. Amelia was bright and cheerful and led us on with her baby; spoke English quite well, but preferred the native. Another young, married native woman joined us with her boy of eighteen months who wore a pink slip and a hat. He trotted along ahead of us with his bare feet over the rough and stony places and would not let his mother carry him. It was amusing to see the energy of the chubby, tireless little fellow.

Reaching another comfortable Portuguese house, the soft strains of a guitar reached our ears; it was doubly pleasant in that secluded, romantic spot. Our greetings were most cordial all around. Bananas were the principal thing cultivated. This man has, partly enclosed by a staunch stone wall, a large spot for the purpose. Near the house were roses, nasturtiums, geraniums, everlastings, &c., which made all seem homelike.

The Portuguese are mostly industrious, and provide more comfortable homes than do the common natives. We had to pass over a few streams of water, I stepping on stones, with a rough stick in one hand, and little Jose waded along in the water holding the other hand. He seemed delighted that he could be of so much use, carrying a light sauge of Mrs. M.'s, also my own and my umbrella. By accident he broke the handle of the latter, and at tea, on our return, he was missing. Mr. M. called him and found him driving a nail into the two pieces of broken handle, thinking he could restore it.

April 18th. It seems best to hasten home. Mr. M. donned a dark gray suit, with shoes and hat, brought "Charley" with a Spanish saddle on his back for me to ride, having no other saddle. As Charley was apt to shy, the plan was for me to ride astride the saddle, and Mr. M. to lead him by the bridle. We trudged on toward Honolulu, and when near to the "What Cheer" house on the *Ewa* road I was very weary with the position, and meeting two Kanakas, got them to help me alight, walked about a mile, and then took a nice express wagon and was carried home.

LETTERS FROM HAMPTON GRADUATES.

PARENTS WAKING UP — TEACHING AND PREACHING — BUILDING HIS OWN SCHOOL-HOUSE — HONOR IN PAYING DEBTS.

MUST BE EDUCATED.

Here is a letter from one of our graduates who has been several years in the field and is reaping the rewards of continued effort and growing experience. The worth of an earnest teacher is constantly increasing.

SWANSVILLE, VA.

Dear Teacher:—

I received the *Educational Journal*, for which I am very thankful. There is not one of the Hampton graduates near me that I can send it to, and besides I like it so well I would much rather keep it, even if I have to pay part for it.

I am getting on very well with my work; my school is quite full and in a prosperous condition. The children continue to grow in the understanding of their studies, and the purpose for which they were made. The parents, too, are beginning to see things different to what they used to. They seem to have opened their eyes in many directions, and take more pains in fixing up themselves and providing for their families. In fact, they appear to have more regard for themselves generally. I feel that my labor has not been in vain, though sometimes I do feel discouraged because of the carelessness of some. The people are getting on very well in this vicinity. They made considerable progress in a religious movement last year. There are two churches built last summer,—a *Baptist* church, about two miles from my school, and a *Methodist* about *five* miles. When I first came to this neighborhood, October 7, 1873, there was only one church here; now there are three. Some of my pupils made profession of religion last year. We continue to have our temperance meetings, which have done much good in this vicinity. I hardly ever see a drunkard here.

My regards to your family, and all the teachers and students.

Yours most obediently, W. A. Y.

The young man who writes the following letter has had to preach as well as teach since he went into the field. His wife, also a graduate of Hampton, wrote that as it seemed to be his duty to supply this want of his people in the place where he taught. He was trying to make up as well as he could for his lack of special preparation for the work of a minister by praying for help and teaching from God.

VA., *April* 30, 1877.

Dear Teacher:—Since I left Hampton I have taught four successive terms, and in three different places. During this time I have had embarrassments to surmount, obstacles to remove, and conflicts of different characters, arising from different sources, to contend with. Some of these sprung from points of ignorance, some from prejudice; while others came as a just recompense for the many mistakes made by me. Notwithstanding all this, my assailants in no case have been able to offer one charge which would stand a test.

So far as I am able to judge, the progress made by the colored children in these few years of freedom is quite cheering, and the work is moving on bravely. Schools have been established in most parts of this county, and children gathered from all quarters; while our good people, both white and colored, seem none the less eager to carry the work to perfection. The cry from every quarter is "More and better teachers." More teachers are needed to help organize a thorough system of education among our people, and better teachers are needed to help lay the foundations of a higher state of industrial, intellectual, moral and religious culture.

In order to become good and efficient teachers, I believe that it is necessary to suppress and discard every artificial appetite, especially the use of whisky and tobacco. Some may say that there is such a thing as indulging those habits to a proper extent: if this be true, I am sure that its confines do not reach to the public, neither to the school-room. And if they claim that they are temperate in the use of these things and do themselves no harm, and if this plea be possible, the practice taken from the examples of teachers, its tendency would be to lead one hundred young persons to the extreme, while one may chance to be what they call temperate.

The idea is prevalent among both white and colored that most anyone will do to teach or preach for us who is able to read and write, regardless of their moral standing. This is a grievous mistake, and must prove destructive to the true progress of our people so long as it is upheld and indulged by us. It is therefore necessary for us, as graduates from Hampton, in common with the graduates from other institutions, to hold ourselves so as to be worthy of imitation from any people, and to urge the necessity of a standard of high-toned teachers and ministers. By these means we will be able to acquit ourselves creditably before the world, and raise our race to a high position of education, refinement, and religious development. When this is done, and not until then, with the ample provisions already made by the laws of the land for us, every right which belongs to us as a people will naturally follow as a consequence of these great and good attainments.

Yours, L.

P. S. If you have any copies of Dr. Wayland's Moral Science, please send me one by mail and I will pay you for it. My wife and I are well, and she joins in love to you all. L.

Students are sometimes obliged to leave Hampton in debt to the school, but though it has lost a good deal of money from this cause, it is but fair to say of them that they have been very generally animated, like the writer of the following letter, with a spirit of earnest desire and faithful effort to pay up the obligation:

N. C., *April* 7, 1877.

Dear Teacher:—The not being able to comply with my obligation to Hampton has made me feel very unhappy for the past six months; but, sir, the county is in debt to me, and has been for nine months. Now I hope you will be patient with me until the county settles, and be assured the amount will be forwarded immediately thereafter. Building school-houses and paying old debts for land, etc., have caused me to leave undone the main thing needful. The school-house that I am now teaching is cost me last year twenty-five dollars, besides doing the principal part of the carpenter's work. I had a conversation with the Chairman of the Board of County Commissioners a few days ago, and he assured me that the money was good; he thought that it would be proportioned during the spring or summer. I am in debt for the shoes I am wearing, though I work on and look to Providence for a brighter day.

Please accept my thanks for the papers you were kind enough to send me; they added many moments' pleasure to my little vacation. It is always pleasant to me to have something new to read. I wrote a letter for publication in the WORKMAN soon after the receipt of the papers; but after my disappointment in not getting the money to balance my account, I became discouraged and was ashamed to send it. It would afford me a great deal of pleasure to attend the Institute in May, but the above will satisfy you that I am not able. I have been trying to visit Hampton for two years, and made every sacrifice to do so, but failed.

My pupils are getting along nicely in their studies, and the adults are improving in their morals. I commenced my labors here about six weeks after I left Hampton in 1874, and worked very faithfully trying to teach these people; and I don't think my labors have been in vain.

With great respect, I am your old't servant, W.

How one changes by being educated somewhat! Seven years ago I lived near the place which I am going to toil about, and used to go to church every first Sunday in the month (as that was the only preaching day they had in each month), and I used to hear the minister preach, and see the people get happy, as they called it, and shout and cry out,—and I was silly enough to wish that I was a Christian and could do so too. Last Sunday (July 1st) I visited the same place and heard the same minister preach, but with new ears, as it were. Some of those same people were there and got happy as usual and made their loud cries; but the cries fell on my ears in a different way from what they did seven years ago. Seven years ago I looked at those who were making the most noise as the best people in the church, and that they were really true and did mean what they were doing, or else were overpowered by the powerful hand of God and could not help themselves, and really did not know what they *were* doing. But now I look at it in the way which I believe to be the true light of the thing, and that is, that they do it to make people think that they are better Christians than they are. They do it to have the "glory of men." My reason for saying this is because if you trace the character of those who shout and make the most noise in church, they are often the worst characters in the church. It seems so strange to me that the minister enjoys it, for he encourages it. You can see that even in his preaching he tries to make an excitement among the people. Sometimes when he is preaching you can't hear anything he says for the shouts and moans of the people. I shall be glad when all our pulpits can be filled with educated ministers and our school-house with educated teachers, for our uneducated leaders will surely bring our race to destruction if they have the lead much longer. The man whom I have mentioned I once enjoyed his preaching, but I cannot say that I did last Sunday. Education can surely change the very looks and sound of things, and I may well say here that it gives new life to man. Without education a man cannot serve his Creator as he ought. So if we are going to be a people, we *must* first be educated. W.

Having seen in the April number of SOUTHERN WORKMAN, a letter written to you in Oct., 1876, by myself, which may convey an unintended idea to the public, I respectfully ask the insertion of these lines. In relation to the school in Williamsburg, for which I made application in August, '76, I did not mean that the gentleman who was reappointed obtained it by any fraudulent means. He was reappointed by the board, through the solicitation of the patronage of the school. I hope the gentleman will not think I meant his appointment to have been through fraudulence, and I hope that he is a co-worker in the cause of education

Please have these lines inserted in the SOUTHERN WORKMAN. C.

COW AND RABBIT.

A Mrs. Stratton, living at St. Helena, Cal., has a cow and a rabbit, between whom a strange and ardent friendship has sprung up. The Star thus tells the incident:

A black rabbit came to the place some three months ago and took up its abode. Mrs. S. keeps on the place a couple of cows, and a short time since the rabbit took up the strange habit of sleeping with one of the cows.

It goes out to the cow's wonted place of rest, waits her coming, and when arrived, the motherly "boss" licks the little protege with much of the same affectionate tenderness that would be bestowed on a calf, the rough tongue and tremendous licks nearly raising the little animal off its feet, and it meanwhile bracing itself with all its four feet spread to withstand the pressure.

Then little "buony" puts its little nose up to the cow's nose and appears to kiss it, all of which silly demonstrations goes through with, the rabbit nestles up to the old "boss" and goes to sleep. It is a singular "bedfellow," the tiny bundle of fur and ears of perhaps three or four pounds with the unwieldy carcass of six hundred, and should the superior animal uplessly wag her chin or flop her tail unguardedly, the little friend must undoubtedly be wiped out of existence. As yet, however, there is peace in the family, and everything is lovely.—*Ex.*

HOW FAR WILL A GREENBACK GO?

Mr. Brown kept boarders. Around his table sat Mr. Brown, Mrs. Brown, Mrs. Andrews, the village milliner; Mr. Black, the baker; Mr. Jordan, a carpenter, and Mr. Hadley, a flour, feed and lumber merchant.

Mr. Brown took out of his pocket-book a ten-dollar note, and handed it to Mrs Brown, saying:

"Here, my dear, are ten dollars toward the twenty I promised you."

Mrs. Brown handed it to Mrs. Andrews, the milliner, saying:

"That paye for my new bonnet."

Mrs. Andrews said to Mr. Jordan, as she handed him the note:

"That will pay you for your work on my counter."

Mr. Jordan handed it to Mr. Hadley, the flour, feed and lumber merchant, requesting his lumber bill.

Mr. Hadley gave the note back to Mr. Brown, saying:

"That pays ten dollars on board."

Mr. Brown passed it to his wife, with the remark that that paid her twenty dollars he had promised. She in turn paid it to Mr. Black to settle her bread and pastry account, who handed it to Mr. Hadley, wishing credit for the amount on the flour bill, he again returning it to Mr. Brown, with the remark that it settled for that month's board. Whereupon Mr. Brown it put back into his pocket-book exclaiming that he "never thought a ten-dollar bill would go so far."

Thus a ten-dollar greenback was made to pay ninety dollars indebtedness inside of five minutes. Who says greenbacks are worthless?

—*Laramie Sentinel.*

HINTS ON AGRICULTURE, by Francis Richardson, of Norfolk, Va., formerly farm manager of the Hampton Institute, will be continued in the next number of the "Workman" and are believed to be worth the careful attention of our Southern readers.

HINTS ON AGRICULTURE.

BY F. RICHARDSON.

Introductory.

I

More peopls make their living directly by agricnltnre than by any other calling; and famine wonld overtake all civilized nations if one year's crop should fail. Agriculture is therefore called the "King of Arts." So nniversal is its bearing upon the interests of all classes that no man's head can be considered well furnished, till he knows the general principles of farming. Professional men of nearly all kinds aro continually brought in contact with farmers. Especially is this the case with teachers in ths Southern States. And the more exact and detailed a teacher's inforuation is on agricultural matters, the more he may enjoy the respect and confidence of those practical men who are the leaders of public opinion in rural communities.

II

To command the respect of practical neu, however, the student must know how narrow are the limits within which book knowledge is worth anything. Books caunot convey the skill of touch which enables its owner to select a valuable animal by the quality of its hair; nor can they give the practiced eye, which decides at a glance whether grass is at ths proper stage for cutting, or whether a clay field should be plowed to-day, or left till it is drier. Nor can hooks determine whether a side bill is too gravelly or too cold for wheat; whether *this* farm is worth ten dollars per acre more than *that*, and whether cattle farming in any particular locality is likely to pay better than raising grain. On all such matters the mere book theorist in agriculture would be as much at sea as the young physcian who has his volumes at his fingers' ends, and can prescribe for any disease which may be named to him; but cannot decide what *is* the matter, in his first case.

III

On all such questions as the above, practical men though prompt to laugh at any dogmatic intrusion upon their provinces, are especially eager to hear facts. They value these if modestly offered, and under a sense that tha experience recorded in books has been often gained under totally different circumstances from the case in hand. Books never do record all the circumstances. They deal in relative terms, and in results; generally leaving out such vital points as temperature and amount of rain fall, &c. For example, a first-rate authority on market gardening living in New York gives as a fixed rule that it will not pay to plant truck on land having a clay subsoil. While in the South, on the contrary, the rule is worthless, and a clay subsoil is often especially sought by truck growers. To trust books too far is to become the laughing stock of sensible men.

IV

The stndents of Hampton have not only the great privilege of seeing a fine farm successfully managed under their eyes and hands, but they are also thoroughly drilled in the elements of Agricultural science in their classrooms. The object of the present series of papers is to supplement tha knowledge thus attainable, by giving as many as possible of the practical ideas about farming which are not commonly found in text-books, but which the young farmer needs at the threshold of his experience, and for lack of which many men have thrown away the labor of years or of a lifetime. In treating of agriculture from this point of view it is hoped that useful hints may be given to the teachers who go out from Hampton into farming communities, and whose pupils may apply to them for advice. The whole future of those pupils may be determined by n word from an honored teacher, and much depends upon

STARTING RIGHT.

I

It is best for the young farmer to begin at the bottom of the ladder. He has a long course before him. In thirty years ha may reach a comfortable independence. If he tries to go faster he will usually sink into some enticing pitfall of speculation.

In every country neighborhood nro to be found a few men who have made money by legitimato farming, and who are not ashnued to use their own hands. After finding some such man, the young farmer can make the best use of two or three years, by working faithfully and diligently for him, and learning what he knows. If a young farmer has determined to be rich in thirty years, he can better afford to labor at first for a successful man for board and clothing only, than to receive high wages from a slip-shod fox hunter who calls himself unlncky.

II

After having given satisfaction to a critical master for two or three years, our beginner will find that though he may have put no money in his purse, and is apparently at the bottom of the ladder, he has really made the first great step upward. He has gotten a *character*. A man whose judgment is recognized in the place, has given him a thorough trial, and pronounced him steady, reliable and efficient. What is ths result?

Tho result is that though without a penny or an endorser he will find two classes of persons who are looking for just such men as he. Ths first class is of practical farmers who need foremen. The second class is of non-residents who must have hands who are trusty and not eye servants. Tho most successful farmer is ero be preferred as an employer: first, because such a man is moro likely to he able and willing to pay all who work for him; second, because something is to be learned from him.

III

Our beginner, looking steadily at the end of tho thirty years, will not be in too great a hnrry to start for himself. And in his early efforts to swim sgainst the current, he will wait till he finds soms solid ground under his feet, before he places the weight of another's arms around his neck. It is true that many young men save nothing until they get married, but this is their own folly. Every valuable farm hand, if single, ought to put by at least, $7.00 to $10.00 per month. If he sticks to this till he has laid up $500.00, he will have learnt the valus of little sums,—which is one of the most important lessons in the art of getting wealth. It is the tcstimony of every successful man, that it is more difficult to keep money than to make it.

IV

While working out for an employer, our beginner is gaining experience at the least risk of any period of his life. He has before him the example of a practical man laying out money: If losses occur, the employee gets a valuable warning; if gains result, the employee can some day try the same path. Moreover, while his own bank account is growing, he has many opportunities of seeing, in the experience of other young men, the folly of trying to farm without sufficient capital.

V

By these gradual steps upward, we will suppose our young farmer to have acquired a first rate character for steadiness, honesty, industry, and knowledge of his business. These things are capital in themselves, and are with in the reach of any one however poor. While acquiring them, he has formed fixed habits, and conquered many of his own weaknesses. He has now takcn a Rigbt Start on the road to an honorable career of prosperity. With his five hundred dollars, he is now, perhaps a man of sufficient experience to commence being his own employer. Only seven or eight years of the thirty are gone, and he finds himself in advance of *fully three-fourths* of the young men who began life when he did.

VI

At this stage of the life of our hero (for heroes are those who conquer little temptations), a land agent lights down upon him. The land agent has a nice little farm of fifty acres, for sale at a bargain. He don't want much down —say $200. Seeing the purchaser is such a *deserving young man*, the balance may remain on interest for four or five years. As a friend, the land agent would advise him not to let such a good chance slip. In the whole course of his experience in real estate, he had never known a more favorable opportunity to make a strike. The wood on the farm will nearly pay for it, &c., &c. Only $1,000.00 for the place and all but $200 might remain on interest. "Buy it! young man! Buy it!"

VII

Our advice would be, do nothing of the kind. You will find just as good bargains five years hence. "There are always as fine fish in the sea as have been caught." The wood would be worth very little without capital to handle and sell it to the best advantage. The farm itself will produce nothing without tools, seed, team and labor. If it is the labor of the owner, how is he to be fed? The $300 still in the bank would be soaked up directly as follows:

Cost of the cheapest horse worth owning,	$80.00
Cart harness, plow harness, and whiffletree	20.00
Cart, plows, drag, cultivator, scythe, axe, spade, hoe, forks, rake, shovel, curry-comb, brush, grind stone, wedges, chains, bags, baskets, steel-yard, half-bushel, hatchet, wrench, &c.,	110.00
Cow, pigs and poultry,	50.00
Seeds and plants,	30.00
Lastly, the wedding expenses	10.00
	$300.00

Even if the house were nicely furnished by a liberal father-in-law, how can the young man live, and pay interest on the remaining $800 due on the land?

VIII

All this fearful embarrassment and the consequent working at a disadvantage, and compulsory horrowing, could be avoided by not investing a penny in land so early in life.

Turning a deaf ear to the land agent, our hero sets himself to find a good piece of land which has been a little neglected and whose owner has not much taste or skill, and would be glad to put it out on shares. Such pieces are to be found easily enough, and after refusing a number of such, our prudent beginner, making haste slowly, will be likely to have a favorable opportunity. Here his good character will enable him to command good terms. And the more he can induce the owner to furnish of stock and tools the better. Thero will be plenty of room left to use $500 as working capital, to more advsntage.

IX

In making a hargain to farm on shares, the beginner should he very careful to have the contract drawn up in writing as definitely and clearly as possible. This is necessary even with the land owner who means to deal fairly because misunderstandings are constantly occurring when there is only memory to refer to. So far from making agreements with land owners whose neighbors do not consider them just men, it is much safer for beginners to avoid such altogether. Even a victory in a lawsuit is often ruinous to a poor man.

X

As a guide we give the following form, which can easily be varied, but as written it embraces the common features of such agreements in Eastern Virginia.

Articles of agreement made this first day of 1877, between John Doe of the County, of , in the State of Virginia, of the first part, and Richard Roe of the said County and State, of the other part, witnesseth that the said John Doe doth demise unto the said Richard Roe, his personal representatives and assigns, all that certain farm situate in the County of , in the State of Virginia, bounded on the North by the main road leading from to , on the East by the land of Adam Smith, on the South by the River and on the west by land now occupied by Piers Plowman; from the first day of January, 1877, for the term of three years thence ensuing, yielding therefor to the said John Doe during the said term, the rent of one-third the crops raised on said farm.

And it is agreed that said John Doe shall furnish three head of yearling cattle and ten pigs over three months old, at the beginning of each year of said term. And that all grain fed to said stock shall be out of the share of said Richard Roe. And that said stock shall be common property, share and share alike, and shall not be disposed of before the end of the said term of three years unless by consent of both parties hereto. Working teams are to be fed from the undivided crops.

It is further agreed that said Richard Roe shall have the use of half an acre of grouud adjoining the dwelling as a kitchen garden. And shall have the privilege of cutting as much timber as may be necessary for fencing upon the farm, and wood for his family.

And said John Doe agrees to pay all the taxes upon said property except the road tax, which is to he paid by said Richard Roe. And the said John Doe covenants that the said lessee shall have quiet enjoyment of his term.

The said Richard Roe covenants to deliver the said John Doe's third, at the South barn on said premises, without charge and in as good order as that in which his own crops are housed. The said Richard Roe further covenants that he will not assign without leave, that he will keep the fences in repair and pay the road tax. And to raise forty acres of Corn each year.

Witness the following signatures and seals.

JOHN DOE, [SEAL.]
RICHARD ROE, [SEAL.]

Witnesses at signing,
SOLON SHINGLE, JOSEPH JEFFERSON.

Sometimes Richard Roe is not able to furnish team and seed and implements. John then furuishes half, and receives half the crops.

XI

The advantage of renting on shares over renting for cash are principally to be seen in bad seasons. When from drouth, or long rains, or insect enemies, the crops fail; the owner gets very little; while the tenant having dwelling, garden and fuel free, can raise his own meat and vegetables and make his poultry and butter pay his grocery bills; leaving him but little worse off for the bad season except his loss of time and wear of tools. Sometimes, however, it would be better to take the risk of renting for cash, as the money rent is often considerable cheaper in good seasons. The advantage of either method of renting over buying, are that the farmer who rents has the most money left to buy stock with. And he can turn a small capital over much more rapidly in livo stock than in land.

XII

The farmer whose money is all wrapped up in land is compelled to sell his grain for want of stock to eat it. Such farmers are getting this year, fifty cents per bushel for corn. The same corn fed to hogs would be worth one dollar per bushel, provided dressed pork brings six cents per pound. The man who has ready money enough to buy hogs at the right time can thus realize twice as much money for his corn as his neighbor who owns land but has not enough working capital to stock it.

XIII

It is a golden rule in farming never to plant a grain crop on poor land. But if the farmer have no working capital to buy stock to make manure, he can't help himself. He is compelled to raise poor crops.

It costs about $5 per acre to draw out manure and enrich a field so as to bring its crop of corn from five barrels up to eight per acre. The three barrels are the product of only $5 of working capital. How many barrels would the same five dollars have yielded, clear of expense, if put into land? Not more than one.

XIV

The fact is that many farmers are "land poor," because they have not clearly understood that land alone is of no more use than gold to a starving sailor on a raft. The money made by farmers is not in proportion to ths size of their farms, but in proportion as they have working capital, and know how to use it. And if our beginner does not own a foot of land for ten years after he has commenced to farm for himself, he will be better off—provided he and his wife know enough not to spend their working capital for things which *can be done without*.

If, however, the young farmer finds that he is fond of attending auctions, or discovers that either he or bis wife have a habit of buying things because they are "nice," or because they are "cheap," or for any other reason than absolute necessity; then his only chance to escape shipwreck, may be to run in debt for a farm. Debt is a hard master, but it will stop him, if anything will, from fooling away his money. It is a sad fact that not one man in ten can rely upon hiuself and his family to refuse always to buy that which they could somehow manage to do without. Therefore, as a general rule, it is better to put money into land, lest it take wings and escape.

In buying a farm, the next thing in importance after healthful location, is the natural productiveness of the soil. That this should be considered before price is evident. Land rich enough without manure, to bring eight barrels of corn pays the farmer over two dollars per day for his labor. While on land which brings only four barrels, the farmer is paid scarcely one dollar per day. The rich land is cheap at thirty dollars per acre, because each acre after paying tha cost of cultivation, yields more profit than the interest on thirty dollars. While the poor land pays no interest, and would be dear as a gift, unless the farmer has means to enrich it.

XV

Rich land in a productive state is often too high-priced for a poor man. But the richest lands are often unproductive from want of drainage simply, and can be bought at a real bargain. The young farmer should be awake to seize such chances of getting rich land cheap. Some of the most successful farmers have found their fortunes in just that way.

A very simple levelling apparatus may be made as follows: Take a fence board eight inches wide and sixteen feet long. Plane one edge so as to be straight. Nail a leg three feet long at each end of the board. Set the board on its legs, straight side up. A carpenter's level on top the board will tell you how much the lowest leg needs to be raised. Raise it till the straight edge is level, and measure with a pocket rule the height of the leg from the ground. This height is the difference of level between the ends. Make a note of it, and move the apparatus sixteen feet farther. Level and measure as before, and add or subtract as the case may require, from the previous note. Or by putting all the down hill measures on one side of the page, and the up hill measures on the other, the difference of their sums will give the difference of level of two places. By this contrivance it is easy to ascertain without employing an engineer how much fall ean be had, and whether it is practicable to drain a piece of low land.

XVI

In choosing a farm next after healthfulness and fertility comes the question of nearness to market. The importance of this depends upon the particular branches which the skill, means or inclination of the farmer leads him

to follow. There are advantages and disadvantages in being near cities and they are so nicely balanced that good managers grow rich in each location. Everything depends upon the man. A shrewd farmer of small means, by locating twenty miles from town, gets good land cheap. In ten years the value of his land is likely to double by the increase of population around him, and by the growth of his orchards and the improved productiveness of the soil. Meanwhile he can rednce his expenses of transportation hy converting his grain and hay into cattls and colts which will carry themselves to market.

XVII

Having formed a clear idea of what particular line of farming is most in accordance with his tastes and his capital, our young farmer considers every plac offered him with reference to these points specially. And, seeing the sad results all around him of hasty and ill-considered purchasing, he takes his time, and will not be hurried in choosing. He will have nothing to do with poor land at any price, nor will he be tempted by cheapness to buy in an unhealthy place, nor to run much in debt and use up all his working capital in paying interest and other expenses. He had rather buy only a very small farm.

XVIII

After finding a place as near as possible suited to his case, it is well for the young farmer to remember that everything he is doing now should be for the permanent benefit of his land and with a view of making his labors easy as old age comes upon him and his strength lessens. He should therefore keep steadily in view the following ideas, much as they differ from ordinary practice.

First, It is possible so to msnage land that while yielding good crops its fertility is constantly increasing.

Second, It is possible to give his live stock such care in hreeding and management that they will command better prices than those of his neighbors.

Third, By care in selecting seed year after year, he may make his grain crop saleable for sced at an advance.

Fourth, By planting a tenth of his land in applctrees of the most showy and productive market kinds and not more than two or three varieties, he may realize a hundred per cent. on the investmcnt.

Fifth, By striet integrity in pnttiag up his products, he may mske his stamp bring an extra price.

Sixth, By giving his sons or apprentices a little ground to tend for themselves, or stock to raise, he will interest them in looking after his interests and remsining with him.

Seventh, An Agricultural paper is worth its cost for the hints it will furnish.

Eighth, It is much safer to raise a vsriety of crops than to trust all to one crop.

Ninth, By honesty and industry and s constsat study how to mske the best use of every minute, he has more chances to become wealthy and respected at farming than at any other profession for which he is equally fitted. Civil rights and honors naturally follow those who show that they can make and keep money and deserve respect.

"I SCRUBS."

"What have my class done for Jesus since last we met?" asked the teacher of a large infant class one Sabbath morning.

One said, "I have earned some money for the hesthen by doing errands," another, I tend our sick baby;" another, "I fetch hunchback Billy to school, with the boys a-laughing at me." One after another told, in a half-bashful, half-exultant way, of the little activities and self-denials of the week, so pleasing to the teacher, and still more to him who said, "Suffer little children to come unto me."

At last a little four-year-old hand was stretched up, and moved hastily to und fro to attract the teacher's attention.

"Well, my dear, what are you doing to plesse Jesus?"

The little eager face flushed with excitement as the unexpected reply came, "I scrubs."

Some of the older children tittered; but the teacher sobered them at once by saying,

"Yes, little Molly's share in the work my class is doing for Jesus is as important as any. If she tries to help her mother by scrubbing a bench or a table, even if it has to be done over after her, she earns the same smile of love as the older ones who can do errands and earn money for the missionary-box."

"She hath done what she could," is the highest praise that can be spoken of any one; and little Molly has done that.

"Mother," said a little girl who had just come in from the new-fallen snow, "the snow is such a pure, pure white, that I could not help saying in my heart again that little verse, 'Wash me, and I shall be whiter than snow.'"

That is a sweet prayer, and one which we should all use.

THE CHILD'S PRAYER.

BY EMELINE SHERMAN SMITH.

His little dimpled hands were crossed,
His face looked saintly fair,
With npturned eyes of tender blue
And waves of golden hair,
As by his dainty couch he knelt
To lisp his evening prayer.

"Dear Lord," he said, "I want to know
If you will bless to-night
All naughty, wild and wicked boys—
The boys who swear and fight?
Please, too, to help those dreadful ones
Who steal and run away.
And never, never do what's right
Through all the blessed day."

Amazed, his mother heard the plea,
And wonderingly she said,
"Why, what, my darling child, has put
Such fancies in your head?
Why don't you pray for brother Charles
And little cousin Fred?"

"Why should I pray for them, mamma?
They're good, and happy, too;
The Lord has done enough for them,
I want Him now to do
Something for those poor friendless chaps
Who *must* be cross and bad
Because they've nothing in the world
To mske them good or glad."

THE CHILD'S PRAYER.

Oh, wisdom of the child's pure heart!
Oh, sweet and loving creed,
That gives such tender, pitying thought
To souls in direst need!
Could schoolmen, with their varied lore,
A larger lesson, teach?
Or churchmen from the sacred desk,
Diviner doctrine preach?

—*Home Journal.*

At Home.

LUCK AND LABOR.

BY MRS. CAROLINE A SOULE.

Luck doth wait, standing idly at the gate—
Wishing, wishing all the day;
And at night, without a fire, without a light,
And before an empty tray,
Doth sadly say:
"To-morrow something may turn up;
To-night on wishes I must sup."

Labor goes, plowing deep the fertile rows—
Singing, singing all the day;
And at night, before the fire, beside the light,
And with a well-filled tray,
Doth gladly say:
"To-morrow I'll turn something up;
To-night on wages earned I sup."

—*St. Nicholas*

BRACKETS.

Pretty and very useful corner brackets can be shaped and made without difficulty, and covered with embroidery, damask or rep. Round the shelf or bracket a piece of the same material with the furniture cover or lambrequin may be cut in points or scolloped and finished with heavy frings. These pieces are often beautifully embroidered on Java or canvas, and the brackets when finished are quite ornamental as well as nsefnl. Leathar work or plus cones varnished are often worked up into very fanciful brackets, and are quite strong and durable.

FOOTSTOOLS AND OTTOMANS

May be mannfactnred ont of old boxes, peck or half bnshel measurss, or long store boxes. Nail old bagging loosely on the top, leaving ons side open till yon havs filled it svnly, plumply (not too hard) with cotton, hay, moss or Excelsior. Then nail ths canvas very tightly all round, and covar with embroidery, or with material to match the furnitnrs. Covsr ths edges with gimp or fringe. Nail a piece of oil cloth over the bottom to maks it slids easily over the carpet when wishing to movs it. Or the top may be fastened by a piess of strong leather or hinges to ons side of the box and stuffed, and covered and trimmed as described above, and thus not only ths footstool or ottoman is severed, bnt a box for plsces, work or anything necessary. In this case there should be castors on ths bottom to movs it, when filled, without trouble.

These srs only a few of the comforts, conveniences and really elegant articles that can be maanfactured by one's own ingenuity, skill and perseverance, saving mach moaey, and gaining more comfort and pleasurs.

A VICTIM TO KITCHEN SLOPS.—Soms fifteen or more yesrs ago a young man in ths village of C——, Potter County, Penn., built him a house and store and commenced trading. Just beneath and to one side of this men's sleeping-room was a filthy pool several feet in diameter, caused by the kitchen slops which flowed from the sink out through a leaden pipe. In the spring following the occupation of the premises, the wife was taken sick of bilious fever, but after a long illness recovered. The next autumn the man took ths fever and died. The store and goods were sold to satisfy the New York creditors, paying some twenty-fivs or thirty cents on a dollar. Thus ended the life and usefulness of a young, active, and highly respectable man, a probable victim to slops. To be so engrossed in the pursuit of earthly good as to forget the simplest and plainest laws of health and common decency, is, to say the least, poor policy.—K.

IT IS SAID, that a powerful yet cheap disinfectant may be made by dissolving a drachm of nitrate of lead in a pint of boiling water, and two drschms of common salt in a bucket of water. When both are dissolved pour the two mixtures together, and when the sediment has settled there will be a pail full of clear fluid, which is a saturated solution of the chloride of lead. A cloth saturated with the liquid and hung up in a room will at once sweeten a fetid atmosphere.

CURE FOR POISONING.

A physician says that sweet oil is not only an antidote to the bite of the rattlesnake, but will cure poison of any kind, both on man and beast. The patient must take a spoonful of it internally, and bathe the wound, for a cure. To cure a horse it takes sight times as much as for a man.

TREATMENT OF BURNS.—On the instant of the accident, plunge the part under cold water. This relieves the pain in a second and allows all hands to becoms composed. If the part cannot be kept under watsr, covsr it over with dry flonr, an inch deep or more. In many instances nothing more is needed after the flour; simply let it remain until it falls off, when a new skin will be found under. In sevrer cases, simmer a leek or two in an earthen vessel, with half their hulk of hog's-lerd, until the leeks are soft, then strain through a muslin rag. This makes a greenish-colored ointment, which, when cool, spread thickly on a linen cloth and apply it to the injured part. If there are blisters let ont the water. When ths part becomes feverish and uncomfortable renew the ointment, and a rapid, painless cure will be ths result. If the patient, in the meanwhile, lives exclusively on fruits, coarse bread, and other light, loosening diet

KINGSLEY says, "If you wish to be miserable you must think about *yourself*; about what *you* want, what *you* like, what respect people ought to pay *you*, what people think of *you*; and then to *you* nothing will be pure. You will spoil everything you touch; you will make sin and misery for yourself out of everything God sends you; you will be as wretched as you choose."

JOURNALISM TWO THOUSAND YEARS AGO.

There seems to have been a necessity since time immemorial, smoag at least half-civilized nations, to bring events of importance to the knowledge of the people by the medium of writing. To this purpose answered the hierogiyphic inscriptions of ths Egyptians, the tombs of Babylon covered with Assyian characters, the Phoenician tablets, and the well known Marmor Radium.

The first Roman Journal, over two thonsand years ago, appesred only once a year. This paper, intended especially to be read by ths public, wes known by the title Annales Maximi. The editor of this paper was Pontifex Maximus, whose duty it was to chronicls all the important events of the year. The news was written on white wooden tablets, and attached to the residences of the citizens. It must have been a very curious sight to see the old Romans crowding around these tablets to get a look at the latest news. But the thirst after knowledge end of ths people grew rapidly, end in snch a measure that the government, the only issuer of the journal, found itself obliged to issue a deily. It is very interesting to know that some of these journals, having resched 2041 years, are still in existence.

The name of the journal was Acta Populi Romana Diurna, and appesred daily either as Albani, *i. e.*, while the tablets hung out in public, or the contents were written with red chalk on the walls of the houses. The contents of this journal comprised what would be classed as daily news in our modern papers; from the want of the necessary material, political srticles were not to be had. Nevertheless, according to the views of the Roman government, it was a true journal and intended as reading matter for the public, which might also be inferred from the fact that the archives of stats were carved in bronze and were inaccessible to the public. Perhaps it would be of interest to some of our readers to peruse a copy of a verbsl translation from the oldest journal known, issued ons hundred and sixty-eight years before the birth of Christ: "Consul Sicinius was the acting judge to-dsy. There was a heavy thunder storm and the lightning split an oak at the foot of the hills of Veli. In a hostelry, at the foot of the hill of James, there wes a fight in which the landlord was badly wounded. Titinius punished soms butchers for selling soms meat that had not been inspected; the money thus paid was used to erect a chepel to the Goddess Lavera. The broker Ansinius fled from town to-day, taking money with him belonging to other peopls; he was caught and had to refund the money. The brigand Demiphon, who was captured by Offi cer Nerva, has been crucified to-day. The fiotilla from Asia arrived to-day."

You can see from this that it was in olden time pretty much the same as in our dsys; we only wish that our officials would attend to the butchers as well as Titinius did. It must be of interest to our journalists to know that Julius Cæsar, the greatest of all Romans, paid special attention to journalism. He saw the necesity of instructing his people in everything occurring in the state; and we find this quotation in Suetonius:

"Julius Cæsar, as soon as he had entered his public office, caused not only to be writtes, but also spread among the people, the proceedings of the Senate."

Thie was the first political paper; and, as it contained news about building, births, deathe, executions and anecdotes, it can be likened very much to our modern paper. It seems incredible, but it can be proved, that already in the olden time, there were stenographers who took down the speeches made in the senate or in public. They were called notsril; and we find a place in Suetonius whers Augustus is angry because the stenographers reported the speech of Cæsar for Metsllus in a very imperfect manner. There must have been reporters, judging from a letter of Cicero to Cœlius; also, private reporters, who gathered the news and sent them by the circus publicus, an institution similar to our mail, throughout ths provinces.

You can see from this that Atelba's saying, "There is nothiag new nndor the sun," is verified once more—*Translated from the German.*

HARD TIMES CONQUERED.

BY MRS. HENRY WARD BEECHER.

About seventy years ago, a physician with a young family springing up around him, consulting his wife as all good husbands find it prudent to do, bought a large farm in one of our New England States where every farmer truly earns his living by the sweat of his brow. Both felt that nowhere could their children be trained to industry and frugality so thoroughly as on a good farm.

Of course the Doctor was obliged to "run in debt" for this property and give a mortgage on the place. The payments were to be made quarterly, and promptly, or the whole would be forfeited and revert to the original owner. In those days physicians were not likely to become millionaires in a hurry, and though his practice was large the pay was small and not always sure. He therefore looked to the farm to bring forth the means to release him from the bondage of debt; and the children even to the youngest, were taught to labor for, and look forward eagerly to, the time "when we have paid for the farm!"

The creditor was the doctor's father-in-law, through his first wife, and while the good old gentleman lived, if by any mishap or over-press of business the quarterly payment had been delayed, it would have been kindly excused. But for the ten or fifteen years that he lived after the sale of the farm, there had not been one delay in payment, though now and then there would come a time when it was very hard work to secure the needed sum in time, for even in the olden days "hard times" were often found prowling about, to the great terror of our hard-working New England farmers. But little by little the heavy debt was diminishing, and they were looking forward, hopefully, to the year of Jubilee, when they could sit under their own vine and fig-tree with none to molest and make them afraid.

At this period the father-in-law died. He had but two children—daughters. The younger, the Doctor's wife, died childless. The elder married a hard, close, scheming man, who, knowing that his wife and children would inherit this property, in case the payments were not promptly met, lost no opportunity of remarking that Dr. Mason's farm would doubtless soon come into his hands, as with his large family he must fail by and by.

The financial troubles which the war of 1812 had caused, as all wars are sure to do, were not yet adjusted. Money was scarce and payments very difficult. Ten children now filled the old house with merriment and gladness; but they were to be clothed and educated.

Let us see how successfully they had been taught to make their high spirits and resolute wills cheerful auxiliaries in lifting the burden which, since their grandfather's death, was pressing heavily upon their parents.

At the time of which we write, among other crops, rye was extensively raised. It was used for food among the farmers quite as much as wheat, but was also valuable for other purposes. When full-grown, but still in the milk, large quanties were cut to be used for "braiding." The heads were used for "fodder;" the stalks, after being soaked in strong hot soap-suds, were spread on the grass for the sun to whiten. When sufficiently bleached and ready for use, they were cut at each joint, the husk stripped off, and the straw thus prepared tied in pound bundles for sale.

Bonnets, then, meant something more than a small bit of silk or velvet with a flower or feather attached, and the "straw braid" for making them was in great demand. Boys and girls were alike taught to braid, and the long winter evenings were not spent idly. Dr. Mason raised large crops of rye, and each child, almost as soon as weaned, was taught to *braid*, and was soon able to do much by it toward clothing himself. At six years of age, a dollar a week was easily earned; at eight, three dollars; and in something of that proportion up to the eldest.

Does any one think such a life, with such an object in view, was hard or cruel? Never was there a greater mistake. It was of immense value to these young spirits. They had something real, that they could understand, to labor for. There was life and courage and true heroism in it. An education—with here and there, to be sure, some rough places to pass over—which was worth more to them than all the money millionaires bequeath their sons and daughters—an education which prepared them in after life to be courageous and self-helpful.

It is this kind of training that has made New England's sons and daughters strong and self-reliant, and the lack of it which makes these *hard times* such a horror, that we hear of so many who seek death by their own hands as preferable to the struggle for better times.

In the long winter evenings when the labor of the day was over, the children home from school, and the "chores" all finished, the candles were lighted and the evening work began. The mother in her corner was busy making and mending for her large family. The doctor, if not with the sick, smoked and read opposite her. The children gathered round the long table in the middle of the room where lay the school-books and straw all ready *machined* for braiding, while the old fire-place, heaped with blazing logs of hickory, oak, and fragrant birch, made the room warm and cheerful. Here, with their backs fastened open before them to the next day's lessons, the children with nimble fingers plaited the straw and studied their lessons at the same time. For children taught to be industrious usually carry the principles thus developed into the school-room, and are ambitious to keep as near the head of the class as possible.

Such a family as this was well equipped to meet and conquer adversity. For several days Dr. Mason had been unusually grave and silent. All noticed it, but no remarks were made until evening, when he came to supper, so unmistakably worried and despondent that his wife enquired if he was not well.

"Yes, well enough. But, Lucy, I have so far been unable to collect money for our quarterly payment. So much is due me that I had no fears but that enough would be promptly paid to save me any trouble."

"How much is lacking?"

"Not quite a hundred dollars; but it might as well be thousands for any chance I now see of getting it in season. There is now so much sickness about, that, as you know, I have had no rest, and little time to collect money. If not ready before midnight to-morrow we are ruined. I have kept it from you as long as I dared, still hoping that those who ought to pay me would do so."

"Have you told them how very important it is that you have the money?"

"No; I did not wish to speak of it. Mr. H. is watching greedily for a 'slip,' and we need expect no mercy at his hands. Under our hard labor and good care this farm has risen greatly in value—too much so for him to spare us an hour if he can once get hold of it. I am about discouraged. It is the darkest spot we have seen yet. But I must be off and shall probably be kept out all night. To think there is not forty-eight hours between us and ruin! And my hands so tied by several bad cases that I may not find one hour to try and make up the little that is needed.

For a few minutes after the doctor left, the children stood silent and sad, watching their mother. At last she said,

"Children, we can help father through this, and save our home, if you are willing to submit to some little self-denial. No; I should have said to *great* self-denial. Each of you has worked diligently to buy new garments for winter. You need them, and deserve them, and I should be so happy and proud to see you all neat and comfortable. But to help father, are you willing to let me try to clean, mend, or make over your old clothes, and use what you have earned to help brighten this dark day? The braid you have on hand, and what is now due at the store, is all your own, or to be expended for your own clothes, and if each one of you is not *perfectly willing*, I don't wish you to give it up."

It was a beautiful sight to see those eager faces watching their mother, ready to answer the moment she had finished; for in the olden time children were taught that it was disrespectful to interrupt anyone when speaking, even when, as in this case, it was difficult to keep silent. But the reply when given was prompt, enthusiastic, and what she had confidently looked for.

"Thanks, dear children!' Now, then, Easton, First bring me all your braid, and let us see how much it will come to."

The braid, in ton-yard rolls, was brought and its value estimated.

"With that which is now due us at the store we have nearly sixty dollars! Well done, for all these little fingers! But now we must devise a way to make up the remainder. Your father spoke last night of a large quantity of straw which, if cut, would bring in something. He will be away all night. If you work well, we can cut many pounds before midnight. Now, girls, help me wash the dishes, while your brothers bring, before dark, the straw we can cut to-night."

By the time the candles were lighted, all was ready to begin.

The younger children were excused at their usual bedtime, but the others worked with their mother till the tall clock in the corner struck one. Then all retired for a few hours' rest.

Dr. Mason returned home in season for breakfast, and his wife enquired if the eldest son could drive her over to the neighboring town to dispose of some braid for the children. He replied that he must be gone again all day, and neither son nor team could well be spared from important work at home. But a strange thing followed this implied refusal. Mrs. Mason, who never allowed her plans or wishes to interfere with her husband's now repeated her request, and urged it till he yielded, from sheer surprise, apparently, that his wife could be so persistent.

The doctor went his usual round, and the mother and son departed on their mysterious errand. Their business accomplished, they returned well satisfied and ready for supper when the father arrived.

A deeper gloom was on his face when he entered; but no word was spoken till all were seated at the table. Too much absorbed in his troubled thoughts to notice the suppressed excitement plainly visible on every face, or if he noticed, knowing they understood his fears, he did not wonder.

Then, in a slightly agitated voice, his wife enquired:

"Have you been successful in obtaining the money?"

He shook his head, but remained silent. Each young quivering face was turned first toward him, then with earnest, questioning glance to this mother.

"Do not be discouraged, dear, even at this late hour."

"Are you wild, Lucy? There are but six hours between us and ruin. Can you talk of hope now? I have none."

With a warning gesture to the children she rose, stepped to her husband's chair and and passing her arm round his neck, said, gently, caressingly:

"Yet still hope on my husband; God will not forsake us."

He moved impatiently from under her arm; but, as he did so, she dropped a roll into his bosom and turned toward her chair.

"Lucy! Lucy! what is this? Where did you get it?"

All was wild excitement. Each child laughing, sobbing, shouting, but one glance from that strong but gentle mother quelled the confusion, and she replied:

"It is our children's offering, and sufficient to make up the needed sum. I persisted in going away this morning against your wishes, because I saw no other escape. We cut the straw last night—many willing hands made quick work; I sold it, and their braid added to it, with what was already due them, completed the sum."

Those who witnessed that scene will never forget it: Dr. Mason with his arm around his wife, and both in tears, calling her all happy names; the children clinging about their parents, so joyful that home was saved and they had helped to save it.

"But Charlie into the wagon, quick. If he fails me not, the six miles between here and M—will be the shortest I ever rode. I shall be home before bedtime to thank you all. I cannot now. I hope we shall never come so near ruin again."

And they never did. In two years the last dollar was paid, and then Dr. Mason vowed he would never owe anyone a cent. He kept his vow.—*Christian Union.*

HAMPTON INSTITUTE LECTURES ON TEACHING.

BY PROF. F. A. ALLEN.

LECTURE XIII.

LANGUAGE LESSONS.

The old-fashioned way of teaching grammar was to go straight through a text book from cover to cover—Etymology, Syntax and Prosody, definitions and paradigms and interminable lists of prepositions, and conjunctions and adverbs,—skipping nothing, explaining little, but ruling it in with an unremitting course of parsing through Milton's Paradise Lost, till all pupils' associations with that grand epic were of hateful and prosy tasks, while his own speech and writing were suffered to go uncorrected.

One of the new ways of studying it, is to wade as wearily through, not one book, but book after book, each one larger than the last and fuller of bewildering rules and labyrinthine analysis. Sometimes a teacher is ordered to carry his class to just such a lesson and page in just such a time. The victim's position is meted out without any thought of its being worth while to measure his capacity. He is to swallow the quart whether or no he holds more than a pint. "Cram that down, and be quick about it—and ready for the next dose." A mind that is not developed to the point of analyzing its own processes is expected to follow the subtle windings and doublings of every new book-maker's mole-tracks through unsolved sentences. Worse yet, he has often to write out the whole analysis, page after page, after an utterly incomprehended pattern, piling one new-coined polysyllabled term upon another till his own wits are buried beneath the monument to the author's ingenuity. Still worse, when he has finished one book, and even could he dimly understand it, he has no sure ground to stand upon. The next school he goes to, or perhaps the next year in the same school, a new book is presented to him, with new definitions, and new analyses, and new terms, between which he has no power of discriminating. This book says so and so,—yes; but the last book says *not* so and so; and another says something else. He is in a quaking bog, with no firm footing anywhere, and nothing certain except that it is all mud. The worst of it all is that after all is done, his own English is not improved—how should it be?

That this is no fancy sketch, many unhappy teachers and pupils can testify.

If grammar be indeed what every text book declares it to be, at the outset,—the science and art of reading and speaking correctly, then no system can be good which will not secure such correctness. Teachers who feel perplexed on the subject, and unable to interest or profit their pupils, will be glad of the following suggestions from Prof. F. A. Allen, of a simple and sensible system of language lessons.

They are not intended to entirely supersede the use of text books. A simple text book—the simpler the better—may be used; but for young children,—or any pupils, indeed,—it is far better to begin with oral teaching and such language lessons as these. They are not arranged here in any precise order, but may be taken up according to the preference of the teacher. Most of them have been used at Hampton, before or since their suggestion by Professor Allen, and with great satisfaction and profit.

SUGGESTIONS BY PROF. F. A. ALLEN.

1*st. Teach to Converse.* Have some subject, familiar and interesting, and talk about it. Say, for instance, crabs, or fishing, or the different kinds of vessels, if you live by the sea; or trees, nuts, birds, squirrels, mountains, if you live by these,—no matter what, if only the pupils have enough knowledge of it to talk about it intelligently. Get the pupils, one at a time, to tell you something they know about it—about different sorts of animals and their habits, say; set them to watching ants and other creatures. Then let them come and talk about it all. When the child gets comfortably through what he wants to say, then correct his mistakes, and let the rest do it if they can.

2*d, Compile Current Bad Syntax.* Don't give your pupils to learn, lists of bad syntax which they never have heard, and which will merely give them new errors, but have them watch each other's mistakes and their own and any they hear, and report them. And always have them show why and how they are wrong, as well as give the correct expression.

3*d, Printing and Writing the Reading Lesson.* If they cannot write, let them print the reading lesson or part of it, and instead of reading it from the reading book, read it from their own slates or papers. That will teach them all at the same time—spelling, punctuation, words, style, and reading manuscript; while dwelling on the lesson to write it will make them understand it and catch the ideas more thoroughly.

4*th, Copying Sentences and Poetry.* This is about like number three. Their copies should, of course, be carefully corrected for mistakes in spelling, punctuation, capital letters, paragraphing, grammar, or—in poetry—proper arrangement of lines. Such copying is admirable for forming habits of accuracy, and for accustoming the eye to the look of a word correctly spelled. It will surprise almost anyone who tries it for the first time, to find how many mistakes he will make in copying one plain page of printing. In copying a little, day after day, from the good selections in his reader, the pupil gets repeated practice upon the words most used, and learns new words, and gets a habit of observation, and sees for himself how good writers punctuate and spell, and express themselves.

5*th, Written Requests.* If a pupil wants to leave the room, get a drink, go home, or what not, instead of speaking or holding up his hand, let him write out his request neatly on a slip of paper already provided and lying on my desk for such purposes, and he steps up and lays it on my desk, or hands it to me. I keep all given to me, in one pile on my desk, look them over at night, and return them the next day, if necessary, for correction.

6*th, Story Telling.* Tell or read (better tell) the class some short, interesting story. Then have them (at once, or the next day, as they are able,) repeat it to you, using their own words or such of yours as they can. Be careful at first, merely to make sure they get all the simple facts. Then criticize their language, and then their style.

7*th, Writing Out the Story on their Slates.* This is a good varintion of number six, as grammar is the science of writing as well as speaking correctly.

8*th, Writing it on Paper.* This may be done with pencil or ink, according to their ability; but should, in either case, be done with all possible care. Do not be satisfied with a shabby, slovenly exercise when the pupil can do it better.

{1st. Neatness.
{2d. Uniformity of handwriting.
{3d. Grammatical construction.
{4th. Style.

9*th, Narration of Their Own*

{1st. Of some actual scene.
{2d. Of some imaginary scene.
{3d. Some systematized story.

Some of this may be too difficult for your pupils. Don't go ahead too fast with them, but only as you see them increasing in ability. Let the stories not be too long, to tire the listeners. Train them to an animated style, and to saying a good deal in a few words.

10*th. Description.*

{1st. Of Persons.
{2d. Of Things.
{3d. Of Places.

This, of course, needs your care—that the descriptions of persons do not grow into personalities.

[An excellent plan we have tried at Hampton is the German one of picture-reading. Hang up a picture—say, from the SOUTHERN WORKMAN—and let the class examine it awhile, and then see which can find out the most things in it, or give the best description of it. This is exceedingly interesting to pupils, and trains their eyes to see and their minds to act, with quickness and accuracy. Let them look about them, and describe what they see,—the room, the view from the windows. You will be surprised, first perhaps, at their inability, but soon by their improvement.—ED.]

11*th, Letter-Writing.* Going through a course of school studies will not make a pupil write a good, fair letter, unless he is taught that, too, either by his teacher or his own observation. Teach your pupils the common forms of letter-

writiag, nnd practice them in it, critleizing,

1st. Date, and address.
2d. Substance and close.
3d. Signature, folding and superscription.

12th, Instruction in Different Kinds of Letters. It is very good to let your pupils practice writing different kinds of letters, anitnble for different occasions. Such, for instance, as the following:

Expressing wants.
Family letters.
Letters of friendship.
Business letters.
Invitations.
Letters of condolence.
" " congratulation.
Asking for situation as teacher.

These nre suggested to aid the teacher's selection. Other subjects may easily be found. Teach them that business letters must be short and to the point, saying all in few and clear words; that letters of friendship should be natural, as much as possible like talking. Teach them to avoid stiff and set expressions, and to say what they feel. Teach them the right forms of invitations.

A want of edncation shows more in letter-writing than in most wnys. A misspelled, clumsy and slovenly letter has often lost the writer n good situation; and a fair, legible and well-expressed one has often been the introdnction to a larger sphere.

THE WOUNDED CURLEW.

BY CELIA THAXTER.

By yonder sandy eove where, every day,
The tide flows in nnd ont,
A lonely bird in somhre brown and grey
Limps patiently nbout;

Aud round the hasin's edge, o'er stones and sand,
And many a fringiug weed,
He steals, or ou the rocky ledge doth staud,
Crying, with none to heed.

But sometimes from the distance he can hear
His comrades' swift reply;
Sometimes the air rings with their musie clear,
Sonuding from sea and sky.

And then. O then his tender voice, so sweet,
Is shaken with his pain,
For broken are his pinions strong and fleet,
Never to soar again.

Wounded and lame and langnishing he lives,
Once glad and blithe and free,
And in his prison limits frets and strives
His ancient self to be.

My pity cannot help him, though his plaint
Brings tears of wistfulness;
Still must he grieve and mourn, forlorn and faint,
None may his wrongs redress.

O bright-eyed boy ! was there no better way
A moment's joy to gain,
Than to make sorrow that must mar tho day
With snch despairing pain ?

O children, drop the gun, the cruel stone !
O listen to my words.
And hear with me tho wounded curlew moan—
Have morey on the birds !

Longfellow's Residence, Cambridge.

Few private houses in the United States nre so well known as the residence of Henry Wadsworth Longfellow, so oftcu has it been described by affectionate untiquarians and enthusiastic pilgrims. It is not only the home of our most celebrated poet; it nlso surpasses in historic interest any building in New England, with the sole exception of Faneuil Hall. Its nge, as compared with thät of other Cambridge houses, is not great. It was built in 1759, by Col. John Vassall, a firm loyalist, who fled to England in 1775, his property in Cambridge and Boston having been confiscated. Its next occupant was Col. John Glover, a hold little Marblehead soldier, who quntrered some of his troops in the spacious structure. When Washington rode into Cambridge, on Sunday, June 2d, 1775, he was greatly pleased with the appenrance of the house, and, hnving had it cleaned, he established himself therein during the same month. Martha Washington nrrived at the house in December, and Washington remained in it until April of the following year. The southeast room on the first floor Washington took for his study, in which the councils of war were all held during the stay of the commander-in-chief in Cambridge. He slept just overhead, always retiring nt nine o'clock. The spacious room behind the study, which Mr. Longfellow now uses for his library, was occupied by Washington's military family, as n rule a pretty large one. A general's "military family," in English parlance, comprised his whole staff. Washington was not averse to a certain amount of official splendor, and was luckily rich enough to carry out his whim in the matter of mnking his assistants a part of his ordinary household. Trumbull, the artist, complained, rather sarcastically, that he, for one, could not keep his head up in thn magnificent society of the house. "I now found myself," he averred, "in the family of one of the most distinguished men of the age, surrounded at his table by the principal officers of the army, nnd in constant intercourse with them. It was further my duty to receive company and do the honors of the house to many of the first people of the country." But Washington was thrifty and frugal personally; and his generous maintenance at his own cost, of a sort of court, was of great service to the colonial cause. The owners of the house after the revolutiou were, Nathaniel Tracy (whom Washington visited for an hour in 1789), Thomas Russell and Dr. Andrew Cragie. Talleyrand and Lafayette slept in it, and in 1833, Jared Sparks commenced to keep house within its historie rooms. Everett und Worcester, the lexicographer, also occupied it for a time, and Mr. Longfellow took up his abode in it in 1837. At first, he merely rented a room, establishing himself in Washington's southeast hed-chamber. Here he wrote "Hyperion" and "Voices of the Night." In the dweiling, in one roon nnd another, almost all his hooks, save the two which date from his Bowdoin professorship, have been produced. Longfellow lind not long been an occupant of the house before he bought it. Its timbers are perfectly sound. The lawn in front is neatly kept, and across the street there stretches a green meadow as far as the hanks of the Charles, bought hy the poet to preserve his view. Mr. Longfellow himself, as he draws near seventy, is a fine picture of beautiful manhood. It has been remarked by his friends that his health has much improved since he delivered his poem, "Morituri Salutamus," at the fiftieth anniversary of his graduntion. Aml all Canbridge, down to coal-henvers and hod-carriers, reveres him for his benignity, and remembers him not only as a poet, but as a kind and gentle man.

—*Harper's Magazine.*

Did Farragut Lash Himself to the Mast?

Page the artist, who painted the portrait of Farragut lashed to the mast, writes, that the rare old hero did lash himself to the mast, as depicted, the new "evidence" to the contrary notwithstanding. And the artist gives to the public these interesting reminiscences:

"During the earlier part of the day, Farragut was on the other side of the ship—that is, on the side where I do not represent him. The torpedo grounl was already passed over, Sand Island passed, and perhaps the fort. At all events, he decided to change his position, and go up the shrouds on this side of the mainmast, where I have placed him, whether it was for a better view alone, or to avoid the noise and smoke of the howitzer overhoad, or because he had no further need of the speaking-tube attached to the shroud and running along down to the deck. Indeed, I cannot remember now if he told me precisely why he came down and went up on this side. I know he said he did so; and that while crossing the deck he saw a 'yarn' (using his own word), and remarked to mo that it was 'just tho thing'—because while up on the other side the thought passed through his mind, that if he were stunned or disabled, his body would be shied off into the water by tho shronds, and not caught on the deck, even as your correspondent suggests. And he said: 'Then my wife and hoy would not have my body even.' I got the impression that perhaps he thought there was, after all, some foolhardiness in his previous exposure. (It seems rather severe to dissect a man's heart at snch a moment.) So, he said, he picked up tho 'yarn,' and when he reascended the shrouds, on the side where I represent him, he allowed his discretion to play the better part of valor, and passed the middle part of the rope around his wrist as a loop, and laying the two ends together, 'whipped' them over a shroud behind him, and tied just such n knot as he afterward tied for me. In his first 'pose' for me, tho Admiral himself arranged some boxes so as to keep his feet in the right position, and had on hn a stick placed at the proper angle to represent the futtock-shroud, and took the exact position required for tho situation. At another time he placed a rope around him and tied the knot for a model. The navy yard people promised mn a model of the rigging, which I needed; but delay ensuing, I made tho model myself from exact measurements of the ship at tha navy-yard; and when the picture was done, and the Admiral brought his wife to see it, I think she was more disposed to flatter the landsman who had made the model of the flagship *Hartford*, than the artist who had made the picture of it, though he was kind enough to say, after various observations, thnt it seemed to him "to be about the thing."—*Exchange.*

NEWS OF THE MONTH.

FOREION.

The first telegraph line in China is now in operation—it is six miles in length.

Hayti is hnsily engaged with another insurrection. President Canal was unpopular with the natives on account of his cordiality to foreigners. Port au Prince was besieged, and a large portion of the city burned.

Reports from London state that the crops of the United Kingdom for 1877 will prove no exception to the succession of unfortunate harvests which they have lately experienced. All kinds of grain is unusually scarce. Cattle are doing well this year.

An agreement has been concluded between Great Britain and Egypt for the suppression of the slave trade; it entirely prohibits the export or import of negro slaves. Egyptian slave traders will be tried as assassins; foreigners will be handed over to their own tribunals. The Khedive engages to abolish all private traffic in slaves in Egypt in seven years.

The Russian forces which crossed the Danube at Sistova were divided into seven army corps, and numbered in all about 240,000. These corps under their respective commanders have been engaged in the occupation of Tirnova, the crossing of the Balkans, the capture of Nikopolis, the advance on Plevna, and in operating about Rustchuk. The advance guard pushed forward to Tirnova, meeting with little opposition; another division, after a sharp conflict, succeeded in furnishing themselves another point of support on the Danube by the capture of Nikopolis. General Ghourko, after being reinforced by the Bulgarian Legion, pressed onward from the eastern side of the Janitra river, the Russians are confronting a large army under Mehemet Ali, commander-in-chief of the Turkish forces. The Russians cover the line of the Balkans as far as Tirnova, and thence to the Shipka Pass; west of the Janitra they occupy Nikopolis and Sistova, and southward as far as Biela. The Turks are defending Rustchuk, Rasgrad, Eski Djuma and Osman Bazar; west of the Janitra they are distributed from Sebri to Lovatz and so on to Plevna. Since the Russians were defeated at Plevna but little fighting has been done; the Turks are not strong enough to follow their advantages, and the Russians are repairing damages and preparing for another attack. Nothing of importance has transpired in Asia Minor during the past month. Owing to recent rains the Russians find considerable difficulty in trasporting reinforcements to the front—the roads are almost impassable.

DOMESTIC.

The tug-boat Matt White, from Richmond, exploded her holler, August 18, while lying at the Rip Raps, instantly killing the captain, engineer and fireman.

A train from Jersey City, N. J. to Long Branch was crossing the bridge over the Shrewsbury river, August 20, when two passenger cars were hurled into the river, and the engine, tender and smoking car into a ditch on the left of the track. The rear passenger car remained standing on the bridge. About sixty persons were more or less injured but none were killed outright; the water was too shallow to drown any one.

A desperate battle took place between Gen. Gibbon's command, numbering about two hundred, and the Nez Perces Indians at Big Hole river, August 12, in which Gen. Gibbon lost, killed and wounded—seven officers and fifty-three men. The Indians' loss was much greater. The U. S. forces are advancing and driving the hostile tribes before them; yet, judging from the past, it is not likely that they will be subdued before winter sets in.

The strike of firemen and laborers which became so vigorous and wide-spread, and at one time so formidable was effectually quelled. Although there is much discontentment in some parts of the country, violent demonstrations have ceased and there is not a great dead of danger of fresh outbreaks. Many trains are being run and mines worked, which had been stopped, without opposition. Troops are still stationed in some sections of the State of Pennsylvania.

The Government Canal around the rapids in the Mississippi river, above Keokuk, which was begun in 1867, has been opened for navigation.

The experiment of thnsporting heavy spars from Hamilton, Ontario, to Boston, by towing them through the water has proved a success. A raft of 180 heavy sticks of timber was towed via Lake Ontario, thus saving nearly $9,000 over old mode of shipment.

The Virginia State Conservative Convention met at Richmond, August 16, and after seven unsuccessful ballots, the eighth ballot was taken which resulted in the nomination of Col. F. W. M. Holliday, of Winchester, for Governor of the State. Genl. James A. Walker, of Pulaski, was nominated for Lieutenant Governor, and Hon. Raleigh T. Daniel, of Richmond, for Attorney-General. Mr. Daniel has since died. Another candidate has not yet been nominated.

The Centennial Anniversary of the battle of Bennington was celebrated at Bennington, Vermont, Aug. 15 and 16. The firing of cannon and the ringing of bells announced the time for the patriotic festivities to begin. About forty thousand people participated in the first day's proceedings; the procession was three miles long; the military were out in full force. Hon. Daniel Roberts pronounced the historical address, and Prof. J. W. Churchill read the poem, by Mrs. Julia C. M. Dorr. Ex-Gov. Hawley spoke for Connecticut; Ex-Gov. Harriman Gov. Hawley spoke for Connecticut; Ex-Gov. Harriman for New Hampshire; Ex-Gov. Banks for Massachusetts; Gov. Conner for Maine; Gov. Stephenson for Rhode Island. Gov. Fairbanks was also in attendance. At 3 P. M. the President and his party arrived from New York. Of his Cabinet, Genl. Devans and Judge Key formed a part of the company. The President was welcomed with great enthusiasm. There were about sixty thousand people present on the second day; the procession was six miles long. The oration, in which procession was six miles long. The oration, in which was described the battle of Bennington, was delivered by Prof. S. C. Bartlett; and Battle Day Poems by Wm. Cullen Bryant and Mrs. Marie Mason, were read and sung. The whole affair was a grand success.

The Wesleyan Female College, at Murfreesboro', N. C., was destroyed by fire last month. The property belonged to the Virginia Conference of the Methodist Episcopal Church; it was valued at $75,000; insurance, $34,500.

Charlestown has been chosen as the permanent seat of Government for West Virginia. The Capital remains at Wheeling until May, 1885.

Many thousands of dollars have been spent in distributing, free of charge, Sample Bottles of Boschee's German Syrup to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering sceptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS

This series of school-books, numbering between three and four hundred volumes, *is known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

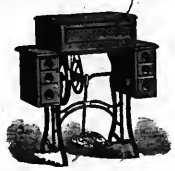
THE CELEBRATED

FLORENCE

SEWING MACHINE.



For Family use and Manufacturing purposes. The *best* in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has no *equal*, while its REVERSIBLE FEED enables it to sew forward or backward without stopping the machine—it being the *only* machine that can do such work.

The *fact* that the "Florence" feeds the work to the right and left, or inward and from the operator gives our patrons a choice between SIDE FEED and BACK FEED machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe, odorless* and *durable* Oil Stove for all who want PURE, MOIST, WARM AIR in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

HAMPTON, OCTOBER, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE annual meeting of the Educational Association of Virginia at Fredericksburg on the 11th of July brought together a small but earnest and able company of gentlemen. Their transactions are of peculiar interest and are recorded in the State *Educational Journal*, including the address of Prof. Thos. R. Price of the University, President of the Association, and the speech of welcome by Hon. John L. Marye in behalf of the citizens of the place.

Referring to "the fiery slopes of Marye's Hill, Pelham's avenging guns and the redeeming volleys of Lee's infantry," Professor Price said: "Here, then, on ground that is holy to all Virginians, we Virginians meet to do our part in the work of peace. We meet here to take counsel together about the furtherance of the work that involves all the future of Virginia. What was the dream of ten years ago is becoming the living reality of to-day. Under the care of this Association the school life of Virginia has been cleansed and intensified. Plans that were laughed at five years ago as absurd, are now showing themselves to be the lines of march on which our State is moving forward to a better time. Thus, as the new ideas have taken root, no year in all the history of our commonwealth has been more richly blessed with educational success. I claim for our Association the merit of having educated public opinion by our discussions, of having guided legislative action by our counsels."

From Lieut.-Gov. Marye's words of welcome, as from the President's oration, we extract and combine sentences from different parts:

"Virginia has drained the cup of public calamity and of private sorrow to its dregs. She has been called to witness the wealth of centuries swept from her people by the consuming scourge of war, and to see her people who were nurtured in affluence suddenly plunged into absolute poverty.

"Virginia needs the best methods and the most approved appliances to enable her people to struggle successfully for material resurrection. Fruitful fields and full garners do not wait upon rude and ignorant husbandry. How are these urgent needs to be met? Our agents only can produce it. There must be an organized and equipped corps of competent teachers, adequate to impart sound and liberal learning to her people. Your body is the exponent and representative of that honorable and responsible class.

"I beg to assure you that your presence here is most gratifying to the people of Fredericksburg, and that they will strive to make your visit a pleasant and a profitable one."

TO READ the *Educational Journal* of Virginia is to find more assurance of a bright future for her than any other source can afford.

Financially it has a severe struggle, and the losses are borne jointly by the editor and the publisher. Like other things nurtured in sacrifice, and not only struggling to live, but opposing a strong tide of prejudice, it has the ring of apostolic energy and earnestness. The Official Department, edited by Dr. Ruffner, gives a monthly *resume* of school work; and an assurance that, though the active friends of popular education in Virginia may be in a minority, they are alive and have the "vim" that means success.

The Doctor points out in the September number the fact that the Legislature of North Carolina has appropriated $2,000 per annum for two years to provide for normal instruction at the State University. "Board was fixed at figures almost nominal. Messes were formed, which demonstrated the fact that the entire cost for meals for six weeks was only six dollars and a half—about four dollars per month. People throughout the State sympathized with the undertaking. Railroads passed pupils and instructors at half-fare. Professors gave their services. Both U. S. Senators delivered addresses. Every learned profession sent one or more of its distinguished members to lecture. Governor Vance came early in the session and made an address, and at the close came again from a distant part of the State to lend his encouragement to what he deemed of such vital interest to the people whom he represents as Chief Magistrate. Both sexes were in attendance and no charge was made for tuition."

Well may Dr. Ruffner plead for State aid in behalf of such institute work as this.

But so far in vain. "And now when will Virginians wake up to the necessity—not the importance, but the NECESSITY of making some provision to secure a body of trained teachers? It is the vital need of our school system."

THOSE who have contributed to the institutions at the South for training colored teachers, may feel from the above how *point blank* they have aimed at the centre of the Southern question. Every dollar hits the "bull's-eye."

Deeply as the whites need normal training, they had stores of mental wealth to draw upon; the negro had none.

IMPORTANT as was right Congressional action to the reconstruction of the South, it was no more important than the use of every moral means to the same end. But national legislation has for eight years ignored it. The Freedmen's Bureau, that supplied the foundation funds of the principal colored institutions, is in disgrace, though the three and a half millions that it expended for Southern education is a source of just national pride.

Public sentiment at the North is indifferent on this point. Its relation to the pocket is not obvious enough. It will pay in the long run for the nation to be generous to Southern schools, even to the benefit of each individual in business.

Most money makers can see present value in a bond that is likely to pay in ten or fifteen years hence, but few of them can realize that a very light tax to help scatter ideas throughout the South till every man can read his newspaper and think for himself, is a good investment as well as anational duty. This apathy explains the apathy of Congress. Party leaders, both in their struggles for bayonet rule and in their defeat and just retirement, have been utterly obtuse as to the most vital point of the Southern question.

Is there any hope that a wise, just and generous policy, a recognition and relief of the terribly degraded masses of the South, both white and black, may be adopted under the new *regime* which seems to be answering the prayer, "Let us have peace"?

WE HAVE examined the August and September numbers of the *Southern Planter and Farmer*. Of this enterprising journal Judge William Fullerton, New York, in his address before the Piedmont Agricultural Society, says: "Virginia is a favored State, and I can foresee a great future for her. There is a spirit of inquiry among her people which will bear good fruit. One of the most cheering indications of her improvement is that there is now published within her borders one of the best agricultural journals in this or any other country. Each number is worth ten times the year's subscription to any one engaged in agriculture. As a matter of self-improvement, as well as State pride, it should be read in every farmer's family within the State. I refer to the *Southern Planter and Farmer*, published in Richmond. If it does not radically change the defective agriculture of the State, it is because its wise counsels are not heeded."

The August number contains an address by Hon. H. H. Stuart of Augusta, urging the payment of the State debt, showing that Virginia is enjoying the benefits of it in her railroads, built by borrowed money, which have raised the cities of Richmond, Petersburg, Lynchburg, Winchester, Harrisonburg, Norfolk, and many such towns as Danville and Staunton to prosperous cities, more than doubling their population, quadrupling that of some of them, opening to them the markets of the world, infusing into them, life, activity, bustle, through trade and manufactures. Destroy the railroads and turnpikes that have been instrumental in all this, annihilate the benefits springing from the State debt, and Virginia would be moved backward more than a hundred years. The honor of this commonwealth would be compromised by repudiation beyond redemption.

Public schools cost the state last year one million and twenty thousand dollars. General Stuart finds no fault with this. He shows that the people are relieved from tuition fees to the schoolmaster, and that they get a large equivalent in the free education of their children.

The public debt is, in round numbers, thirty millions of dollars (not including that portion assigned to West Virginia). Interest would be $1,800,000. The annual cost of the government is about a million dollars, aside from school appropriations. The present revenue of the state is $2,700,000.

General Stuart proposes the following:

"Instead of a tax of five per cent. being necessary to meet the engagements of the State, I hazard the assertion that a tax of *two-thirds of one per cent.*, in aid of the other sources of revenue, would be sufficient. The whole tax on land is now, at one-half of one per cent., $1,213,782, and on personal property, $374,771. The aggregate of the two is $1,588,553. If the tax were increased from fifty cents on the $100 to 66⅔ cents, the addition to the revenue would be $529,514, which, as I have already shown, after biennial sessions of the Legislature, with a diminished number of members, and reduced pay introduced, will meet the entire deficit. Nay, I go further and affirm that if the Constitution be so amended as to secure a capitation tax of two dollars instead of one dollar, to be applied to the support of free schools, and the Legislature will then pass Governor Letcher's dog law, all our financial difficulties will be solved without any increase of the tax on real or personal property."

The large class of repudiators in this State, the legislators who do not dare vote, any increase of taxes, the men who pride themselves on their honor as Virginians, will do well to read one of the General's closing paragraphs.

"Fellow citizens! permit me to remind you that your debt is a just one. You borrowed the money to improve your material interests. You expended it in valuable internal improvements; in the erection of your noble charitable institutions, and of your renowned University and Military Institute. You are still in the enjoyment of all the advantages resulting from these large expenditures. Will you now repudiate or refuse to pay the price of these works, which have done so much to promote your prosperity? When you thought the honor of Virginia was at stake, at the beginning of the war, you gave your sons and brothers, who were as dear to you as life itself, to the cause; and you poured out your treasures like water to vindicate her unsullied name! Will you now pause in the discharge of an honest duty, and, for the sake of a few paltry dollars, suffer the taint of repudiation to rest on her proud escutcheon? I have proved to you, by figures taken from authentic sources, that the fulfillment of your whole duty to yourselves, to your creditors, and to Virginia, will involve but a trifling sacrifice."

IN THE same number is republished a circular from Hon. L. L. Polk, Commissioner of Agriculture of North Carolina, indicating energy and enterprise in his department.

The Commissioner of Agriculture of Virginia, Dr. Thos. Pollard, has also the past summer undertaken to collect statistics from farmers in regard to crops and stock.

THE proposition for a Social Science Association in Virginia is discussed:

"We in Virginia are in no fix to undertake such work with any particular promise of success. To deal in these abstractions presumes leisure, and plenty of it. Nothing, in our judgment, would insure a more effective deliverance from the embarrassments peculiar to our situation, as brought about specially by the war, than the ability, on the part of an association of our best men, to consider their bearings with calmness, and give shape both to our legislation and to our public opinion. But each one of us is so busily engaged in the daily strife for mere bread, that we can find time for little else. With wealth so certainly assured as to keep one's mind away from the boiling of the pot, this

important work conld be done.

"Every thoughtful man is bound to deplore our sitnation in this behalf; still we are all able to do something, in Grange and Farmer's club, in Board of Trade and Chamber of Commerce; and this something cannot be left undone, unless we are willing to flounder forever."

The leading article in the September number of the *Planter and Farmer* is by

"CIVIS," ON THE PUBLIC DEBT.

Who says: "The average expenses per annum of our State government, including education from 1850 to 1860, were $588,000. The same expenses reached in 1874 the enormous figure of $1,584,000." The difference is principally in school expenses

"Retrenchment of state expenses, which wonld improve our morals and revive and invigorate material thrift throughout our borders, even if there were no pressing necessity for economy, is at once the pathway of honor and of safety. Have we the nerve and the manliness, bravely to demand it and push it, tbrongh? In pursnance of this policy, it may be necessary to abolish nnnecessary offices and so compel their lazy incumbents to productive industry; to revise with extreme rigor our criminal code, which, as at present administered, offers a premium on crime, and comfortable quarters on the scant earnings of honest toil, to rognes and scoundrels, who might be pnnisbed far more snitably and effectively at the whipping-post; to abate somewhat that profuse and sumptuous charity which is a standing invitation of the vagrant and idler to tbe alms-house; to reconsider, partienlarly in tbe light of recent developments, the claims of that spurious and intermeddling philanthropy indigenous to other latitudes which has of late moved with its silly sentimentalism the once sober and staid old Commonwealth, to offer, witb the wretched plea of poverty on her lips, to every boy, white and black, witbin her limits, free education from the alphabet up to the calculus, and through all the walks of literature and science."

In short, rednce offices and salaries, legislate but once in two years, restore the whipping-post and disband tbe pnblic schools.

"If we are not moved by a supreme desire to save the honor of the Commonwealth—already tainted—and to submit to any sacrifice necessary to this end, we have become indeed a people too debased for freedom. Is Virginia to suffer the black doom of repudiation? Ratber let her sovereignty be annihilated, and her name, once radient with glory, the synonym of honor, be blotted from history and from the memory of mankind."

The trumpet of "Civis" blows with no uncertain sound.

Nothing is better for this old State than sharp criticism. Adulation of her is not nncommon in ber borders.

Free and earnest discussion of that which is most vital to her will do more good than harm. Let the pen of "Civis" and others deal plainly with the facts of society; and of all that concerns her welfare.

Old ideas and prejudices need to be brushed away before Virginia shall be fully abreast with the nineteenth century.

Spending two or three months every year in New England, in the interest of this institution and for rest, we cannot but see that the mutual feeling of both sections is improving. On all sides Virginia is spoken of as a State with great resources, fine climate and a fine possible future; and there is an undoubted "hankering" on the part of many Yankees of enterprise for the inilder climate of the Old Dominion. The trouble is with the lack of homogeneity of the people of both sections; and with tbe feeling in tbe Nortb that if a man goes South and is careful as to his words he can get along with his neighbors pleasantly enough; but if he "speaks his mind" on political and social questions not in accord witb the popular ideas, he may find his life a lonely one, no matter how respectable and worthy it may be. There has been a good deal of experience to justify this impression.

We anticipate no influx of the vigorous constructive element from the North at present. Notbing could be more helpful or is more needed in this section. Tbe great need at the South is a division of intelligent people into two political classes; naturally, tbose who look backward and those who look forward. Tbe elements are ready: the time is coming for it. When the liberal element in the South is organized against the Bourbons, is headed by men "to the manor born," and hoists the flag of FREE DISCUSSION, there will come to these exhausted states thousands of men of unbounded energy, who will set tbe water power of Virginia at work to prodnce every variety of fabric, and infuse fresb strength into her worn out lands.

The *Journal of Education* and the *Planter and Farmer* are doing a good work and should be read by those in tbe North who seek a change. Tbe latter, bowever, is strongly tinctured with Bourbonism, in respect to the common school question, is afflicted with negrophobia, believing that "we are cursed with negro labor," when tbe Atlantic Seaboard States would be a desert without it, and tbinks Virginia can dispense with Yankees.

A special Committee of tbe Legislature of Georgia, cbarged with tbe duty of attending the annual examinations of the University of Atlanta, (for negroes) founded by the American Missionary Association of New York, and aided by an annual donation of $8,000 from Georgia, has reported most fairly and favorably.

As an acknowledgement of those who were brought up in theories hostile to negro education it bas a special value, and is as creditable to the candor and good sense of the Committee as it is to the University:

Official Report on Atlanta University.

ATHENS, July 10, 1877.

Mr. J. W. Glenn, from the special committee charged with the duty of attending the annnal examinations of the University of Atlanta, reported as follows:

Present, Mark Johnston, H. H. Jones, J. H. Dunham, C. M. Neal, H. L. Mitchell, and J. W. Glenn.

"That the recitations before the Board were most flattering to the teachers and pupils. The results exhibited extraordinary skill and patience in tbe former, and remarkable docility on the part of the latter.

"They would call tbe atteution of tbe General Assembly to the fact that it can, to a great extent, sbape the public opinions of the colored race, and make them true and loyal citizens of Georgia, thereby increasing her dignity, power and influence, or it can turn all their prejudices and feelings against their native State, as the former scene of their slavery and the present bome, as cbarged by our enemies, of their oppressors and natural enemies. Thus trained, they will be ready at the suggestion of our enemies to throw all tbeir political influence and voting power against the true interests of our own section. No school in Georgia ever had such a field, and its social as well as political power may become immense. Those who seek instruction there control nearly one-half of the votes of the Empire State of the South. They have just been emancipated, and are wholly unformed as citizens, and, as yet, almost ciphers in the problem of government—cipbers to be placed after any significant factor that happens to control the impulse, the moment. The Board noticed, too, that they were eminently 'clay in the hands of the potter.'

"Probably no pupils on earth yield so implicitly to the impress made by the teacher.

"The pupils from that school will be moulders of their race in the State, and the bias which they receive for or against our home institutions will be communicated to a vast body of new voters. It has passed into an axiom that the people of a Republic must be educated, since all questions of policy and power must be ultimately referred to them. We consider it no less axiomatic that such education should develop a strong patriotism and a distinctive love for home and 'fatherland.' This race has naturally strong local attachments, but they evidently do not love the home institutions of Georgia as directed by the whites. Our State is a large patron of this institution, and she can be interested in it only so far as it sends out to her intelligent, moral and patriotic citizens. To accomplish this and furnish noble citizens from a race necessarily degraded by recent bondage, as yet almost untaught, and with circumstances and influences wholly unfavorable, is a task as vast in proportions as it would be noble in purpose. Your Board had constantly in view these ends to be attained, and the difficulties in the way. They also found neatness and order in the school-room, far in advance of what is usually found in the academies and colleges of the whites.

"The pupils were exceedingly quiet and respectful, and showed an appreciation of the proprieties and a love for the harmonious and beautiful, which few, knowing the race, would have thought possible. Indeed, the Board are constrained to say that the mental training was very satisfactory. These pupils will *certainly* exert a tremendous influence on their race."

As to whether that influence will be for good or ill, is as yet more problematical. Heretofore, most of the surroundings of these people have tended to drag them away from us; to alienate their affections from the State and embitter them against her institutions. This has been most unfortunate for State and people, and it is highly important that their allegiance and love be secured to the home government.

Until this is done, tbey will always be indifferent and troublesome citizens. The carpet-baggers and others who exerted a bad influence, are now powerless, or nearly so; and if the pupils from this school be patriotic and true, the race may furnish the State many valuable citizens. Members of the Board thought tbat the animus of the pupils this year seemed much better.

Formerly, their feelings were clearly against us, almost wholly alienated—so much so indeed that the propriety of withdrawing the State aid and using it for a normal school taught by our own people has been discussed and pressed.

But the Board tbinks *now* such a course would be unwise; as it would create dissatisfaction and further alienation; because they accepted this aid in lieu of their claim on the Government Land scrip.

They seem much attached to the school, and for the present they will take instruction from Northern teachers more readily and confidently than they would from us.

The Board suggests however, that our authorities insist that these Northern teachers *do not* try to alienate them from old masters and homes, and from their native State; or even use such instruction or place around them such influences (by sectional books, etc.) as will have that tendency.

Probably the present teachers are not so careful in this respect as the interests of this people and of our State demand. The Board would further suggest that the graduates of the "Atlanta University" be encouraged, by all proper authorities, to engage in teaching their race, and in helping to make them good citizens.

All of which is most respectfully submitted.

J. W. GLENN.

On motion, the foregoing report was read before the whole Board of Visitors for the State University, adopted, and ordered to be transmitted to tbe Governor.

(Signed) H. H. JONES,
Chairman Board of Visitors.

We quote from the *Norfolk Landmark* an account of a newly devised means for raising revenue for the State, by means of which it is hoped that the interest on the State debt may be paid:

"Dr. Moffett, a Virginia Legislator, lately conceived the idea of providing for the payment of the interest on the State debt out of the thirstiness of his fellow-citizens. He framed and had passed a law levying a tax of two and a-half cents on each dram of whisky or other alcoholic beverage sold, and one-half cent on each glass of lager. Every dealer is compelled to have a bell register, and when a bartender sells a glass of whisky or beer be is required to turn a crank, whereupon an index revolves and a gong sounds. Deputy Commissioners of the revenue inspect the machine once a month and make up their little bill, which the dealer has to pay.

"The possibilities of this new censes—taken of human weakness or gauge of human folly, whichever suits best—are simply immense. There seems to be some reason to believe that we shall at last know just how many drinks may be contained in a barrel of whisky and a keg of beer."

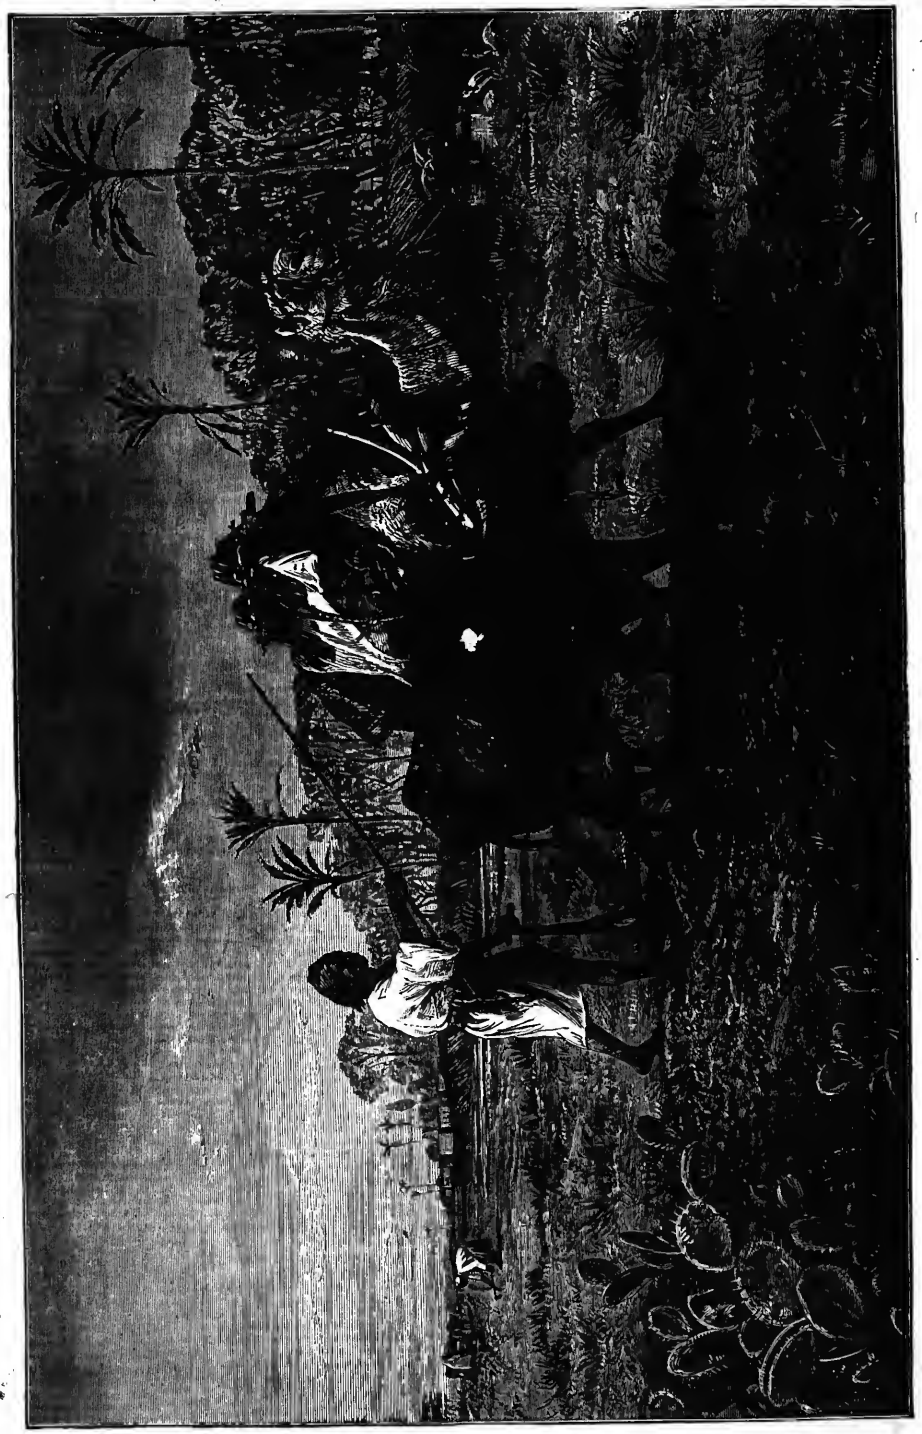
It is hard to convince the ignorant followers of a political party that there is any difference between its principles and its men; that the character of a candidate goes for anything, or affects their duty as voters. This difficulty has nearly ruined the Republican party in the South. The party has committed snicide. It was not "kicked out" by the new policy at Washington. When defrauded at the ballot-box, it has been unable in some cases to excite any sympathy because to be cheated ont of such candidates as it has sometimes presented was but a nominal grievance. Now that the question of race is out of legislation and their political position is assured, the colored people need to learn that the welfare of the country and their own well-being rest on Christian morals and that tbey cannot afford to vote for men of known bad character. They are afraid "to divide the party," yet at this very time decent men in it are being compelled to vote for candidates of the opposite party on moral, not on party grounds. Wherever this is the case, the negro can't see tbat the party is already divided, and that losing its moral strength is absolute ruin; that he is being led by weak and selfish men into his last ditch, politically. Honest difference of opinion in the ranks of the opposite party brings out editorials on "Traitors in the Camp" just as refusing to vote for his party candidate for the best reasons leads the negro to consider a life-long Republican as his betrayer and mortal enemy. But his political education has led to this. Our statement is, of course, as to the generality of blacks. Many of them are clear sigbted, liberal and wise in political matters.

We have received from OLIVER DITSON & Co. another package of fine pieces of Music. There is "The Birdie's Ball," a merry Song with Chorus, and with a picture that will delight the little ones who see it. Then there is "My poor Heart is Sad with its Dreaming," with an elegant title page, and very expressive music, and "Unrequited," one of Pinsuti's elegant compositions, with English words and Italian style. Then for Piano players we have "Come, my Love," a Galop, which is one of a set called "The Telephone," containing 20 easy pieces composed by Mack, also "Whispering Waves," by J. L. Frank, a smooth-going Piano piece of medium difficulty, and lastly, the Unique Galop," by Howard Cadmus, with a strange and splendid title and brilliant music. Examine them at the Music Stores.

RESUSCITATING THE DROWNED.

A new mode of resuscitating drowned persons and others suffering from asphyxia, consists in placing the patient on his back with his arms extended. A roll of clothing is then laid below the false ribs so as to throw the anterior margin into prominence. The operator then kneels actride the patient, placing his hands so that the balls of the thumbs rest upon the false ribs, while tbe fingers fall naturally in the depressions between the ribs on each side. An assistant holde the tongue of the patient, and the operator, with his elbows firmly pressed against his sides, throws his whole weight forward, by which the false ribs are pressed upward and inward, producing great motion of the diaphragm and displacement of the contents of the lungs. Suddenly raising his body, the operator allows the false ribs to return to their position producing a correspondiug movement in the diapbragm and inrush of air. By keeping up rythmic movements of this kind, artificial respiration is produced.—*Galaxy.*

One of the most ready means to extinguish kerosene flames is to throw a cloth of some kind over the flames, and thus stifle them; but as the cloth is not always convenieat to the kitchen, where snch accidents are most likely to occur, some one recommends flour as a substitute, and which, it is said, promptly extinguishes the flames; and can be readily gathered up and thrown out of doors when the fire is ont.



EGYPTIAN PLOUGHING.

A curious farm team, is it not? Yet not so unlike some that one may see in our own Southern States—a little steer and a horse say, or a mule and a cow—and it is explained by the same reason no doubt, that of necessity, which is the mother of invention. The camel is the animal which the Egyptian finds most useful and is most likely to own. Why should he spend his money for more than one ox when his patient camel will bend his long neck to the unequal yoke?

The time for plowing in Egypt is October, when the Nile waters are subsiding from the land, leaving their rich fertilizing treasures of alluvial soil upon it. Then the Egyptian plows his fields and sows his wheat and barley and millet, and in a month after the land laughs with the harvest.

No more beautiful sights and strange contrasts can be imagined than the Egyptian year presents. Bland, beautiful winters when travellers come flocking from the North in search of health; fierce desert blasts, hot and deadly in the spring. Then the steady rise of the River, anxiously watched, bringing food for the year to Egypt's rainless plains from the mountains of the South. Rising, rising, from the middle of June to the end of September, till, from a depth of scarcely six feet at Cairo, the wonderful Nile has overflowed its banks and spread over all the plains. "Standing on the elevated bank or dyke," says a traveller, "you seem to stand between two seas; on one side rolls a swollen, turbid flood of a blood-red hue; on the other lies an expanse of still water extending in the desert-boundary of the valley; the isolated villages circled with groves of palm, being scattered over it like islands, and the *gisr* or dyke affording the only circuitous communication between them."

The subsiding waters leave the country one slimy mud-heap. But out of this red earth, new life is to spring, fresh as first in Eden. The seed is sown on the good ground and "the valley is suddenly covered with a mantle of the richest green, and the face of the land smiles in the traveller's eyes with all the splendor of a new created beauty."

So rich is the land after this strange watering that it yields three crops; wheat and barley are first sown; then, after the spring equinox, cotton, millet or indigo; and thirdly, after the summer solstice, with millet or maize.

Very little cultivation is needed, and the Egyptian plow is a simple affair enough. It did not figure among the two hundred and sixty-three plows of various nations exhibited in Agricultural Hall during our Centennial exhibition. Still in Egypt, as in all other countries the plow is the indispensable companion of the husbandman, and in its rustling furrows follow all the blessings of peace and plenty.

Among all the plows at the Centennial there was one which excited more general interest than all the rest however new their patent or foreign their design. And this was the inscription upon it:

"The Webster Plow,
Constitutional Soil Expounder,"
Owned by the College of Agriculture, Mass.
Made by Daniel Webster in 1837.

Its proportions were as follows: Length, 13 feet; beam, 9 feet; handles 6 feet 4 inches; distance between handles 2 feet 10 inches; width of mold-board, 1 foot 8 inches; width of share, 1 foot 4 inches; point of share to end of mold-board, 5 feet 4 inches.

And this is what Daniel Webster, the great statesman and orator, wrote about it.

"When I have hold of the handles of my big plow, with four yoke of oxen to pull it through, and hear the roots crack, and see the stumps all go under the furrow out of sight, and observe the clean mellowed surface of the plowed land, I feel more enthusiasm over my achievement than comes from my encounters in public life in Washington.

LION AND PONTO.

A few years ago two very good friends lived at the Hampton Normal School. How much they studied I cannot say, but they were both very intelligent characters in their way, and very well satisfied with each other's society. They were together in work and play. If one was sent on an errand, the other always wanted to go too, and though there was a great difference in their size, the smaller could always keep pace with the larger.

As I have put their names at the head of this story, you will easily guess that these two good friends were a horse and a dog. Horses and dogs are usually good friends, and they are both such faithful friends of man that it is strange that men are ungrateful enough to abuse them.

One very dark night, Lion was sent to bring a traveller up from the Fort. The good strong fellow never seemed to mind how heavy a load he carried, so with traveller and trunk he trotted bravely back through the deep mud, and the darkness of that darkest hour that comes just before the day. Ponto was not with him that time, which was a pity as it turned out. Perhaps Lion had advised his friend to stay home and have another nap as he and John would have liked to. They both went almost asleep themselves I think, as he jogged on, unchecked, with drooping head.

Suddenly, the jog trot came to an end, and Lion commenced backing and tossing his head. "You Lion, what's the matter with you?" cried John. But Lion refused to go forward another step, and John had to get out into the mud, and see for himself, or to feel rather, for it was too intensely dark for human eyes to see much of anything.

"Clar to goodness of dis Lion hasn't done lost off his collar. Lion how did you do that? You stand still sir, till I look for it."

Looking for it was rather hard work in the darkness, and John, after groping around the carriage for a while, held a little further conversation with Lion on the subject, and then explained to the traveller, that he reckoned he would have to go back and search along the road they had come, but that Lion would "stand as stiddy as a lamb."

John had utmost faith in Lion's capabilities. How far he imagined the horse could have drawn the wagon without a collar, I don't know, but he went all the way back to Old Point searching for it. Meanwhile Lion fulfilled his promise of standing still and steady. I believe indeed that he went fast asleep. Suddenly a stumbling splash in the mud, and a cry "Hi—thar"—Lion jumped and reared as the dim figures rose before him of a man and woman, unseen till close upon him.

"What's that I tumbled over?" said the man. Fortunately John came scolding up at this juncture, from his unsuccessful search, and between the three the stumbling block was discovered. And what should it be but the collar, quietly lying in front of Lion's feet just as it had slipped off.

Now if Ponto had been there he would have smelled it out in two minutes.

It was fitting, was it not, that these good friends should die within a few weeks of each other. Poor Lion got a nail in his foot, and had the lockjaw. I cannot say that Ponto died of grief. His death was more tragic if less romantic. He was accidentally shot. But he sincerely mourned his friend, wandering around the stables in an inconsolable manner till the day of his own death. If there is any happy hunting ground for horses and dogs and our other four footed friends, as some tender hearted people believe, I have no doubt that Lion and Ponto roam its green pastures together.

THE STORY OF A GREAT SOULPTOR.

Bertel Thorwaldsen was born in Copenhagen, Nov. 19th, 1770. His father was a poor wood-carver, who made rude figure-heads for merchant vessels. While still a child Bertel helped his father and began to carve in wood. There were still living a few years ago, old carpenters who recollected perfectly the pretty child with blue eyes and light hair, who used to come and see his father in the ship-yards of Copenhagen.

"LION AND PONTO."

Little early Bertel manifested a taste for sculpture, and was sent when he was eleven years old to the free school of the Royal Academy of Fine Arts—where he made so much progress that he was soon able to render valuable assistance to his father.

He did not show equal aptitude, however, for other branches of study. At school he showed so little zeal that the chaplain considered him very backward, and when the time came to prepare the pupils for their first communion, put him into the lowest class of the Catechism. A distribution of prizes at the Academy of Fine Arts occurred at the same time and Bertel obtained a silver medal. The chaplain, having seen the fact noticed in the Copenhagen paper, asked his pupil: "Thorwaldsen, is it a brother of yours that has just taken a prize at the Academy?" The boy looked up, blushing with surprise: "It is myself, sir." The Chaplain, who had looked upon Bertel as quite a dunce, was astonished. He changed his tone directly. "Mr. Thorwaldsen," said he, "please to pass up to the first class." This title made such an impression upon the boy that he never forgot it. In after years, when loaded with honors he often said to his friends, that glory had never been so sweet as on that day when his boyish heart thrilled with rapture.

Torwaldsen was seventeen years old when he gained this first prize. In two years he gained another and larger one, and his father now came to the conclusion that the boy had had enough art education to become his partner.

Bertel's teacher at the Academy thought he ought to cultivate his remarkable talents, and with difficulty persuaded his father to allow him to continue his studies. It was decided that he should devote half his time to earning his daily bread in the shipyards, and the other half to his art-studies. He now began to carve figures in stone. Thorwaldsen obtained one prize after another, and at last received the pension which the Royal Academy gives to its most successful pupils, to enable them to travel and study abroad. At the age of twenty-six he left Denmark for Rome, where he lived twenty-three years, during which time he produced an immense number of beautiful statues and bas-reliefs, and won for himself a wide fame.

This success did not meet him just at first, however. He had his discouragements like other artists, and after he had made his first great statue, Jason with the Golden Fleece, it remained so long without a purchaser though admired and praised by all that he was forced to make up his mind to leave Italy, as his money was all gone. He had packed up his things and was starting off, when he found there was a difficulty about the passport, which would detain him a day. A few hours after, a rich English banker came in and ordered a copy of the Jason in marble.

So he stayed in Rome, and fame and fortune came to him. Fame brought the fortune, but she came in strange ways. For instance, his work-shop was struck by lightning, and all his models, except his "Cupid and Psyche," were destroyed. The accident was truly a brilliant and striking one! Poets sang of it, the newspapers were full of it, and all this excitement helped to make him more widely known.

At length he resolved to visit his native land. His parents had long been dead, but the whole nation had become interested in him, and thousands were anxious to see him.

On his way home he visited Lucerne, and there modelled the wonderful monument to the Swiss Guards, who died in defence of the king of France. The colossal lion is carved out of the native granite in an immense niche eighty feet long and forty feet high, hollowed out of the solid rock.

After a short stay in Copenhagen, Thorwaldsen returned to Rome, where for twenty years more he remained, producing many great works of art, which adorn Rome and many of the principal cities of Europe. At length, in 1838, he determined to return to his native land. The king sent a government frigate to bring him home with all his works. Denmark was proud of the great artist, who sprung from the lowest ranks, and became the greatest sculptor of his age, and she welcomed him with such enthusiasm, that his return was like that of a conquering king. The last six years of his long life were spent in Denmark, where he was visited and honored by kings, artists, and great men of all lands. Since Thorwaldsen's death a museum has been erected in Copenhagen in which more than six hundred of his works are on exhibition. These consist of statues, busts, bas-reliefs and groups, representing every variety of subject, and this art-gallery is that of which Copenhagen is most proud.

SOMETHING ABOUT VENUS.

In *St. Nicholas* Prof. Richard A. Procter has something of real value, as well as interest, for the young people, about "Other Worlds than Ours," from which we clip the following:

"It is strange that of the stars we see, Venus is the only one which is in reality like the earth in size. All the others are either very much smaller or very much larger. Most of them—in fact, all the stars properly so called—are great globes of fire like our sun, and are thousands of times larger than the globe we live on. A few others are like Venus and the earth in not being true stars, but bodies travelling round the sun, and owing all their light to him. But it so happens that not one even of these is nearly of the same size as the earth; they are all either very much larger or very much smaller. Venus is the only sister-world the earth has among all the orbs which travels round the sun. There may be others in the far-off depths of space, travelling round some one or other of those suns which we can call "stars," but if so, we can never know that such sister-worlds exist, for no telescope could ever be made which would show them to us.

In the first part of this article, I have given an account of the various changes of appearance presented by the beautiful star which sometimes shines as Hesperus, the star of the evening, and sometimes as Lucifer, the morning star. Let us now consider what this star really is, so far, at least, as we can learn by using telescopes and other instruments.

Venus has, in the first place, been measured; and we find that she is a globe nearly as large as the earth. Like the earth, she travels round and round the sun continually, but not in the same time as the earth. The earth goes round the sun once in twelve months, while Venus goes round once in about seven and a half months; so that *her* year—the time in which the seasons run through their changes.—is four and a half months less than ours. If Venus has four seasons like ours,—spring, summer, autumn, and winter,—each of these seasons lasts eight weeks. Venus also, like our earth, turns on her axis, and so has night and day as we have. Her day is not quite so long as ours, but the difference—about twenty-five minutes—is not very important.

A GOOD ANSWER.—A talented temperance lecturer was once asked, "What should we do with all the grain that is now required for distilling?" "Feed the drunkard's wife and children with it; they have gone hungry long enough," was the prompt reply.

At Home.

BOYS.

BY KATE TRUE.

Oh, yes, I dars say,
"They are much in your way,"
And keep up a noise,
Those troublesome boys;
But then, after all,
Tha world is't small,
And tha very best thiag,
Whlch could happes to you .
Is, to have in tha house,
A boy or two.

Yes, thars's skates in the hall,
Some hats and a ball,
And as to tha table,
Yon never are able,
To find what you want.
When school time is o'er;
There are books, caps, and mittens,
And things by the score,
Bnt, ths very best thing,
Which could happen to you,
Is, to have in the house,
A boy or two.

And then, "when your head aches,"
Ah! yes, don't I know,
How racing and tearing,
Thoss boys will go?
They stamp on tha staire,
They slam every door,
They hug you like bears,
Until you are sore;
But, the very best thing,
Which could happen to you,
Is, to hava in the house,
A boy or two

You see, hye-and-hye,
When you ars grown grey,
These same rognish lads,
Will be done with their play.
And then, what an outlook,
When your work is done,
You will live a naw life,
Through a dear, honored son;
So the very best thing,
Which could happen to you,
Is, to hava in your home,
A boy or two.

—*Salem Observer.*

Don't forget to say good-morning; say it to your parents, your brothers and sisters, your school-mates, your teachers—and say it cheerfully and with a smile; it will do your friends good. There's a kind of inspiration in every "good-morning," heartily and smilingly spoken, that helps to make hope fresher and work lighter. It really seems to maks the morning good, and to be a prophecy of a good day to come after it. And if thls be trne of the "good-morning," it is also true of all kind, heartsome greetings They cheer ths discouraged, rest the tired one, and somehow make the wheels of life run smoothly.

LIME WATER FOR BURNS.

A correspondent of the *American Farm Journal* writes that tha readiest and most useful remedy for scalds and burns is an embrocation of lime water and linseed oil. These simple agents combined form a thick, cream-like substance, which effectually excludes the air from the injured parts, and allays the inflammation instantly. He mentions a case where a child fell back ward into a bath tub of boiling water, and was nearly flayed from her neck to below her hips. Her agonies were indascribable; but her clothing being gently removed, and the lime and oil preparation thickly spread over tho injured surface, she was sound asleep in five minutes. Subsequently, the parts were carefully washed with warm milk and water three times a day, the oil dressing renewed, and tha little patiant rapidly recovered. Though all the scalded skin came off, sha did not have a scar. This remedy leaves no hard coat to dry on the sores, hut softens the parts, and aids nature to repair the injury in tha readiest and most expeditious manner. This mixture may be procured in the drug storss: but if not thus accessible slack a lump of quick lime in water, and as soon as the water is clear, mix it with tha oil and shako it well. If the case is urgent, use boiling water over the lime, and it will become clear in five minutes. The preparation may be kept ready bettled in the house, and it will be as good six months old as when first made

An Englisb journal says: "In answer to a correspondant who asks for a whitewash that will stand exposure to the weather, we giva tha following, which we know to be good: Take half a bushel of freshly-burned lime, slake it with boilding water; cover it during the process to keep in the steam. Straln the liquid through a fine siave, and add to it seven pounds of salt previously well dissolved in warm water; three pounds of ground rica boiled to a thin paste and stirrad in bolling hot; half a pound of powdered Spanish whiting; one pound of clean glue, which has been previously dissolved by soaking it well, and then hanging it over a slow fire in a small kettle, within a larga one, filled with water. Add five gallons of hot water to tha mixture, stir it well, and let it staud a few days covsred from dirt. It must be put on quite hot. For this purpose it can be kept in a kettle on a portable furnace. About a pint of this mixture will cover a square yard."

Teachers' Table.

SINGING AND MARCHING.

We aaed hardly tell our graduate teachers that it is a good plan to introduce singiag into their schools. Those of the class of '77, who had an opportunity to learn soms light gymnastic exercises have no doubt found them a pleasant aid in their teaching the past summer. Thers is no better way to break up the monotony of the school-room. and rest the children's muscles, aad rouss up the sleepy oaes than to set them singing and marching once in a while. Hera is a very good song for the purpose, set to a lively, familiar tuns, which the children will lika to learn.

MOTION SONG.

TUNE: "When Johnny comes marching home again."

1 With shoulders erect and toes turned out,
Hurrah! Hurrah!
Now let us in unison gaily shout,
Hurrah! Hurrah!
2 With hands upraised as we sing the rhyme.
3 We'll strike them together and keep the time.
[:4 And we'll wheel quite round, while singing our motion song.:]

5 Now left and right we march along,
Hurrah! Hurrah!
We fill the air with our merry song.
Hurrah! Hurrah!
6 We carry our muskets like heroes of old.
7 Saluting our captain so brave and so bold.
[:8 And we march, march, march, while singing our motion song.:]

9 Our fingers and thumbs are eight and two,
Hurrah! Hurrah!
There's plenty of work for them to do,
Hurrah! Hurrah!
10 With elbows a-kimbo, and looks so shy,
11 We bow to our partners so gracefully,
[:12 And we hop and dance, while singing our motion song.:]

13 As back and forth our arms we throw,
Heigh-o! Heigh-o!
It's pretty hard work now, you may know
Heigh-o! Heigh-o!
14 For trying our best our eyes open to keep,
15 We drop all our heads as if going to sleep.
[:16 And we nod, nod, nod, while singing our motion song.:]

17 What terrible noise is that we hear?
Dear me! Dear me!
18 We all have been snoozing, now that's quite clear.
Dear me! Dear me!
19 So let us take books and be ready for work,
20 For we are not willing our lessons to shirk,
[:21 Tho' its jolly good fun, when singing our motion song.:]

1. School rise and stand erect. 2. Raise hands ready to strike. 3. Clap hands in correct time. 4. Turn round twice while repeating this line. 5. Tread left and right foot. 6. Right arm across waist, left at side. 7. Touch right hand to forehead, like military salute. 8. Keep marching time with feet. 9. Raise hands, palms out, spread fingers. 10. Hands on hips, elbows out, look sideways at each other. 11. Make a low bow. 12. Hop lightly on each foot 13. Let arms hang and swing. 14. Fold arms, grow sleepy. 15. Drop heads. 16. Glide into seats, sing low and soft, nodding heads, and diminishing tone gradually to last note, finally resting arms on the desks and supporting heads asleep. After a moment of dead silence, teacher may strike bell suddenly, when all must raise heads and hands as if frightened, and go on (all seated) with No. 17. 18. Rub eyes with knuckles. 19. Take books from desk hurriedly. 20. Turn leaves quickly with thumb. 21. Throw head from side to side, with careless good nature.
The last line of each verse should be repeated.

HOW A TEACHER SERVES HIS COUNTRY.

If a poor boy has reached the age of fourteen, neglected by the community, he represents a capital of nearly one thousand dollars which is unproductive; and if he lives out the term of life for which he has a probable chance in the life insurance tables—forty years—as a pauper or criminal, he entails a loss upon his State of five thousand dollars. On the other hand, every youthful criminal made into an honest boy by our preventive institutions of charity and reform is a clear saving of five thousand dollars to tha community. It may hs somswhat unpleasant to regard the human being simply as money capital, hut the aapect has its peculiar and impressive lessons—*N. Y. Times.*

SHAKESPEARE'S SCHOOLING.

Shakespeare's schooling is now a point of interest to Mr. Furnivall, who has procured from the Rav. Mr. Lupton, the leerned master of St. Paul's school, London, a conjectural schedule of what would be probably taught at that time in the grammar school of a small country town like Stratford. Mr. Lupton writes: "I think you would be safe in concluding that at such a school as Stratford, about 1570, there would be taught:

"1. An 'A B C book,' for which a pupil-teacher, or 'A B C-darius,' is sometimes mentioned as having a salary. (I have a transcript of an 'A B C book,' from the Greenvills Library, which I suppose to be of the latter part of Henry the VIIth time).

"2. A Catechism in English and Latin, probably Nowall's.

"3. Tha authorized Latin Grammar, *i. e.*, Lilly's, pnt out with a proclamation adopted to each king's reign. (I have edition of 1529, 1532, 1535, 1662, 1676, 1687, 1709, 1717, 1731, 1732, 1733, 1738, 1756, 1778, 1784, 1709, &c., and particulars of many others).

"4. Some easy Latin construing hook, such as Erasmus's 'Colloquies,' Corderius's 'Colloquies' (you will see an edition of 1568 in the British Museum, marked 12316 e 1—7 or 'Baptista Mantuanus'"—to which list of studies, suggests Mr. Furnivall, we may add writing, arithmetic, and music.

TO ANNIE C——
IN MEMORIAM

"Celm on the bosom of thy God,
Fair spirit, rest thee now!
E'en while with us thy footsteps trod,
Death's seel was on thy hrow.

Dear as thou wast, ead justly deer,
We would not weep for thee;
One thought shell cheek the sterting tear,
It is—that thou ert free.

Lone are the paths and sad the hours,
Since thy hright spirit's gone;
But, O, a hrighter home thsu ours,
In heaven is now thine own!"

WE print below a letter from the Rev. Titus Coan, D. D., the veteran missionary at the Sandwich Islands. He resides at Hilo, (Byron's Bay) Hawaii, the most beautiful spot in that picturesque group. From his proximity to, interest in and authority upon the great volcano of *Kilauea*, one day's ride from his house, he has been called the "King of the Volcano."

Hilo, Hawaii, April 21, 1877.

One of the objects which my wife and I most regretted not seeing while in the United States in 1870-71 was the "*Hampton Normal Institute.*" From its organization we felt a peculiar interest in that school. Its influence must be happy on the freedmen of the South, and, I see not why not on many others.

I always give the "*Southern Workman*" a hearty welcome, for it is a *live* paper, and well adapted to benefit the class of peopls for whom it is especially published. Its illustrations are quite useful, and the paper is full of practical good sense, and of information on a great variety of subjects. In short it is a *cultivator*. To show my good will I will send you a trifle to give it one more feather in the wing to help its flight to the cabins and cottages of those who are striving to climh the hill where a wider horizon and a broader landscape shall open before them.

Through my sou, Semuel Latimer, of San Francisco, I will send you ten dollars ($10) for the *Southern Workman*, requesting you to send ten copies for one year, to such individual freedmen, or such schools or other institutions in the South as you shall deem best.

We were glad to hear of the success of your aumerous concerts, and only regretted not to have heard tha melodies.

We are now hoping and longing for political and social peace and harmony between the North and the South; for commercial prosperity; for the revival of all proper industries throughout the land; for the progress of science, of human culture and of all useful knowledge among the masses; and especially for the general pervasion of those moral affinities and that "motherly love" which so surely flow from the gospel and the "God of peace," wherever faithfully and fully preached, and intelligently and truly received in meekness and docility of spirit. What a glorious future awaits our country if her discordant elements, political, social and moral, can ones be eliminated, and the principles of truth, righteousness and love be generally evolved; so that tha whole grand, compacted, and mighty nation shall shine in intelligence, in freedom, in virtus and in the light of God; each and all of the members of tho body politic "Endeavoring to keep the unity of the spirit in the hands of peace."

Tha whole land might then be jubilant with joy, and the North and the South, the East and the West join in the eloquent refrain of one of our gifted occidental poets, at the closs of a hitter war:

"Thus as down a lone valley, with cedars o'erspread,
From war's dread confusion I pensively strayed,
The gloom from the face of fair heaven retired,
Tha winds ceased to murmur, the thunders expired,
Perfumes as of Eden flowed sweetly along,
And a voice as of angels enchantingly sung,
Columbia, Columbia, to glory arise,
The Queen of the world, and the Child of the skies."

Your work, and the work of all the good, hoth North and South, tend to such a result, and the prayers of all the soas and daughters of peace ars, that "Violence shall no more be heard in the land, wasting nor destruction within har borders; hut that her walls be called *Salvation*, and her gates *Praise.*" May her snn never more set in blood and murky gloom; but "the Lord be her everlasting light, and the days of her mourning be ended."

Perhaps you have heard, o're this that Rev. C B. Andrews is dead, and that our young Prince and heir apparent to the throne has gone to tha tomb; and that Mrs. Dominis has been proclaimed the succssor of our reigning king. How fast our moaarchs and Princes fall! Your mother has lived upon the Island to see the entombement of five and the dethronement of four, and so have I.

Reciprocity has quickened the nerva and muscle of industry among us. Planters are estir, money circulates, and many are after "the golden fleece." But monitors come along now and then to give needed caution.

The boiling and sugaring house of tha Hitchcocks, near our town, was burnt down on the night of the 20th inst., and the sams night some fifteon houses of the workmen on the Chinamsn's plantation at Kampahnea were consumed.

Hilo has now six plantations in operation, and we shall go up to ten ere long, if workman can be found. Tha lack of a sufficient number of laberers is now one of tha hindrances to the industries of the country.

Most truly yours, T. COAN.

THE CLOCK-TINKER.

TINKER, may I learn the trick—
How you cure a clock that's sick,
Peeping in her face behind,
(Are those wheels her brains?) to find
Why her pulses do not go
Regular and sure and slow?

Tinker, have you learned Time's trick—
How it is he makes clocks tick?
Is there such a thing as knowing
What it was first set them going?
Do you, sir, suppose they had 'em
In their gardea, Eve and Adam?

Is there, up among the suns—
Father of these other ones—
Some great timepiece that can show
All the small clocks how to go?
Are the stars set right by some
Mighty swinging pendulum?

Tinker, where's the loosened screw
That the juggler Time creeps through
When he slips into bis place,
Up behind the old clock's face?
Have you ever seen that feat?
Or does Time evsn graybeards cheat?

"Boy, I've tried through Time to see;
But he played strengs tricks with me.
While I gave the wizard chase
He was dancing on my face.
Look you! like a crow he flies;
Here's his track around my eyes!"

—*Lucy Larcom, in "Our young Folks."*

AMMONIA AS A CURE FOR SNAKE BITES.

[From the Pall Mall Gazette.]

Several cases of snake-hite, in which the value of Professor Halford's remedy, subcutaneous injection of ammonia, has been demonstrated, have, says the Melbourne *Argus*, lately occurred in the colony. At Seymour, on the 14th of December, a young man, twenty-six years of age, named Dwyer, was bitton hy a snake between the thumh and the first finger of the right hand The wound was received at nine o'clock, and no treatment was applied until half-past eleven, when the patient was powerless and almost insensible. Ammonia was injected into his right arm, when he revived at once. He suffared a relapse, but the ammonia was againsuccessfully applied, and he ultimately recovered.

At Bungaree a young girl was hitten hy a snake, and gradually sank into a state of stupor. Two hours and a half after she was hitten ammonia was injected. Relief was immediately obtained and the girl rapidly recovered.

A third case happened on the Acheron, eleven miles from Alexandra, where a little girl two years of age, the daughter of a farmer named Deak, was hitten by a snake just above the ankle of the left foot. Symptoms of completo coma were setting in when the ammonia injection was used with magical effect. The child sat upright and became quite lively. A relapse occurring, a second injection was made with as great effect as before, and the child from that time continued to improve until her recovery.

Another case in mentioned of a native woman on the Wirrega station, South Australia, who was bitten hy a snake on the ankle. She became unconscious, and the surface of the hody was turning cold when ammonia was injected The woman at once revived and recovered.

A correspondent of the *Rural Home* thus deseribes a simple and convenient window fastening hy which the sash can be held in place at any desired height: "Make an almond-sheped hutton about two inches long and an inch hroad at the hase; screw this on the sash within one inch of the strip on the frame where in tha sash slides; cut two or three notches in said strip one-fourth of an inch deep, and cut out upward to a sharp edge. When raising the window with one hand, with the other press the hutton's point into the notch, at whatever height you wish it. A reverse notch can he cut near the hottom to turn the hutton into, to secure it from heing opened on the outside. We heve had these in use over five yeers, and do not know that we would exchenge for the most approved patent springs. A pocket knife and a gimlet are all the tools needed to meke them, and in an hour all the windows in the house can be fixed."

MORE SHEEP NEEDED.

Last year we paid foreign countries fifty millions of dollars for woolen goods, and eleven millions of dollars for uamanufactured goods. When we have in this country twenty millions more sheep than we now have, we shall only produce what wool we use; and yet there is no country on earth where it would seem sheep could be raised so profitably as in the United States. But we are coming every year nearer to supplying our own markets with the wool they demand. In 1875, the wool clip of the country was nearly 200,000,000 pounds, while in 1860, it was only sixty-five millions.—*Maine Farmer.*

Agricultural.

RAISING HOGS.

There is probably no other branch of farm business that pays so well as the raising of hogs. For the last two years, the profit in pork-making has been nearly a hundred per cent. on the money invested. One of my neighbors, last year, paid $30 for a sow and pigs, to which he fed 106 bushels of corn, valued at $95, beside the milk from a dairy of three cows. The second day of November the whole lot sold for $206.41. The manure, he said, would mostly pay for the trouble of feeding. In breeding, it is much the best to use young stock. The sows should not be over two years old, as old sows are much more apt to destroy their pigs than young ones. In the fall and spring, there is usually a good demand for pigs, and they rarely sell for unremunerative prices. This spring, pigs, when ready to wean were sold at $3 apiece.

Of all pure-bred hogs, especially for this section, is is generally conceded that the Berkshire has the preference, as being by far the easiest to keep; and they will mature at an early age, making very fine pork. I can keep two pigs of this breed where only one can be kept of the Poland-China stock. Pigs should be allowed to run with the sow for four or five weeks after farrowing; then they should be weaned, giving them plenty of milk, and they will do fully as well if allowed to run with the sow for a longer period. As the pigs get older, it has been my custom to mix a little meal with their milk, thus keeping them improving all the while. April pigs thus fed can be made to dress three hundred pounds by Christmas, and at a cost, at the present price of corn, not to exceed five cents per pound. Many a farmer makes a great mistake in feeding his hogs on new corn in the fall. It has been clearly demonstrated that one bushel of old shelled corn, ground into meal, is worth as much as four bushels of new corn fed in the ear.

I cannot too strongly urge upon farmers the profit of keeping a breeding sow and raising their own pigs. I was told the other day by a friend, that last winter he bought a sow for $10, and in the spring sold $24 worth of pigs, and in the fall the sow was killed and then weighed over three hundred pounds—a clear profit of $15 over and above all cost of feeding. At what business can any one do better?

—*Country Gentleman.*

THE COMPOST HEAP.

The compost heap can be made one of the great auxiliaries in improvement. The farmer, in the first place, should study the adaptability of his soil to the proposed crop, and so far as possible supply the soil with what is most desirable, and in the compost heap this can be done to a large extent. Of what shall the compost heap be made? The ingredients generally to be found about an ordinary farm, or obtained cheaply (in many cases) a convenient muck or marl bed, ashes, chip dirt, bones, leaves, dead animals, refuse from slaughter houses, woolen or paper milla refuse, night soil, barnyard manure, plaster, lime, refuse salt, old brine, hen manure, soap suds, soot, and many other unsightly things about a farm that can be thus utilized where they will do the most good.

Manure from the stable, the cattle yards and sheds, hog yards and hen roosts, privy vaults, etc, should constitute the basis of the compost heap, with which other refuse mattera we have mentioned are incorporated. The animal, manures act as a ferment, and the fermentation and decomposition which takes place reduces the whole mass to a uniform consistence. Without admixture with other substances, the tendency of animal manures is a too rapid fermentation; they become mouldy and burn up; the addition of other substances named, also muck, turf, etc., checks excess of fermentation, prevents volatile matters from evaporating, and absorbs the gases. The addition of the manure, therefore, to the compost heap is highly necessary if the best and most desirable results are to be obtained. The heap requires occasional turning and intermixing so that the whole mass may become thoroughly and evenly mixed and ripened.

In the application of manure from the compost heap to the land, of course, some knowledge of the character of the soil is necessary, as well as ths wants of particular crops to which it is intended to devote such land; for it is far from good policy, to apply such composted manures to fields indiscriminately. A soil that is well supplied with humus, is often benefited by lime, and other stimulating fertilizers. Light and sandy soils require carbon and potash. Heavy, stiff and cold clays, require carbonsceous and animal manures and silicates, to improve their mechanical condition. It is prudent, therefore, in the management of compost heaps, to take these things into account, so that the greatest advantage may be derived from them. Compost heaps under the management of this judicious farmer, constitutes an important factor in his profits. They are not an insignificant part of his capital, and deserve far more attention than is usually given them. As the country grows older, and the natural fertility of the soil is depleted, the compost heap will become more and more necessary, for it must play a prominent part in restoring the waste and keeping up the productiveness of the land.

THE EXPERIMENT of farming ostriches for the purpose of securing a regular and abundant supply of their valuable feathers, is being tried in South Africa, in the vicinity of the Cape of Good Hope, where the ostrich is "native in the place and to the manor born," and land of the right sort can be obtained to any extent. A large extent of suitable bush land is fenced in, over which the birds roam peaceably enough in ordinary times, but in this breeding season the pairs select and occupy one of the several small camps laid out for the purpose. The birds are very fierce and savage at this period, but at all other times are as tame as a flock of sheep. They assemble to be fed at bugle call, though the feeders have to be careful of any loose articles there may be about, for the ostriches snap up and swallow immediately any such trifles as tobacco, pipes, knives, spoons, coins, &c., and make attempts to wrench off buttons from boots and clothing, and are not particular as to watches and chains if they can secure them. The plucking of the birds is a dangerous operation. They are enticed by a bugle call into a small inclosure, where they are packed as closely as possible to prevent them from administering those terrible kicks to the pluckers of which they are capable, and which are delivered with a force sufficient to break a man's thigh. The plumage of the farmed ostrich is said to be abundant in quantity and superior in quality, and the yield from a well stocked and carefully-tended farm returns a large profit on the whole outlay.

NEWS OF THE MONTH.

FOREIGN.

A TERRIBLE disaster occurred in the English Channel, Sept. 13. The British ship, Avalanche, from London for New Zealand, carrying sixty-three passengers and a crew of twenty-two, collided with the British ship, Forest, from London, for New York, crew numbering twenty-one, and both vessels foundered. The Forest struck the Avalanche between the main and mizzen masts, nearly cutting her in two. The latter sank immediately; the Forest kept afloat an hour or two. Only one boat, containing twelve persons, reached the shore in safety, all others were lost. Nearly one hundred persons were drowned.

M. THIERS, ex-President of the Republic of France, died at Paris, Sept. 3d, in the eighty-first year of his age. Thiers was a statesman of the highest order, and for nearly fifty years has been famous as a historian, journalist, orator and statesman. In personal appearance he was peculiar, almost comical: very short and very stout, with a large hooked nose and enormous spectacles. The death of Thiers is a severe blow to the French Republic, and is keenly felt. He possessed the confidence of a great portion of the French people, who at the present time especially need his wise counsel, moderation and patriotism.

LONDON, SEPT. 17.—*The Daily Telegraph* publishes a dispatch from Mr. Stanley, the African explorer, dated Emboma in Congo, West Africa, August 16. He states that he has completely navigated the Lualaba, and has succeeded in proving it to be identical with the Congo. Henry Stanley entered upon the journey from which he has returned, in November, 1874, when, at the head of 300 men, he left the coast to explore the lake region of Equatorial Africa. He diverged from the usual road at Upwapwa, reached the western frontier of Ugongo on December 31, struck directly across almost a level plain, and at Tchiwya, in the Urimi country, about the latitude of Ujiji he found the waters flowing northward. Thence he followed the course of the River Shemseyu, for 350 miles, and reached Kagehyi on the Victoria N'yanza Lake, February 27, 1875, having lost 194 men by death, and desertion. He launched a boat and circumnavigated the lake, assisted by thirty canoes lent him by Mtesa, King of Uganda. His circumnavigation covered about 1,000 miles; he minutely explored the inlets and found that Speke and Grant were right in declaring—contrary to Livingstone —the N'yanza to be one great lake containing many islands. On April 17 he started to complete his exploration of the west side of the Victoria N'yanza. He proposed next to cross the intervening country, and explore the Albert N'yanza.

THE Turks and Russians have been doing some very severe fighting, and the losses are heavy on both sides, but no important changes of position have taken place since our last issue—the Turks are holding their ground surprisingly well.

DOMESTIC.

A TERRIBLE railroad accident occurred, Aug. 29th, about seven miles from Desmoines, Iowa. In consequence of a violent rain-storm which prevailed at the time of the disaster, a small creek that passes through a culvert under the railway was swollen to a mighty stream, the tremendous current of which washed away the stone culvert and left the track supported only by the silis which spanned the direful chasm. The train consisted of one baggage car, four passenger cars, and one sleeping car: excepting the sleeping car, which remained standing on the track, all of these car were completely telescoped and thrown into the bottom of the ravine. Twenty persons were killed outright and about forty more or less seriously injured.

BRIGHAM YOUNG, the famous president of the Mormons, died at the Lion House, Salt Lake City, Utah Ter'y, Aug. 28. Brigham Young was born in Vermont, in 1801, his parents were Methodists, but he embraced no religion until he became a Mormon. Brigham learned and followed the occupation of a carpenter, painter and glazier. In 1824 he married his first wife, and in 1832 he embraced the Mormon faith at Columbia, Pa. He was immediately ordained an elder, and in 1835 was made senior Apostle: soon after this he left for England, returning in this country with a company of emigrants in 1841. About this time the Mormons had many hardships to contend with: Being compelled to leave Ohio they settled in Missouri, and from thence they were driven to Illinois. Here they lived in comparative safety until 1844 when polygamy was introduced into their community; this so infuriated the people of Illinois that Joseph Smith, the Mormon leader, was assassinated and the Mormons driven out of the State. Young then became the leader and conducted his poverty-stricken hand to Utah Territory, where they arrived in 1847. The Mormon have been quite prosperous in their new home and some of them are very wealthy. At the time of his death Young was worth more than $7,500,000

ONE of the largest fires which have visited New York city for many years occurred Sept. 3d, at 9¼ A. M. The fire was first discovered in a drying room in Hale's piano factory, and an effort was made by some of the hands to extinguish it, but without avail. The fire spread so rapidly, that before 2 P. M all the buildings in the square bounded by Tenth and Eleventh Avenues and Thirty-fifth and Thirty-sixth Streets were in ruins, besides quite a number on the opposite side of Thirty-fifth Street. The heat was so intense that one of the steam engines was abandoned and was destroyed. Several lives were lost; one thousand persons were thrown out of employment; as many more rendered homeless, and property to the amount of $1,000,000 consumed.

THE international shooting match between the British and American rifle teams, took place at Creedmoor, Long Island, Sept 13th and 14th, and resulted in a victory for the Americans by a score of 3,334 for the Americans and 3,242 for the British, out of a possible 3,600. This is the best shooting that has ever been done on either side of the Atlantic. The ranges were 800, 900, and 1,000 yards.

YELLOW fever has made its appearance at Fernandina, Fla., and owing to the unfavorable state of the weather is spreading rapidly. More than a score of cases have proved fatal. Charleston, S. C. and Savannah, Ga., are doing all in their power for the unfortunate city.

PRESIDENT HAYES and his cabinet have been making an extended tour in the States east of the Mississippi. They have already visited the New England and some of the Western States, and are now travelling in the Southern States. Good-will and enthusiasm greets them on every hand.

A SEATTIFUL monument, surmounted by a colossal statue of the late Andrew Johnson, is to be erected to the memory of the ex-President, near his old home in Tennessee.

THE Democrats of New Jersey have nominated Genl. Geo. B. McClellan for Governor.

SENATOR MORTON, of Indiana, is lying very low from an attack of paralysis. It is thought that he will recover.

SENATOR BOGG of Missouri died on the 20th.

THE faculty of the University of Pennsylvania has decided the question of coeducation of the sexes in that institution. Instruction in the Scientific School and Department of Arts shall hereafter be given to both sexes. There are about 1,000 students in the college.

LEVI COFFIN, well know in *ante bellum* days as President of the Underground Railway, always a prominent anti-slavery man, died at his residence in Avondale, Ohio, at 2:30 P. M., Sept. 16. His age was about seventy-five years.

BOOTS AND SHOES!

N. MCNIELL invites attention of the public generally to his large and carefully selected stock of Boots and Shoes of the

Best City-made work,

which I will sell at and below cost. All other goods in my store will be sold lower than ever, in consideration of the times. Please give me a call and see for yourselves. Ladies' and gentlemen's work made to order, and repairing neatly done.

N. M'NIELL, HAMPTON, VA.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering sceptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most succesful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The best in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its Reversible Feed enables it to sew forward or backward without stopping the machine—it being the *only* machine that can do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between Side Feed and Back Feed machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

THE FLORENCE HEATER.

The only *safe, odorless* and *durable* Oil Stove for all who want Pure, Quiet, Warm Air in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

Manufactured by

THE FLORENCE SEWING MACHINE COMPANY,

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

H. PHOEBUS, PROPRIETOR.

TERMS: Transient $3.00 per day; $17.50 per week and upwards, according to location, &c.

This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by Old Dominion Steamship Company's steamers from Pier No. 7, North River, New York, and by the Bay Line steamers from Philadelphia to Baltimore, and Old Dominion Steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and Fortress Monroe—containing one of the oldest churches in the country, are all within a few minutes' drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Signal Service Officer, being as follows: Spring, 40° to 80°; Summer, 70° to 96°; Autumn, 50° to 86°; Winter, 34° to 68°. Open for the Spring months. —Open for guests all the year.

HOUSE.

THE

Leading Clothing House

OF THE

UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing

FOR MEN'S WEAR,

FOR YOUTH'S WEAR,

FOR BOY'S WEAR.

Our stock is always

THE NEWEST,

THE LARGEST,

THE FINEST,

THE CHEAPEST.

When visiting New York do not fail to examine our goods.

HAMPTON, NOVEMBER, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE Hampton Institute opened October 1st, and on the 18th the total nttendance was 288, of whom 223 were boarders nnd 65 day scholars. There are 161 men snd 127 women. This attendance and the promptness in entering are unprecedented. The sleeping-rooms are crowded; n number of young men will have qunrters in tbe new harn, intended for grain rooms.

Applicnnts hail from nll parts of the country, from Missouri, Texas, and even California. Jamnica and Cuba are represented, the former by one and tbe latter by seven young men, all of good promise. A number of young colored people from the Northern Stntes have entered. As gradustes of the Hampton Institute, whose diplomas secure engagements in Virginis, North Carolina nnd Maryland, tbey are able to obtain work as teachers in those States far more readily than if educated in the North.

Tbe corps of teachers bss not materially chnnged. It is the policy of the school to retain permanently, if possible, a certain number of teachers, securing thus the benefits of experience and retaining a hold on graduates, to whom the institution is its teachers more than its buildings. Keeping up an influence over this class is as important as it was to give them their education, and is a part of the work tbat does not appenr in any statistics. Another such work is the assignment of teachers who are applied for and appointed at the Principal's office.

The Institute is thus brought to hear upon tbe public schools of this nnd other States. A lnrge number of graduates, however, get schools for themselves by corresponding directly with State officers.

Through Professor Newell, Supt. Public Instruction of Maryland, ten have been employed in tbnt State.

Throughout the entire range of our relations with Southerners there has been the kindest spirit, a purpose to give the colored people a fair chance, and an entire absence of complaint on both sides. Long deferred paymeuts of salaries, in some cases, have been the principal difficulty.

DURING the existence of the "peculisr institution" the negro was powerless to help himself. Hence sn sggressive policy of three pbsses, agitation, war, and reconstruction. The present national policy is, however, an scknowledgement thst esch State settles its own questions, regulates its own affairs of every kind. The colored man must make the best terms he can witb bis neigbbors. External aid has somewhat blinded him to the necessity of using his own wits; he faintly reslizes how much he ought to or can do for himself. The rsce has genius for getting slong, for "scuffling" through difficulties; but very little for turning to account sll the resources at hand.

The teacher of the black rsce is more and more inclined to tell them tbat tbeir greatest trouble is in themselves and their greatest work upon themselves. The internal and external condition of a people have a reciprocnl influence. The work of the psst seventeen yenrs nnd the dresm of many for fifty years bas been nn outward change, and it has come with dramatic completeness; the work of the next fifty years will be to mnke the internal cbange correspond with it.

Men and things being as they nre, it will be impossible for the negro to ever hold the political weight that he now has unless bis fitness for power shnll be improved.

His strength is numerical, not morni; when his majority is gone his influence nearly disappears. Rightly or wrongly, bis future position will, in general, be that of a minority. Tbere is no help for it. It will be of use to him only as he develops moral force, and learns wisdom.

In our own vicinity, where the majority is colored, the process of evolving representative colored men is now going on; considerations of character are painfully absent; n candidate for the State Senate is regularly nominated whom respectablo men cannot and will not vote for. There becomes at once a color line in the Republican ranks; eveu the better class of colored people do not realize the importance of the moral element, although some will, in this case, scratch the ticket. In their condition better things cannot be expected; yet they have sometimes shown excellent judgment as to nominees.

Generally, tbey do not feel the influence of enlightened sentiment. The smartest men win.

Their moral weakness is s terrible obstacle to their improvement. It neutralizes many of the benefits of their citizenship. The need of a great and well-sustained system of educstion adapted to their needs is paramount.

One class of men at the North opened tbe late Presidential csmpaign with appeals to the passions and memories of the civil wnr, and would attempt to further regulate the difficulties of the negro. Another class preached reconciliation nnd opposed srmed interferance.

In tbe light of the real welfare of the race the former method was as hopeless as it was useless. The black man could not stand where politicinns would have bsd him; be lacked the personsl quality, the power to organize, to act coherently, intelligently, with any regsrd to the future, and had no nppreciation of public sentiment. It was not his fault. Uuder slsvery he improved much, but it was not just tbe school to fit him for the exercise of sovereign power.

Tbe failure of the Executive at Wsshington to enforce wbat he could not enforce, or to demand wbat he could not get, has apparently broken the ranks of his supporters. The conciliation of the North is tbe next thing to be done. Force has done all it can for tbe negro, but some of his political backers would still use it.

They would open fire, though the recoil of the gun be more fatal than the shot.

The South to-day is in a better temper for providing the blsck man with education than it ever has been; the movement is onward; it is slow but sure. The changes have been tremendous. The negro's opportunity has been created; it is not as ample as it should be, but it is enough for a trial. Tbe importance that the colored race should, at this point, by every industry, energy and wise ambition for self-improvement, ratify its title to its new rights cannot be overststed.

The Charleston News finds much that is grievous in the last Annusl Report of tbe General Agent of the Peabody Fund. The *News* complsins that there should be "such publicstion of tbe facts as will show who gets the money."

And so exnspersting is the silence of Dr. Sears on this snd similar points, that the *News* goes to the length of intimsting that the Peabody Fund is a "mismanaged charity," csils the Report n "confession that nothing has been systemstically done," and finally gives the document a parting shske with the menace that if the facts so imperiously demanded he not furnished, "it is better to let the fund drop out of sight, as an institution which is of more value to officers and coteries than to the Southern people."

It is only just to Dr. Sears to observe that the evident intention of Mr. Peabody was to furnisb funds for doing good in s discretionary way by filling up the gups always occurring in operations of orgsnized and routine sgencies; and by aiding sueb struggling efforts in the right direction ss deserved success and were ready to perish. Education, according to tbe methods of red tape and "impartial" distribution, could only be hopefully essayed by the State or national legislstion. An eclectic disposition of the fund was, in the opinion of Mr. Peabody, adapted to make bis drop in the bucket go the furthest.

In the exercise of his high and delicate trust, there are obvious reasons why the agent for the disposal of such a fund should avoid the jealousies and comparisons which would inevitably attend a detailed statement of the results of his judgement in particular cases. Had the money been obtained by collections from the public, either from appeals to the charitable or from taxation, then indeed the strictures of the *News* would be more wise. As it is, we understaud tbat able journal to occupy the singular position, that the Southern people should hold its benefactors to a strict necount; and that the public has a right to examine the private books of any one who is so "unbusinesslike" as to offer it money.

AN INTERESTING letter appears in this issue of the WORKMAN, from s gentleman in Jamaica who is well informed respecting the condition of the negroes in that island.

Probably few are awsre of the recent efforts for their welfare; we may believe that the race will hereafter have better advantages than ever, not only from Christisn work, but from the sppointment of Sir Antony Musgrave to the governorship of the island. This gentleman was recently transferred hy the British Government from n similar position in Victoria, Australia, to Jamaica. His experience, capacity, nnd deep interest in the welfare of all under his charge, will insure the benefits of wisc and just ndministration to all classes in Jamaica. Heretofore, secounts from there have had an uncertain sound. It hss been impossible, from wbnt we read and have heard, to be very sure of the extent to which emancipation has been a blessing to those people.

There is nothing more difficult than to impress upon ex-slaves the obligations of freedom and tbe fsct that the difference is, tbnt in freedom men must work harder snd behave better than in slavery, but have the luxury of doing it of tbeir own necord.

ON THE Hsmpton Institute grounds there is a very comfortable, furnished cottage for rent. It was built hy a friend of the school who had expected to make it a home, but was called away.

It is benutifully situated, standing close upon the sea-shore, where there are excellent facilities for boating all winter.

Anyone desiring to pass the winter in Virginia and to secure this commodious cottage should address tbe Principal of the Hampton Institute.

Mr. Daniel Barker of Norfolk, whose advertisement of winter-flowering plants, roses and bulhs appears in anotber column, has hsd long experience ns a gnrdener and florist, and is fully competent to do all he agrees. His well-stocked green house contains the best and choicest collection of plants to be found south of Washington; snd he is prepared to guarantee everything he sends out exactly as represented. Give him a call and you will be sure to order sgain.

SPECIAL PREMIUMS.

The following Special Premiums sre offered by WILLIAM N ARMSTRONG, Esq., of New York:

1. For the best Essay on the trae method of farming one hundred acres of land, in Tidewater Virginia, on the plan of diversified prodaction, $25.
2. For the best Essay on tho trae method of farmiug one hundred acres of land, in Southside Virginia, on the plan of diversified produc. tion, $25.
3. For the best Essay on the trae method of farming one hundred acres of land, in Piedmont Virginia, on the plan of diversified prodaction, $25.
4. For tbe best Essay on the trae method of farming one hundred acres of land, in the Valley, or Southwestern Virginia, on the plan of diversified production, $25.

It is desired, in a few words, to show the capabilities of n one-bundred scre farm, in each of the severnl localities mentioned.

The conditions, in respect to these premiums, are as follows:

1. The competing essays will be delivered to the editor of the *Southern Planter and Farmer*, on or before the first day of January, 1878, and by him be delivered to the Executive Committee of the Virginia State Agricultural Society.
2. The said Committee will determine the relative merits of the essays, in such manner as they may deem just, and to the author of best essay, respectively, they will award the premium.
3. The successful essays will be given in the first instance, to the *Southern Planter and Farmer* for publication.

GENERAL T. M. LOGAN, of Virginia, read a paper before the American Social Science Association of Saratoga, Sept. 6th, on "The Opposition in the South to the Free-School System." We extract paragraphs of special interest. The spirit nnd tone of the paper are excellent and the insight of the author is clear.

THE OPPOSITION IN THE SOUTH TO THE FREE-SCHOOL SYSTEM.

A paper read before the American Social Science Association, at Saratoga, September 5th, 1877, the subject under discussion being: "The Question of Education in the Southern States."

By Gen. T. M. Logan, of Richmond, Va.

I. Opposition to public instruction in the South prevails mostly in country districts, where the school system is inefficient. It is not so general in villages and towns, where the schools are of higher standar.l: while in cities, where the system is most efficient, the opposition is scarcely perceptible. In thinly settled districts, the schools are necessarily few and widely separated; while salaries are too small to command the services of competent teachers. The inefficiency of country schools is exaggerated by comparison with those of the cities; and tax-payers oppose appropriations for their support. The sparse population of country districts, by thus affecting the efficiency of schools, occasions opposition to public instraction in the South. But as private schools could only be sustained at increased cost, the public-school system is most needed in poor and thinly settled districts

The impoverishment of the Southern people is another condition which occasions opposition to public instruction. With taxable values largely depreciated, the South is, also, heavily indebted; and the free-school system is opposed by many, because it necessitates increased taxation.

* * * * *

But the principal opposition to public instruction in the South, arises from the presence of the freedman. Colored schools must, under the law, be equally sustained with those of the whites; and hence, aversion to educating the freedman occasions oppositiou to the whole system.

In consequence of these local conditions, decided opposition exists, in the South, to the free-school system, although the necessity of governmental instruction is conceded in all other civilized communities.

The voting power should, on theory, be intrusted only to enlightened citizens; but, in free countries, suffrage has already been extended to large classes who, without free schools, would be unenlightened: therefore, as suffrage cannot now be restricted, popular

governments must educate the masses.

Suffrage having been enlarged in advance of educational qualifications, theory has been violated, and placed in a transitional state of great peril. Private exertions being inadequate for the emergency, governmental action is necessary to avoid this danger which threatens social destruction; and free-school instruction is the only available mode of qualifying the people as sovereign voters.

These views apply with peculiar force to the political condition of the South, where an illiterate race, unaccustomed to the responsibilities of citizenship, have been made voters. The Negro cannot provide for the education of his children; and government, as a political necessity, must undertake it.

Before the general introduction of free schools, British laborers were the most intelligent in Europe, and the industrial supremacy of England was unquestioned. But when the laboring classes of other nations became more enlightened in consequence of public instruction, Great Britain experienced closer competition in her leading industries, having adhered to the theory that government should not undertake the education of the people. At the Paris exhibition of 1857, it became apparent that England was losing her industrial preeminence. In many of her manufactures she was excelled in quality, and undersold in market. There was no disputing the fact; there was no mistaking the cause. An exhaustive report by a special committee of parliament gave the explanation: the free schools had diverted the laboring classes of competing nations. As an industrial necessity, the present free-school system of England was thereupon inaugurated.

Thus, progressive countries are forced to adopt some system of public instruction, or be distanced in the industrial race of the nations.

The usual objections to educating the masses are advanced in the South, but they apply equally to other communities, and have been repeatedly refuted. They are generally based on the assumption that education is the privilege of the few, and most of them are mere appeals to class prejudice.

But as the opposition to the free-school system in the South is due principally to the presence of the freedman, so the objections advanced derive their influence chiefly from race prejudice.

It is insisted that the education of the Negro by public instruction will not prove advantageous to society; but no reasons are assigned why he should be an exception to the rule, that the standard of education is always advanced by the education of the people.

All objections to public instruction in the South apply equally to both races; but to avoid antagonizing the whites, they are usually urged against educating the freedman, and thus the appeal is made to race prejudice to strengthen opposition to the free-school system. The whites would not intentionally be unjust to the blacks, even as a class, while towards them as individuals the kindest feelings prevail. But race prejudice, which naturally exists, has been increased by misapprehensions regarding the freedman and his position as a distinct element of society.

Although the "war of races," which seemed imminent during reconstruction, has been avoided, race antagonism, to some extent, remains, and the idea still prevails that it is unavoidable. A social conflict may exist while the relations of the races are being adjusted; but there being no permanent hostility of interest, no race antagonism need continue.

The abhorrence of the whites to amalgamation also increases race prejudice, and strengthens the reluctance to educating the freedman. It is often broadly asserted that slavery being abolished, the races cannot live together without extermination of the inferior, or amalgamation of the two. But neither result need be expected in the South, where the conditions are unprecedented.

The Indian was exterminated because his nature could not conform to the usages of civilization; but the Negro has so far conformed to the usages of civilization as to live in a civilized community.

The natives of South America amalgamated with the Latin races; but a similar result is rendered impossible in the Southern States, by the greater race differences between the Negro and the Teuton; while, furthermore, in preserving race purity, the Teutonic have always been more scrupulous than the Latin races.

Much of the prejudice towards the freedman would be removed, if his relations, as a distinct element of society, were better understood. Many who now deplore the presence of the colored man, as a great social evil, exalt the *regime*, because of its alleged influence in raising the social standard of the whites; and yet, if the Negro formerly exerted a beneficial influence on society, the influence of the freedmen now, as a distinct class of free laborers, should tend more strongly to elevate the white race.

When two races live together, as in the Southern States, in full equality under the law, each will take that grade in the social economy to which its race qualifications entitle it; each will find its ethnological level.

In the South full civil equality exists, and all spheres of life are open to both races; but, in the race competition, the whites occupy the higher plane of life, the blacks occupy the lower.

Practically, there are two classes in the South, as clearly defined as if established and rigidly preserved by caste laws. The whites, in effect, constitute an upper caste, without the existence of laws giving caste privileges; while race prejudice prevents amalgamation, and preserves the class separation into two distinct social strata.

This classification not being established arbitrarily, the whites, as a class, may reap all the advantages, if any exist, of the caste system, without necessarily experiencing the usual evil influences of caste laws.

Full civil equality existing, race competition, stimulated by race pride of the whites, will prevent that enervation of the privileged class which is usually caused by the caste system. The lowest labor on the industrial scale being performed by the freedman, the lowest occupations of the whites are of higher grade than those of the laboring class of other communities; and hence the average employment of the white race, in the South, should be of a higher order than in other countries.

If it be conceded that he has, by nature, qualifications requisite to make him an efficient laborer, differentiation between the races might result in greater fitness of each, respectively, for its special sphere in life; as, in the case of individuals, a division of labor produces greater fitness for special duties. Those, therefore, who value class distinction, should be the last to object to the presence of the freedman, assuming, as they do, his inherent race inferiority.

It has been generally believed that the freedman would entail evils on the South, and these apprehended evils have been greatly exaggerated, thus increasing the race prejudice of the whites; while, as an element of society, he really contributes advantages which all have been ignored.

Communism is regarded as the social rock on which modern civilization is in danger of being wrecked; and, recently, the agrarian tendencies of labor unions, in America, have aroused the gravest apprehensions. But the freedman promises to be a conservative element of society—his presence tending to restrain the growth of communism. The southern limits of the strikes and riots, in the late railroad disturbances, were almost identical with the color lines on the census maps; and, although the tendency to such combinations and excesses varies with density of population, the real protection of the South arose from having two antagonistic races constituting her industrial classes. The white and colored employees will not combine against their employers, because antagonism is stronger between the races than between capital and labor—the white engineer being more identified with the railroad proprietor than with the colored brakesman at his side.

Her industrial classes being thus divided by race differences, the South has less to fear than other communities, while from the same cause, she has less to apprehend, politically, from the communistic tendencies of the day.

For more than a century, the vexed question of the Negro has perplexed the first intellects of the South; and the problem remains unsolved. But the freedman is now a citizen and voter; and self-interest should prompt the whites to prepare him for greater usefulness.

As a laborer, ignorance is his greatest deficiency; this would soonest be removed by the free-school system.

As a voter, the freedman is liable from ignorance to be misled by demagogues; but when taught to read, he is brought within the influence of the press, which is conservative, because controlled by the property holding classes. Therefore his greatest deficiency as a voter, also, would be soonest removed by the free-school system.

All arguments usually advanced in favor of public instruction apply with greater force in the case of the Negro, because of his greater deficiencies. And thus, every consideration of the subject leads to the conclusion, that the future welfare and prosperity of the South demand the education of the freedmen by public-school instruction.

Races, like individuals, require education; but methods of instruction should be adapted to their ethnological condition. But the friends of the freedman insist that the same courses of instruction should be provided for each race, although the education of the Negro has only commenced, while the Anglo-Saxon has received the civilized training of centuries. To undertake the race education of the freedman by a system adapted to the whites, would be like placing a pupil in the highest grades before he had received primary instruction.

The leading aim in the education of the freedman in his present condition, should be to train him to habits of industry. The violation of this principle explains the fact, which has caused so much concern among their friends in the South, that the freedmen who receive the highest education often prove the most useless citizens. Having received only "book education" at school, they enter life without habits of industry, inherited or acquired, to protect them from vagrancy. It is this fact, now universally conceded, which excites the greatest alarm for the future of the free-school system in the South. Education does not induce idleness; but it is alleged that when the freedman regards himself qualified to earn a support by mental work, he is unwilling to accept manual labor. He cannot secure employment suited to his supposed acquirements; and he becomes an idle and unproductive member of the community. His idleness, the more noticeable because of his education, creates prejudice against public instruction, while to explain the evil as a result of an unwise course of instruction, will avail little after the public mind has accepted it as an effect of the free-school system itself.

It is further urged, that the freedmen, as individuals, do not at present require the same education to prepare them for their labor in the lower sphere of life, as that needed by the whites to prepare them for their duties in the higher. Except as preachers and teachers of their own race, there exists no demand for the services of the freedmen in the higher occupations, however qualified they may be by education and ability. Why then, it is objected, spend time and money in preparing them for positions they will not occupy.

The freedmen are now demanding high schools, wherever such schools are provided for the whites, without considering whether they are really needed; but instruction unsuited to the condition of the race only strengthens the opposition to their education. A vigilant minority are eager to destroy the entire system of public instruction, and the friends of the freedmen should heed the warnings of experience.

If, during the civil rights agitation, laws had been passed enforcing mixed schools, the opposition of the whites would have caused the abandonment of all governmental instruction in the South. Prudence overruled, then, the clamor for mixed schools; prudence should over-rule, now, the clamor for similar instruction for both races.

When individual freedmen evince special aptitude, every opportunity should be afforded for their education, especially when their acquirements are in demand; but the free-school system should be adapted to the general wants and not to exceptional cases.

There should be no restrictions on his education, but the question is: What course of instruction, which is practicable, will be most advantageous to the freedman in his present condition? The system would be only tentative and provisional; for, as the race advanced, the education should be changed to suit their changed condition.

It is a grave mistake to attempt to "Europeanize" the African, in efforts to elevate him. On this subject Edward W. Blyden, one of the most cultured of Africans, has expressed himself in the strongest terms against making the African "a parasite upon the European," and urges his development "upon the basis of his own idiosyncrasies."

These views, deductions from general principles, are confirmed by experience. In consequence of having acquired habits of cleanliness, of order, of industry, the graduates of the "Hampton Normal and Agricultural Institute" of Virginia, are in constant demand. The policy to be pursued is clearly indicated. Beyond primary instruction, industrial education, similar to the Swedish system, is the education which the freedman needs. The adoption of such a course of instruction, the only one suited to his present condition and wants, would result in preparing the freedman for greater usefulness, and in making him a more valuable citizen; while the success, which will then attend public instruction, would silence all objections, and, eventually, remove opposition to the free-school system in the South.

GOOD USE FOR A DIME.

We advise all our readers to forward their address and 10 cents to Orange Judd Co., 245 Broadway, New York, who make a special offer to send for this sum (half price and postage) the number for October 1st, of the *American Agriculturist*. This splendid number, besides over 50 engravings, contains a great amount of useful, practical, reliable, seasonable information, not only for the Farm and Garden, but for the household. Children included. Most will get from it hints and suggestions worth ten or twenty times its cost..... Better still, to send $1.60 and receive the paper, post-paid from now to the end of 1878—that is, all of volume 37, with the rest of this year *free*. (Two copies for $1.50 each). Nowhere else can one get so much really valuable, paying information for so little money—not 3 cents a week, a sum easily saved or produced extra, which the paper will be sure to help one to do. This journal is prepared by practical men and women, who know what they talk and write about from actual experience and large observation, and do greatly aid others to profitable planning and working. Many single hints and suggestions each abundantly repay a year's cost. The fearless exposure of quackery and humbugs in every number are invaluable, and have saved its readers and the country millions of dollars. The departments for the Household and Children are pleasing and instructive. Every number of the paper is beautifully illustrated. In short, the *American Agriculturist* is full of good things, for every man, woman, and child, in city, village, and country. Take our advice and send $1 60 for 14 months, or at least send a Dime for our half-price specimen now offered, and see it for yourselves.

Our readers will be interested in an extract from the *Brooklyn Argus* of Sept 26th, headed—

MISSIONARY ENTERPRISE.

Freedmen Educated in Southern Colleges and sent as Missionaries to Africa—Farewell Services in the Central Congregational Church.

A notable event, and one marking the beginning of a new era in missionary enterprise, occurred Sunday night in the Central Congregational Church. It is, of course, well known that since the close of the war a number of colleges and other institutions of learning have been opened in Virginia, Georgia and other Southern States for the education of the colored people. These institutions are under the control of the American Missionary Association, which has heretofore always had to rely on the efforts of white missionaries for the carrying on of the work of converting the heathen. Now, however, the Association will be able to send colored missionaries to Africa, and it is believed they will be eminently successful, for the reason that the natives will listen more readily to a man of their own color than to a white man, and also because the colored missionaries will be better able to withstand the extreme heat and deadly miasma of that country than their white predecessors were.

The first colored men qualified to be sent out as missionaries were in the Central Congregational Church last evening, in order that their friends and the officers of the Association might publicly wish them "God-speed" in their great undertaking. They were:

Rev. Floyd Snelson, who was accompanied by his wife and three children.

Benjamin James, M.D., wife and two children.

Mr. A. E. White, who has been specially fitted to act as a teacher, from the Hampton Institute.

All three were formerly slaves on Southern plantations, and since their emancipation have been educated either at the Hampton (Va.) Institute, Atlanta University in Georgia, or Howard University, Washington. These are only three of the twenty academies, schools and colleges founded by the American Missionary Association in the Southern States for the education of the freedmen. They are now attended by 6,175 students, and 70,000 colored children have already been taught by those who were formerly pupils in one or another of the institutes. In addition to the educational institutes founded by the Association, it has also established fifty-six churches in the South.

Sunday evening the colored missionaries and the members of their families occupied chairs in front of the platform, on which were seated Rev. M. Scudder, pastor of the church; Rev. M. E. Strieby, D. D., Corresponding Secretary, and Rev G. D. Pike, District Secretary of the American Missionary Association, and Rev. Father Gleason. The church was crowded in every part, and among those present were: U. S. Marshal Hurlow, David M. Stone, Esq., H. W. Hubbard, Esq., Assistant Treasurer of the A. M. A., and many others.

After an address by Dr. Scudder, and the singing of the Missionary Hymn,—

The missionaries were requested to rise and receive the charge from Rev. M. E. Strieby, who said there was a fitness in their meeting in that church, as its pastor represented a family that had had three successive generations in the missionary field, and on the roll of missionary heroes the name of Scudder would always shine. So many things had been said about Africa that he should confine himself to three points. His first charge to them was to take good care of their health, for on that would depend the success of the enterprise, which was at present but an experiment. If they succeeded, the Association would be encouraged to persevere, and it was designed that they should go forward as the pioneers of a vast company of missionaries. He also charged them to be careful in the extending of their missionary work, bearing in mind that an army was not always successful by hard fighting, but there had also to be good generalship. Finally, he advised them to act with caution in moving into the interior of the country, and to put forth their efforts as they saw their way clear before them. Under all circumstances they were to bear in mind that they went forth as the embassadors of Christ, to preach His gospel, and if they did His work faithfully, then at the last he would give them the crown of everlasting life.

At Home.

GRANDMOTHER GRAY.

BY MARY KEELY BOUTELLE.

Faded and fair, in her old arm-chair,
Sunset gilding her thin white hair,
Silently knitting, sits Grandmother Gray;
While I on my elbows beside her lean,
And tell what wonderful things I mean
To have and to do, if I can, some day:
You *can* talk so to Grandmother Gray—
She doesn't laugh nor send you away.

I see as I look from the window-seat,
A house there yonder across the street,
With a fine French roof, and a frescoed hall;
The deep bay windows are full of flowers;
They've a clock of bronze that chimes the hours,
And a fountain—I hear it tinkle and fall
When the doors are open; "I mean," I say,
"To live in a house like that, some day."
"Money will buy it," says Grandmother Gray.

"There's a low barouche, all green and gold,
And a pair of horses as black as jet,
I've seen drive by—and before I'm old
A turn-out like that I hope to get.
How they prance and shine in their harness gay!
What fun 'twould be if they ran away!"
"Money will buy them," says Grandmother Gray.

"To-morrow, I know, a great ship sails
Out of port, and across the sea;
Oh! to feel in *my* face the ocean gales,
And the salt waves dancing under me!
In the old, far lands of legend and lay
I long to roam—and I shall, some day."
"Money will do it," says Grandmother Gray.

"And when, like me, you are old," says she,
"And getting and going are done with, dear,
What then, do you think, will the one thing be
You will wish and need, to content you here?"
"Oh, when in my chair I have to stay,
Love, you see, will content me," I say.
"That money *won't* buy," says Grandmother Gray.

"Aad, sure enough, if there's nothing worth
All your care when the years are past,
But love in heaven, and love on earth,
Why not begin where you'll end at last?
Begin to lay up treasure to-day,
Treasure that nothing can take away,
Bless the Lord!" says Grandmother Gray.

—*Wide Awake.*

EVERY MAN SHOULD HAVE A TRADE.—In the Prussian royal family this principle is carried to its fullest extent, and according to the Berlin correspondent of the *Times*, on the 22d ult., the occasion of King William's birthday, he was presented with an engraving by Prince Henry and a book bound by Prince Waldemar, the two younger sons of the Crown Prince. Each of the princes has learned a trade. The Emperor himself, it is said, is a glazier, and the Crown Prince a compositor. The German royal family have learned that there is no royal road to usefulness and prosperity; that they must become as the people to be able to rule the people. Reverses may come also and it is well to be prepared—skilled workmen have little difficulty in procuring employment.

PREVENTION OF FIRES. Add one ounce of alum to the last water used to rinse children's dresses, and they will be rendered uninflammable, or so slightly combustible that they would take fire very slowly, if at all, and would not flame. Bed curtains, and linen in general, may also be treated in the same way.

A WARNING.—An intelligent writer calls the attention of all consumers of kerosene oil to the pernicious and unhealthy practice of using lamps filled with that article with the wicks turned down. The gas which should be consumed by the flames is by this means left heavily in the air, while the cost of the oil thus saved, at present prices, would scarce be one dollar a year for the lamps of a household. His attention was called particularly to this custom while boarding in the country where kerosene was the only available light. A large family of children living in the same house were taken ill one night, and on going to the nursery, the mother found the room nearly suffocating, with a lamp turned down; whereupon the physician forbade the use of a lamp at night, unless turned at full head. He says he could quote many cases, one of a young girl subject to fits of faintness, which, if not induced, were greatly increased, by sleeping in a room with the lamp almost turned out. Beside the damage to health, it spoils the paper and curtains, soils the mirrors and windows, and gives the whole house an untidy air and an unwholesome odor.

A CURE FOR SOOTY CHIMNEYS.—F. C. R. says: About fifteen years ago, a dwelling was raised one story higher, and a chimney had also to be raised some feet higher; and as the chimney was built up, it was plastered on the inside with salt mortar, to prevent the adhesion of soot. The result is that the part plastered with salt mortar is white and clean to this day, while the other part gets filled with soot up to the very line where the salted part begins, and has to be cleaned each year, the chimney being in almost constant use. The proportions used were one peck of salt, added while tempering, to three pecks of mortar.—*Scientific American.*

☞ If houses were built on dry sites and of sufficient area, and with proper arrangements for ventilation, and the water supply was pure and sufficient, the larger half of the great problem of sanitary science would be solved. The disposal of the refuse of life and labor is a simple matter. Wretched homes, impure air, and fouled water lower the physical and mental stamina of men and women so much as to make them indifferent to dirt, and passive almost under disease. Arouse their energies by better homes, and the disposal of refuse or waste substances would become a work of ease, if not of absolute pleasure. For all of the different modes of disposing of sewerage or other waste there is none so simple, direct or efficient for the rural districts as its immediate application to the soil and conversion into the growing crops of the garden or allotment.—*Sanitary Science.*

LIBERIA.

What People Earn and Eat in Liberia.

BY THE REV. T. GRACEY.

GRAND BASSA COVE, LIBERIA,
January 5, 1877.

SALARIES AND WAGES.

I have put myself to some pains to collect some general information, the correctness of which is sufficient for practical purposes.

To begin with government officials, the President of the Republic is paid a salary of twenty-five hundred dollars per annum in the currency of the country, which is at least depreciated below the United States "greenbacks" now freely circulating here, fully fifteen per cent. He has, however, some perquisites, as for instance, an appropriation for public entertainments at his own table. The Secretaries of State and Treasury are paid one thousand dollars each per annum; the Attorney-General and Postmaster-General seven hundred and fifty dollars each, the Comptroller and Auditor seven hundred dollars each, while the Treasurer receives two hundred dollars less than these, and the Clerk of the State Department three hundred dollars.

But it may be of more general interest to know what can be earned by skilled and unskilled laborers.

A carpenter can command two dollars per day, exclusive of boarding, so also can blacksmiths, but they both find it more remunerative and satisfactory to work by contract. It must not, however, be supposed that at present a large number of such workmen could command employment here. There is very little building now amongst the Americo-Liberians, as there is but little influx of this class into the country, and the residences and business property are quite sufficient for present necessities. The aboriginal population live in houses constructed of bamboo and thatched with straw, and the entire cost of such a house would not reach twenty dollars. The Americo-Liberians occupy houses which have cost from one hundred to several thousands of dollars. But five hundred dollars will purchase a very respectable and comfortable homestead in Monrovia; on the St. Paul's River the cost would be even less.

What Liberia wants primarily is agricultural laborers. There is a fine opportunity for any self-poised colored man here who will leave this small shuffle for the little dignity and remuneration of the government offices and the contest for the small trader's place, and settle down on these fine inland homesteads and develop the resources which are so abundant. He cannot buy land on the margin of the St. Paul's River for less than from twenty-five to fifty dollars per acre, but two to six miles back from it he can have his lands assigned him. He does not need much capital to construct a house, nor for clothing. He can do well on purely indigenous food by a little self-denial till he gets adjusted to the situation.

The ordinary day-laborer amongst the aborigines is paid from twenty-five to fifty cents per day, but the colonist can as readily have seventy-five cents or a dollar for even unskilled labor. This puts him on a level with respectable society, as may be known by the fact that the largest salary paid to a clergyman is not more than eight hundred dollars per year. Even in Monrovia the salary of the leading preacher is only five hundred dollars per annum, he providing his own house out of that sum. The average preacher's salary is not three hundred dollars per year. An unskilled mechanic can command as much pay as the average salary of the school-teacher, for these are paid from one hundred and fifty to three hundred dollars.

KINDS AND COST OF FOOD.

The next necessity in order to forming a judgment of the real worth of wages is information as to what can be procured with the same. If the colonist determines that he must procure the same food that he was accustomed to in the United States, he can expend very readily a sum much greater than he can earn. Wheat flour must be imported from Europe or the United States. The Holland flour commands from fifteen to eighteen dollars per barrel; English, fifteen or sixteen, and American the same. Mackerel is also sold at fourteen to fifteen dollars per barrel; herring at seven to eleven dollars; bacon, twenty to twenty-five dollars per hundred pounds. There is very little domestic butter, because cattle do not thrive on this coast. Foreign butter costs seventy-five cents per pound; turkeys cost five dollars per pair; Irish potatoes cannot be very successfully cultivated, hence are scarce and costly. But the sweet potato can be had every week in the year. At the Muhlenberg mission farm, at the head of navigation of the beautiful St. Paul's River, the sweet potato is planted once a month for the use of the mission children. The plant grows wild, but does not bear much fruit unless cultivated. The cassava, which is much like a sweet potato and a roasted Italian chestnut, is a root about two and a half feet long. An upper stalk of some old plant is buried two inches deep in the ground, and after a twelvemonth will yield a half-bushel of roots. These things grow readily and with other things require little labor. The seed is thrown on the ground, and a little scratching with the hoe is sufficient. In some places two crops can be grown in succession on the same soil.

But little domestic meat is to be had, but wild meat abounds. The red and black water deer, the elk, a larger deer, and other species abound. The bush-cow is said to be good eating; there is also the bush hog or ground-hog, which is large, and if wounded is dangerous. Rice can be had in abundance, and is large, dry and delicious. Domestic sugar and syrup are of fair quality and cheap. Coffee—the best in the world—can be had at eighteen to twenty cents per pound. Fish abound in the streams.

But who can long want for luxuries where fruits are so abundant, rich and free. The Liberia orange is equal to any that we have eaten fresh from the trees in Asia, Europe or America. Pineapples grow all along the lowlands of the coast, while the graceful branches of the cocoanut are laden to the very tip with the heavy fruits. They look as tender and as delicate as willows and yet hold these weights of seventy-five or a hundred pounds most firmly. Peaches, pears, cherries, etc., are intermixed with the plantain, the guava and the lime, and the whole land teems with the wonderful variety of fruit free to all.

Taken altogether, Liberia offers a free and full diet to the new-comer, and all but a few foreign articles are to be had at marvelous little cost. On the other hand, the climate is such that one cannot accomplish as much work here as in more rigorous climes. The fact that horses, mules and cattle do not thrive here leaves man without such kindly aid, and the only work animal, therefore, is man—or woman—for the latter do a great deal of the hardest work amongst the aboriginal population; and he who would get on well cannot afford to spend his days in idle loafing any better here than elsewhere.

The white man cannot get on in this climate, but the colored man from abroad soon passes through the acclimating process, and can live and labor, and earn and eat as well here as anywhere else in the world. I have taken pains not to overdraw in any direction. There are colonists here who are dissipated, but they are very few. Some mechanics have not found remunerative employment, and a few grumble, but the most of the people, in fact almost all that we have conversed with, after passing through the slight attack of fever, and a severer one of home-sickness in some cases, would not exchange their life and situation in Liberia for any other country. Many of them have tried other lands. Quite a proportion of the better classes have been in England or other European countries, and yet are persuaded that they can earn more, and have better food or more of it, and a happier and more congenial life here than elsewhere. "We are at home," said an eminent negro of Monrovia, who has seen much and known much of what opportunities and affinities the colored race has elsewhere.

Yet this is no place for indiscriminate emigration of colored people. Liberia wants self-poised, self-reliant, self-helpful men, and such can do well here.

A HAPPY FAMILY.

Do you know the secret of a happy family? It is love and work; unselfishness and industry. That is what makes the world move on, and the world can't move on very smoothly, you know, unless the homes do. Of course the parents must set the fashion. They are king and queen of the home dominion, and all the little subjects will follow their lead.

"You Maria Serena, mind what I say now or I'll skin you within an inch of your life."

That is what a mother heard her little six-year old say to her doll, when a visitor was in the house.

"Why, Jennie, my dear, that is not a pretty way to play with your dolly."

"Oh, I'm only playing I'm you mamma, and telling dolly what you told sister last night."

It was not that kind of mother that Napoleon mean't, I think, when he uttered his famous declaration that "What France needs is mothers."

And when you see a boy of twelve loafing on the street corners with a dirty stump of a cigar in his mouth, or trying to form his young lips to the half understood oath, it doesn't make you feel any happier to know that he is trying, poor little fellow, to act like his father.

A great many new homes are rising in the South among the freed people. They are the hope of the race. If they can be happy as well as free, bright with love and industry, centres of intelligence and goodness, it will be well for the race and the nation.

Every young colored man and woman to whom has been granted the good gift of an education, and training in industry and morality, for a start in life, should see to it that their homes are such as this.

TEMPERANCE Coffee-Houses are needed in every city of the South. Her working classes are to a fearful extent the victims of rum. We hope the following account will direct attention to a great need, and stimulate some one to try the experiment of a coffee-house in a Southern city.

TEMPERANCE COFFEE-HOUSE.

BY JOSHUA L. BAILEY.

As the traveller upon the prairie saves himself from the approaching fire by starting a fire to meet it, so may the fiery influences of rum and whisky, which would consume the body and soul, be stayed and quenched by supplies of other beverages and wholesome food.

To this end, a nearly simultaneous effort has been made within a few years in Boston, Cleveland, Chicago, Baltimore, Philadelphia, and elsewhere, in the establishment of "Holly-Tree" and "Friendly Inns," "Temperance Restaurants," and "Coffee-Houses." The results, differing somewhat according to local circumstances, have on the whole been satisfactory, proving beyond any doubt that under proper administration these institutions can do a great work, not only in rescuing drunkards from their evil habits, and in keeping the young men from temptation, but in encouraging thrift and sobriety among all classes, very much decreasing the sale of intoxicants, and changing the character of neighborhoods.

"The Workingman's Coffee-Houses" of Philadelphia may be said to have originated in a desire to accommodate the demand for stimulants of which we have already spoken—a demand difficult to eradicate, but possible to direct and control, by providing an acceptable substitute.

Some ideas which seemed indispensable were acted upon at the outset:

First: As to location. If we wish to catch fish, we must go where the fish are. Upon one of the chief business thoroughfares, where men are already accustomed to congregate at the usual lunch hour, there was believed to be the place to spread the net.

Second: The liquor-saloons are made attractive, they are brilliantly lighted, and comfortably warmed. The coffee-houses must not be behind in these respects.

Third: If we ask men to abandon their beer and whisky, we must furnish them a substitute every way better. It was determined, therefore, that the coffee as well as every other article offered for sale should be of the best quality, prepared in the most skilful manner, and served under circumstances as attractive as possible.

Fourth: The price, too, must not be higher than would just cover the cost, that, while satisfying the palate of the most fastidious, it should accommodate the pocket of the poorest.

The experiment was begun in October, 1874. In the very centre of the city, at the intersection of Fifteenth and Market Streets, a small store was secured, and suitably fitted up. On one side the new public buildings were in course of erection, employing some five hundred men, and on the other about the same number of men, teamsters, draymen, etc., came daily to

the Pennsylvania Railroad Freight Depot. "The Workingman's Central Coffee-House" was the title adopted.

It commenced in a very modest way, with only a few pounds of coffee and

Fourth: No distinction is permitted in the treatment of the patrons, who represent every rank and grade of society. BE YE READY.

BY REV. FREDERICK B. ALLEN.

I visited yesterday one of our steam fire-engine houses. On entering the door there was

the Pennsylvania Railroad Freight Depot. "The Workingman's Central Coffee-House" was the title adopted.

It commenced in a very modest way, with only a few pounds of coffee and sugar, a few dozen rolls, a small cook-stove, and a woman acting the double part of cook and waitress. In a few days the services of an assistant were required, and from day to day the business increased, so that it became necessary to secure additional help and enlarged accommodations. Soon a complete kitchen had to be built in the basement, then the adjoining store was added, and, within a year, the third store, till now the premises occupied by "The Central" are about six times the size of the room in which it was opened! It now furnishes lunch daily to about 1,400 persons.

Encouraged by this success, a second coffee-house was opened under the same management, December, 1874. This was located in the centre of the wholesale trade of the city (No. 31 South Fourth Street), and was called "The Model."

From the first it was crowded even to an uncomfortable extent. The demands of its patrons soon rendered larger quarters a necessity. A new building was erected specially adapted to the purpose, many novel features being introduced which a twelvemonth's experience had suggested.

The *new* "Model" opened June 1 of this year. Many persons thought it was too large, and that it would never be filled. But it was thronged on the day of its opening, and on every day since the demands upon it have been fully up to its capacity. The number lunching here daily is about 2,600.

In the establishment of the Coffee-Houses there were, of course, many mistakes, the results of inexperience. Many things had to be unlearned as well as many learned. But mistakes were promptly corrected. With the growth of the work, ability to provide for it seemed to keep pace, and modifications in the management were adopted as necessity dictated.

Not much was anticipated at the commencement beyond furnishing a mug of coffee and a roll of bread, but it soon became apparent that something more than this was needed. Many of the beer and whisky saloons display the invitation—"Free Lunch." Enticed by this bait, scores of young men enter the trap. At the further end of the saloon a table may be found containing a dish of stewed meat and vegetables, *very highly seasoned*. Of this any one is allowed to eat without charge, but few can do so without stopping to slake their thirst at the bar as they pass out. The lunch indeed is *free*, but not so the drink. Hundreds of young men in our stores, counting-houses, and work-shops have thus been lured into habits of intemperance and final ruin.

To meet this necessity, the Coffee-House bill-of-fare was greatly extended, and now quite a variety of nutritious and substantial dishes are provided, and each at the uniform price of *five cents*. The main feature—the coffee—is, however, preserved. A full pint mug of the best Java (equal to two ordinary cups), with pure rich milk and white sugar, and two ounces of either wheat or brown bread, all for *five cents*, is the everyday lunch of many a man who, but for this provision, would be found at the dram-shop.

A few additional characteristics of these establishments, and to which their success is largely to be attributed, may be here noticed.

First: There is the utmost regard for cleanliness in the preparation of the food, in the condition of the eating-room, kitchen and other apartments, and in the personal appearance of the attendants.

Second: All the employés are women. A matron is at the head of each coffee-house. Great care is taken in filling every position to employ those only whose character and conduct shall be above reproach.

Third: The employés reside upon the premises, and form one family, having neatly-furnished chambers, parlor, library, laundry, bath-rooms, and all the comforts of a home, thereby securing the interest of each in the welfare and reputation of the Coffee-House.

Fourth: No distinction is permitted in the treatment of the patrons, who represent every rank and grade of society. The Coffee-Houses were pre-eminently intended for "workingmen" as distinguished from idlers and drones. Workingmen comprise the great proportion of the people. Clergymen, editors, bankers, merchants, lawyers, manufacturers, mechanics, the draymen, the boot-blacks, the newsboys, all belong to this class—every man who works, whether with his hands or his head. For these the Coffee-Houses are intended, and, while not wishing to exclude any, they are clearly not designed for that other class who do not love work, and will not work so long as they can either steal or beg.

Commenced chiefly with the view of providing a substitute for strong drink, other harmonious work was soon pointed out, and now the upper rooms, over seven stores, comprising the entire block in which "The Central Coffee-House" is located, are devoted to the moral and spiritual benefit of those who can be brought under such influences. Here is a suite of

"A HAPPY FAMILY."

five rooms, consisting of a lecture-room, seating four hundred persons; a reading-room for young men, supplied with books and periodicals; and smaller rooms for prayer-meetings and other purposes.

A prayer-and-praise meeting is held in the lecture-room every Tuesday evening, and a temperance meeting every Thursday evening. A Bible-class and prayer-meeting are held every Sabbath afternoon. In one of the rooms an association of reformed men meets every Monday, and a young converts' meeting is held every Wednesday. A distribution of illustrated papers, chiefly upon the subject of temperance, is made every Saturday from the counters of the coffee-houses to the extent of 3,000 copies, thus supplying Sunday reading in many households not reached by any other like instrumentality.

It may not be out of place here to notice that smoking is not allowed in *any* of the apartments, and the use of tobacco in any form is discouraged.

Should it be asked, What are the results of this coffee-house work? The reply is that they are, beyond any anticipation, satisfactory. The substitute for the intoxicating cup has been accepted by a daily increasing number. Hundreds can be counted who have been led away from the liquor-saloons through this instrumentality, and many are known to have entirely abandoned the use of intoxicating drinks.

Some have been rescued from drunkards' lives, and are now filling positions of honor and respectability, and not a few are rejoicing in the forgiveness of their Saviour. Scores of letters have been received from those who acknowledge themselves to have been benefitted, and fathers, mothers and sisters have called to express their gratitude for the restoration of sons and brothers.

To another question often put: "Are these Coffee-Houses self-sustaining?" it may be answered: *The receipts pay all the running expenses.* But they have not yet, nor is it likely that they ever will refund the money expended in the outfit. Nor is the auxiliary work (reading-room, lectures, etc.) any charge upon the Coffee-Houses, but is wholly sustained from voluntary sources.

Considered in connection with the known results, the amount expended has not been large. No better investment of money could have been made—none producing a greater revenue in good fruit.

Two such institutions may seem to be insignificant in a city which legalizes the traffic of five thousand liquor-saloons; but considering that it is less than two years since the first Coffee-House was opened, the progress made is encouraging. The feasibility and practical success of the enterprise having been demonstrated, it is to be hoped that temperate men and women will aid in the work, until in every city and town such establishments shall supplant the liquor-saloons, and thus contribute in no small degree to the overthrow of the giant evil which to-day broods over the land, wasting our resources, paralyzing our industries, loading us with taxes, corrupting the people, and carrying every year seventy thousand of our countrymen to drunkards' graves.

Let total abstinence men be of good courage, and count labor and patience no hardship. Victory shall yet perch upon their banners.

God hasten the day!

BE YE READY.

BY REV. FREDERICK B. ALLEN.

I visited yesterday one of our steam fire-engine houses. On entering the door there was the ponderous machine, weighing over four tons, in perfect order ready for use. The brass triumings were polished to the last touch of brilliancy. The fire was all made, ready at a moment's notice to be lighted. By its side was the hose carriage, with its six hundred feet of hose compactly coiled on the cylinder, and like the engine waiting for its summons. Just at hand was the stable, where three stalwart horses stood in their stalls, with their harness on, prepared for action. We visited the firemen's sleeping room. Before several of the beds stood a pair of boots, with the pantaloons conveniently arranged so that one in a hurry could jump into them at once. Ten men variously engaged stood about the engine room. Their coats hung upon the wheel of the engine, where they would mount or were folded upon the seat above.

In order to show the completeness of their discipline, the gong which ordinarily strikes for fire rung. In an instant a bell over the horses' heads sounded, and of themselves, the three animals came with tremendous clatter through the passage way, and each took its proper post at the vehicle ready to be attached. It is estimated that in twenty seconds from the moment of the alarm, the engines, horses and ten men are off upon their noble errand. At the beginning of a fire, minutes are of priceless value, and so the firemen are always ready.

What a lesson for us Christians is here taught. Sometimes our call is an opportunity of service, a kind deed is to be done, a fitting word spoken, some Christlike office rendered. The chance may quickly pass. If we are not in the right spirit, if we are absorbed in our own affairs, if we are worldly minded, the golden minute will slip by unimproved. It can never be recalled.

Perhaps a sudden temptation may come. Our character is put to an abrupt test. Our principle is sorely tried. Much depends upon whether we are found prepared or unprepared. One fresh from the place of prayer, one who has just sought God's grace to keep him from evil, or one who is busy in work for his Master will repel the allurement almost without a struggle. The cold, prayerless heart, the soul which has been dallying with sin, looking at the forbidden fruit, longing for it, thinking of it, he will be caught in the snare. He will fall because before the test came, he was not in a state of readiness.

There is one call which must come to every one. Scripture and observation, both prove its suddenness. It is almost always unexpected. The lesson is, "Be ye ready." Not, get ready, but *be* ready, The faithful, active Christian, will not be surprised by the most sudden coming of Christ. The same preparation which fits us for useful living, is the best provision for death. Only we must not wait for the call to complete our readiness for eternity. That must be completed beforehand.

When astronomers prepare for an eclipse they do their work betimes. They leave no possible precaution unattended to. At that critical moment when the long looked for shadow strikes the edge of the planet, or sun, and the leader's voice cries, "Mark," there must be no delay for the adjustment of instruments or provision of materials. They must be ready.

Are our loins girded? Our lamps burning? Would opportunities, temptations, death find us unfurnished? *Be ye* also ready.—*Sunday-School World.*

A WORD AT NIGHT.

Everybody's life is like a book. Every day is to each one like the leaf of a book. Every thought, and word, and act is like the words we read on the page. God reads this book of life which each one of us makes.

Dear little ones, when night comes, ask him to give you light, that you see how you have lived through the day, and whether you have put only good things into your book of life.—*Our Little Ones.*

LITTLE FOXES.

One little fox is "By and by." If you track him, you come to his hole—Never.

Another little fox is "I can't." You had better set on him an active, plucky little thing, "I Can" by name. It does wonders.

A third little fox is "No use in trying." He has spoiled more vines, and hindered the growth of more fruit, than many a worse-looking enemy.

A fourth little fox is "I Forgot." He is very provoking. He is a great cheat. He slips through your fingers like time. He is seldom caught up with.

Fifth little fox is "Don't Care." Oh, the mischief he has done!

Sixth little fox is "No Matter." It *is* matter whether your life is spoiled by small faults. —*Good News.*

A COUNTRY THANKSGIVING SERMON.

Ay, goodmas, closa the great hara door;
The mellow harvest tima is o'er :

The earth has givea her treasures meet
Of goldsa corn aad hearded wheat.

You aad your neighbors well have wrought,
Aad of the summer's bounty caught;

Won from her smiles and from her tears
Much goods, perhaps for maay years.

You come a tribute now to pay—
The bells proclaim Thaaksgiving Day.

Well have you sowa, well have you reaped;
Aad of the riches you have heaped,

You think, perhaps, that you will give
A pert, that others too may live.

But if such argament you use,
Your aiggard bounty I refuse

No gifts you oa the altar lay
In any sense are givea away

Lo ! riags from Heaven a voice ahroad:
" Who helps God's poor doth lend the Lord !"

What is your wealth ? Ho'd have you kaow
To hold it, you must let it go.

Thiak you the hand by Heaves struck cold
Will yet have power to clutch its gold ?

Shrouds have ao pockets, do they say ?
Behold ! I show you thea the way ;

Wait aot till death shall shut the door,
But send your cargoes oa before.

Lo ! he that giveth of his hoard
To help God's poor doth lend the Lord.

To-day, my brethren,—do not wait ;
Just yoader staads Dame Kelly's gate;

Aad would you build a maasion fair
In heaven, send your lumbor there :

Each stick that on her wood-pile lies
May raise a dome beyoad the skies ;

Yoa atop the reats withia her walls,
Aad yoader rise your marble halls ;

For every pass that stops the wiad
There shiaeth oae with jasper liaed

Your wealth is goae, your form lies cold,
But ia the city paved with gold

Your hoard is held ia hands Diviae ;
It bears a aame that marks it thine.

Behold the hargain ye have made ;
With usury the debt is paid.

No moth doth eat, ao thieves do steal,
No sufferiag heart doth envy feel;

Ring out the words, Who of his hoard
Doth help God's poor doth lead the Lord !

Go get your cargoes under way ;
The bells riag out Thaaksgiviag Day !

—*Harper's Weekly.*

Teachers' Table.

IN THE SCHOOL-ROOM.

BY EMILIE LILIAN WHITING.

The last little foot had sattered away,
And sound ista alleace hed faded.
The last good-night kisa had been pressed oa my brow;
The room was all darkened aad shaded;
Aad I sat at my desk thinkiag over the day,
Its shadows and saashine, its labor aad play.

Aad I said to myself, and preyed for Hia aid,
That my work should be holy aad pure ;
Might he free from all motives unworthy His neme,
From all thoughts that could staia or allure;
That my teaching may guide them to Him, who would hold
Theas childrea, so dear, at rest in his fold.

Aad I prayed that my work might be earaest and true,
Seeking ever, with teaderest care,
To guide them aright through the life-patha below,
And for life more divlae to prepare;
Aad thet never a precept of mine should be givea,
That could lure them astray from the pathway to heaven.

So I said, as I sat thinking over the day,
And prayed the dear Father above,
To guide, eversnore, each dear little one,
Aad earich their lives with His love;
To help them when'era with life's labor oppressed,
And at last send His angels to call them to rest.

READING.—The manner of teaching *Reading* during the first term in which books are used by the pupils, has a very important influence ou the future progress of those pupils. In the processes of instruction, only one difficulty should be presented to the pupil at a time. Among the difficulties which children have to encounter during their first lessons in reading from books, are, learning *to know the words at sight*, so as to pronounce them readily; learning *to know what the words and sentences mean;* learning *to read in such a manner as to imitate good conversation.*

First Step.—With each new reading lesson the first step should he to make the pupils familiar with the words of the lesson, hy printing them on the hlackboard in columns, and teaching the children to pronounce them at sight; next teach them to pronounce at sight the same words in the book, hut out of their order in the sentences of the lesson, lest they learn them by rote, instead of by sight.

Second Step.—Train the pupils to find out what each sentence means, and tell the meaning in *their own* language.

Third Step.—Trnia the pupil to read each senteace so that the reading may resemble good conversation. Finally, when the lesson has been read in a proper mnaaer, the teacher should talk with the children ahout it, aad encourage them to tell, in their own laaguage, what they have read.

N. B.—*Let the standurd for good reading be its resemblance in manner to good conversation.*

INSTITUTE JOTTINGS.

THE following "Institute Jottings" were adopted by a Teachers' Institute at Beaver, Peansylvania. They will be found as useful here as in that State. Teachers will fiad them valuable.

Never ha late at school.
Make few, if any, rules.
Never allow tale-hearing.
Avoid governiag too much
Visit the schools of others.
Never punish when angry.
Never magnify small offences.
Cultivate a pleasaat counteaance.
Never be hasty in word or actioa.
Teach both by precept and example.
Never let a kaowa fault go unnoticed.
Require prompt aad exact obedieace.
Labor diligeatly for self-improvemeat.
Encourage parents to visit the schools.
Subscribe for some educational journal.
Never compare oae child with another.
Never atteapt to teach too maay things.
Never speak ia a scolding, fretful maaaer.
Make the school-room chearful and attractive.
Never let your pupils see that they caa vex you.
Baalsh all books at recitation, except in reading.
Ask two questioas out of the book for every oas ia it.
Never indulge in aaything iaconsisteat with trus politeness.
Never use a hard word whea aa easy oas will aaswer as well.
Never tell a pupil to do a thing unless coavinced he caa do it. [*Exchange.*

AN EXAMPLE WORTHY OF IMITATION.
SIGNS OF THE TIMES.

The appropriation for the free or public schools for colored children in Spartanburg, S. C., was so smnll for the present year (1877), thnt it could support them for only one month. The colored people were, in consequenee, so aroused on the subject of education that they resolved to have an independent school of their own, They held a meeting on the 10th of July, and issued an address, stating their need, and asking for aid, at the same time declniring their intention to help themselves. The committee worked earnestly and persevringly. Funds were obtained, which, with aid from the Peabody Fund, wnrranted them to open the school on the 1st of August, with a fair prospect of being able to continue it for nine months. On the 19th of August, an enthusiastic mass-meeting of white and colored citizens was held nt Spartanburg in the interest of this movement. The following account of it was published in one of their newspapers:

Colored School Conveantion.

An earaest effort is beiag made by our colored people at this point to establish a regular graded school, as announced by a circular published a few weeks ago, bearing the signatures of the trustees of the public school, and a colored committee, appointed to look after the aatter. As the State school fnad is not sufficient to support the schools for any length of time, it is the object of the committea to eadevor to secure assistance from tha Peabody fund, which supplemeated hy private subscriptions, aad what the colored people themselves caa raise, it is hoped will be sufficieat to keop the school open for aine months of the year.

Two young colored teachers, named Lewis aad Dart,—oae a graduate of the North Carolina Dibble Uaiversity, aad the other a member of the Georgia State Institutioa for colored studeats,—are actively eagaged in the work of raising aad providing fuads for the school; and called a meetiag in its iatarest, which was held at the Court House on Saturday last.

The meetiag was called to order, and Col. Farrow was called to the chair, and J. L. Dart requested to act as secretary. Capt. H. S. Thompson, State Superintendent of Educatioa, was preseat, and addreased the meetiag at length, on the subject of Educatioa, its importance and advantages, assuriag the colored people that the pledges made by Governor Hoaptoa during the campaign, in behalf of our peo ple, should be faithfully carried out as far as the State was able, but eadeavoring to impress them with the importance of goiag to work themselves.

President Carlisle, of Wofford College, made a few remarks, stating that Spartaahurg had right to be proud of the fact, that the first effort to establish an institutioa for the Deaf and Dumb aad the Blind was made by a Spartaaburg maa; the first doaatioa to found a college in this State was made by a Spartaaburg maa; the first effort to establish a Female College of high grade was made in Spartanhurg, aad that this was the first coavention of the kiad held in the educational interest of the colored people aad addressed by the Superintendeat of Educatioa. After asking many pertineat questions concerning the school, its objects and iateatioas, the character and fitness of the teachers selected, &c., he expressed a favorable opiaioa of their capacity, aad a willingness to aid and assist them.

Mr. S. Bobo then came forward and gave the colored people a good old-fashioaed talk about their duties and responsihilities as citizens, showing a kindly feeliag toward and a willingaess to contribute to the furtherance of the object in view.

Lewis and Dart—who are respectehle, intelligeot young men—both made clear, pointed speeches, showiag a proper appreciatioa and conception of the duties before them, aad makiag a pleasaat impressioa on those in attendance.

At the suggestion of Presideat Carlisle, a subscription list was started, which will be presented to ell citizeas of the towa, aad it is hoped will help largely toward makiag the school a success.

After a few remarks hy the chairman aad others, the meetiag edjouraed.

Now that the government of the Stats is ia the haads of the whits people, and the colored people dependent upon them for all educational advantages (being poor and unable to halp themselves to any great degree),—we hope that a liberal policy will prevail. The colored maa is dependent upon the white for education, moral aad mental,—in short, for civilizatioa, aad we hope it will aot he denied him.

THE writer of the letter published below, is in chnrge of the school at Spartansburg, S. C., referred to elsewhere in our columns. He is one of the best and ablest workers among the freedmen. The influence of such colored men is vital to the welfare of the negro and to the prosperity of the whites. The training of earnest and eapnble negro youths is a demonstrated sueeess, and the wealth of the North enn in no way more effeetually help the prostrate States to better times than by aiding the institution now struggling not only with the difficulties of maintaining strong corps of teachers, but with the necessity of providing in some way for the maintainanee of a majority of their pupils; all willing to work but unable to pay the cost of their food, erowding in for instruetion, and testing the nerve of men who must beg at the North the deficit signified by the masses of dusky, poverty-stricken youth. Out of these onee rejected slnves mny eome good material for a newly construeted civilization.

SPARTANBURG, S. C., Sept. 1st, 1877.

MY DEAR FRIEND:

Truly, I was greatly eacouraged and rejoiced by the reading of yours of the 8th ult. I thaak you for your strengtheaiag, Christian words ; I thaak you for your promise to aid the Spartaaburg High School. Siace the 1st of July we have *labored* with earaestness, patieace, perseveraace and prayer for the establishmeat of this permaaeat and high school; and aow we all are pleased and thankful to kaow that the school staads on its feet, aad it almost sees its way clear for its first nine moaths. Friends have subscribed about $100 for our school. The small tuition from patroas will amouat to about $200. The Peabody Fund will aid us by $300. The school is runniag ead will close the last of March '78. I taught in it as aasistaat duriag Aug., but have resigaed to the permaaeat lady assistaat—Miss Emma Johnson of Greeaville, and of the State Normal School.

I have the temporary charge of a small congregation. Just now, we are passing through a blessed revival of religion. Have had a crowded house almost every aight for a week past. We have maay axtious seekers for the Saviour. Please help us pray for them.

Am very aaxious to retura to my Junior class next moath, but as I could get hold of only a few dollars this summer, and the way of getting fuada for my lacidental expenses seems quite dark, I almost douht that I shall get back. My congregation is poor as well as small; but if I am compelled to discontiaue my studies, I shall become a pastor at oace. For I have consecrated my all to the work of preaching the gospel of Christ.]

Hoplag that you have recruited your strsagth by your few months' rest, and that you may ever be blessed, I remaia,

Yours sincersly and gratefully,
J. L. D.

The following experienee gives an inside view of the working of an intelligent colored mind, not above the ordinary. Our aim in publishing this and similnr letters is to give our readers impressions from first hnnds of the condition of things among the colored people. The *Southern Workman* has, we believe, better access to their real condition than any other pnper, through its eireulntion among the most relinble and disinterested class in their midst, and through the lnrge eorrespondence of the officers and teachers of the Hampton Institute with the grnduates of the past seven years, who are senttered through the Atlantic seaboard States.

NORTH CAROLINA, Sept. 14th, 1877.

DEAR SIR: After a long deley caused by being moneyless, I write you some lines concerning the present condition of the colored race in this end other counties of North Ceroliaa. Sir, it seems to me that the teachers are gettiag negligent. They seem to be interested as to how much they can get for teaching, and not how much good they can accomplish. Since the last election they have been restive and dissatisfied, and aow they seem to be interested about emigretiag to Liberia. The rich people of this county are very active in dissuading them from going to Liberia or any other country ; they seem to have a different spirit to that of the year 1866, when they were tryiag to persuede every colored maa and womaa off to Mississippi. The colored people put little or no confideace in the whites, they seem to thiak the white man is ever planning or executing schemes to their hurt. Wages are very low round about here this year—lower than they have been since the year 1869. The poor class of white people say the colored people are the cause of it, and colored people say the rich people have made an agreement to pay the laborer so much and nothing over. So each class is disposed to lay the blame oa the other. Herstofore the poor class of whites plead poverty as a reason for aot educating their childreu, but now they seem to have made up their minds that the constant drop is the one that wears the stone, so they have gone vigorously to work. I was engaged ia teachiag all the past winter ia the southern extremity of this county, but have aot as yet received any thing for aiy services as assistant teecher of the Peabody school, that I wrote you about last fall. The principal teacher failed to get aid from the people or the said Peabody fund, therefore I am aot expecting anything from him. Aad I did aot succeed in getting a place to teach this summer, save oas moath subscription school aear Brevard Station. The people as a general thing are interested about their farms, so much so, that you caa not urge them to assemble together for the purpose of literary or scientific improvement. I caaged a few of them to assemble on last Wednesday night with their childres, at the school-house where I have been teaching. I talked very plaia to them about educetiag their childres. I told them how that I believed that God would call them to accouat for aeglecting the educatioa of their childres. Also I offered my service as their teacher, this winter. They seid they would be glad if they could pay me to teach all winter. Have you eny second haad books that have heea used by the studeats at Hamptoa Normal school, that you would sell at a trifle ? I find it so difficult to get the parents of the childres to puy such books as they aeed for their childres, that I am at a loss to kaow how to teach them to read. So if you have aay cheap books, thet you would dispose of, they would be very acceptable. I am very aaxious to have them learn those things which are the more eppropriate. I wish to teach them what it is to worship God like people of erudition and not like the heathea. I was iavited to a prayer-meeting last Sunday evening; on reaching the house where the prayer-meeting was to be held, I saw quite a number of people gathered round the door; they soon begeu their worship, as they called it, by siaging the old familiar hyma, "Am I a soldier of the Cross." But it was aot very long before they had the house in the greatest uproar and about as ever was heard in their dancing-rooms. I know they will get angry at me, but I latend to get them together before long and tell them how they should worship God in a more quiet and easy meaner.

Dear teacher, you will have to excuse me for this careless writing to one of your staading, for I am in a hurry at present. You will please write at your leisurs and let me heer or read all the good news about the Hampton School aad teachers.

Yours truly,
G.

LYNCUBURG, SEPT. 11TH, 1877.

My dear General Armstrong:

From time to time I have been writing some notes oa the colored people, which I sow saclose to you aad leave it to you to decide whether it is worth while to print them ia the Workman. You know my opportunities for what Mr. Shelby's Sam called "bohservation" have been good, as I was born a slave holder, and have been surrouaded by negroes from my birth.

I notice that most people who write about the colored peopla treat them as if they were all alike, which is a great mistake. Like other people they are much the result of circumstan-

Consult the National Teachers' Monthly.

ces; those who had good chances for improvement as slaves, and especially those who were employed as house servants, or allowed to learn trades, being usually now far in advance of the plantation hands. And apart from these differences in education and trainiag, my observation leads me to believe that the slave-trade brought a wonderful mingling of tribes and races to our shores, and that it is quite as true that there are "Negroes and Negroes," as that there are other varieties in the human family. In this neigbborhood I have been struck with the appearance of some ex-slaves, who, while being quite black, have long, silky hair, finer features and more musical voices than their companions. These people are usually intelligent, and are called by the Negroes "Mollygaatons," having evidently some traditions of being natives of Madagascar.

I was speaking of this subject lately, to our neighbor, Mr. Lewis Armistead of Occidental tobacco fame, who has had large experience with the colored people as only negroes are employed in the tobacco factories, and he said he had often made the same remark himself, adding that his father had owned a Negro man of fine appearance, commanding mind and polished manners, evidently belonging to a superior race of men. Uncle Jack, though very black, had a well-shaped head and finely cut features, and was universally pronounced handsome.

He was the "head man" on the farm of his master, who was a Presbyterian preacher, in charge of two or three country churches, and in his frequent absences, much responsibility was thrown upon Uncle Jack, who was always found faithful to his trust.

Mr. Armistead required all his house servants to attend family prayers during the week, and all the slaves on the place to come to the Sunday morning service. Uncle Jack served his race as Methodist preacher, and his style was so much admired that white people frequently attended his church. In his master's absence from home, which his pastoral duties often made necessary, Uncle Jack was always asked to officiate at family prayers, which he did with much dignity, installed in his master's arm-chair, reading the Scriptures with admirable fluency and uttering such fervent petitions for every member of the household, especially its absent head, that tears were often brought to the eyes of those present.

Uncle Jack had a son, who showed such remarkable aptness for learning, being taught by his father and his master's children at odd times, that he attracted much attention in the neighborhood and an effort was made among the white Methodists to purchase the young man for the purpose of educating him as a missionary to Africa. His master asked $800 for him, and the church agreed to pay half the sum, if the youth could raise the other half himself. What a queer picture of humanity such a story presents. Perhaps an impartial observer might have suggested that the slave's master, and all concerned in such chattels as this embryo missionary, and not the savages in distant lands were the people who needed conversion. But the white Virginians of that day were educated in the belief that they were carrying out the Divine plan for civilizing and Christianizing a heathen nation, and such people as Mr. Armistead honestly thought they were doing God-service. Will they not be judged "according to their light?"

This case did not fail to attract the notice of the worst class of slave-holders in the county, who greatly resented the liberties allowed the young missionary, as calculated to sow the seeds of discontent among their slaves. But in spite of all difficulties the young negro did manage to pay his purchase money, and when examined for entrance to college was found surprisingly advanced, having been taught a great deal by the children of the family, and other young people in the adjacent village, who had noticed his ardent thirst for knowledge. After graduating and being ordained, he did at last actually sail for the land of his forefathers, where he was first professor, and then principal of a Liberian college. For a long time he corresponded with a Methodist paper in Richmond, and the letters of the Rev. Edward Morris were read with interest by many people outside of his church connection. Unfortunately for his people and the cause in which he labored, his health yielded to the African climate, and he died in the prime of life.

LETTER FROM JAMAICA.

What is being done for the blacks;—Day-schools, — Sundny-schools, — Denominational work.

KINGSTON, JAMAICA, *June* 13th, 1877.

My dear Sir:—

My time is so fully taken up with travel and official work, that I have not been able to command time, until now, to give you some idea of our efforts and success in our educational and Christian endeavors to uplift and civilize the masses of black and colored people of this beautiful island.

Until about eight years ago, the Government of Jamaica did little to educate the rising generation of the laboring classes, but for some years past it has put forth most praiseworthy energy to meet the great want of the country. The total amount spent in 1875 for aid in the work of elementary schools was £14,458 16s. 9d., and I calculate that an equal amount was raised by the schools themselves. The total number of children in the common day-schools of the country was 41,000 in 1875. Out of 555 schools that applied for government inspection, 462 passed that inspection, and received "pay for results." Under my general superintendence I have over 80 Wesleyan day-schools, in which we have nearly 6,000 day-scholars. These teachers are native, black and colored, mostly trained in the Island, and a considerable number of them have been in our employ for years, and would do credit to any of our ordinary day-schools in the mother-country; and they are a great help to us in our church work.

We have in our Sunday-schools nearly 9,000 *scholars*, and 776 teachers. Out of our schools have gone forth, for many years, numbers of young men to occupy respectable positions both in our towns and on our plants; tions. Of our present staff of Wesleyan ministers in this island, fully one-third are natives; and with regard to talent, character and religious power, they do, as a rule, hold their own alongside our European brethren.

We have, as one of the churches of Jamaica, over 16,000 church members, and they raised for general religious purposes last year, more than £14,000. The Baptists, Church of England, Presbyterian and other churches, are at work side by side with as in school and general Christian work, and their reports are equally cheering with our own. Of course we have much yet to do to overtake the work called for by the condition of from four to five hundred thousand people only a little more than a generation removed from slavery, but enough has been effected to give hope to your friends in America who are seeking to uplift the emancipated millions of the Southern States. Wishing them every success in so noble a work,

I am, my dear sir,

Yours faithfully, GEO. SARGEANT,
Chairman of District and General Superintendent of Missions and Schools for Wesleyan Churches of Jamaica.

WE PUBLISH the following extract from a speech of Col. Thomas Harding, Chairman of the State Democratic Committee of Georgia, as expressing the sentiment of a class ut the South. The Southern Democrats are pledged to the education of the negroes. So far, when they have had control, the course of free schools has run more smoothly than when their opponents have been in power:

"Educate these unfriendly blacks, and you teach them to seek a living without work; for a little learning unfits them for their true sphere —manual labor—and they will grow up to be restive, surly, and insolent, toward the whites. The carpetbagger and white radical have already inflicted grievous evils upon us by indoctrinating evil ideas into their woolly heads, and we should not join them in their unholy work of educating them to be lazy, trifling and insolent. Voting and free schools awaken in the idle young negro foolish and absurd aspirations, which will surely engender much trouble and evil. Education makes the negro fickle, unreliable and insolent; then let us not in future, waste our hard-earned money in bringing up a race which seeks to oppress and degrade us, while enjoying privileges which we confer. Let both races educate themselves, and each man his own offspring."

THANKS to the perseverance of the enlightened men of this State there is some hope for the passnge of a dog law by the next Legislature.

The poor people of both races and certain men who are devoted to sport are opposed to the measure.

Dogs are a concomitant of the extremes of poverty and of wealth, and are considered indispensable to the happiness of people of both classes. These two classes are, therefore, opposed to a law of which too much cannot be claimed as a means of restoring prosperity to this commonwealth. We quote a paragraph in this connection, from the *Norfolk Virginian*:

"Bedford County has received $3,557 from the dog tax, which, after paying various sums, for sheep killed by cura, for rewards on scalps of foxes and for cost of collection, leaves $2,700 in the treasury. If this tax were doubled and made to apply in every county in the State, we we would soon see flocks and herds upon our hillsides and in our valleys, along our watercourses, and upon our marshes; but we can never sell mutton or wool as long as the State is plagued, as she now is, with great armies of worthless dogs. The example of Bedford ought to be followed by every county within the State, and we hopo ex-Governor Letcher's bill will be adopted by the next General Assembly."

NEWS OF THE MONTH.

THE hundredth anniversary of Burgoyno's surrender at Saratoga was celebrated by laying the corner-stono of a monument on the battlefield, October 17th.

THE Egyptian obelisk known as Cleopatra's Needle, presented by the Khedivo of Eeypt to the British Government, and recently shipped from Alexandria, was lost in a violeat storm off the coast of Spain, the ship which was towing the huge caisson containing the treasure being forced to cut it adrift. It was, however, very fortunately found floating and rescued by another English vessel.

A gentleman of New York City has offered to contribute $100,000, the whole sum needed for the transportation of a similar obelisk which the Viceroy of Egypt has promised to give the United States, and Mr. Dixon, the English contractor engaged in removing Cleopatra's Needle to England,—a cousin of Mr. George Dixon of Hampton,—is prepared to undertake the transportation of the Monolith.

THE President's Message recommended army appropriations on the basis of an army of 25,000 men, and called attention to the benefits to the industrial and manufacturing interests of the United States by a proper representation of American industries at the Exposition at Paris, to be opened May, 1877.

RUSSIA seems to be getting a little ahead. Kars is again threatened. Both sides are suffering greatly from bad roads and weather.

THE 57th Annual Meeting of the American Board of Foreign Missions was held in Providence, R. I., October 5th. It was a large and interesting meeting and resulted in the raising of $81,000 on the spot, which more than canceled the Society's debt; $900 were further contributed for the famine sufferers in India.

SEPTEMBER 17th, an Eastern bound train on the Union Pacific was robbed at a lonely station by a party of masked brigands; $65,000 in gold were taken from the express car, and the passengers robbed of their watches and purses. Two of the robbers have since been shot, and $20,000 recovered from their persons.

THE fire in the Patent Office at Washington last month, proved very destructive; 87,000 patented models were lost, and the actual loss will reach $80,000 or $100,000.

THE September statement shows a decrease for the month in the public debt of nearly $4,000,000, and for the three months just ended, of $8,500,000.

CONGRESS convened in extra session on the 12th inst. Three new Senators, chosen to fill vacancies, were admitted, Matthews, of Ohio, Cameron, of Penn., and Cockrell, of Mo. The House was organized as usual by the Clerk. He stated that from Louisiana three sets of credentials had been received, but as only those signed by Governor Nicholls complied with the State law, he had placed those only on the roll; and that as neither of the two claimants from Colorado presented regular credentials, he had not admitted either, leaving the decision to the House, when organized. Samuel J. Randall of Pennsylvania was elected Speaker. The President's message, stating the objects for which the extra session was called, was received on the 13th. Objection was made to the admission of two members from South Carolina, but they were admitted next day.

A CONVENTION of colored people at Corinth, Miss., a few weeks since, to consider the project of emigrating from the South, was attended by some 4,000 persons, including 300 delegates from other States than Mississippi. The proposition to emigrate to Africa was not looked upon with favor, but the proposition to emigrate to Arizona, New Mexico or Texas was approved.

THE colored people of North Carolina are to hold a delegate convention in Raleigh on the 20th of October, to devise plans for their educational, material and moral advancement as a race, which, the call says, "are and should be at this juncture paramount to all other issues."

THE Spanish Government has paid to the American Minister $570,000, on account of claims for losses incurred by American citizens in Cuba through the civil war in that island. This amount is a part of what was awarded by the Spanish Claims Commission which met in Washington, in 1871.

GENERAL MILES, who was endeavoring to intercept the NEZ PERCE Indians under their chief, Joseph, in their retreat before the pursuing force of General Howard, encountered them on the 9th ult., on Snake Creek, in the northern part of Montana Territory, and surprised their camp, capturing many of their horses. The engagement was severe, and the troops had 64, killed and wounded. The Indians, having entrenched themselves, were besieged for five dnys, and finally, on the 5th inst. they surrendered, giving up their arms. They number, it is stated, about 350 in all, of whom 160 are warriors.

FROM the 5th to the 9th inst., excellent rains fell over a great part of the threatened districts of Northern and Central India. The autumn crops, wherever surviving, will be much benefited, and the spring crop sowing is thought safe. Emigrants from those districts are returning, and agriculture is active. From Madras it is stated that if the southwest monsoon prove good, the famine will end in four months, and relief will be necessary for that period. The subscriptions received by the 'Lord Mayor of London, for the sufferers by the famine, amounted on the 10th inst. to $1,700,000.

HON. J. F. QUARLES, colored, of Atlanta, Ga., has been appointed by the President, consul to Malaga, Spain. Mr Quarles went North after the war, and entered Geneva College in Ohio, where he remained two years, after which he graduated at West Minster College, Pennsylvania.

Many thousands of dollars have been spent in distributing *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introdneed to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts

ROSES,
WINTER-FLOWERING
PLANTS and BULBS, for Sale—very low.
For $1, I will send
8 distinct varieties selected Tea Roses, or
6 " " " " and 1 *new* variety.
Or 8 bulbs fine Dutch Hyacinths,
Or 20 bulbs, 10 distinct varieties of selected improved Tulips,
Or 100 bulbs fine Dutch Crocus.
All Guaranteed True to Name.
☞ Also on hand, a large assortment of plants, seeds, bulbs, and all kinds of florists' supplies for sale as low as anywhere in the United States.

THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

THE CELEBRATED

FLORENCE

SEWING MACHINE.

For Family use and Manufacturing purposes. The *best* in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its REVERSIBLE FEED enables it to sew forward or backward without stopping the machine—it being the *only* machine that can do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between SIDE FEED and BACK FEED machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe, odorless* and *durable* Oil Stove for all who want PURE, MOIST, WARM AIR in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

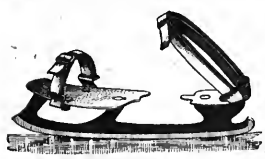
—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.



We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

THE HYGEIA HOTEL.

H. PHOEBUS, PROPRIETOR.

OLD POINT COMFORT, VA.

TERMS: Transient $3.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the Fortress Monroe and Baltimore Steamboats. Old Point Comfort is reached daily by the elegant steamships of the Old Dominion Steamship Company, from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the Bay Line of steamers. Time, 24 hours from New York.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The Hygeia House has been kept open for the accommodation of guests for the winter season for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 68°, 74°, 79°, for Summer; 70°, 76°, 80°, for Autumn; 45°, 44°, 49°, for Winter; and 46°, 52°, 65°, for the Spring months. —Open for guests all the year.

RUMFORD

Yeast Powder.

FAMILIES, HOTEL KEEPERS, FARMERS, MINERS, AND SHIP STEWARDS,

Will find this preparation superior to any other Yeast Powder they have ever used. It contains nothing but what is found in *Meat, Fish, Corn, Rice* and *Wheat*. Bread made with it is more wholesome and retains its freshness longer than when by any other method; it is *quick, sure* and convenient, the dough requiring no time to raise, but should be placed in a quick oven as soon as mixed.

There is economy in it, as a large percentage of Flour is saved by using the **Rumford Yeast Powder**, and it is guaranteed to keep good in any climate. In making Cake fewer eggs are necessary if a little of this Powder is used.

For Sale by all Grocers.

Manufactured by the

Rumford Chemcial Works,

PROVIDENCE, R. I.

VOL. VI. HAMPTON, VA., DECEMBER, 1877. NO. 12

THE DOG IN THE MANGER.

THE DOG IN THE MANGER.

The fables of Æsop the Athenian slave, written for Grecian edification five hundred years before Christ, will doubtless continue to be read in all civilized languages as long as such exist.

Among the most familiar, is the fable of the Dog in the Manger, that unamiable cur which barked and snapped at the horse every time he put his head down to the oats, until the insulted animal exclaimed —"Why are you so unreasonable. You do not eat oats yourself and yet you will not let me eat them!"

We have all no doubt met and suffered from dogs in the manger, who defraud others of their rights without the poor excuse of wanting them themselves, but from simple maliciousness or selfishness. If a man—or any number of men—resolve to wor't no longer at their old rate of wages, they have no doubt a right to do so, though they may soon see the folly of it. But when the strikers force other men by threats or violence to join them, and oblige their helpless families to starve with them, they are just dogs in the manger, and so you had better say to any who ever ask you to join a strike.

Such are the cross-grained, uncomfortable people who make their homes torture cages for others without apparently taking much enjoyment in them themselves. Such are the fretters and croakers of this world, who, like the frogs in the ditch, drown all the music of the air, and silence the singers without contributing a single melodious note themselves. Such is the bully—no other name so well fits him—who with great brag and bluster and barking worries his betters into submission.

Of course, all these dogs in the manger ought to be whipped out of it. The nobler creatures they presume to insult, should take them up by the neck, give them a good shake and drop them out into the barn-yard. It would not be a hard task, for the bully is always a coward. The trouble is, that the dog in the manger is usually a thick-skinned beast, and chooses his victims carefully from the most delicate and sensitive natures, whose very superiority of organization makes them suffer the more keenly, yet suffer all rather than retaliate in kind. The only consolation is that some day or other the dog will snap at the wrong animal and receive the punishment he deserves.

Business Manager.

HAMPTON, DECEMBER, 1877.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

THE result of the local elections this fall is not encouraging so far as this immediate vicinity is concerned. Here, as throughout the State, there has been apathy; from a-half to two-thirds of the voters of both parties not caring to vote.

The colored vote for State Representative and Senator easily outnumbered that of the Conservatives. This district will be represented in both houses by men of intelligence but of no moral standing. The negro does not realize that by electing such men he is doing himself a serious injury.

But his political educators have, since his enfranchisement, taken no pains to impress him with anything but the duty of voting the regular ticket, and the horrors of the rule of the opposite party; this they succeeded in doing at a terrible discount of his future political prospects, which are, from year to year, growing beautifully less. His idea of his rights is clear, of right and responsibility, very dim; but the latter the average colored man does not take into account. The ballot in his experience is rather a weapon than a solemn duty. It pulls down and sets up; it is, to him, force and nothing more.

He is not to blame for this ignorant view. Among the colored people there are many who see the folly of ignoring character and there is a healthy popular preference for good representative men, but not enough to prevent a few wire-pullers from having their own way. Yet excellent men have sometimes been chosen to represent them. The good men among them are often in principle opposed to those they vote for, but the dread of disloyalty to party is too much for their scruples. The whites, however, appear to have no more political independence than the blacks.

Only as ideas are diffused, as they are able to read and think for themselves and have a set of clear-headed, educated, unselfish men as leaders, will they be likely to do themselves more good than injury by their votes. In their present condition they are liable to the saddest political errors and to reap, and the country with them, a harvest of evil results from the moral blindness which is their misfortune and not their fault.

THE NEW YORK TIMES takes exception to the words of President Hayes when at Richmond in regard to the Superior advantages of the South over the West; as follows:

"The cheap lands of which the President spoke at Richmond are, for the most part, entirely exhausted or impoverished lands requiring skill, capital and time to restore them to productiveness or heavily timbered lands requiring arduous and protracted toil before being brought into cultivation.

Neither of these conditions is suited to the average farming emigrant. He knows, perhaps, very little about scientific agriculture. He has no money to spare for fertilizers. He cannot afford to wait years for a crop. On the other hand, he is unfit for the crushing drudgery of clearing forest land, and he cannot hire hands to do it for him. To such an one of either class Virginia presents few charms. The opportunities it offers are not adapted to such as he. Here it is that the West outbids the South and will for many a year to come. The prairie with its rich virgin soil, its easy cultivation, its quick and remunerative crop offers the very conditions sought by the average emigrant."

A gentleman who has had long experience in manufacturing in a northern city decided that a country life was better for both health and profit; that the South from its climate and proximity to market was preferable to the West, and after studying most carefully the resources of the South, engaging actively in the purchase and sale of produce for months in order to ascertain the most profitable lines of production, he has at length purchased a valuable farm in Elizabeth City County, Va., in which the town of Hampton is situated, confident that he has the best possible vantage ground for agricultural success.

While the whole of tide-water Virginia is by no means attractive, it yet contains many farms of great value and capacity for sale at moderate prices, the yield of which can be sent direct by water to the leading cities on the Atlantic Coast. Both these lowlands and the mountain regions of the State are adapted to sheep husbandry. As soon as the party in power shall possess the wisdom to make a dog law, this industry will take a front rank. Lambs are raised in our open winters with little trouble, and bring from $6.00 to $7.00 apiece in New York City; freight being about 50 cts. apiece. These worn-out lands can be made to produce grass. Thousands of bushels of ale-wives can be purchased on the shore at about twenty cents a bushel and will at once bring fine corn crops on the poorest soil.

At the Hampton Institute, over 6,000 lbs. of pork and an equal quantity of beef are produced yearly from the grass and grain made on the school farm, while the land is growing richer every year.

The open secret of success in farming in this region is stock raising. Without capital this cannot be done. The poor emigrant has but little to entice him, but the man of enterprise with moderate capital will find here a field for his resources such as the West cannot afford.

THE Anniversary meeting of the American Missionary Association of New York, which was held at Syracuse Oct. 23d, 24th, and 25th, was significant as an endorsement by the real workers of the old Abolitionist party of the Southern policy of President Hayes. The hearty accord of the audience, expressed by frequent applause, with such sentiments as the following in the address of the Rev. Washington Gladden, showed the drift of sentiment—though by no means that of all who were present.

The difficulties in the way of peace in the South, were found in ignorance and hate. A large proportion of the colored people cannot read or write, and from such masses come corrupt voters. That was the trouble with Louisiana. The South wanted school-houses, and not regiments of soldiers. When the negro is educated, on that day shall lie down in the same grave the bull-dozer and the carpet-bagger. The olive branch is the only weapon that will conquer a lasting peace for the South. He thanked God we had a man at the head of the Government who carried his weapon in both hands—a man who fought with both hands when necessary, but who was now trying to make peace with all his might. If the Republican party can not follow such a leader as this, then good-bye to the Republican party. If the American people cannot support such statesmanship as this, God help the American people! Returning to the subject of the colored race, he said the future of the negro is bound up in the future of this country. Timely action may turn the course of this nation into a channel of great good.

The earnest dissent of a few was no more manifest than the cordial assent of the great majority.

While Mr. Wm. Lloyd Garrison thinks that the colored people have been "betrayed into the hands of the enemy," and bitterly denounces the President, Rev. Dr. Strieby, a veteran Abolitionist and the representative and head of the greatest organization in the world for the redemption of the negro race, cordially endorses President Hayes' policy, for he sees that real work for the freedmen is more hopeful in the present condition of things than it has ever been before.

Those who regard the welfare of the ex-slaves as dependent directly on the use of their political power may well weep, for the ballot is nearly useless in their hands; those who see that the ballot is secondary to the improvement of the race in mind, morals, and condition, may be joyful, for this work is flourishing better than ever; those who are helping in this work of improvement are, to-day, through their contact with the field in all its aspects, finding frequent and increasing signs of a better feeling in the South; they have won the respect of all by their ten years of steady effort. Good men are finding each other out and the lines between them are becoming dim. They do not agree historically. The ex-slaveholder may claim that American slavery was a precious boon to the African, but many of this class will join hands with the Yankee school-teacher in efforts to elevate the freedman.

THE death of Senator Oliver P. Morton of Indiana, is another break in the ranks of the famous "War Governors"—such as Buckingham of Connecticut, Andrews of Massachusetts, Morgan of New York, Curtis of Pennsylvania, Denison of Ohio, Sprague of Rhode Island, and Yates of Illinois,—who upheld the pillars of the State at home, while the armies they had sent into the field were fighting for the Union. Governor of a border State, threatened continually with invasion and faction, Gov. Morton not only kept it in the Union, but made it conspicuous among the States for its prompt and more than adequate response to the President's calls for troops. The enthusiasm with which these men rushed to arms was kindled by his eloquence and supported by their knowledge that their Governor was doing everything in human power for them and for their families. No troops were better cared for than the Illinois troops. Homes for soldiers and soldiers' families were established at Indianapolis. When a regiment needed on the field had gallantly offered to start without their bounties, Gov. Morton raised the money on his own securities and paid them. His call upon the women of the State for aid for the soldiers was the first appeal of the kind that was made, and the Sanitary commission was largely indebted to his active and sympathetic efforts.

If greatness is measured by the ability to meet a great emergency, he certainly rose to greatness in the brilliant stroke of state with which he defeated the treasonable intent of the Legislature of 1863 to tie the Governor's hands and prevent his aid to the army by a bill depriving him of all control of the military power and forces of the State. The Republican members withdrawing to break up the quorum, as the only means of preventing the passage of the bill, by the forced adjournment of the Legislature, Governor Morton was left absolutely without means of carrying on the Government for the next two years, no appropriation having been made. He threw the case at once before the loyal people of the State—and asked for funds. Banks and private individuals responded promptly. To make up the deficit he forwarded from the United States Treasury $250,000, which was granted under the act to form and equip militia in States threatened with rebellion. Of this sum, he was able to return nearly half to the Treasury. His accounts were audited by a committee of the next Legislature including members of both parties, and every item approved. His conduct was again reviewed in 1876 on a charge of fraud, and again triumphantly vindicated.

It shows how fast the war is slipping away from us into the past, and new issues taking the place of old ones, that this brilliant record seemed awhile forgotten in the cry of "bloody shirt," and "rag money"—raised against him in both parties, in the campaign of 1873. His earnest speech in Indianapolis reviewing the history of Ku-Klux oppression in Louisiana, was charged with a purpose to revive and foster sectional animosities, and his endorsement of the currency bill, which but for President Grant's veto would have increased the greenback circulation to $46,000,000, was deplored by all friends of solid money. He afterward reconsidered his views of inflation, and in a speech during the last Presidential campaign declared that he should stand by the Resumption Act of '75. As for any sectional animosity, while he believed in dragging oppression to the light and making short work with the Ku-Klux, he heartily approved the President's Southern policy, and his latest reference to public affairs was in endorsement of it.

Long after the swell that followed the storm of civil war has ceased to agitate the surface of national feeling, his name, with those of the other noble "War Governors," will shine as the stars above the horizon of American history.

We think sometimes that such men are raised up for the occasion—the truth is rather that they are raised up *by* the occasion, as when a forest of oaks is cut down, another of pines spring up in its place. The seeds were all there in the ground, waiting only the favoring circumstances to call them into life. So the great needs call forth the great men, and in this fact is the world's hope for the future, and support when the heroes fall.

THE LEE "Gleaner and Advocate" of Mass., contains a tribnte to the memory of Mrs. Mary Shannon, wife of Mr. Wellington Smith of that town, which arrests our nttention, not only by the sadness of the circumstances but because it is a firewell to one whose interest in every good work was as genuine as it was quiet and unostentatious. Her interest and that of her husband in the work at Hampton has for ycars been both cordinl and substantial.

THE Rev. Henry M. Field, Editor of the New York Evangelist, in his valuable and interesting articles entitled "Around the World," gives the following account of the labor system in one of the Dutch Colonial possessions in the East Indies.

Middle Java is very rich in sugar plantations. The production is greater, I should suppose, than that of the West Indies. One manufactory which we visited was said to yield a profit of $400,000 a year. Nor is this the product of slave labor, like the sugar of Cuba. Yet it is not altogether free labor. There is a peculiar system in Java by which the government, which is the owner of the land, in reating an estate to a planter, rents those who live on it with the estate. It guarantees him sufficient labor to work his plantation The people are obliged to labor. Their labor is exacted partly as a due to the government, amounting to one or two days in the week. For the rest of the time they are paid small wages. But they cannot leave their employer at will. There is no such absolute freedom as that which is said to have ruined Jamaica, where the negro may throw down his tools and quit work at the very moment when the planter is saving his crop. The government compels him to labor, but it also compels his master to pay him. The system works well here in Java. Laborers are kept busy, the lands are cultivated, and the production is enormous—not only making the planters rich, but yielding a large revenue to Holland.

MR. WILLIAM LLOYD GARRISON, the most famous champion of the enslaved Anglo African, writes to the New York *Times* regarding the President's course; we quote a few of his sentences:

"As to his Southern policy, I was constrained to regard it as totally at variance with all his fair spoken words and pledges, a deplorable betrayal of a most sacred trust, a discount upon laflexible loyalty, and a bounty upon rebellious usurpation, giving the sheep into the custody of the wolves, on the lasnc assumption that the latter would lose all their taste for blood, provided all shepherdly watchfulness was withdrawa, makiag a 'consolidated South,' wherela the virtual disfroochisement of every colored citizen would be ruthlessly enforced, aad every white Republican be driven to the wall, and at the next Presidential election surrendering the National Gomeat ia to the hands of those who still ostentatiously glory in their rebellious uprising to destroy it. I am more deeply convinced than ever, if possible, that wq are betrayed into the hands of the Philistiues; that the President, however 'amiahlo' and 'well-intentioned,' has not those qualities essential to meetiag a crisis like the present; and that when he talks of his 'policy,' it means this, and only this—absolute surrender to the unrepeutant, merciless, aad haughtily-defiant spirit of rebeldom—to the exclusion of the General Govcrnment from any clsnce of constitutional interference in any part of the South for the protection of those whose rights of citizenship are cloven down by a bloody process, and who may venture to approach the polls only at the peril of their lives. In withdrawiug the troops as he did, he knew with absolute certainty that both Nicholls and Hampton would instantly, by the assistaoce of a murderous minority armed to the teeth, leap into the high places of trust, and dominate the State. He knew, or was inexcusable for not knowing, that his act would be followed by frnatic yells of rebel jubilation on the one hand, and on the other by groanings unutterable of the defenscless colored and white loyalists abandoned to their miserable fate."

There is not a level-headed Northerner or loyalist in the South, independent of government patronage, and qualified by a wise and proper course of conduct to judge of the situation, who would deny that the foregoing words make a ridiculous travesty of the general facts of the ease. There is local oppression; there are those whose groanings are, by reason of severe treatment, unutterable, and no doubt something like "rebel jubilation" has been heard in the land. We are, by our frequent correspondence with the 200 graduates of the Hampton Institute scattered over Virginia and the two adjacent states, in a position to know something of the condition of one quarter of the ex-slave population of the United States. They are governed by their old masters and their prospects are better than ever, especially in the matter of education.

Nearly five years ago the Field Secretary of the American Missionary Association, who had just returned from a tour of inspection through South Carolina, Georgia, Alnbnma, Tennessee and other states, assured us tbat when the whites were in power the work of that Society—managed by the most devoted Aholitionists—was more hopeful than when the Republican element controlled. It would not have been, in his opinion, in the tben condition of the public mind, safe to have stated this publicly. But it was true; and is now more true than ever.

Those friends of tbe negro who realize his real condition, tbat responsibilities have been thrust upon the race for which it is ill-fitted and that the practical duty of the bour is, not so much to make a hopeless struggle for his complete possession of all his legal rights, as to justify his title to them by his own merit, are not only the friends who alone are of much use to him, but the great majority of them rejoice in the President's policy. They did not believe with Fernando Wood, who, in his speech in 1861 in New York, would send the soldier South with a sword in one hand and an olive branch in the other, but would have him fight with both hands; and now they would make peace with both hands. They know that the South is not all hate; that there is a progressive element there. The late Governor Morton, in his recent speech in Oregon, admitted its existence, but claimed that it was powerless as a minority.

Doubtless it is in a numerical minority, but it is made up of the best men in the South and gains ground daily. It is built up, not by parties and newspapers, but is the product of experience, thought and necessity; the logic of events pushes it forward; the honest, working men in the South know very well the folly and the wrong of cruelty to negroes and mean to do justly by them. They have some peculiar views as to the black man's place, and shudder at the shadow of social equality that they see in civil rights. They do not like his present status, but are disposed to make the best of it. Their sentiment as to the negro is by no means what the latter's Northern friends wish it were, but it is improving; and it is because things are becoming better, and, because the President's policy is helping to make the relations of the races and the general condition of the South better, that so many of the oldest and stoutest champions of the black man believe in the President's policy.

MR D. BARKER, florist, Virginia, formerly of England, has established an attractive greenhouse in Norfolk, Va. (See advertisement in our columns.) His success is shown in the following extract from the *Gardener's Monthly*:—

TUBEROUS BEGONIAS.—Mr. D. Barker, Norfolk, Va., writes:—I have this day mailed to your address a box of the "tuberous-rooted Begonias," which I hope will reach you in safety.

[These were beautiful, warranting all we said of them in our last. It is so seldom that our own people take in hand improvements, that when we find one going along and keeping pace with Europeans in floral culture, we are glad to give every encouragement. We noted several collections of improved tuberous Begonias in England last year, that were considered "extra strokes of luck," but these of Mr. Barker's were the equal of any.—ED. G. M.]

GEORGE DIXON wishes us to inform the friends of the freedmen that he continues to help them to find a market for their Oysters. Many poor men are getting them, but their families are suffering because they cannot dispose of them. They are of very good quality this year. The shell oysters are sent out in barrels; opened oysters in kegs containing from one to five gallons, or in cases (hermetically sealed) holding one or two quarts. Persons wishing to act as agents must apply to GEORGE DIXON, *Hampton, Va.*

WE GIVE below an account of the surrender of the famous Indian warrior, Chief Joseph, from the Chicago *Inter-Ocean*, which will be gratifying to the many friends of General Howard:

THE SURRENDER.

"Perhaps the greatest misrepresentations current have related to the surrender. It has been generally reported that General Howard did not arrive at General Miles's camp until several hours after Joseph's surrender; it is also stated that Joseph contemptuously refused to surrender to Howard, while willing to give his arms to Miles. The facts are these: General Howard had sent a courier from Musselshell Creek to General Miles, then near the mouth of Tongue River, telling him just when and where (within six miles) Joseph would be likely to cross the Missouri, and directing Miles to intercept him at that point. General Miles sent back word asking for nine days to get ready and in position, and requesting General Howard to "slow up" accordingly, so as to keep the Indians back. This was done. The battle was fought in the Bear Paw Mountain. General Howard, with thirteen of his men, arrived at the scene of action twenty-four hours before the surrender. Joseph stubbornly refused to surrender, and afterward declared that he had no idea of surrendering to General Miles until he heard Howard had come up. And he did not decide to surrender until General Howard's interpreters went over to Joseph's camp, and, in General Howard's name, demanded the surrender. And when the conquered chief with his men came into camp he first offered his arms to General Howard, who, with very extraordinary generosity not often witnessed among rival army officers—and in spite of the fact that Howard was the ranking officer, and Miles had only done what Howard suggested, and, after a 2,000 miles pursuit, enabled him to do—declined to receive them, at the same time waving him to General Miles. The jealousies of army officers are well known; in striking contrast this instance of extreme disinterestedness and generosity is deserving of recognition. Probably very few would have done as General Howard did; we are not sure it was quite the wisest thing to do; but he may be allowed to be his own judge on that point.

"The facts are as here stated. We give them only in the interests of truth and justice. Generals Howard, Miles, Sturgis and Gibbon have each done well. Absolute bravery, conjoined with heroic endurances, was never more signally illustrated. That an army, shamefully left by their country to go nine months without pay, should have served their country with such sublime devotion, is a wonder and a cause for the highest admiration. Heartily to acknowledge it is now the least we can do."

A TEACHER from Ohio, employed in Memphis, Tenn., writes to the *Educational Weekly* as follows:

"I expect to return to Memphis next week, when, with your permission, I shall take it upon myself to send you such information as will enable you to see both sides of the Southern question. Pardon me if I say, that, until last week, your remarks upon that subject have been 'one-sided,' the fault no doubt of your sources of information. All the 'cons' have been furnished you, and none of the 'pros.' The South, as far as her means permit, is doing well for the colored part of her population. I have been in Ohio now six months, and my observation here goes to prove that the colored man is as well if not better off there than here. He holds important offices and fills responsible positions sometimes in the South, as I can prove by furnishing names, if necessary. I know of no such cases here. They have their own schools, provided from the public fund, their accommodations, ample and commodious, their teachers as well paid as our own, and all under the care and direction of the same school officers. They are not admitted into the white schools—true; neither are they in Columbus and Cincinnati, two boasted educational centres. Nations do not outgrow prejudices in a day, nay more than individuals. In time all will be well. Memphis is doing all she can, and she is in nowise ahead of her sister cities."

WHY SOILS DETERIORATE.

It is a fact, evident to us all, that the soils of our country have been and now are deteriorating from excessive cropping. In proof, take our own section, Western New York, and compare the fertility of the soil, now, with forty years ago, and what is the result of the comparison? This season we have an average crop of wheat as compared with forty years ago, but this is an exception of one year in ten, caused by a most favorable season. If the soil does not deteriorate by cropping, why this change? It is simply because it has become exhausted by continual cropping without adequate returns to the soil.

Why do we not read of the Geneses wheat and flour in the city market quotations to-day? Simply because the impoverished condition of our farms is allowing newer States with their virgin fertility to take their place. My experience has been that any soil will deteriorate without an adequate return for the elements which are taken from it. Take, for instance, Michigan soil that has been considered inexhaustible, and no thought was taken for the morrow.

The question arises, how are we to renew our soils and make the straw stand as firm, with heads bowing to the ground, as it did forty years ago? There are four ways apparent to me. First, by deep culture; second, by an appropriate return in the shape of fertilizers for exhaustion by cropping; third, by a judicious rotation of crops, and fourth, by following nature's laws in renewing by appropriate rest.

My idea is that the six year rotation is the best for the objects in view, for the following reasons: First, we plow a three-year-old sod for corn, in the spring, applying hill fertilizers, together with benefits of sod to secure a crop, plowing from four to seven inches according to the nature of the soil. The next spring, we have the corn stubble to turn up for oats or barley with the benefit of old sod for crop, plowing about the same depth as for corn. Immediately after harvest plow from five to twelve inches for wheat, plowing under all the manure made from the farm the foregoing year, if coarse, but if in condition to work in, by all means apply to tha surface, for it will make the wheat stool more readily in early spring and insure a good catch for the grass seed. And here is an important consideration with me and the key to the whole question: Secure your catch of grass seed, for the old German adage is, "No grass, no stock; no stock, no manure; no manure, no crops."

Deep and thorough culture should be aimed at in the preparation for wheat because wheat requires it, and it prepares the ground for the grass crop also. I allow the land to remain in grass for three years. This gives a rest corresponding with the three years of grain crops. I usually mow the first two years, allowing the third for pasture. By the fourth we have a good sod for corn.

Supposing, to illustrate, we take a farm of 100 acres and lay it out six fields of sixteen acres each, leaving the remaining four acres for orchard, buildings, and the like; we see we always have a field in order for the leading cereals,

—*American Rural Home.*

"SPEAK A KIND WORD TO ME."

A man once saved a very poor boy from drowning. After his restoration, he said to him:

"What can I do for you, my boy?"

"Speak a kind word to me sometimes," replied the boy, the tears gushing from his eyes, "I ain't got a mother, like some of them."

We never injure our own character so much as when we attack that of others.

TELL THE BABY A STORY.

Tell the baby a story?—
What shall it be about?
Not about "Jack and his glory,"
That is a trick worn out;

"Beauty," and "Cinderella?"
Oft have I told them o'er,
And every time she has them,
The baby asks for more,

Till I'm tired myself of hearing
The twice-told tales I tell,
Though, perhaps, if I were Baby,
I'd like it just as well.

But the baby wants a story—
"One that is truly true,"
And I've one with age that's hoary,
But always sweet and new.

The story of the Christ-child,
And His wonderful, beautiful birth;
How shining down through the Heavens,
He came to live on earth,

And help the little children
To find the pathway back
To His home in the loving Heevens,
Up His glorious, shining track.

And so we all must thank Him,
On this Thanksgiving Day,
And give him a gift for Christmas.
What shall it be, you say?

He gave Himself to the children
Their Best of friends to be,
And he said, Forhid them not to come
And give themselves to me.

And He left Hia poor behind Him—
What to them have we given?
For, Whetever ye give to these, He said,
Ye give to your Lord in Heeven.

H. W. L.

CHRISTMAS CAROL.

BY JAMES RUSSELL LOWELL.

"What means this glory round our feet,"
The Magi mused, "more bright than morn?"
And voices chanted, clear and sweet,
"To-day the Prince of Peace is born!"

"Whet means this star," the shepherds said,
"That brightens through the rocky glea?"
And angels answering, overhead,
Seng, "Peace on Earth, good-will to men!"

'Tis eighteen hundred years, and more,
Since those sweet oracles were dumb;
We weit for Him, like them of yore;
Alas! he seems so slow to come!

But it was said, in words of gold
No time or sorrow e'er shall dim,
Thet little children might be bold,
In perfect trust to come to Him.

All round about our feet shall shine
A light like that the wise men saw,
If we our loving wills incline
To that sweet Life which is the Law.

So shall we learn to understand
The simple faith of shepherds, then,
And kindly clesping hand in hand,
Sing, "Peece on Earth, good-will to men!"

For they who to their childhood cling,
And keep their nature fresh as morn,
Once more shall hear the angels siug,
"To-day the Prince of Peace is born!"

Teachers' Table.

PLEASANT SCHOOLROOMS.

If you weat to civilize your children, make your schoolroom beautiful? "How een I do that?—Look at these black walls—these rough beneches—that rusty stove, that crooked stove-pipe, those dingy windows, this broken floor. Whet can I do to meke *my* schoolroom benutiful!"

Soap, water, and whitewash are the fairies to help you. Can you manage to get these? Then enlist the children's help. They will think it fun. The benches can be cleaned. The walls whitened, the stove polished, the pipe straightened, the floor mended and washed; the windows washed, and the rubbish cleared from the yerd,—all in one Saturday if you have hands enough. Tell them to coue with very clean hands and faces and clothes next Monday in honor of the occasion.

How proud they will be of "our school room"—You will have better lessous all the week, and you will teach better yourself.

Ornaments, pictures, mottoes and flowers. These ere the fairies to call in next. Now you are in despair. You have no money for such things with your reduced salery—uncertain at that. Wait a hit. Mrs. Nature keeps a cheep store in the woods. Autumn leaves, ferns, mosses of all kinds, grey hanging festoons, eoral brenches, silver cups, emerald velvet. She has acorns too, trailing vines, scarlet pertridge berries, holly and mistletoe, and vases and brackets of tree fungus. Mrs. Nature knows how to dress up her school-room, and she doesn't forget the fresh air and sunshine. That is the reason the children like her school-house better than yours. You had better borrow some of her notions.

Invite the children to go with you next Saturday morning, and bring home a store of beautiful things. Let them bring their dinner to the school-house, so you all can have the afternoon for work.

You will have plenty to do making and hanging your moss wreaths and festoons, and training your vines, planting them in good rich earth from the woods, in anything you can get for the purpose—any tin can, broken pitcher, or wooden box will do, and can be entirely concealed by mosses and mossy branches. The vines will be very lovely on your white walls, or around your clean windows.

Lay your autumn leaves and ferns carefully between newspapers or in books, for pressing under your trunk. In a couple of weeks they will be dry enough to use, and will keep their color quite well, if you change them into dry pepers every day or two. You can gum them, or sew them onto paper in wreathes or groups like bouquets, and there you have lovely pictures for your walls. Frame them in grey moss, or well-dried green moss. Or you can festen them in bunches on the walls, with small tacks or even pins, or fasten up against the well one of those pretty brown vases, you find clinging to the sides of old trees, and fill it with a gay bunch of your leaves.

TELL THE BABY A STORY.

I have laid out work for you for several Saturdays. All the better. You and the children will enjoy it, and get better acquainted, and your influence will increase, and you will learn a great many interesting things in Mrs. Nature's school-house.

If you bring home more from the woods than you can use, let the children take the pretty things home.

I might make a longer list of ornaments, quite within your reach. For Christmas, of course, you will want holly and evergreens. If you get hold of a pretty picture from some illustrated paper, cut it out for your schoolroom. Fasten it up and frame it with moss or sticks with the bark on. Very pretty rustic frames you can make with no expense but tacks.

With such a pleasant school-room, of course you will have to be neat and clean in your own dress.

The more you let the children help, the better it will be.

Try the plan, and let us know how it works.

INDUSTRY is the foundation end the evidence of civilization. The sevage will not work. All men are naturally lazy. The mind alone produces industry.

The school of the pedagogus cannot teach occupations; but nevertheless it can prepare children for occupations. It can teech principles and form habits which will prepare each child for life, as the house-joiner's tool prepares each piece of material for its place. The first work of the teacher is to destroy laziness. Though natural, it is criminal in boy or man. In its last analysis it is a went of self-determination. Under it man resigns his selfhood, becomes drift, insensate metter. It is contemptible, and destructive to society. And unless it be overcome, education is impossible, as well as future usefulness. Good teaching begins by presenting something that awakens the mind and unconsciously excites activity; and it ends in the establishment of active habits.

(*For the Southern Workman.*)

A HAWAIIAN LEGEND.

BY ELLEN H. M'CULLY, OF HONOLULU.

Kawakawa was a native of the Sandwich Islands. Born in the reign of Kamehameha I, he was a lad of eighteen years when the first missionaries arrived in the Islands in 1821. After the Hawaiian language had been reduced to writing, and books had been printed, he learned to read. When I first knew him he was an old man nearly seventy years old. He appeared on the farm at this time and took his place among the hay-cutters. The short, thick grass which covers many parts of the Islands can only be cut by the man or woman sitting on the ground and using a butcher's knife, a hatchet or a spade. After drying it, the cutter ties it in bundles, and is peid by the bundle. This work was suited to the strength of Kawakawa's years, and he proceeded to establish himself as a regular tenant of the farm by building himself a house. It was made of the long rushes growing on the farm, tied to a light frame. It was innocent of windows, and one low door admitted its owner to its one room. This room was like the average Hawaiian home. Covered by mats made of rushes, or screw pine leaves, one corner was devoted to the calabashes containing the food; another corner with its pile of mats denoted the bedroom; while a line hung with clothes, across another corner, served as clothes-press. Hawaiians do not use chairs, and the room was not cumbered with them. In this hut, set without the slightest regard to any point of the compass, or to the fence line near by, the old man lived in what was to him great comfort, with his old wife Kalawaiie.

Kawakawa was a decided character in his way. He was a short, thin man, stooping a little as he walked. His eyes were small and deep set, and the thin lips of his large mouth were always tightly closed. The habitual expression of his face was one of dignified gravity. The old man had three things among his small earthly possessions especially dear to his heart: These were a yellow wooden chair, an old-fashioned beaver hat and a black broadcloth dress coat; these last the cast-off garments of his master. Kawakawa had an inborn love of ceremony, and he made payday a ceremonious occasion, and on these days he was exceedingly attentive to his toilet. After his hay had been counted each Saturday, he went to the nearest water and gave himself a thorough bath. Going then to his house he dressed himself in the only white shirt he owned, a white vest, leather colored pantaloons and his dress coat. The addition of a stout pair of cowhide shoes and his heaver hat to this toilet, and he was ready for the ceremony of receiving his pay. He seemed to regard the whole affair something in the light of a solemn prayer-meeting. His shoes were evidently a trial to the old man. Accustomed to go barefooted except on dress occasions, the hard, stiff shoes made his feet ache. Sometimes the pain overcame the pride and delight he took in the wearing of these shoes, and then he would take them off and carry them in his hand, tied by their leather strings. When all the hay was in, the cutters went up to the master's house for their pay. Kewekawa's fellow-workers sat or lay on the ground while waiting, talking and laughing and smoking, sometimes playing on the Jewsharp or otherwise yielding to light behavior, but Kawakawa's dignity did not lend itself to any such frivolous conduct. Bringing his yellow chair under his arm, he put it down in a convenient place and sat down on it with an air of grave satisfaction. He engaged in conversation to a limited degree with the older and more sober minded of the company, but entirely ignored the gayer ones, and their untimely remarks and laughter at his appearance and position.

When Kawakawa had been on the farm a short time, a trespassing hog, the mother of a fine litter of pigs, came to an untimely end, and her young were divided among the people on the farm. The smallest, a forlorn, sickly little thing, fell to the lot of Kawekawa and his wife. With a great deal of care they nursed it up, giving it ten to drink and wrapping it in a warm blanket till it came to its full strength. This pig, named Manawahi, a gift, constituted the third member of the old man's family. There was a fourth and last, and this was a chicken. The chicken came into his possession on this wise. The female of the only pair of turkeys the farm owned took it into her head to increase the stock. She had but one egg in her possession on which to begin operations, but this seemed enough to her to warrant the effort, and she set about it. But Lui Yong the small Chinese steward was not of one mind with the turkey, and finding a hen's egg he slipped it under her that her time and patience might have larger results. In three week's time a chicken appeared, and it was given to Kewakawa's care, lest if left under the turkey it might seduce her from any further care of her own egg. This pig and chicken took the place of children to the old people. Every Sunday the whole family might be seen wending their way to Kawaihao, the large stone church nearly two miles distant. Kawakawa carried the chicken under his arm while the pig followed closely on Kalawaiie's heels. Occasionally Manawahi stopped to investigate some tender weed growing by the weyside or otherwise lent himself to mischief. Kalawaiia missing the patter of bis feet, would turn and remonstrate with him and call him to come along. Manawahi plainly showed that he heard and understood, but was not ready to obey. After repeated calls, however, he would shake his head impertinently, and then run to her and follow gravely along till his curiosity was again aroused. During church time the chicken sat quietly and contentedly on the old man's lap, only meking a peep now and then to express her sense of comfort, but Mnawahi was not so well-behaved, and at last he became so noisy, the deacons suggested to Kawakawa that he should leave him at home. In course of time the chicken disappeered, and the most anxious search failed to discover her sepulchre, but it was strongly suspected to be the pot of some of the light-fingered people on the farm. Manawahi's end was even more inglorious. His mind seemed bent on doing evil, and his bad behavior at last estranged the affections of his foster parents, and he was sold for the humiliating sum of two dollers and a half. He was then killed by strangulation, and baked, a victim of his evil habits. Truly a sad end to follow such excellent instruction!

In course of time Kawakawa's health failed. The Yeoman doctor called to his relief pronounced his trouble dyspepsia, but it ran into consumption of the bowels. The old man had a strong desire to live at first. He took his medicine, and ate the food ordered for him with pathetic patience. He became emaciated to the last degree, but he lay in dignified endurence, though the heat of the summer sun poured into his hut, and the flies ran freely over his face. This man, born a heathen, waited on God during the long weeks of his sickness with a patient trustfulness beautiful to see, and which Christians of greater privileges might copy. He liked to have the Bible read to him now, and his familiarity with the Book enabled him to prompt and help along the slow Hawaiian of the reader, even when he had no book. He was especially fond of hearing Jonah's prayer, and the verse "Salvation (or life) is from the Lord." The chapter containing this prayer was always his choice, till shortly before his death, when he accepted it as evident that his departure was

at hand. Now he asked to hear the last two chapters of Revelations. He had submitted himself to God at the cost of his strong desire and be longed to hear of that country to which be was called. One morning friends came to visit him, and they all wept together, and after praying they all went ont of the house on some business or work, leaving the old man alone. When they returned they fonnd a great Presence hnd been there in their short absence and borne the old saint away.

"There are first which shall be last, and last which shnll be first."

OUR SKATER BELLE.

Along the frozen lake she comes
In linking cresents, light and fleet;
The ice-imprisoned Undine hums
A welcome to her little feet.

I see the jaunty hnt, the plume
Swerve hird-like in the joyons gale,—
The cheeks lit np to hurning bloom,
The yonng syes sparkling through the veil.

The quick breath parts her langhing lips,
The white neck shines through tossing enrls;
Her vesture gently sways and dips
As on she speeds in shell-like whirls.

Men stop and smile to see her go;
They gaze, they smile in pleased snrprise;
They ask her name; they long to show
Some silent friendship in their syes.

She glances not; she passes on;
Her steely footfall quicker rings;
Shs guesses not the benison
Which follows her on noiseless wings.

Smooth be her ways, secure her tread,
Along the devious lines of life,
From grace to grace successive led,—
A noble maiden, nobler wife!

ANONYMOUS.

THE CATHOLICS IN AFRICA.

From the "Catholic Review."

An Irish Missionary in South Africa, the Rev. James O'Haire, supplies the following history of the efforts of the Catholic Church to Christianize that neglected region. He writes: "In May, 1660, the first priest set foot upon South African soil, but for doing so was made a prisoner. From that time until 1838 many priests visited South Africa under the most trying circumstances. However, in that year, 1838, there were in South Africa, as far as could be ascertained, only 150 Catholics, without one priest, one church, or one school. Behold the change—witness the progress—there is now south of the Orange River, which is but a portion of South Africa, three vicariates presided over by three Bishops, Vicars Apostolic and one prefecture, under the direction of a Prefect Apostolic. There are fifty-two priests, including Seculars, Oblates of Mary Immaculate, Jesuits and Fathers of the Society of African Missions. There are also seven convents, four of which are Dominican, two Oblates of Mary Immaculate and one of the Sisters of Mercy. There are monastic establishments for the education of boys, conducted by the Marist Brothers, Oblates of Mary Immaculate and Jesnits—the latter have under their care the first Catholic college of South Africa—to say nothing of thirty-two other Catholic schools conducted by priests and laics. Add to the above items seven Catholic sodalities, five societies, three confraternities, three cathedrals, and twenty-four churches, including convent chapels, and 10,000 children, and you will see the immense progress that the Catholic Church has made from 1834 to 1877 in South Africa. Notwithstanding the great efforts and success of Catholic missions up to the present, all their labors have been confined to the districts south of the Orange and Vaal rivers, if, indeed, we except the Jesuit missions of Umbaceo, of which honorable mention is made by Livingstone, but which were unfortunately utterly exterminated by a vile wretch, Governor Pomlino. Very recently the enormous territories stretching from tho Orange river to Damarland and the river Limpopo, and thence to the Zambesi, have been accepted by the Society of African Missions. In this vast new mission field there is not at present one Catholic missionary. Great Namaqualand, Damarland, and Gwamboland are peopled by tribes which technically come under the denominations of Hottentots, Koranna, and Bushmen. Then that sweep of country lying immediately between the rivers Limpopo and Zambesi contains at least one million of tractable colored races, inhabiting a country which is exceedingly fertile, rich in gold mines and by no means unhealthy. It is to be hoped that the Society of African Missions will succeed in receiving into its ranks men of self-denial, zeal, and energy, who will found missions in the almost illimitable tracts now confined to its care, by which the door may be afterwards opened to allow the ingress of Catholic missionaries to those regions of Central Africa which, though believed to be thickly inhabited by savage tribes, are yet np to this all but a sealed book to civilized men.

An English Quaker, Mr. Stanley Pumphrey, in a lecture on Indian Civilization, which has recently been published, notes some suggestive facts with regard to the differences which exist between the Indians in Canada and those who are so unfortunate as to be the "wards" of the "freest and most enlightened republic on the face of the earth." He says:

"The Indians of the British dominions are, in proportion to the population, three times as numerous as the Indians of the States are to theirs; yet while the United States have had almost constant wars, on the other side of the St. Lawrence there has been constant peace. Through the kindness of a former Indian Commissioner, William Welsh of Philadelphia, access has been given me to the valuable evidence furnished by J. T. Gilkison, for fourteen years Visiting Superintendent of Indian affairs in Canada, who has had under his direct charge 3,300 of the Mohawks, Senecas and other tribes. The following are some of the questions put to him, together with his replies:

'Have you ever known or heard of any case, during this century, where the whites had any reasons to fear incursions from the Indians?'

A. 'No such occurrence has ever taken place in Canada within that period. Their relations have been friendly; the Indians being treated with consideration and kindness.'

'Do you consider the Indians have perfect confidance in their just treatment by the government?'

A. 'Most Assuredly.'

'Do you believe that whatever is coming to them will be received, without losing any weight or value by passing through the agents of the government?'

A. 'Certainly: clear statements of accounts are furnished them half-yearly, so that they may know what is due.'

"While treated as wards, and receiving, as such, exceptional care and assistance, the Indians of Canada are looked on as a part of the nation, having rights as much entitled to respect as those of any other class. The cupidity of land-speculators, and the rapacity of frontier bush-rangers, are never allowed to over-ride their claims. Suitable reserves, once set apart, are henceforth sacred. They cannot be sold without the voluntary consent of a majority of the male adults by special vote, and with the approval of the government, which approval would be withheld unless a change was evidently for their benefit. The government have never attempted to force the Indians to surrender their lands.

"Added to these excellent regulations they enjoy the benefit of equal laws. They are punished for crimes and protected from injury, just as others. Thus treated, we are not surprised to find that they give no more trouble than an equal number of whiten of the lower classes. Their condition steadily improves, and the population of some tribes is on the increase. The Christian religion, being commended to them by justice and kindness, they are disposed to accept it."

—*Catholic Review.*

POPULAR AGRICULTURAL EDUCATION.

The Delaware College is making an effort to put agricultural instruction upon a popular basis. It will be difficult to gather statistical results of the instruction given, but the authorities of the State would help much those who are trying to find the best means of improving farms, if they would observe carefully and report upon the operations of farmers who have had the advantage of their system of schooling. The term will extend over next November, December, January and February. No examination is necessary for entrance, and the tuition for four months is only twenty-five dollars. Elementary law regarding the holding and conveyance of land and its appurtenances, will be taught, and the list of subjects upon which instruction is given, includes political economy, practical agriculture, anatomy, botany, meteorology, chemistry and geology, so far as they are concerned in the constituents of soils, and the adaptability of crops, plant-propagation, the breeding of animals, and the common studies of English grammar, English and American history, geography, arithmetic, the metric system, and book-keeping. In several of the departments instruction will be given by lectures. The course of instruction, it is seen, is not high. It is in subject-matter what the agricultural class should understand, and it is to be seen whether a course of lectures covering only four months of the year, giving opportunity for farm work for the other eight, will be of material advantage. The prospect is good, for if the drill necessarily fails in thoroughness because of the short time given, it may give enough information to prevent mistakes, which would otherwise prove costly. Further, it may so open the door to study and reading, that the farmers who have enjoyed it will save their winter evenings and other leisure time, by keeping up their interest in the subjects studied at the college, whereas it is now only too common that much time is foolishly wasted.—*New England Farmer, Sept.* 1st, 1877.

OUR SKATER BELLE.

THE following letter is interesting as an account of things in a certain part of South Carolina from the standpoint of an intelligent young colored man who is honestly trying to make himself useful. The willingness of the present officials to employ him, and the difficulties that beset incompetent teachers are a sign of a healthy state of things to some extent, at least.

The hopeless mania for going to Liberia that prevails in South Carolina and elsewhere, is reasonable enough in his case, for he would do good there, but it is likely to unsettle and injure a large and ignorant laboring class as well as all classes. The condition of these deluded beings is pitiable.

Much depends upon the tact of the whites in dealing with them. As usual, those who by care and kindness succeed in winning the good-will of the negroes will be prosperous and satisfied, but those who attempt to "cuss" them into more enlightened ways will, in their failure, make noisy complaints about their abnormal condition and the need of some "reform" measures.

SOUTH CAROLINA, *Aug.*, 1877.

Dear Sir:

When I left Hampton I went right in pursuit of a school, and was successful, and would have been suitably remunerated, but for the political question which was agitating the minds of all throughout the State. The Democrats being so bent upon accomplishing their object and advocating their measures of reform that they considered any one who was in the country then, to be their foe. In order to get the Negro under their direct influence, they thought it best to remove any one from their midst whom they thought would communicate any political intelligence whatever; though they had never known me to do it, and I never did. So soon after the Hamburg massacre, they began to threaten me and assumed an attitude for immediate hostility, or pretended, so I quietly got away. In August last I went to Aiken expecting to get something to do, but was unsuccessful. Troubles having started in that county, young men and women had to flee from the country. I stayed there with my sister until Dec., when I got a school which I taught four months, and was promised $140 for my services. The difficulty between the dual governments hindered the collection of taxes at the proper time, so they are being collected this month. Being in debt for board, and in reduced circumstances pecuniarily, I had to sacrifice my claim, and after paying board I was almost dry, but have launched out again and am only three miles from where I was driven. No white person expresses any dissatisfaction at my return. There has been a time, when the county was devoid of a true teacher, that most any one could get a first-grade certificate. Now one has to undergo an examination which *certainly* tests their ability to teach. I make the fifth colored person in this county that holds a first-grade, and the only one in Aiken, so I have been before two boards. We have not teachers enough, for every township cannot get such as the Democrats will employ. Now about my school. It is taught in a church built of logs. I have seventy-seven names enrolled and am looking for more soon when the board promises to give an assistant. Have found Prof. Allen's instructions useful in governing and teaching so many. The people are anxious, very anxious to have their children learn. I labor hard to advance their children and have met with tolerable success, as I have been here but two weeks. The people seem to think I know all that's worth knowing. In a country of blind people the one-eyed is king—it is with me, and I will be held responsible for the use I make of the influence I have over them. It has been and is now my aim to promote a higher tone of morals, which I am proud to say, is not so low as in many places. Their religious ideas restrain them as they live close to the cross and treasure up the principles of true Christianity. I shall give you a full account of my school, also Sunday-school, which I expect will be very large.

I suppose you have heard of the movement among the colored people toward the settlement in Liberia. Preparations are being made and many will go if they can get conveyance. I have no doubt that if we are successful in our efforts I will go. It is our only salvation. We will never be a people until we do go there. You are very likely to receive a letter from me at that place some day. I want to get out of debt to the school now. I must close. Very Respectfully, your pupil,

D.

"Well, my boy, so you are going to try your fortune in the city. I tell you it is a dangerous ocean to launch your craft on," said a man to his neighbor's son.

"Yes, sir," answered the lad, taking his Bible from his pocket; "but you see I've got a safe compass to steer by."

"Stick to it, stick to it!" cried the man, "and the devil can not hurt so much as a hair of your head."

THE following paper was read by the Principal of the Hampton Institute at the Anniversary Meeting of the American Missionary Association at Syracuse, N. Y., October 24, 1877. It has been slightly cut down:—

The negro question of the day is the negro himself. Till the close of the war it was his freedom. For the next ten years it was his relations with the country; citizenship and

In our judgment of the Anglo-African we should take the relative, the historic standpoint, and there we find ground for hope; but to fulfill this hope we should organize our work for it from the standpoint of absolute fact, of just analysis. We should act like the doctor with his tonics or his knife, not as a tearful sympathizer who would kill with delicacies.

There was no "annihilation of the negro mind in slavery." There was not so very much to annihilate in the poor beings who

We negro teachers have a stimulus, that the world knows little of, in the enthusiasm of our students, whose opportunities, in most cases, have cost a struggle; they call out every energy by the depth of their need, their unlimited faith in us and by their heroic perseverance. They leave us for the field; we watch them, they never forget us, and, better, they don't forget their debts. We are not like those who fire into the air; we see our shot strike.

have changed as in no equal period in the history of our race; the revolution has not been all external.

Of the 4,000 free schools in Virginia, 1,100 are for blacks, employing more than 600 colored teachers, the rest being white. They cost annually in taxes about $350,000, four-fifths of which comes from the pockets of the whites, who thus voluntarily supply more money to the cause of negro education than the entire annual revenue of the American Missionary Association.

It means progress that Georgia has for years

THE following paper was read by the Principal of the Hampton Institute at the Anniversary Meeting of the American Missionary Association at Syracuse, N. Y., October 24, 1877. It has been slightly cut down:—

The negro question of the day is the negro himself. Till the close of the war it was his freedom. For the next ten years it was his relations with the country; citizenship and rights. For generations to come it will be his deplorable condition, his deficiencies, and how to make the most of him.

I speak, of course, of the average negro of the South. In his mental, moral, and material destitution, he has as much power as anybody to make the next President, or to decide on questions of tariff, currency, or war. Hence the negro question is and will be, as it has been for the past forty years, a foremost one.

The difficulty with him is, mainly, a subjective not an objective one; himself, not his relations. His low ideas of life and duty, his weak conscience, his want of energy and thrift, his indolent, sensuous, tropical blood, are, rather than mere ignorance, the important and unfortunate facts about him. The race is not, however, a fallen, degraded one.

Ecclesiastical, marital, personal and filial relations among the colored people, are, by civilized standards, terribly wrong.

Pastors and deacons can sell whisky and lead loose lives without scandel; an ex-jailbird returns to his former social position; in politics and in society character goes for little or nothing. Yet there is in our principal cities, North and South, and scattered through the country, a class of colored people of excellent ions, of preachers of character and force.

The power of Christian education and of right public sentiment has never reached the negro race; it has been made impossible. Whether these influences shall be brought to bear upon them is the question. They have never rejected what was never within their reach; their condition is a sad one, but they are not debauched.

A colored girl who comes to the Hampton Institute usually makes great improvement; her expression and general appearance change; her womanly instincts become stronger; her self-respect and character develop by direct teaching and by the still more potent effect of influence and atmosphere. Yet her previous life may not have been pure. She may have sinned without being demoralized by it. Her moral sense was too weak to be shocked. She knew, but could not realize the wrong. It was no terrible leap into an abyss; it was the logic of her life; inevitable almost from the social conditions about her, and no ruinous fall.

Every worthy girl who graduates from our institutions—many of them strikingly intelligent and attractive—is fair game for any hound who chooses to follow her. Whatever her legal rights, she has, practically, no redress; public sentiment does not demand it; she has no avenger but God. Without good society to stimulate her to virtue, living for the most part with those who cannot afford to throw stones, with her own impulsive warm blood against her, only Almighty Grace can save her. I know a number of this class who are devoting themselves as teachers to their race, whose steadiness I wonder at.

Women are often preferred as teachers to men; they succeed equally well, and have equal wages as public school teachers.

The success of co-education among the negroes has been marked. But four cases for discipline in nearly ten years has been the record at Hampton.

While multitudes of freedmen are given over to sensuality, there are multitudes who need but the shining of God's truth and the accessories of Christian living, and the seeds of virtue and of moral beauty in them will spring up, making their lives pure and fruitful; fruitful and useful, even if, from the power of the old nature, not always as correct as they should be.

The morals of the negro are better than they seem. We mistake in our estimate of the reaction of transgression upon ignorant offenders. The story of the devout old "Auntie," who *would* go to communion service and not let one poor old goose (that she had stolen) "come between her and her blessed Lord," shows how little a broken commandment disturbs the peace of the unenlightened.

The oft-mentioned "divorce" between religion and morals never occurred. They never were united, and could not be. We should be careful of severe conclusions as to the value of their weak, inconsistent discipleship. God has been very near to them, and has ever been ready to return to them whenever they would return to Him. They remind us, in many ways, of the children of Israel. The strong religious nature of the negro race makes it with its peculiar experience seem like one that has been led by a pillar of cloud. They appear to be better fitted for a theocracy than for a republic.

In our judgment of the Anglo-African we should take the relative, the historic standpoint, and there we find ground for hope; but to fulfill this hope we should organize our work for it from the standpoint of absolute fact, of just analysis. We should act like the doctor with his tonics or his knife, not as a tearful sympathizer who would kill with delicacies.

There was no "annihilation of the negro mind in slavery." There was not so very much to annihilate in the poor beings who were brought from this African jungle. In the providence of God the selfishness of men was instrumental, as all things are, to the fulfillment of His eternal purposes. The contact of a higher and lower race in slavery is inevitably most damaging to the latter, and in many ways helpful to the former.

Books are essential to knowledge, but not to wisdom and manly force. The *taboo* of books was the greatest stimulus the race ever had. The black man (contrary to general opinion) *could* think, and thus foiled the white men. He heard table talk, gossip, and speeches. His powers grew as he observed and pondered; restricting knowledge gave it a charm; it was the white man's source of power; with it he would be like him; to possess this secret became a passion, and this passion, though quenched in many by the reaction, and the hard realities of freedom, is the hope of the race in its sudden emancipation in its new temptations and dangers. The negro is an infant in literature, but a graduate from the school of experience. He was fitted for freedom far better than was supposed, and candid Southerners admit that the race has done better than they dared to expect. The total products of the South have been greater than ever. A neighbor of mine, a Confederate Colonel, says that he gets one-third more from free than he ever did from slave labor.

Constitutional amendments and civil rights are no guarantees of the salvation of the freedman. They only give him standing ground on which he can work it out for himself. They give to his friends a chance to help build him up. They mean simply opportunity.

His worst master is still over him—his passions. This he does not realize. He does not see "the point" of life clearly; he lacks foresight, judgment, and hard sense. His main trouble is not ignorance, but deficiency of character; his grievances occupy him more than his deepest needs. There is no lack of those who have mental capacity. The question with him is not one of brains, but of right instincts, of morals, and of hard work.

Most savage races are not mentally sluggish. The African Zulu tests the wit and resources of an educated missionary. The Polynesian cannibal is a natural orator and takes to law and theology with very readiness. The aborigines of Australia are quick-witted. With their struggle for existence, their perpetual "*qui vive*," their traditions, their stores of literature, of no mean merit, transmitted orally for ages, most savage people are not like "dumb driven cattle;" yet their life is little better than that of brutes, because the moral nature is dormant.

The *differentia* of the races seem to be in moral strength, in guiding instincts, in power to "*sense*" things, in their genius for this or that. Within school or college walls these distinctions hardly appear. In active life they are conspicuous and decisive.

With us, the question with the colored race is not, to what culture the gifted few can attain, as we find negro blood among those in the higher ranks of success of many kinds; but what does the race, as a whole, need most and need now? How shall their weak points be made strong?

They need a system of training which aims at the formation of character, and of self-respect; these rest upon a foundation of morals and good habits. We can best aid them by Christian example and teaching. The best of teachers are required. When his whole routine of life is controlled, the negro pupil is like clay in the potter's hands. Boarding schools alone can do the thorough work required. Their officers should realize in themselves the ideas of a true Christian civilization. A teacher does more by virtue of what he is than of what he says. The most powerful constructive influence is indirect; the inner life expands in the right atmosphere rather than through direct pressure. To create such opportunities the American Missionary Association has established a series of institutions whose magnitude and cost have seemed, to some, too great, but the Association was wise to concentrate its resources for higher education, in order to secure a higher quality of personel force and stronger moulding influences, as well as the economical advantages of maintaining larger numbers at one point.

Drill, training, toning up, is the important feature in the Association's work; it is making men and women; it is, I believe, a well-balanced, thorough-going system of culture, aiming directly at the mark, mingling mental with moral and physical training; satisfied to send out graduate teachers as Christians, no matter what denominational flag they may fly.

We negro teachers have a stimulus that the world knows little of, in the enthusiasm of our students, whose opportunities, in most cases, have cost a struggle; they call out every energy by the depth of their need, their unlimited faith in us and by their heroic perseverance. They leave us for the field; we watch them, they never forget us, and, better, they don't forget their debts. We are not like those who fire into the air; we see our shot strike.

The natural indolence of the negro is as much in his way as his ignorance. In salvation by hard work is his hope, his *in hoc vinces*. His education must be promotive of industrial habits. Educated men without trades form a large, and the worst proportion of criminals. Common schools are not the panacea that some have claimed them to be. But they give us leverage upon this people, and we should make the most of them by supplying them with the best of teachers; with men whose knowledge has cost them something, who are able to win their bread, as the people must, and can tell them how to do it; who shall be, not only pedagogues but guides, and civilizers, whose power shall be that of character and example, not of sounding words. The negro teacher is the hope of his race; he is looked up to; his influence for good or evil is vast; when well-fitted for his work he has not been found wanting.

What the colored race needs most, and needs now, is teachers of the right sort, as well as preachers fitted for the pulpit by some stern discipline. Let us make the teachers and we will make the people. Here Christian benevolence at the North finds its true point of effort. Upon it the American Missionary Association has directed its forces with a wisdom and energy which, if sustained, promises the greatest results.

Teachers are in demand. Of the multitudes of free schools in the South probably not one in ten is properly taught. Southern taxation for colored schools amounts to not far from $900,000.00 and Southerners are sending to us for teachers. Institutions conducted by Northern men for negroes have generally secured the respect and good-will of all; their graduates are called for on all sides.

There is no place in the world where such a harvest awaits Christian labor and outlay as in work for the freedmen of America. Every dollar, and every hour expended reach those passionately eager to get good and to do their part toward it. The English language with its riches has become their inheritance. There is no foreign jargon to be learned. They accept the Bible, they crowd their churches. There is infinite work to be done but they are open to the truth.

Long and well-sustained effort will bring about a better state of things among them. But there are comparatively few who will do their part to this end.

A hundred will be horrified over the Hamburg massacre where one will give a dollar to better their condition; thousands will cry out for Federal bayonets where but here and there one will help furnish them with the defense of enlightened minds. An intelligent colored man of good character can take better care of himself without than with a company of soldiers at his back.

Two things are noticeable: an outcry over the abandonment of the negro to the tender mercies of his former owner, and a steady shrinkage in the contributions for his improvement. Embodying as does this cause the grand moral objective of the war and excusing, nay, demanding, every drop of blood that was spilt, it is pitiful to see the meagre contributions both of money and of personal force that have been made for it. You can count on the fingers of your hands the first-rate men who are devoted to it. As the army is the general, so the institution is the man; there are not men enough. Their cry is not to fire the Northern heart; denunciation is, to them, as sounding brass. They are working under the banner of the Prince of Peace, and they find many a noble friend among those who lately were fighting to keep the negro down; they call for resources, for schoolhouses, books, and for enough to keep them comfortably.

When it was a question of freedom or slavery, when North and South were sharing, directly or indirectly, the profits of slave labor, and moneyed interests were too strong for humanity, it was necessary to denounce the wrong.

To the Abolitionist the African slave was a being made in the image of God, bound in chains, and bought and sold like cattle; the negro was idealized; race differentia were ignored; shining characters and their opposites were painted on the background of human bondage; Uncle Tom showing the possible nobility of the negro under the wrongs of slavery, and Legree illustrating the possible ruin of the white man wrought by it.

To arouse the country, blinded by the love of money and of ease, this was necessary. But North and South have atoned for their guilty partnership; the language of those days is not the language for to-day. To denounce the South as a whole befits only a demagogue.

In the South, during the past ten years, ideas have changed as in no equal period in the history of our race; the revolution has not been all external.

Of the 4,000 free schools in Virginia, 1,100 are for blacks, employing more than 600 colored teachers, the rest being white. They cost annually in taxes about $350,000, four-fifths of which comes from the pockets of the whites, who thus voluntarily supply more money to the cause of negro education than the entire annual revenue of the American Missionary Association.

It means progress, that Georgia has for years given to the colored University at Atlanta $8,000, and that Virginia has given the Hampton Institute $10,000 annually, officered and controlled as they both are by Northern teachers, and filled with students all of whom vote in opposition to the party that aids their education; that the latter State had in full operation a free school system five years before her new Constitution required it; that the Presbytery of Virginia and other Southern religious bodies, in their actions and in their organs, are recognizing the genuine needs of the freedmen, urging effort in their behalf, and are making friendly overtures to workers from the North. In old times thousands of good men and women in the South taught their slaves the Way of Life, and many are doing it now. General Stonewall Jackson taught a colored Sunday-school twenty years, and Colonel Preston continues the good work. There is yet stout opposition, and there are mountains of prejudice; to be taxed for negro education is not yet counted a luxury. The sluggish, thinly populated back country has changed but little; and entire regions not at all. In the cities, with their quicker life, more active thought, and commerce with the world, they have better discerned the signs of the times. In Virginia to-day no politician dare oppose free schools in his canvass for the popular vote. The Southern leaders in educational ideas are among the best men in the land; they have struggled in a way not dreamed of at the North; while in a minority they have the earnestness in a just cause that insures success.

The work of educating the freedmen is being done mainly by colored teachers. They are sustained first, by ex-rebel soldiers and ex-slaveholders. Of the hundreds of applications for teachers that I have received in the past seven years, nineteen out of twenty have come from that class with offers of salaries in all cases; secondly, by friends in the North who, eight years before the South expended a dollar, with great effort and outlay, and with aid from the Freedmen's Bureau, were laying a foundation for future builders, giving to the colored people a grand impulse which has brought the present State systems into the line of demand and into the logic of events. They are now concentrating their efforts on higher institutions, which without their aid would never have existed, and which depend on them for their building up, and largely for their maintenance, and entirely for their endowment. They are centres of educational inspiration and power, working harmoniously with the local systems, winning every year the increased confidence and respect of all classes, sending out annually graduates who are needed by thousands and are welcomed along the whole line of school effort.

Bourbonism at the South is not dead; it will not fail for want of effort to restore the Black Laws in South Carolina and elsewhere, nullify school systems, and thrust the black man back to his "normal condition." The theory that "a black man's inner consciousness is only to be reached through his hide" is not fully discarded. Its success, which I think impossible, except in South Carolina and in some of the Gulf States, would not be a reduction of the freedmen to penceful serfdom. To thus mount guard over the negro would be costly. He has been wonderfully quickened and modified since freedom, more by experience than by school teaching; his intent ferocity would inspire a war without a battle in which the rifle and the firebrand would each do their worst work, and desolation would reign. The races will stand or fall together.

Men's madness must sometimes be shown. Perhaps we shall see illustrated at the South the opposite extremes of wisdom and folly in dealing with the negro question; more generally a mixture of both.

General Toombs' silly rant about the "500,000 savages" in Georgia, did not prevent a generous Constitutional provision or permission for State aid to higher negro education.

Dr. Sears, agent of the Peabody Fund, says that in all the States where there has been a reaction against education, it has been followed by a return to better measures than ever. A general forward movement at the South is assured; through action and reaction it will go on slowly, surely, and grandly.

The Rev. Mark Hopkins, D. D., late President of Williams College, Massachusetts, recently said, "History presents no social problem more difficult than that which now confronts the people of the Southern States." After stating the leading facts of the problem, Dr. Hopkins continues, "Is it possible that from these an harmonious social and

political state should come? If it is possible | NEWS OF THE MONTH | Many thousands of dollars have been spent in dis | *Consult the National Teachers' Monthly*

political state should comn t If it is possible, it must be by a combinntion of intellectunl and moral forces such as the world has never seen."

Should the general government do its dutv by the "nntion's wards," nnd good men of nll sections sinking their partizanship, nnkn, in God's name, common cause in behnlf of the negro race, the end will be renched.

A writer in the *Nation* illustrates the process of regeneration which is going on all over the South of Virginia by describing the state of things on two farms which he recently visited.

They are two hundred miles apart. On one of 2,000 acres there were, before the war, nbout 150 slnves of all nges. The owner, at emancipation, put them in wagons and deposited them in Ohio. His successor now works the plnntation with twelve hired men, who see to his cnttle, of which he raises and feeds large herds. On cultivation is carried on on shares hy white tenants. He has an overseer, makes a snug incomc, and spends a good part of his winters in Baltimore and New York. He laughs when you ask him if he regrets slavery. Nothing would induce him to take care of 150 men, women, and children, furnishing perhaps thirty able-bodied men, littering the house with n swarm of lazy servants, and making heavy drafts on the meathouse and corn-crib, and running up doctor's bills. The other was owned at the close of the war hy a regular "Virginia gentleman," with the usual swarm of negroes, and who was in debt. He sold it to an enterprising young farmer from snother county, paid his debts, and retired to a small place, where, with two or three hired men, he makes a liviog. The young farmer, instead of seventy-five slaves, works it with twelve hands in the busy season and three in winter, is up at five o'clock in the morning superintending them himself, raises all raisable crops and is as intent on the markets and the experiments made by his neighbors as if he lived in Illinois or the Carse of Gowrie. He was led hy Colonel Waring's book to try tile-draining, and made the tiles for the purpose on his own land. He was so successful that he now manufactures and sells tiles extensively to others. It would be difficult to meet at the North or in England two men with their faces turned nwsy from the old times more completely than these, more averse to the old plantation ways; and, as far as I could learn or hear, they are fair specimens of the kind of men who are taking possession of the Old Dominion. Their neighbors consist of three classes: men who had by extraordinary exertions saved some or all of their land after the war, and had by borrowing or econmizing managed to stock it, and are now prospering by dint of close manngement and constant attentioo, on the Northern plan; young and enterprising men who had bought nt low rates from original proprietors whom the war left hopelessly involved, and too old or incapable to recover; and a sprinkling of Northern and English immigrants, of which latter class I shall say something in another letter, for their history is curious.

Two years ago in the counties of Laurens and Edgefield, in South Carolina, the Labor League was again organized, but, unaided by the courts or Legislature, it was unable to accomplish any of the "reforms" so much desired by the white citizens. Now, however, under the home rule of Genoral Hampton, the organization has been revived all over South Carolina, and the tone of the local press leaves no room to doubt that a determined, and probably a successful, effort will be made when the Legislature re-assembles to have the laws governing labor in South Carolina radically changed. What the leagues demand—and it must be remembered that they are directed by some of the heaviest land-owners and most influential men in the State—is, that hereafter all agricultural labor shall be performed undor contract, each violation of which shall be considered a misdemeanor punishable by forfoiture of crops ur imprisonment, or, still worse, by whipping. The leagues will also ask that all unemployed negroes shall be declarod vagrants under the law, and punished citbor by the lash or imprisonment, and that the same course bo pursued in regard to all persons found trespassing. Failing in this effort to secure the passage of these and similar "reform laws," the gentlemen who compose the leagues have agreed among themselves that they will refuse to sell or rent land to black men, that they will only employ field hands and other laborers at rates of wages to be agreed upon by them, that they will employ no servant or workman without the consent of his former master, and tbat no cotton, corn, or other agricultural product shall be purchased from negroes, unless such products have been raised upon the land of the purchaser. How absolutely the black laboror, under such a system as this, would be in the power of his white employer is sufficiently obvious without further comment.—*N. Y. Times.*

NEWS OF THE MONTH.

Famine prevails in Brazil, South America, caused by drouth; 80,000 cattle have perished, and 15,000 people are starving.

Earthquakes in Nebraska, Iowa, and Kansas.

Storms on the Atlantic. One steamer from Liverpool to Boston, Nov. 4, put back on the 16th, reporting having encountered seven hurricanes.

The society for Prevention of Crime is attacking unlicensed groceries in New York City.

Judge R. B. Carpenter, of South Carolina, has written a letter advising the negroes of that State not to emigrate to Liberia, and telling them that if they will be frugal and honest they will be best off where they are.

The reports from the Woman's Temperance Union of Massachusetts tell us that that State has one hundred and two auxiliary organizations, and 10,000 members. Vermont has nineteen. Minnesota has recently organized a State Temperance Union.

The railroad traffic managers of Ireland attribute the great bulk of all railroad accidents to the sale of spirits along the line.

Mr. T. M. Metcalf, Minnesota's Commissioner of Statistics, estimates that the wheat crop of that State this year will reach the enormous amount of 40,000,000 bushels, notwithstanding the ravages of the grasshoppers.

The steamship Mosel, which recently sailed for Europe, carried out 300,000 California salmon eggs. They are put up in lots, and will be distributed in England, France, Germany, and the Netherlands.

The Chinese authorities have officially taken possession of the railway between Woosung and Shanghai, and stopped all traffic thereon.

General Grant has had a most enthusiastic reception in France, both from American residents and principal officers of the Government.

An International Exhibition, under the patronage of the Governor of Cape Colony, will be opened in April next, with an agricultural department organized on a large scale. Various classes of articles will be included in the exhibition, and facilities will be given for their sales.

The Russians have captured the Turkish citadel of Kars, which is considered the key to Turkey in Asia.

A new submarine telegraph cable is to be laid from San Francisco to China and Jepen by way of the Sandwich Islands.

POLITICAL.

The Army Appropriation bill passed House and Senate, November 12th and 17th. It places the maximum strength of the army, as at present, at 25,000 men, and directs that a force sufficient for protection shall be placed on the Mexican and Indian frontiers of Texas.

Daniel W Voorhees (Dem.), appointed by the Governor of Indiana to Senator Norton's vacant chair, took his seat on Nov. 12th.

The decrease of the public debt during the month of October was $4,250,000. In the Treasury—coin, $131,000,000; currency, $100,000,000.

General Garfield, toward the close of the session, presented a petition which shows that at least two hundred and ten colored men are in favor of emigration to Liberia. They desire Congressional aid to this end. Garfield stated that there was an extensive movement among the colored people looking toward emigration to that country.

RELIGIOUS.

The Eighty-third Annual Conference of the Methodist Episcopal Church, was held in Lynchburg, Va., beginning November 15.

Rev. T. M. Beckman, Chairman of the Committee to consider the Bible Cause, presented a report, which was adopted. The report showed that the Virginia Bible Society has distributed within the grounds of the State from April, 1871, to April, 1877, in Bibles, &c., $41,000, and had received from all sources in the State, $20,970.53. In the same time the American Bible Society had contributed to the necessity $24,000 in Bibles and Testaments. During this period 90,574 families were visited, 14,577 totally destitute families were found, and 9,805 supplied.

The Board of Missions reported the appropriation for domestic missions during the ensuing year. The amount is $1,000 less than last year. The whole amount is $7,100.

The assessments of the ensuing year were reported. The whole amounts are: Conference collections, $6,000; domestic missions, $7,000; foreign missions, $6,220; Bishops' fund, $1,700; educational, $3,000; publishing house, $4,500; Total amount, $30,420.

The American Missionary Association has sent to the Mendi Mission in West Africa the Rev. Floyd Snelson of Savannah, Georgia, who will take the place of the Rev. Barnabas Root, deceased. Mr. Snelson is accompanied by his family, Dr. Benjamin James and family, and Mr. A. E. White of the Hampton Normal & Agricultural Institute, Hampton, Virginia. Dr. James will be missionary physician, and Mr. White will take charge of mission farms. All the parties are colored, and have been connected with educational and evangliring work among the freedmen in the South.

EDUCATIONAL.

The School Board of the city of Norfolk has purchased two lots for the erection of two additional school buildings—one for white and the other for colored pupils. The trustees of the city opened this session with a larger attendance than usual.

The total enrollment in the public schools of Petersburg at the close of the first week was 1,076 out of a school population of about 2,500. Of the enrollment 676 are in the white and 400 in the colored schools. The High School has about 100 pupils.

One member of the new freshman class at Yale is a colored man—Mr. Manning, Sons of Mr. Evarts, Mr. Edmund Clarence Stedman, and ex-President Woolsey are in the same class.

Howard University debt has been reduced from $110,000 to $11,000.

San Francisco.—The Chinese in San Francisco have petitioned to the Board of Education for a school. They are taxed for public school purposes, but not permitted to attend such schools.

Colored Convention.—The Colored Educational Convention of North Carolina was held in Raleigh, last week. The Committee on Resolutions, stating that the time had come for the colored people to think and act for themselves, and to assume the task of moulding their own destiny as citizens of the American Republic; and that education, morality and industry must constitute the basis of their elevation and prosperity as a people; that notwithstanding the many obstacles and evils with which they are compelled to contend in their present condition, they felt cheered and encouraged by the signs of the times: the disappearance of race prejudice in the State, the growing sentiment of friendship and confidence between the races, the obliteration of the "color line," are in the highest degree gratifying to all lovers of progress and peace; that the colored people appreciated the efforts of the State press, and the action of the State Legislature and State Executive in providing more ample and efficient means for the education of the colored people of the State. The last resolution was warmly discussed, and finally defeated; but one of some what similar meaning was afterwards introduced and passed. The Convention is said to have been composed of active, intelligent and earnest men, but the white people complain of the apparent spirit of partisan politics that controlled it.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of Boschee's German Syrup to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts

"Unquestionably the best sustained work of the kind in the World."

HARPER'S MAGAZINE.

ILLUSTRATED.

Notices of the Press.

The veteran *Magazine*, which long ago outgrew its original title of the *New Monthly Magazine*, has not in the least shaled the popularity it won at the outset, but has added to it in many ways, and has kept fairly abreast of the times, thanks to the enterprise of the publishers tact and wisdom of its editors. For whatever is best and most readable in the literature of travel, discovery, and fiction, the average reader of to-dey looks to *Harper's Magazine*, just as expectantly as did the reader of a quarter of a century ago; there is the admirable variety of contents and the same freshness and suggestiveness in its editorial departments now as then.—*Boston Journal.*

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstrase and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, the series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

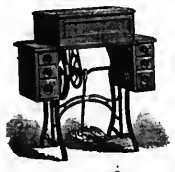
THE CELEBRATED

FLORENCE

SEWING MACHINE.



For Family use and Manufacturing purposes. The *best* in the market. In simplicity of construction, excellence of manufacture, perfection of stitch and ease in operating it has *no equal*, while its REVERSIBLE FEED enables it to sew forward or backward without stopping the machine—it being the *only* machine that *can* do such work.

The *fact* that the "Florence" feeds the work to the right and left, or toward and from the operator gives our patrons a choice between SIDE FEED and BACK FEED machines. Examine the "Florence" before buying elsewhere, as a faithful comparison will demonstrate its superiority over all its competitors.

—o—

THE FLORENCE HEATER.

The only *safe*, *odorless* and *durable* Oil Stove for all who want PURE, MOIST, WARM AIR in

HALLS, BEDROOMS, OFFICES, SHOPS, CONSERVATORIES, ETC.

☞ Can be used anywhere, without connection with chimney flues, as it generates no smoke or noxious gases.

—o—

THE FLORENCE COOK.

Meats, Bread, &c., cooked by this stove are *better flavored* and *more digestible* than when cooked by wood or coal.

—o—

The Florence Steel Skates.

We make the only *Cheap Steel* Skate in the market, which, with our *Bronze* and *Spring* Skates are meeting with large sales and giving perfect satisfaction. **Try Them!**

THE HYGEIA HOTEL.

H. PHOEBUS, PROPRIETOR.

OLD POINT COMFORT, VA.

TERMS: Transient $3.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the steamers from Baltimore and Norfolk, and is reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The Hygeia is within a few minutes' walk of Hampton Normal and Agricultural School, the National Military Home, Soldiers' Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years, as shown by the Meteorological Observatory, shows an average of 80°, 74°, 76°, for Summer; 70°, 56°, 48°, for Autumn; 45°, 44°, 49°, for Winter; and 48°, 58°, 68°, for the Spring months. —Open for guests all the year.

RUMFORD

Yeast Powder.

FAMILIES, HOTEL KEEPERS, FARMERS, MINERS, AND SHIP STEWARDS,

Will find this preparation superior to any other Yeast Powder they have ever used. It contains nothing but what is found in *Meat*, *Fish*, *Corn*, *Rice* and *Wheat*. Bread made with it is more wholesome and retains its freshness longer than when by any other method: it is *quick*, *sure* and convenient, the dough requiring no time to raise, but should be placed in a quick oven as soon as mixed.

There is economy in it, as a large percentage of Flour is saved by using the **Rumford Yeast Powder**, and it is guaranteed to keep good in any climate. In making Cake fewer eggs are necessary if a little of this Powder is used.

For Sale by all Grocers.

Manufactured by the

Rumford Chemical Works,

PROVIDENCE, R. I.

HAMPTON, JANUARY, 1878.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

WITH this issue the "Southern Workman" enters its seventh year. It has been published at a loss, which, however, in yearly decreasing, and is more than offset by its benefit in various ways to the Hampton Institute. The monthly edition is now 1600 copies, not quite half of which are sent to paying subscribers North and South; the rest go to contributors to the school, to friends of the freedmen in this and other countries, to exchanges, to colored men and teachers unable to pay, and to School officers and representative men.

The good-will so general and hearty in this State towards the Hampton Institute and its graduates is in some measure due to the "Southern Workman," which has been recognized, even by a leading Democratic paper as a proper guide and adviser of the colored people.

It asks the continued support of subscribers and their co-operation in extending its circulation among the deserving poor and others of the South, and the rich and influential of the North; that the former may have disinterested counsel and information, and that the latter may read what brave young colored men and women are doing for themselves and their people, and be influenced to help them; and, that by becoming self-supporting, the Southern Workman may bring its resources discounted by no adverse balance, to the support of good work in the South. We urge our friends each to do a little to build up this paper, if judging from this and other numbers they think it deserving enough.

IS THE colored race dying out? According to the census of 1870 it had, during the previous ten years, increased a little over ten per cent., in spite of war, want, suffering and wide-spread ruin throughout the South.

Learned Southerners have, from time to time, solemnly asserted the decrease of the race from the neglect of infants and of the sick, and from other causes, chiefly negro improvidence.

Northern readers have usually supposed that these gentlemen were very willing to adopt a theory which indicated that in slavery the African found his only chance of existence, and therefore his normal condition, and that therefore his best friends are not those who would thrust him into freedom and to destruction.

But recently published facts seem to confirm these Southern prophecies. The country is startled at the revelation.

We quote from the *Boston Journal*:—

"Nearly all the statistics relating to the subject, now accessible, are those coming from the larger Southern cities, and these would seem to leave no doubt that in such centres of population the mortality of the colored greatly exceeds that of the white race. In Washington, for instance, where the negroes have enjoyed longer and more privileges than in most southern cities, the death-rate per 1,000 in the year 1876 was for the whites, 26.537; for the colored, 49.294; and for the previous year it was a little worse for the blacks. In Baltimore, a very healthy city, the total death-rate for 1875 was 21.67 in 1,000, of which the whites showed 19.80, the colored, 34.42. In a healthier little city still, Chattanooga, Tenn., the statistics of the last five years give the death-rate of the whites at 19.9; of the colored, 37. The very best showing for the latter, singularly enough, is made in Selma, Ala. It stands per 1,000, white, 14.28; colored, 18.88. In Mobile, in the same State, the mortality of the colored was just about double the rate among the whites. New Orleans for 1875 gives the record of 25.45 for the death-rate of the whites, to 39.69 for that of the colored. The Registrar of Charleston, whose statistics in this matter run back for several years, sums them up, not in the form of percentages, but of average longevity. Thus, he states that in that city the average duration of life for white people is thirty-eight years and three months; of colored people, only twenty-four years and four months."

Against the conclusions thus suggested is the fact that the body of the colored population is outside of cities and that statistics do not as yet indicate the tendency of the rural class. Many close observers believe that the decrease is general, but equally good authorities assert the contrary. No conclusion is satisfactory; but we incline to the belief that the colored race will at least hold its own, because in the corresponding class of whites in all cities there is great mortality. It would be interesting to know the death-rate among the poor whites of Washington, Richmond and Charleston, whose dying out has never been hinted at.

The negro is prolific. The phenomena of a dying race, such as one sees among the decaying Polynesian tribes, are not seen among them. Children are abundant and healthy in city and country. The pickaninnies do not seem destined to die young; They are a numerous, frisky, healthy class of unfailing humor and appetite, as unlike as anything can be, the sore-spotted, scarce Hawaiian child whose race is doomed.

THE figures above given are ominous and are food for thought. There is no source whatever of a suitable supply in lieu of negro labor. The large, low, swampy, malarial, but highly productive area of the South would become almost a desert without it.

The successful Southern farmer knows that he has the best labor in the world. The negro is important to the country's prosperity.

The decrease of the race would be a serious matter in many ways; it would destroy their *morale*. Young colored men, seeing no future, without hope, enthusiasm, or *esprit de corps*, would gradually degenerate; there would be an appalling number of worthless blacks, mere driftwood, creatures who would care only for the passing day; free as, American citizens are, to rise as high or sink as low as they should choose.

A phenomenon of a decreasing race is the more rapid mortality of the women. The male Sandwich Islanders are becoming lawless and violent from the scarcity of females. The disproportion and the difficulty are increasing, making infinite perplexity and trouble.

This is natural. There would probably be a terrible time with the colored people in the advanced stages of decay.

The statistics of the next census will be of deep interest with respect to the negro race. Humanity, patriotism and religion, demand attention to the well-being of this race.

While self-dependence and self-government are teaching them many lessons, it is at no small cost. They need a system of influences and opportunities which the kind interest of a few friends at the North, together with State aid in some cases, has already provided for a comparatively small number. The general government still ignores its duty to the nation's wards. We hope something may come of the suggestions of President Hayes in his recent Message in respect to national education.

THE education needed for the elevation of the colored race is one that touches upon the whole range of life; that aims at a foundation of good habits and sound principles; that considers the details of each day; that enjoins, in respect to diet, regularity, proper selection and good cooking; in respect to habits, suitable clothing, exercise, cleanliness of person and quarters, ventilation, also industry and thrift; and, in respect to all things, intelligent practice and self-restraint—especially in respect to the employment of "conjure" doctors and the use of quack medicines. Such ways can be best taught in boarding schools. It is indispensable to the success of the colored race that more boarding schools be opened, and that those now in existence be placed on solid foundations. These will create a class or guild who will be a nucleus of civilization.

It is important that the teachers of colored common schools be fitted and enjoined to give to their pupils instruction in the details and duties of daily living. Much can be done to popularize right hygienic ideas, and sound ideas generally, but only by the greatest patience and perseverance.

The missionary workers of the world, believing that their work was the care of souls alone and not that of the whole man, have, we think, by too little attention to physical matters, sometimes made mistakes.

The spiritual guides of a people whose ability to endure the strain of civilization is doubtful, should, we think, constantly strive to avert impending evils by a system of physical doctrines as earnestly enforced as that of the higher life, to which the bodily life is conditional. Both are part of a Christian manhood. Devoted men of the noblest type have sometimes been saddened at the decay of the people for whose salvation they have labored with life-long faithfulness. Does not experience suggest that missionary work in the South and elsewhere should be thoroughly practical, that it should attack, with a vigor not heretofore thought necessary, the minor faults of daily life.

Immorality is often the result of herding in one room, when the occupants, had they known or cared enough about it, would have adopted a decent mode of life. A pure family life, which is the central point of a true civilization, can be promoted both through the illumination of souls and by the direct teaching of and persuasion to better habits and methods.

The wrong should be taken hold of at its roots. The conditions of vice are as great an evil as vice itself.

The causes that affect the continuance of the negro race cannot be overcome by merely supplying them with school-houses and churches. Church membership is a good sign, but no guarantee of their preservation. To these should be added instruction and training upon the whole range of daily life.

WE HAVE received the Annual Report of the Superintendent of Public Instruction of this State, an account of which will be given in our next issue.

THE recent message of Gov. Jas. L. Kemper to the Legislature of Virginia, is his last.

He states that, the whole of the public debt of Virginia, including principal and all arrears of interest, is $33,538,960.00.

He is convinced that the general features of the present revenue system, if untouched, merely corrected as to certain patent defects in matters of detail, will hereafter suffice to pay the full interest on the debt. The Constitutional Amendment which prescribes biennial sessions of the Legislature will make a saving of $100,000 annually. The recent tax on "drinks" is expected, with certain necessary corrections, to yield half a million of dollars yearly.

Governor Kemper opposes with the greatest vigor and ability the proposed efforts to nullify the "Funding Bill." He discusses the re-adjustment of the debt. He says: "So soon as the State shall proceed to pay, as it can, full current interest on the debt; so soon as its ability and its will to continue such full payment shall be made evident to the financial world, I have assurances that, then, a loan may be negotiated at four, per cent. and in a sum sufficient for retiring the whole of the debt."

In reference to re-adjustment, the Governor uses the following eloquent words:

"The broadest and highest considerations only must rule this whole question.

"The credit of the State and the credit of the citizen are parts of one whole, and neither can long exist without the other. The government is but the reflex of the people. The character of the State is but an aggregation of their individual characters. The success of all good and great enterprises for the development and enrichment of the community depends, in a greater or less degree, upon credit, and ultimately upon public credit. No State has ever broken its faith except at the cost of banishing capital, prostrating enterprise, impoverishing its people, and drying up the sources of its revenue. The preservation of a healthy sentiment of State pride and honor is the bulwark of free institutions. It is the cheapest defence of order, the surest means of staying vice and crime, and of giving purity and prosperity to the people and the government. The loss of that sentiment brings with it the saddest of all calamities for a State—the decay of its men."

Governor Kemper earnestly advocates many reforms that will ease the State treasury. An improved system of State book-keeping is called for: one that would dismiss many of the present half-employed force and give better results. He would dispense with county judges. He finds fault with the law which consigns men to the penitentiary at great expense to the State, who could be summarily and inexpensively punished. He says that the lunatic asylums are encumbered with cases of senile lunacy, and waste public money in needless transportation charges.

He thinks that the entire judicial system needs revision, that the tax on personal property should yield three times as much as it does, and that the oyster-beds should yield a revenue.

He makes the surprising statement that before the war, when Virginia was twice as rich as now and larger by one-third, the annual cost of the State government was less than $590,000.

The expenditure for the past eight years has averaged $1,058,976 yearly.

Governor Kemper's most able and thorough discussion of State affairs closes thus,—

"If my official service has been worthy of Virginia, then it shall speak for itself. If in aught I have been unfaithful or unequal to the high trust which a generous people committed to my charge, then no words of ingenious defence or apology can change faults into virtues. All I know, and all I dare affirm, is that, having stood steadfast against every opposer for what I have adjudged to be truth and the right, I shall now deliver into the hands of my successor the crown of Virginia's honor without a stain or spot or blemish sullying its purity or its traditional glory."

GOVERNOR KEMPER has been Governor of the entire State, not of his party only. Thousands of Republicans would rejoice at his continuance in office another four years and gladly vote for him. He has stood steadily for the right, and, while he lost temporarily a certain party popularity because of his unyielding fairness and broad statesmanship, he has gained universal respect, and retires to private life with the good-wishes of all his fellow-citizens. His interest in education has been special, and his kind good-will to the colored people, constant and genuine.

With such Governors, Virginia would soon take a proud place among her sister States.

We call special attention to the broadside of letters from Hampton graduates on another page. Such letters, which we have been for several years in the habit of giving to our readers, have proved, as we are satisfied by abundant evidence, one of the most interesting departments of our paper, valuable to it and the school and their common cause. To be put into direct communication with the work they help support is desirable for all the practical friends of the freedman, and there is no other way so natural and effective as this; it is even better than a flying visit. Unaffected and simple in style, and rich in experience, these letters reflect the condition of the freedmen, and of the whites, too, by whom they are surrounded, as far as these are related. They are pictures from the field by "our own artists." Valuable as they are, we could not afford to use them at the cost of injury to their authors. But the letters themselves could not help showing it. They are a test delicate as an electroscope, and satisfy us that practically no such injury results from their publication. Their readers will agree with us that they are as simple and unaffected now as at first. This is their chief charm, resulting chiefly from the fact that they are written in the freedom of friendly correspondence, without that consciousness of writing for the press which is fatal to simplicity in immature writers. Out of the great number received, it is almost never that we find one spoiled by such consciousness. There is a general understanding among our graduates, that extracts from their letters may now and then be published, so that no confidence is betrayed by this use of them. Indeed, they read each other's letters with interest; but there are so many to choose from that one seldom sees himself in print, and names are usually suppressed, and all the address but the State. Corrections are made only of occasional errors of grammar or spelling, never of matter or expression. But they speak for themselves, and with these precautions and explanations, we feel more than justified in giving them to our readers.

We give below an exact copy of a letter from a County Superintendent of Schools in Virginia (only suppressing one name), having the writer's permission to use it thus. We gladly avail ourselves of the opportunity to lay it before our readers. Such spontaneous testimony cannot but gratify and encourage all friends of the Hampton School, and the work for which it exists.—

Newbern, Va., *Nov.* 24, 1877.

James O'Keafe, Esq.,

Dear Sir:—

Enclosed is a letter from ——— ———, colored teacher, educated at the "Hampton Normal" school. I have no doubt but that he will give satisfaction, and would advise you to secure his services without delay. I have instructed him to wait until he receives information from you in reference to salary, length of term, etc.

I have had some experience with the "Hampton Graduates," and have almost invariably found them thoroughly trained for their work, quick and zealous in the discharge of every duty, and setting an example to the majority of *white* teachers in the admirable *discipline* of their schools.

I will warrant you that ——— is neither *preacher* nor *politician*, but a teacher in so far as skilled instructors can make him one.

Write to him without delay as he will not long remain unemployed.

Respectfully, W. W Wyson,
Co. Supt.

We are often asked what amount of influence the Roman Catholics are exerting in the South among the freedmen. There seems to be a general haziness of ideas in regard to it, with a general impression that they are making or meditating some great effort to proselyte the Negroes. Official information is the best, and perhaps such inquirers will be interested in the following quotation from the *Catholic Review* of Nov. 24th, a prominent organ of the church, published in New York City:—

"A special correspondent of *The Catholic Review*, who has witnessed the recent departure from St. Joseph's College, Mill Hill, London, of missionaries for our colored brothers in the Southern States, thus describes that most interesting ceremony:—

"On Tuesday, October 30th, the Revs. John Slattery and E. Proth took their departure from this college for the negro mission of the United States, and at the same time the Rev. A. Muller started for India. Since the first departure, in November, 1871, when Dr. Vaughan brought his first four young missionaries to Maryland, in response to the earnest appeal of the American bishops assembled in the second Plenary Council of Baltimore, the work of evangelizing the negroes has steadily progressed. It has not, however, developed itself as rapidly as its founder had hoped; for while St. Joseph's missionary fathers have gathered a few thousands of negroes into the one fold by their labors in Baltimore, Marlboro, Louisville, and Charleston, they cannot forget there are upward of 4,000,000 of blacks who, for the most part, remain unevangelized.

"Many more missions are to be founded; many more schools, and some orphanages, etc., are to be founded before the wishes of the founder of St. Joseph's College are in any way realized. A deep conviction remains with many that the evangelizing of the colored race can be done most efficiently by a society. Many heroic efforts have indeed been made on behalf of the freedman, but these efforts have in many instances died away with the death of the originators. On the other hand, a society never dies; hence it is more likely, under God's blessing, to succeed; for when a member is removed through sickness, death, or unfitness, he may be easily replaced by another who will carry on the work. For this reason, viz., to fill up the ranks of the little band of St. Joseph's missionaries, have these two fathers been sent, and next year they will be followed by five or six others."

The description of a brilliant ceremony of consecration follows, and the address to the missionaries by Bishop Patterson, which is eloquent and Christian. After it, the correspondent says,—

"The Fathers took the vow of obedience to the Bishop of Salford, Superior General of St. Joseph's Society. The two missionaries to the negroes added a second, by which they pledged themselves before God to be the servants of the colored people and to accept no work or dignity which might interfere with their vow."

If the idea were merely to establish a new religious faith among the negroes—as possibly it may be with the missionaries themselves,—we would only say, first, that it is not likely to be very successful, and second, that to what extent it could succeed, it might not do any great harm.

We believe that there is great uncharity and wrong in the wholesale denunciations of Roman Catholics in which some Protestants indulge. There is enough Christianity in Bishop Patterson's consecration sermon to inspire these missionaries with apostolic zeal, enough in the religious teachings of his church to save souls, and a great deal of wisdom in its methods from which Protestants might take lessons. The errors and superstitions which overload it are perhaps not more fatal to the souls of its believers than other superstitions and errors they might exchange for these.

We do not believe there is much in the forms of Romanism to attract the freedman. His instinct for the beautiful and dramatic, strong as it is, is less strong than his instinct for spontaneous emotional expression. The informal demonstrations and excitements of a Methodist camp-meeting will always be more attractive to his soul than the most gorgeous of rituals. He wants to do his own praying and shouting.

But the chief significance and motive of this Roman Catholic movement are not religious but political. The Romish Church is always and everywhere a great political organization. It believes in the union of Church and State, with Church on top. While the Negro was a slave, nothing was heard of this care for his soul. Now that he has a vote Rome wants it. To get it, with the shrewdness for which she is famous, she approaches him on the side she finds most vulnerable—his sensitiveness on the question of caste. Another number of the *Catholic Review* says:—

"'The broad, brotherly and catholic spirit of the Roman Church toward all who join her fold is attracting many colored persons. Their union with this Church strikes a killing blow against color caste in America.' We find these remarkable sentences in a very able letter addressed by George T. Downing to the Rev. Edward P. Humphrey, D.D., LL.D. Who George T. Downing is we need scarcely tell: he is a colored man well and widely known as one who has acquired a large fortune by his own industry, skill and thrift, and who possesses the esteem of all who know him. Who the Rev. Edward P. Humphrey, D.D, LL.D., may be, we know not; but it appears that he is the writer of an article 'On the Color Question in the United States,' wherein he advises our colored citizens to take themselves off to Africa and live there by themselves. Mr. Downing takes the liberty of demonstrating the folly and cruelty of this advice, and he does his work thoroughly. Here is a specimen of his style:

"'Reverend and dear Doctor, permit me in concluding to sum up the substance of your letter; to strip it and exhibit it without ambiguity or color; to give its morale and conclusion. I can do so in saying that a class of men, when the first opportunity is given them, are, as you say, "rising apace in the scale of intelligence, self respect, sound morality, and the religious sentiment and life." Yet they must go to an ignorant, soul-dejecting, heathen-killing land, because they, to use your words, will be "stung" by Christians, by the civilized in a Christian land; that they will in this land of school-houses, of Bibles and of churches, with all the astonishing virtues true of the struggling class, be the subject, from high and low, of "slights," "indignities," and a "freezing exclusion," which civilized Christian Americans "will strongly enforce." Verily, the colored man is needed in America as a missionary.'

"Mr. Downing has touched the thing with the point of a needle. Protestant Christianity—the Christianity represented by the Rev. Edward P. Humphrey is a sham; Catholic Christianity is genuine. The one is narrow and clannish; the other is—Catholic. At the altars of the Catholic Church all men are equal—prince and peasant, white and black. Mr. Downing points out with force in his letter that our colored citizens do not hanker after any social recognition other than that to which their education and character may entitle them. Their political rights are assured to them; the Catholic Church gives them their religious rights; what else they want they will win for themselves or do without it."

This sounds well, but people who have lived at the North surrounded by the race which represents the Romish faith in the United States, and are familiar with the sort of fraternal feeling it has for its "colored brethren" (that is not what it calls them), will read this gush of sentiment with a smile; and remembering with some distinctness, a time not very far back when New York streets ran with Negro blood, and a Negro orphan asylum burned to ashes, under the fury of a Catholic mob, will ask themselves what this sudden access of brotherly love means.

It means that there is a large political cat in the meal, and the sooner his claws are discerned the better. And it suggests to Protestant churches which may have furnished the text for Dr. Humphrey's advice and Mr. Downing's letter, that if they are not willing to sacrifice as much of caste distinctions as Rome will for the sake of their colored brethen, they are holding open the door for her to enter in and occupy the land.

ENCOURAGING.

From a well-known clergyman in Boston, Mass.:—

"I enclose my subscription for the Southern Workman to November, 1878,—a capital paper; every number is a missionary.

"Henry W. Foote."

In the *Christian Recorder* of Nov. 29th, the well-known organ of the Colored M. E. Church, edited by Rev. B. T. Tanner, D. D., we find the following vigorous and remarkable editorial:

"The utmost any colored man of to-day can hope to do, is to lay such a foundation as will enable his son, or more probably his grandson, to become distinguished. As for himself, he must be satisfied to remain almost, if not altogether unknown. And wherefore? For the reason that his past ancestry has not been of the kind, as to insure in him high thinking and polished doing. Coming of a generation of servants and slaves, the atmosphere in which he was born and reared has been altogether destructive of that, the world will care to have survive; much less to have honored. Say what you will, there is a certain kind of transmission of intellect from the father to the son. If not the transmission of intellect *per se*, it is certainly the transmission of those helps and agencies by which intellect is developed, and so becomes the power we find it. But for the colored man it comes not *per se*, neither in the shape of helps; consequently he has it not. Therefore the work of the present generation is to lay such foundations as will in the future secure to the class he represents, the brain power that will command the attention of the world.

"Nor let any of us despise this work of laying foundations. There is as much glory to be attached to it as can possibly be attached to any other. The fact is, the glory for any generation, is to do the work given it to do. It may entail poverty, suffering and even death, but if we would be heroes in the fight of life, do it.

"Let us then accept our work, resolving that the foundations we lay for our children and our children's children should be so broad, and wide, and deep, as will compel them to rise up and call us blessed."

That a prominent colored editor should face the true work before his race with such thoughtful, brave, clear-headed discernment, is a most hopeful sign for it. Well may he call that work as glorious as any other can be. It is the work of the Pilgrim fathers, the work of the pioneers of every race that has become great. We are what our fathers lived and died to make us. Our children will reap what we may sow.

FARMING IN TIDE-WATER VA.

An exceptionally good manager who resides in Norfolk and has varied business interests in the city, and at the same time carries on three farms in the adjoining county, on the share system mainly, told us that he found his crops paid him a better interest than any other species of investment. His rule is not to touch poor land at any price.

Good land can be bought in this vicinity at $10 per acre by any shrewd buyer. Southern hostility to Northern settlers is rapidly becoming a mere bugbear. The man who will buy only good land here, and not more than he has means to manage, has vast advantage over farmers farther North, for mixed farming in summer, and fattening stock in winter.

The mean temperature during the six coldest months averages 48°; the thermometer seldom sinking below 20°. No large expense is therefore necessary for building warm basements or furnishing carbonaceous food to keep animals from freezing. Cattle from the back country where they are raised without much expense on the reeds, are to be landed, delivered at the Hampton farm, weighing from 5 to 10 hundred pounds, at two and a-half to three and a-half cents per pound, live weight. Grain is as cheap as in New England, and the cow pea, cut before maturity and cured, makes an excellent and valuable substitute for hay, requiring only four months from the time of sowing till use, and yielding per acre as much value in food as timothy at the North. Clover does well for two or three years, but runs out.

The demand for properly fattened beef and mutton for the markets at Norfolk, Old Point, &c., is not at all supplied from local sources. Fattening is not understood nor practiced generally, and the best beef comes from Richmond, *via* the James River line, and costs $2.50 per head for transportation. Cattle in Norfolk market are worth three to four cents on foot, and beef sells from the stalls at fifteen cts. for choice cuts. Before the war the swamps used to be full of branded cattle running almost wild, winter and summer. Thefts now discourage the Southern farmer of the old school from this method of raising beef, and he knows of no other. Stall feeding, and the English style of feeding sheep on turnips are unknown arts.

An acre of land properly enriched will produce three heavy and valuable crops in a season; viz: early potatoes, corn and cow peas, or turnips. We believe that with our long season, no acre in New England can be made to produce as much cattle food in one year as a selected acre of our school farm. To all Northern farmers of means we would say consider these things, and come spy out the land, and see if we have not understated the inducements to employ the cheap labor of Virginia, rather than the omniscient blunderers from Castle Garden.

Dr. Reynolds, the temperance lecturer, says that six hundred of the oldest physicians of the land testify that since they have stopped giving alcohol as a medicine, they have had much better success with their patients than before.

LETTERS FROM HAMPTON GRADUATES.

The Hampton Normal School, now in the tenth year of its existence, has two hundred and twenty graduates, eighty-eight per cent. of whom have become teachers. With most of these the school has kept up constant communication, both through the Southern Workman which is sent to all whose address is known, and by frequent correspondence.

These graduates' letters, fresh from the field, supply the most direct, and graphic information that can be obtained of the condition of the freedmen and freedmen's schools in the regions from which they come. In publishing them, we believe that we are doing a service to all classes of our readers.

We begin the year with a particularly rich selection, and shall have fresh ones to offer from month to month, as heretofore.

A good friend of the school allows us to publish the following letters from two of its graduates. The first from a young woman who has been teaching for several years with success; the second from the young man who has just gone as missionary to Africa.

———, VA., *May 9th*, 1877

Dear Miss —:

Your welcome letter received in April, deserved a more prompt reply, but I have been too busy to write until now. I don't know how to thank you for the nice package you sent me and my pupils. I have read a part of the books with great interest and delight, the few spare minutes I have had before and after school hours.

You would feel richly paid, could you have seen, or could you even feel, how delighted the scholars were with the tracts, and what nice care they take of them. They are perfectly carried away with the "Child's Question Book." They do answer the questions so nicely. I use it as a kind of dessert after I am through with the Bible lessons, and you ought to see how they smile all over their faces when it is time for "Our Questions," as they call the exercises. I use the Sunday-school papers from Hempton, edited by Miss Harold. As a help, I take "The Sunday-school Times" published in Philadelphia. It is very fortunate for me that the "Southern Workman" and "The Sunday-school Times" are getting out the same lessons, 2d Book of Kings. Do you think I am using suitable questions and helps? I am obliged to take question papers that have the lessons all written out, because my pupils have no Bibles. I have only seen two Bibles beside my own since I came to this place. I have fastened up the texts you sent me, and you can't imagine what a cheerful looking little school-room I have got. Nearly all the children have learnt by heart the "Rules for doing good." Even the little ones who cannot read, can repeat them from hearing the large scholars read them so often. Now I shall be glad, if they will put them into practice— for I think the good of knowing how to do right, is in doing it. It is worth little to know all the safe paths and never walk in them. I don't think it is worth while for me to say anything about my day school, as you see so many letters from other Hampton graduates.

May be I ought to tell you about one of my classes, (I say ought, because I feel proud of it) which numbers about eighteen or twenty, average age seven years; came to me when I first opened, which was the 26th of last February. They did not know their A, B, C's. Now they can read quite well in the 2d Reader, spell in two syllables, can count and, make all the figures from one to one hundred, and some of them can do sume in addition. Don't you think this is pretty well?

Shall be glad to hear from you at any time, when you have time to write.

Your friend, L.

N. Y., *Sept.* 18, 1877.

My dear Friend:

Your kind letter gave me much pleasure. I shall do as you asked me to, that is, take it with me to Africa. Not only that one, but all you have written me on the subject. My time in America is very neer out, our day for sailing being the 24th. We shall have our parting meeting in Brooklyn, next Sunday, and leave the next day. Rev. Mr. Snelson, our minister, has gone home to bring his family. He has a wife and three children. Dr. James has a wife and two children, making the number of our party ten, five grown persons and five children. There are other passengers but not of our party. The vessel is a sailing vassel, and we shall he at sea for some time. It takes her between thirty and forty days to make the trip. I pray that we may have a pleasant voyage. And, as we are going on such a mission, I feel assured that we shall. I am now looking forward to my work, and the more I think of it, the more I want to go. Each day brings new assurance that the Master has called me to do this work for Him. I am well pleased to go to Africa and give my life for the Master's cause. I hope you will write me as often as you have time. For you know, when one gets so far from home, it is always a pleasure to hear from some dear friend. I shall of course have to drop some of my correspondents, but I want to correspond with you all the time. My address will he Mendi Mission, near Frectown, Sierra Leone, West Africa. I feel that I am to do some good in the world, though it be in a land that is forgotten by many. I believe that God will bless it even there. This will he the last letter I shall be able to write before we sail.

Yours truly,
ACKREL E. WHITE.

The thirst for general information which our students acquire in the school finds no springs in the deserts to which many go as teachers. As far as possible we supply it with the old papers from our reading-room, but there are, of course, not nearly enough to go round.

My dear friends and ex-teachers:

Long before this time, I know, you have looked for a letter, but my circumstances were such up to this time as not to allow me to do what I wished to do when I wrote—that is to send money to hnvo my box of books sent to me.

Here where I am the people do not know who is president of the country, nor do they know the name of the country in which they live (I mean the mass of the people). In short they seem to know nothing of the other counties of the State, of the other States, nor of the other countries of the world; they have a knowledge only of their own little county, and the things that have transpired therein for some years.

The majority of the people of this county are Roman Catholic, and I have the good fortune—or bad, I hardly know which—to be settled in a community entirely Catholic. The nearest church of Protestant denomination is several miles from us, in which they hold services only twice a month.

This is a very lonesome place indeed. There is but one family that lives near the school that sends any children, and only three other families are represented in my school. My average weekly attendence is about eight; the average age nine. I have all told, fourteen scholars. I have found no trouble in teaching; it isn't confining, but I suppose that is on account of the lonesomeness of the place.

Since I have been here, I haven't seen a single newspaper; but by an accident, I received a piece of a newspaper aronnd a package a few days ago, bearing date of the 9th of November, from which I got the intelligence of the progress of the Eastern war, and of the death of Senator Morton. A few other minor things also that were very refreshing. Miss M., when you send my books, please put into the box some old newspapers They will enable me to catch up with the times, for I am terribly far behind them. If convenient to you, please put in an atlas, and a geography; and send me a copy of that book called The Speakers' Garland, and the bill of them, and I will send the cash, or, if you prefer, drop me a card, and I will forward that first. You cannot send the box by express, but by freight.

I have just received some money, because the quarter was out the last of the month,—it began the first of September—and the small amount which I have left after paying my board and purchasing a pair of shoes, I will spend for something to read, and will endeavor to pay my bill at the Institute out of the next quarter's salary—if not the whole bill, at least two-thirds of it. I am a poor Christian and need all the prayers I can get. Pray for me. Ask the same of all my teachers. I am in need of almost everything required to make a good Christian. I pray hard, and that is the reason I am so well satisfied here. Though my pay is small I would not leave my scholars for anything. I have become very strongly attached to them indeed. If I can't read the Bible to them, I have a Sabbath school at half-past two, for old and young. I teach the Catholic catechism and read from such books as they choose to bring to me for that purpose. I teach moral lessons and ask questions upon the duties of man towards God, to his fellow-men, the State, &c. I am very well satisfied here, but would be more so, if the people were of my faith.

I hope by the grace of God, never to disappoint the friends who aided me at the Institution. My purpose is to do all the good I can and thus glorify Him. Reading the Bible is offensive to my school board, to my trustees, to my scholars, and also to their parents, consequently no Bible has ever been read in my school-house. That little book you gave me, finds ready listeners among these people.

I am yours with true deference and friendship.

The following letter gives a graphic account of the floods which have caused such suffering recently in Virginia.

———, VA., *Dec.* 1*st*, 1877.

Dear Miss M:

If I had written to you when I first came, I would have told you of a hard country and a lonely place. I began school on the 19th of Nov. I entered the school-room with one little boy and thought for quite a little while that that was all that I was going to have; but by and by more came in which made my number fourteen the first day. I did not do much the first day, however, but take their names and find out what they had been study ing. Here they have no school-house, but rent a room. My room is large enough to hold about sixty. The second day eleven more came in and two the next. By the last of the week I began to feel quite proud of my school. But lo, and behold, Wednesday, Thursday, and Friday it rained very hard night and day. Friday night the river overflowed and the water rose very fast and high. The people, those that lived nearest to the river had scarcely time to get out of their houses. They could not save a thing only what they had on their hacks. And some did not do that. There were eighteen livee loet round here. And from what I have heard, there were some thirty-two souls lost here and elsewhere. Such a time I never saw in all the days of my life before. O, it was dreadful. It about ruined a great many families in this place.

Ten houses were washed away and all that was in them. These were all black people's houses, with the exception of one. Poor things, they are now destitute of everything.

As the good Lord would have it, I am not very near the river, so the water did not reach me. But I am afraid it has hurt my school. Many that would come, now cannot come. The James divides the place; the bridge was carried off, so those that live on the opposite side now cannot get to school. And some I had have now lost. Everything seems to be in a perfect chnos.

I have a very nice boarding-place indeed; with very pleasant folks, have a very good room and bed, and really have no room to complain whatever.

When I write again, hope to have something interesting to tell you about my school.

Remember me to all.

Sincerely,
M.

We do not remember ever seeing a richer collection of children's compositions than the following. The teacher has no reason to despair.

VA.

Dear Teacher:—On returning from my school this afternoon, I thought I would write and let you hear of my sojourning. To-day is Friday (the last day in school week), and, after a review of the week's studies, the children are requested to write short compositions I send you six, copied just as they were written:

"SUNDAY SCHOOL.

"Sunday school is a good place to go. To keep out of badness. And learn the words of god good boys and girls goes to sunday school every sunday when they can. Everybody ought to go to sunday school; and hear the Bible because it tell them what is right and wrong.
M. F. Hancock."

"SUNDAY SCHOOL.

"Sunday school are the place that people ought to go, and learn to read about god and his diciples, and of him to learn good and not bad like Biley doue to day killed a little sparrow, where will uever do him no harm in the world, and he put the bird to death. Poor bird. Peter S Hancock."

"Sunday School is a good place that all bad children ought to go to. And some of the members do not come to the Sunday School. And this School is a very emportant one. And the people ought make their children come where gods work are going on. And if they fuse to come whip them. I do not fuse to come where the Lord work ie. Jerry Chappell."

"Sunday School are a place that people ought to go to learn something about the scripture Sunday School are a very pretty place to go to learn and to spell and to read People ought to be have there Selves. Emily Farmer."

"Sunday School is a very useful thing; though I dont go to it but I hope every body will go if I dont go. Sunday School is a place where every body ought to go to learn sense, and read the scripture and hear the word of God. Ellen Coles."

These were written by the Fourth Reader class. My school numbers fifty-one pupils. I have no little task to undergo. Besides worrying with the children all the week, I have the respouciihility of head Deacon and Clerk of the church. I sometimes despair, but when I look and see that there is no one in our midst more competent than I am for either position, I look to the "Great I Am" and do the best I can.

Ere this, you are somewhat experienced in the movements of our race. They suit quite well to begin with, but the end, alas! how different from the beginning! Our penple are quick of apprehension, but do not continue in it.

I am suffering with toothache and rheumatism in my shoulders. I can't write more; hope I may be able to write you a more definite letter before your Institute closes. Please to remember me to Miss C. L. and Miss M. F. M., Mise H., and all the school.

Very reepectfully,
Your once pupil and scholar,
H.

THE writer of the following letter is taking his first experience of teaching in a dark corner. We have no doubt that he will be a light to it.

———, VA., *Nov.* 11*th*, 1877.

Miss M,— Dear friend:

This is my first opportunity of writing to let you know how I got along on my journey.

I left Old Point 2 o'clock P. M., stayed in Norfolk all night; left Norfolk 6:30 A. M., arrived at Richmond, 5 P. M. I had to stay there all night, then I took the packet at 5 o'clock the following evening and arrived here at four the next morning.

I went to see the Superintendent who examined me as follows: "What is a fraction? Which is most, five-eighths or five-sixteenths? What is an improper fraction? What is the difference between compound interest and simple?" The example he gave me was, $100 for four years on compound interest, to work in my head. He then asked me, "What is a participle? What is a conjunction? What is history?" He began to examine me in United States History and he examined me all through; I answered every question he asked, excepting dates. Next, spelling; the only thing I missed in was geography; I missed half the questions he asked. He talked to me half an hour before he began to examine me. If it had not been for geography, I would have been perfect. In mathematics he asked me all he could, and I answered as rapidly as he could ask. He was much of a gentleman, and told me he was sorry to ask a man of my ability to work for such money. To tell the truth it is worth $50 per month to stay here; any one who wishes to do good for the black man, he or she need not go to Africa, for right here one can find the people who hardly know they are free; they all say "Masse Henry," and "Massa John" and so on. The people have lost all confidence in school-teachers; all they have had here have been drunkards, and this lonely place is enough to make any man drink. The minister is about as good a grammarian as the old man who drives the Normal School cart. The whites and blacks are all alike; they all say "gwine," "dar," "fotch" and "is you that." There has been a school here for three years, and there is not a child here that can tell how much 5 and 5 are.

I opened Sunday school to-day. I had about thirty good behaved scholars. When I send to W—— for my box, I will send to you for some hymn books, Bibles, and Moody Gospel Hymns; the Bibles are $ .25 each are they cot? I expect to open school on the 12th; the Sunday-school that I opened to-day is about the first opened in this town.

I know that you wish to know if I am happy here; I em not, but still I am putting my best foot foremost. Where I am boarding I read Bible every night and have prayers. I hope to hear from you soon. Please excuse this letter; I have not any time place to write.

Yours respectfully,
S.

The following letter is from one of the original band of Hampton Student singers, most of whom are settled as teachers and are doing good work.

Miss H.— Dear friend:

I take the present opportunity to write you a few words thanking you for giving me this situation, and letting you know how I am getting along.

I opened school on the 12th. I have not got a full school yet, but they have promised to give me about fifty or sixty after Christmas. They promised me $20 per month, but as there is no money in the treasury and they are in arrears in paying teachers, I shall have to lose ten or fifteen per cent. to get any money.

I like the country very much; the people are very sociable and kind, both white and colored. Rohr Dungey and Horace Sparks are teaching near me, but I have only seen Dungey. There is not much encouragement to teach fifty or sixty pupils for about $18 per month, and pay one's board out of that, but I shall do the best I can while I am here. I heard three miles from the school-house, but we have had no bad weather yet and I don't mind the walk.

Please remember me kindly to General A., and the teachers.

Respectfully,
W.

The spirit with which our graduate teachers meet the difficulties and hardships of their position, is as encouraging to us as their success is, and of course is one great cause of their success. We hear no whining. They state their circumstances, for our sympathy or advice, but waste no time in lamenting. The following letter from one of our young women graduates, is an excellent example of this good grit.

———, VA., *Nov.* 20*th*, 1877.

My own Dear Miss H:

I am again at my appointed work. I opened school the 5th of the month. My school numbers only twenty-one as yet. There are about sixty children in or near this place, that would be in school if they had clothes. I must confess I never saw the people so poor as they are now, nearly every colored family around here is working out in the field picking cotton and peanuts, and nearly all the children

are at work trying to get their clothes ready to come to school after Christmas. Then my school will be crowded. I went around last Saturday through the town, to see how many children

Please remember me kindly to all the girls that I know in school. Much love to all the old teachers. Hoping to hear from you soon I will close. I am as ever,
Your grateful pupil.

papers you could give me, the children will he pleased to have them. When you send the book that contained the plantation songs, please also send a catalogue.

Yours truly, C.

natives who have flocked to the beach to see her arrive. Yes; Africa is ready to receive the white-winged fleets of the world. What shall we send her—slave-traders and rum, or missionaries, and teachers, and a Christian commercial civilization?

are at work trying to get their clothes ready to come to school after Christmas. Then my school will be crowded. I went around last Saturday through the town, to see how many children I could get to come to Sabbath-school. I was much surprised to find twenty children (in this small place) who could not attend for the want of clothes. It is really true I never heard so many little ones say "I want to go to school, but I have no shoes or clothes fit to wear." Of course some of these children will be able to come in school before it is out, but a great many of them are compelled to stay at home the whole term; if it were warm weather they might come. I did not know that the majority of the people here were so poor, but I believe the times are hard everywhere now. I am teaching a night school which numbers fifteen. I teach them right at home. Last Friday night I was teaching as usual, my room was full of boys and girls and one class standing on the floor, when I heard a gentle tap (it was nine o'clock), I said "Come in." To my surprise in stepped Ella and Sesie. You may know I was little a confused. I soon dismissed my school; then for a little chat about the dear old Normal School and its inmates, which I enjoyed very much.

Next morning I went with them to Dr. B's office to be examined, and introduced them. He said that one of them would have to go off on the morning train to the next station as that was her place, so he asked for the diplomas, Ella handed hers. Without another word he handed her a certificate. Susie, poor girl, had forgot her diploma. Dr. B. did not know what to do about that, for he had no time to examine her; so he asked me if I knew when she graduated. I told him yes, then he asked her about where she taught last, and the grade of her diploma. He then said, "Well, of course I will take your word, but had rather see your diploma." He then gave her a certificate. After thinking awhile, he said it would be best for the two girls to get a buggy and go through the country to their places. This was a trial, for they had to go in different directions, so each had to hire a buggy, and out here you can't get a horse and buggy to go ten miles less than $2.00. Ella had to go just that distance, so I soon got one for her, but Susie seemed to have had luck all the way. She had to go thirty-five miles, and the man said he could not carry or send her less than $7.00. I asked her if she could pay that, and she told me that she did not have but fifty cents with her to save her life; I felt very sorry and would have taken the money out of my own pocket for her if it had been in there. At last thought I could get a friend of mine to take her there and wait for the money. He was willing to do it as she was one of my friends, and I was sure he would get his money, but now the day was growing old, he could not get there before night, so he agreed to take her to Jerusalem which is half of the way; he took her there for $1.50 and I wrote a letter there to another friend and asked him to take her up to where she was going to teach. She was very thankful to me and I was glad to be of service to her. I heard she reached her stopping place on Sunday, but I don't know whether she or Ella either, are teaching or not. Both of the trunks are at our house yet, waiting to be sent for; so much for the two teachers.

I hope some other poor girl may be as happy on this Thanksgiving day as I was last. I will try and make somebody happy on that day if it is only to say a kind word, to make some poor heart glad.

Please remember me kindly to all the girls that I know in school. Much love to all the old teachers. Hoping to hear from you soon I will close. I am as ever,

Your grateful pupil,

D.

P. S. If you have anything you would like to send my poor little ragged children, you can send it by express. I will willingly pay the express charges.

THE inspiration of having a missionary in Africa is already beginning to be felt by the School. A missionary does not give up his work at home when he goes to the heathen. His devotion, self-sacrifice and success are a constant uplifting of the tone and zeal of the workers he leaves behind him.

HENRY CO., VA., *Nov.* 14, '77.

Dear Sir:

I was greatly encouraged and rejoiced by the reading of the Southern Workman of the 12th ult. I remember reading in there about the missionary enterprise. Those who are going to Africa, and whose names read as follows: Rev. Floyd Scaelson, Benjamin James and my dear old school-mate A. E. White. I am proud to know that there are three who have resolved to go there for the civilization of our race; and most especially one from our school, Hampton. I also read some very interesting letters that were published in your last paper, November the 1st. One most particularly from North Carolina, which interested me very much.

I am teaching near the place where Inge, Dyson and Yancy taught. I commenced the 29th of October; the scholars have advanced a great deal, some study arithmetic, grammar, and geography, and various other studies. I have a scholar that could enter the junior class if he were at Hampton, and some two or three more soon. The colored people generally, I may say two-thirds of them, are doing pretty well; they are not not any ways dependent on the whites; some own land, cattle, hogs, horses, and nearly every one a dog; while others rent and lease and won't work at all. The chief production in this section of the country is tobacco. They say if they don't raise tobacco, they can't make any money, this year they have made so much tobacco that they can't get any price for it. Danville, Va. is the great market for that weed. My advice is to them to raise more corn, wheat, oats, cattle, hogs and sheep. Most of them do raise enough corn and wheat to last them the year round, while others do not. Hunting is carried on to a great extent; the squirrel, hare, and fox in the day-time and the opossum at night. Sunday is not regarded; they say that is the only time they have to hunt. In this county there are three denominations—Missionary Baptists, Methodist and Old Iron Sides; the M. Baptist and Methodist I am well acquainted with, but the Old Iron Sides I am not. The colored people here believe in good, educated ministers, and they have very good ones in this neighborhood; they have prayer-meeting about twice every week. I have visited one since I have been here, and it was very well conducted, Saturday nights anyhow, and adjourned at eleven o'clock, while some have parties and have big frolics.

If you have any old books, or Sabbath school papers you could give me, the children will be pleased to have them. When you send the book that contained the plantation songs, please send a catalogue.

Yours truly, C.

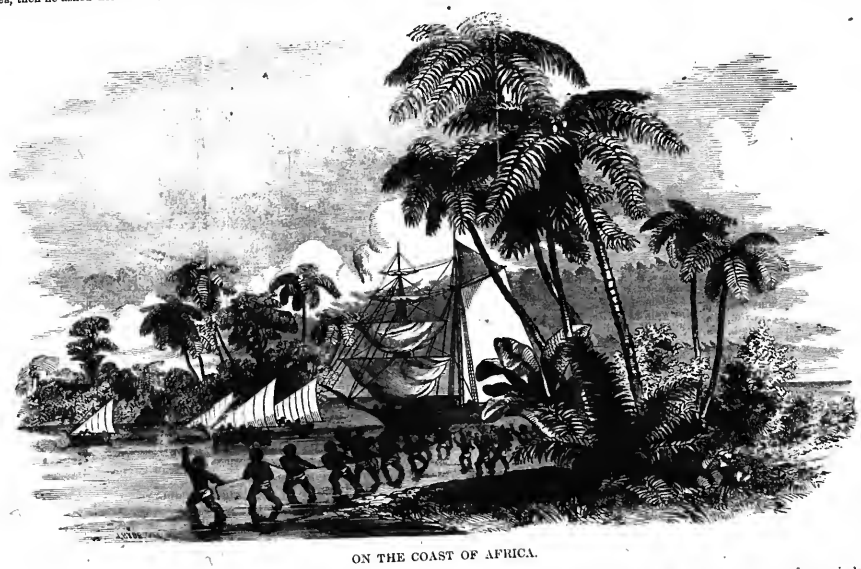
THE BASS ROCK.

Sailing towards the mouth of the inlet known as the "Firth of Forth," on the east coast of Scotland, the traveller's admiration is excited by a remarkable island rock, rising bold and bare 420 feet above the sea. It is about a mile in circumference and nearly round in shape. Its frowning cliffs rise straight from the sea, and no landing is possible on any side but the southwest, and there only when there is a lull in the great ocean waves that dash and roar almost ceaselessly against its rocky wall.

This is the Bass Rock, and it is as conspicuous in history as it is in the landscape. The crumbling walls of an ancient fortification moulder slowly at its southern base, and clinging to the steep side, about half-way up this slope are seen the remains of a still more ancient chapel which dates back to the introduction of Christianity into Scotland, and was built in honor of a pious hermit who made it his retreat during the wars between the Picts and Scots in the sixth century. The fortress dates certainly from the fifteenth century, and before the English took possession of Scotland was used as a stronghold by the Scottish Lords. Kings have found refuge within its walls, prisoners of state and the victims of religious persecution have languished in its damp and gloomy cells. The son of a Presbyterian minister who was confined there in the time of the persecutions of the Scottish "Covenanters" in the 17th century, says, "the Bass was a bare, cold, unwholesome prison; all their rooms or dungeons full of smoke like to suffocate and choke them, so that my father, and the other prisoners were necessitate many a time to thrust head and shoulders out of the window to recover breath."

The stronghold was destroyed in 1701 by King William of Orange after having been held by his enemies, the followers of the exiled King James. Ever since, the Rock has been only the lonely home of sea birds screaming around its lofty summits, and resting in great numbers in the crevices of the rocks, which sometimes shine snowy white in the distance covered by their plumage. Of all the birds which make it their home the solan goose is most valued, both for its down and its eggs. Hardy peasants take them in great numbers for market, travellers often visit the rock to enjoy the shooting and the grand scenery.

Our picture represents such a party of sportsmen, perhaps the guests of the family to whom the Rock now belongs, the descendants of the Scottish Lord, Sir Hugh Dalrymple. For the illustration and the facts concerning this famous Rock, we are indebted to *Harpers Weekly.*



ON THE COAST OF AFRICA.

AFRICA READY TO RECEIVE US.

Our picture represents the landing of a merchant ship on the coast of Africa. Her cable is pulled ashore by the willing hands of the natives who have flocked to the beach to see her arrival. Yes; Africa is ready to receive the white-winged fleets of the world. What shall we send her—slave-traders and rum, or missionaries, and teachers, and a Christian commercial civilization?

WE HAVE received a very interesting article upon the Liberian question by Mr. Edward S. Morris of Philadelphia, the well-known merchant in the Liberian trade, and regret that we have not space for it this month, but will give it in our next number. The article, which was written for a Philadelphia paper, is an answer to one recently published by the State Department at Washington. Liberia and her commercial interests have no better friend than Mr. Morris, and in considering both sides of the question of emigration, as those to whom it is of vital importance are bound to do, Mr. Morris's statement is of great interest and value.

SIXTY men are daily employed in quarrying ice from the Grindlewald glacier in Switzerland, for the army hospitals in Bulgaria.

AN Iowa man was burned to death while drunk, and therefore his widow sued the saloon-keeper who made him drunk, and recovered $6,000 damages.

IT is a good supplement to the old proverb, "Train up a child in the way he should go,"

THE success of the London Temperance Hospital is treating nearly 5,000 cases without alcohol, is leading the profession to diminish the use of stimulants.

REV. E. W. BLYDEN, the new Ambassador from Liberia to Great Britain, is a member of the Presbytery of West Africa and of the Synod of Philadelphia.

THE medical officers connected with the English army in India, without exception, condemn the issue of rum rations as unnecessary and dangerous in every way to the soldiers' well-being.

MISS JOSEPHINE A. SLOAN, a colored girl, graduated at the head of her class in the Rogers High School, at Newport, R. I., last summer, receiving the gold medal awarded to the first scholership and pronouncing the valedictory. Her average in every study, on examination, was within a fraction of the maximum, which is 100. She took her last two years' study in one year, and excels in Latin, Greek, French and German.

CHARLES A. MINNIE, a lad reared in the Colored Orphan Asylum and a graduate of the Greenwich Street Grammar School of N. Y. city, was the successful competitor for the West Point Cadetship offered by Congressman Miller. In reading, history, and spelling, he ranked 100 each, in grammar 99, arithmetic 98, and geography 88, being an average of 98, while the highest average of the others was 75.

Agricultural.

WE REPRINT from the *Scottsville Courier*, Albemarle Co., Va., nn interesting article by Mr. W. G. Merrick, a Northern gentleman who has settled there, on the

CULTIVATION AND IMPROVEMENT OF WORN-OUT LANDS.

The country, North and South, is full of agents of fertilizing companies and manufacturers, and if the figures could be given, it would astound the uninitiated to know what numbers of the community gain their living directly from the farmers by the sale of fertilizers. I think $10,000 a low estimate of the amount spent on fertilizers in the neighborhood of Scottsville; the amount spent iu the State may be imagined.

The question naturally arises: Have these fertilizers improved the condition of the land and pnid a profit at the same time? I think I can answer that in too mnny cases the results have been unsatisfactory, and I give two reasons. First, the farmer has purchased his fertilizer without knowing the requirements of his soil (on this subject I may have something to say hereafter); second, the farmer often purchases a worthless fertilizer, or at least one which has little of the ingredients of plant food. This is more the fault or ignorance of the party who offers the fertilizer, and can be best corrected by the establishment of an experiment station and certain State laws, such as now exist in Connecticut. The report of the chemist of the experiment station of Connecticut will bo quoted as an authority in these remarks.

These two reasons for the unsatisfactory results from the use of fertilizers are all that ars now necessary. Under the second reason I give a remedy, but the remedy for the first lies mainly with each individual farmer himself, and an understanding of what we want is only to be gained by experiments to he made with different fertilizers on different crops, in an economical manner, until we are satisfied as to what the *soil* requires in order to supply plant food to the different crops.

To those who have not studied the composition of plants, I will say, that there are certain ingredients in soil and atmosphere which enter into the growing plant, bringing it from the germ to the perfect plant, and these ingredients are termed by chemists and agricultural writers "plant food." These ingredients of plant food must first appear in the soil. Unless all the requisites are present in some form the plant cannot attain perfection. Its growth is stunted, its grain shriveled, disease and insects attack it, and the result is a failure of the crop. I shall speak only of those elements which can be supplied by the farmer to the soil.

When plants are burned they always leave more or less ash behind, and this ash consists of several, and sometimes as many as fourteen different substances, of which the following are found in the greatest quantities: Potash, soda, lime, magnesia, silica, sulphuric acid, phosphoric acid and chlorine. I will mention one other ingredient of plant food which can be supplied to the soil by the farmer, which is nitrogen or ammonia.

Of these ingredients of plant food the most important are potash, nitrogen or ammonia, phosphoric acid, sulphuric acid, lime and magnesia. The first three are the ingredients most often deficient; the last less frequently wantiag, and all the others are supplied in ahundance by most soils.

The questiou that first presents itscif to the thinking farmer is, Which of these ingredients are deficient in his soil? How shall he find out? Only by experiment. Now to experiment with potash we would hnrdly buy a super-phosphate, or thinking onr land needed phosphoric acid we would not buy a fertilizer rich only in nitrogen, but this very thing of huying fertilizers without knowing the ingredients of plant food they contain, nor the per cent. of such ingredients, is done every day, because the agent recommends the fertilizer, and it may be a few dollars cheaper than the fertilizer purchased last year.

Let the farmer know first what he wants to supply to his soil for the crop he intends growing. It is unquestionably a great help to know the analysis of a plant in order to supply the different ingredients it contains to the soil to grow the crop in its greatest perfection, bnt when he gets such analysis how does he know which of the ingredients his soil is deficieut in? As I said before, by experiment. If he desires to experiment in all the different ingredients, let him take the following fertilizers:

For potash we have sulphate of potash, a chemical supplied by any market, and containing from 30 to 40 per cent. potash, and valued in the market at $60 to $65 per ton.

Wood ashes, both leached and nnleached. I will state that ashes nre nearly a complete fertilizer, containing almost all the ingredients of plant food, with the exception of nitrogen.

For nitrogen we may use many preparations. Among the chemicals arc nitrate of soda, with 16 per cent. nitrogen, valued at $80 per ton. Sulphate of ammonia, with 20 per cent. of nitrogen, and valued at from $90 to $100 per ton. Among manufactured fertilizers are dried blood, fish, manure and Peruvian guano, besides many others whose chief ingredient is nitrogen.

For phosphoric acid there is pure ground bone, both steamed and raw, with a per cent, ranging from 20 to 26, insoluble phosphoric acid; pure bone treated with sulphuric acid to render the phosphoric acid solubis, and known as superphosphate of lime, containing soluble phosphoric acid from 1 to 10 per cent., about the same or more insoluble

For lime we use the quick lime of commerce.

It must be remembered that there are influences at work both against and in favor of the different fertilizers. For instance, potash may be found of great benefit during certain seasons when we have plenty of rain; again, in a dry season it may be of little value, which shows us many things have to be taken into consideration when experimenting, therefore it is well to carry on the experiments during a series of years, using the same fertilizer on the same plot, until it is clearly demonstrated to our own minds whether it is the plant food needed to produce the best results at the least cost. Further, it may be that not one only, but two, or even three, of the ingredients nre required, therefore it is well to experiment, not only with the different ingredients alone, but two in connection, say phosphoric acid and nitrogen on one plot, potash and nitrogen on nnother, and so on.

There nre other conditions of the soil requisite to obtain the best results. It is often found useless to apply lime to land destitute of vegetation, as lime acts not only as a plant food, but is of mechanical use in dissolving and preparing other elements for use, (this may also be said of potash), and particularly is it of benefit in this way when put upon land where a large amount of vegetable matter has been turned in as a green crop, or when applied where barn-yard manure has been spread, either as a top dressing or plowed in. In fact, I have found from my own experience that any fertilizer acts better on land comparatively rich in vegetable matter than on land destitute of the same.

NOTES FROM VIRGINIA.

Many persons from the North and West are settling in Virginia, mostly in the valley and Piedmont region, where the land is stronger than in the tide-water region and not so subject to bilious diseases. Yet in the counties of Matthew nnd Gloucester the low grounds, so called, are as healthy as any portion of New York or New England. Our lands are light, but far preferable to the plain pine lands of Massachusetts, such as lie east of Springfield, and in other parts of the State. The original growth of timber here is the finest oak, chestnut, pine, gum, some beech, &c. The soil is well adapted for market gardening and fruits—apples, pears, peaches, grapes, figs, melons, &c. Corn is the principal cereal crop now grown. Previous to the war, large crops of wheat were grown, but now very little is raised. The war left the people with limited means and less inclination to improve their lands, and probably four out of five cannot pay their debts. With every possible facility for getting fertilizers, very few apply them. The best and cheapest are fish, which will be delivered on your shore at six or seven cents a bushel; shell lime at the same price; marl in any quantities; muck; mud debris from sea nad land inexhaustible. Commercial fertilizers are sold at lowest rates, but require means. Taxes are high, but not much more than in many other States. For instance a farm adjoining me, of 200 acres, with moderate improvements, oyster shore, &c., valued at $4000, for which it could be bought, pays for State, county, school and parochial taxes, (the last optional,) less than $75. This region should all be a garden spot, but is surely retrograding. We have no railroads and don't need any, as no farm in the county is an hour's ride from navigable water. For a man of reasonable means, this region offers good inducements, and for a poor, lazy man, greater, for he can always, in a few hours' time, get oysters, fish and crabs enough to last a day or two, and make or get corn and sweet potatoes somehow.

SAM'L CLARKE.

Matthews Co., Va., Aug. 18, 1877.

P. S. I am or was a Massachusetts man or boy.—*New England Farmer.*

HERETOFORE the United States has been the great market for European manufactures, but this order of things is being suddenly reversed; for not only are American manufacturers driving European manufactures out of our market, but they have begun to compete most successfully with European manufactures in European markets.

To cite a single instance, as reported to the Department of State by the United States Consul at Amsterdam. The house of Daniel Loeb largely exported leather, principally tanned calfskins, to the United States. The Consul, noting the cessation of these exports, called upon the senior partner for an explanation. His answer was: "We are no longer exporters; we now import from the United States. Affairs in Europe are about being turned topsy-turvy by the Yankees."

He then stated that not only did they import leather from the United States, but that they had also begun to import New England shoes, and that European manufactures cannot compete either in price or quality with the American. The house has recently sent a large order to New england for shoes, and the junior partner was about leaving for the United States to perfect and enlarge their business relations.

DIED, of typhoid fever, Sunday, Dec. 2d, Maria Moody, member of the Senior class of Hampton Institute.

DIED, of consumption, at Appomattox Court House, where he was a teacher, Robert A. Thompson, graduate of Hampton Institute, of the class of 1877, and one of the "Hampton Student Singers."

These deaths are deeply lamented by the School, of which both young people were faithful and beloved members

SELF-HELP AMONG THE NEGROES.

FROM AN ADDRESS BY COL. J. T. L. PRESTON OF LEXINGTON, VA., IN SYRACUSE, N. Y.

While what others are doing in aid of the colored people is important, it is insignificant compared with what they are doing for themselves. Self-help is the best resource for the present, and the best hope for the future A nation may be aided by a friendly, outstretched arm, but progress in civilization can be made only by marching on its own feet.

Two things have been marked characteristics of the colored race since their emancipation. One is their persistent attachment to their churches, and their willingness to make efforts and sacrifices to secure church buildings. I give, as an illustration, an example coming under my own observation. In the town of Lexington, Virginia, with a population of 3,000 or thereabouts, there are eight church edifices: for the whites—Presbyterian, Episcopalian, Baptist, Methodist and Roman Catholic. For the blacks—two Baptist and one Methodist. Of these eight, the one that reflects most credit upon the congregation that erected it, is the First Colored Baptist Church. It accommodates five hundred hearers. It has a basement ten feet high, built of solid limestone. The superstructure is a well-proportioned frame, tastefully painted, neatly finished within with pulpit, platform, stained benches, chandelier and carpeted aisles. The building is surmounted by a cupola-shaped belfry, which waits for its bell till times are easier, or some liberal friend is moved to make a gift of one. The whole cost not less than $3,500. All this has been done by a congregation every member of which is a day laborer, with only his two hands to depend upon for the support of himself and his family. They have not had help from abroad, and not much from the resident white population, whose resources are strained to keep up their own organizations. They did it without credit—for how could *they* borrow? I cannot forbear repeating the racy account I heard the other day from one of their leading men, a former slave of my own; who has driven my carriage for twenty-five years, and has been my hired servant ever since the close of the war.

"What is the secret of your wonderful success?" I asked of Phil.

"Well you see, ole master, the fust thing after the war, what we thought of, was the gittin' a church of our own. But in course, that was a big thing, and lots of 'em didn't have faith to b'lieve we could lift one een of that job. But the mo' we thought about it, the mo' we wanted it, and at last a pa'cel of us couldnt, stan' it no longer. So I says—'Boys! here's for you! Them what thinks wid me, come along, and to-morrow we'll begin.' This was on a Sunday night, arter meetin. 'Soon as supper'e over to-morrow night',—I says—'we'll set to the foundation;' and don't you hang roun', now, but come along quick.' Sho' nuf, they came, but they wan't but seven of us. 'No matter'—I says—'here goes!'—and the fust man what struck a lick for the foundation is a-talking to you now, ole master. Well, as soon as we got etarted, more came along, and by-m-by we had as mnny as we wanted, in line, diggin' away of moonshiny nights; and sometimes we held a lamp fo' the rest to dig by. When we got done the diggin', came a tough place. We could dig, but we couldn't git out rock an' haul it, and put it up ourselves ar'ter night. That thing 'quired money, and we didn't have any of that to spare, we thought. But the foundation lying thar with its mouth open, as one might say, spoke loud, ole master. So we laid a tax of a dollar a month on every member. Some 'clared they couldn't stan' it; but they *had* to stau' it, or *git*. So you see, we scraped up 'nuf to pay fo' rock to begin with; and every round that went up made the people mo' readier to give. But we was 'bliged to stop four or five times 'fo' we got through. When it was all up, it looked so good and solid, that all the folks cried "Hurrnh!"—though some was of the 'pinion that we were runnin' the coulter too deep, and a cheaper building might do. But when the frame wns up, and the church showed itself, though just in its bones, as one might say, the people was ready to cry, they wns so glad; and nobody ar'ter that held back. 'Deed some of 'em was for hurrin'on too fast. I alwnys *has* noticed, ole master, that blowen bosses does the leetlest work.

But, you see, we seuffled along. We paid what we promised, and had suppers and fairs; and Providence must have helped us, for we got along so much better than folks looked for. As soon as the house could be used, we dedicated it; and we made every man puy fifty cents admittance, and we sot two guards at the door to gather it; and they gathered on those two days one hundred nnd ninety dollnrs. So we went on to do the inside fixings. Our hearts was in it, ole master, I tell you! I felt sometimes like mine would bust! And we b'lieved in havin' thnt 'ar church and—thar it is! The belfry will cost right smart, but we ean go it; and some time 'fo' long we's 'gwine to lnvo a bell, too—you see! I always *did* have faith for the church nnd it don't take much faith for a bell."

THE EASTERN WAR.

WHAT THE RUSSIANS AND TURKS ARE FIGHTING FOR.

E. A. Freeman writes as follows in the *Contemporary Review*: It must then be fully understood that the Turk is not fighting for his own home or his own country. He is fighting for the right to play the tyrant—to play the Turk—in the country and homes of other men. He is fighting to guard his spoils from their lawful owners. He fights in order that he may keep the power of unrestrained murder, robbery, and outrage over as large a part of the earth's surface as he can. To the fine ladies and gentlemen at Stafford House, and to the Duke who talks in their name, this seems a "sacred cause." Those who try to put a sacred cause are spoken of as "aggressors." The "aggression" of Russia consists in the noble determination of the Russian people that this state of things shall be put an end to, in their determination themselves to spend and be spent in the glorious work. If by Turkey we mean the lands so marked out on the map and the people of those lands, the Russians are not fighting against Turkey, but for Turkey. They fight to free the people from barbarian bondage. They fight to free the land of Turkey from the exactions of barbarian tax-gatherers. They fight to free the homes of Turkey from the plunder and defilement of barbarians, robbers and ravishers. They fight, in short, to free the land from the barbarian intruder and give it back to its own people. May such "aggression" as this ever prosper. It is grievous to as as Englishmen that Russia should be left to do alone the work which England should have done at her side. But we can none the less feel our hearts beat for those who are doing the work, in which we are kept back from sharing. They have the sword in the eanse of righteousness; they have jeoparded their lives unto the death to put down the wrong and uphold the right.

NEWS OF THE MONTH.

POLITICAL.

THE President, in his Message defends his Southern policy, the good effects of which he considers have been already manifest; favors a steady adherence to the purpose of resumption of specie paymnnts as early as practicable; approves of maintaining silvar as currency, but objects to making it a legal tender in unlimited amount, and to paying any part of the public debt in the proposed new silver coinage, at a nominal value exceeding its commercial value, because such action would be a breach of faith, and an injury to public credit; desires to co-operate with Congress in better systematizing the methods of admission to the civil services and premotion therein; and recommends an appropriation to continue the Civil Service Commission. Attention is called to occurrences on the Mexican border, and solicitude is expressed as to the influences there existing which endanger peaceful relations. The military measures which have been token in that quarter are stated. On the Indian question it is announced that after a series of deplorable conflicts, peace now exists with all the tribes. The pursuit of a just and humane policy in the future, and the faithful fulfillment of all engagements made with them are strongly urged. Its renews his promises to favor Congressional measures for encouraging general education by National aid, and recommends the establishment of a National University at Washington.

CONGRESS.—The extra session of the XLV Congress was finally adjourned shortly before 12 o'clock on the 3d of Dec., and at noon the regular session was opened. A number of nominations remained unconfirmed and many others failed even to be reported, among the latter the New York Custom House nominations. The President's Message and the department reports were submitted. The Secretary of the Treasury in his report states that the expenses of the Government for the last fiscal year were $238,999,088 85, and the surplus revenue $9,046,577 69. The Secretary is confident that no appropriation can be renewed under the existing plan. The House on the 4th passed a bill repealing the "ironclad oath," which requires persons entering the service of the United States to swear that they have never been engaged in rebellion. The House also adopted a resolution for the enforcement of the rule against the sale of intoxicating liquors on the House side of the Capitol. The President on the 6th returned to the Senate nearly all the nominations upon which it had failed to act in the extra session, including those of the New York Custom House officers. The House bill granting certain payments to the heirs of those lost in the sloop of war *Huron* has been passed, also one calling on the Att'y General for a list of criminal prosecutions in U. S. Courts in South Carolina since Jan. 1, 1876, for offences against life, property, civil rights or suffrage On the 10th Pinchback, of Louisiana was admitted as Senator. The House passed a resolution directing the committee on Foreign Affairs to consider immediately the difficulties between the United States and Mexico, and the best means to enlarge their commercial relations. On the 12th, four of the New York Custom House nominations were rejected by the Senate and the other confirmed, after six hours' debate. The Senate Committee on Privileges on the 8th, Senator Stanley Matth ws, of Ohio, introduced a concurrent resolution declaring all U. S. bonds payable, principal and interest, at the option of the government, in silver dollars of 412½ grains and that such payment is not in violation of public faith or the rights of creditors. It was debated at length on several days, but will not be voted on before Jan. 21st. On the 13th Congress adjourned until Jan. 10th.

RICHMOND, VA., December 10th.—In the Senate to-day a joint resolution was introduced providing for a joint committee of both houses to report such measures as will best secure a speedy conference between the commonwealth and its bondholders with a view to securing such an adjustment of the public debt as will bring the payment of the entire interest within the resources of the State, derived from the present rate of taxation, and do equal justice to all classes of bondholders. A motion to indefinitely postpone consideration of the resolution was unanimously voted down A substitute, covering a series of resolutions, as then introduced, proposing increased taxation, favoring the development and protection of the present system of public education, a reduction in the expenses of the State government, a re-adjustment of the State debt and payment of the interest thereon on terms not dictated by the creditors of the State but in accordance with the will of the people; opposing the operation of the funding act of 1871, expressing a determination to pay creditors all that the diminished resources of the State will justify, and repelling the idea of repudiation. Both these propositions were tabled and ordered to be printed.

THE Georgia State election for members of the Legislature and ratification of the new Constitution, took place on the 5th The Constitution was adopted, and Atlanta continued as the capital by over 15,000 majority.

JUDGE HUMPHREYS has refused to surrender U. S. Senator Patterson to the South Carolina authorities.

CONGRESSMAN Robert Smalls, of S. C., convicted of bribery while member of the Senate of that State, has appealed to the Supreme Court for a new trial, pending which, he is released on bail. It is claimed he was convicted on the worthless evidence of a confessed thief, and by a partly prejudiced, partly intimidated jury.

FOREIGN.

THE fortified town of Plevna in Turkey in Europe, after a siege of several months and an unsuccessful sortie, surrendered to the Russians Dec 9. The Sultan has requested the mediation of the foreign Powers, though not as a conquered ruler.

MEXICO has announced its disapproval of the raking into Texas, and requested consultation with the United States government to devise means of preventing them. The government of Pres. Diaz is becoming better established.

GENERAL.

The Norfolk Landmark has the following:

SPLENDID CONDUCT OF TWO COLORED MEN.

BRIEF mention has already been made in the *Sun* of the drowning of Miss Milburn and two children of Mr. Houser, at Mason's island, Potomac river, near Fredericksburg, Va., by the recent flood. The particulars of the affair which are as follows, show that two colored men were also drowned while heroically striving to save an imperiled family: the island was overflowed and the inmates forced to leave their house and take refuge in a tree. While they were in this perilous situation a crowd of men gathered on the river bank, opposite the island, but took no steps for their rescue, until a colored man stepped forward and said that he hardly expected to get back alive, but that he could not stand still and see the people drown. He was quickly joined by another colored man, and taking off their coats and handing them to a bystander, they put out for the island. They reached it safely, and started back, having in the boat with them Miss Milburn and the two children, intending to return for Mr. Houser, his wife and the other child. When a part of the way across, their boat was swept against a tree and upset, drowning one of the men and one child, while Miss Milburn, the other child and the remaining man succeeded in catching hold of the tree. They remained there from three o'clock Sunday afternoon until three o'clock Monday morning, when the tree and its living burden were swept away A crowd remained on the bank beside a fire all night long, listening to their cries, but were unable to rescue them. Mr. Houser, his wife, and the remaining child stayed in a tree near the the house all night and were saved. The names of the heroic colored men could not be ascertained, but their conduct in risking death to succor those in distress is worthy of the greatest admiration.

AT Spartanburg, S. C., on the 19th of last August, was held the first convention for promoting education among the colored people, and was addressed by the Superintendent of Education in South Carolina.

A NUMBER of colored men in Washington have formed an organization under the name of the Negro American Society. Its purpose is to consider the causes and possible remedy for the excessive mortality among colored people in that section of the country.

WE are in receipt of a number of German papers with notices of the first concerts given in Berlin by the Fisk Jubilee Singers, and their reception by the Imperial family. We rejoice in the great success they are having.

THE bottom of the sea will hereafter be surveyed from balloons M. Hureuf and a companion going up in a balloon on the 24th of last August, at Cherbourg, and being at an altitude of 5,000 feet, were amazed to see beneath them, with startling distinctness, every rock, fissure and depression at the bottom of the sea. The sea opposite Cape Levy, where the aerial voyagers obtained this bird's eye view, has an average depth of 300 feet. So limpid did the water appear that the under currents were perceptible, and nothing would have been easier than to sketch or map the bottom of the sea.

THE poet Whittier celebrated his seventieth birthday on the 16th of December Congratulatory poems were sent to him by all the principal poets of America. This sweet singer of American home life, and brave champion of freedom and the rights of the oppressed, is living a quiet and honored life in Amesbury. It has been well written of him, "Distinguished as will be his place in the annals of literature, Whittier has his own pure, sweet, beautiful life as far grander than his writings. His life is his best poem."

STANLEY, the American explorer of Africa, has completed the brilliant achievement of crossing from the great African lakes to the West Coast, a journey of 6,500 miles though terrible hardships and dangers. He has proved that the Congo is, as Carreen supposed, a continuation of the Lualaba, and made other important discoveries, which will be published in a volume.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

H. PHOEBUS, PROPRIETOR.

Terms: Transient $3.00 per day; $17.50 per week and upwards, according to location, &c.

This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached by all Railroads entering Richmond, and thence by Inesplendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, Fortress Monroe, Newport News, Norfolk, Portsmouth—combining one of the oldest climates in the country, for all sports in and out doors, as well as for health.

The climate during the year is unsurpassed for salubrity, the range of the thermometer kept for the past 20 years as taken from observations at the Hygeia Hotel, showing a mean temperature for Spring months, 60°, 66°, 67°; Summer, 79°, 78°, 77°; Autumn, 69°, 66°, 63°, for Winter, 46°, 43°, 38°, for the Spring months.—Open for guests all the year.

RUMFORD

Yeast Powder.

FAMILIES, HOTEL KEEPERS, FARMERS, MINERS, AND SHIP STEWARDS,

Will find this preparation superior to any other Yeast Powder they have ever used. It contains nothing but what is found in *Meat, Fish, Corn, Rice* and *Wheat*. Bread made with it is more wholesome and retains its freshness longer than when by any other method; it is *quick, sure* and convenient, the dough requiring no time to raise, but should be placed in a quick oven as soon as mixed.

There is economy in it, as a large percentage of Flour is saved by using the **Rumford Yeast Powder,** and it is guaranteed to keep good in any climate. In making Cake fewer eggs are necessary if a little of this Powder is used.

For Sale by all Grocers.

Manufactured by the

Rumford Chemical Works,

PROVIDENCE, R. I.

ZELL'S ENCYCLOPEDIA.

New Revised Edition—150,000 articles, **3,000** engravings, and **18** splendid maps. The BEST BOOK of universal knowledge in the language. Now in course of publication. *SPECIMEN* with map sent for 20 cts. Canvassers who wish terms and territory will please address the Publishers.

Business Manager.

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

Hereafter, except during the summer months, there will be a two-page Supplement with each number of the "Southern Workman." The first page picture will be transferred to the Supplement. Commencing with this number an article will appear in each issue, except in summer, from one who has been an occasional contributor to the "Nation" to "Scribner's Monthly" and to "St. Nicholas."

The review in this number of the report of the State Commissioner of Agriculture, is by a writer from whose pen we hope for an article each month; who as a volunteer aid on the staff of the "Workman" will add force and brightness to its pages.

The "Southern Workman" embodies the thought and experience of the largest corps of teachers in any negro institution in the land; it is part of a system which is founded upon the real wants of the colored race, whose support chiefly from voluntary contributions, is best assured by clear statements of its idea, and of the most direct and reliable information as to the facts on which it is based. The usefulness of this paper is increased by discussion of the human problems tangent to a broad plan of education, by impartial criticism of Southern ideas, and by throwing all the light it can on the "situation" and on the needs of the South. It is devoted to a true reconstruction, and has no sympathy with the efforts of professional politicians whose foundation idea is the continued re-election of themselves to government offices. The "WORKMAN" represents those coming from the North who have given themselves to the work of lifting up the colored people, who, having no grievances and only pleasant relations with their neighbors, might be suspected of being under what Charles Sumner called the "subtle magnetism of Southern society," were it not that they are too busy to have much social intercourse with anybody.

It may claim peculiar advantages in having access to the personal experience of nearly three hundred negro youth at the Hampton Institute, and to that of over two hundred mature, thoughtful and reliable graduates, many of whose letters are published, but only as there is ground for confidence in their statements. They form a corps of observation extending chiefly through Maryland, Virginia and North Carolina; there is a sprinkling of them in West Virginia, South Carolina and Georgia.

Their letters, increasing every year in volume, interest and just observation, lay before us the pith of the negro question; the benighted, the well-intentioned, the right and the wrong headed condition of the race; the earnest efforts, the noble sacrifices, the fine success of some, the hard drinking, the lazy and hopeless ways of others.

Such information published freely in the "Workman" gives it, we believe, a special value to all who are interested in moral progress in the South and to whom the real question is whether men are becoming better or worse; to whom a God-fearing civilization is the true objective point.

We believe that there is a field for the "Workman" and we enter into the labors of another year assured that there is a work to be done, resolved to improve this paper, hoping to meet, and determined if possible to create a larger interest in a sound literature on the Southern question.

"REPORT OF THE COMMISSION OF AGRICULTURE, STATE OF VIRGINIA."

BY THOMAS POLLARD, COMMISSIONER.

At last Virginia has settled down to business. For ten years and more, she has been proclaiming from her housetops, and everybody else's housetop, if allowed the chance, that she has the finest climate, and the grandest resources, agricultural and mineral. Emigration societies, colonization societies, land agents, "statesmen," private citizens, and the press generally, have stated and re-stated that this is a land flowing with milk and honey, if you will only come and make it flow with milk and honey. The experienced prospector, the very inexperienced emigrant, the restless merchant, and enthusiastic city men, have been here. As they moved slowly through the country on a single track railway, and viewed a monotonous succession of worn-out farms, and scanty communities rather destitute of what are called the "privileges," they became at once serious, and reflective. The absence of the genial flow of milk and honey, became a marked feature in their experiences. Some, indeed, have been bold enough to stay and see the thing out. But none of them, so far as we know, have become wild or uncontrollable allies of the milk and honey theory.

We believe, most unreservedly, in the vast resources of Virginia, in her location, soil and minerals. But other States have great resources also, and they are always pressing these resources on people who propose to emigrate. The great blunder now is and *has* been, that our statesmen, citizens, land-owners believe, and have believed, that Virginia has greater resources than other States. This has given rise to much foolish, though not criminal, misrepresentation. We have been taking wares to market that do not come up to representation. These worn-out lands are a sorry spectacle in the land markets, when compared to the fresh, deep soil of the Western and South-western States. It is the putting up of a sore-backed, limping, wheezy plug at auction, with the gushing statement that "if you will give him rest, and oats and medicine, you can make a racer of him!"

To the fine speeches of Virginians the question has been made, if you have such vast resources, why don't you develop them? Why are you so generous in giving them away? The Virginian replies, we have no capital to work up our advantages! But to this it is said, "capital always goes where money can be made, and, moreover, capital is uncommonly sensitive in finding out where money can be made."

But, now Virginia proposes to do what should have been done years ago, and to have done which would have relieved her largely in her dire distress. This Report is a new departure. It is the beginning of a system, by which the farmer will develop and give value to his own land instead of selling it at a sacrifice to the thrifty Northern farmer, and then walking into the poor-house. It is not money, it is brain and work that is needed to increase our landed values. Had our farmers, right after the war, borrowed largely of men capital in order to develop their farms, it is evident that by this time they, the borrowers, would have been hopelessly bankrupt. A new system of labor went into operation, by necessity. In the vast changes, in the want of experience, any and all borrowed capital would have been lost. The prime trouble has been that the planters have used their brains actively enough, but not in the right direction. How to make farming pay has been an incidental question. So they have always been ready to get rid of their lands because they did not know what was in them.

In creating the office of Commissioner of Agriculture, and placing Dr. Pollard in that office, the State has done a wise thing. There is no "machine work" in his appointment. It is, however, discreditable to the intelligence of our planters that it was not done years ago. The salary of the Commissioner, even in these hard times, and in view of the small income of the State, is insignificant when compared to the results to be obtained. All the political offices are insignificant in comparison. The agricultural interests of the State are paramount, and there is urgent need of attention to them. The amount of five thousand dollars allowed for contingencies is too little. Each county should raise that amount at least. We should infer from intimation in the Report that there are poor accommodations for the work; in fact, that the Commissioner, like the curb stone brokers, "carries his office in his hat."

Undoubtedly the Legislature feared the people might become too prosperous under a really effective and sudden agricultural light.

Dr. Pollard's report is clear, carefully drawn, and full of information. So far as it depends upon his efforts, the prosperity of the State will rapidly advance. The statement about the "resources" of the State is well enough. But we hope it will not be frequently repeated. When people come to us, in these Southern States, they are treated to "resources" without limit. The North Carolinian will admit that Virginia is not utterly destitute of substance, but if you really wish to see "resources" come to North Carolina. So says the Georgian and the Texan. Even the Vermonter, under the better systems of cultivation, will tell you that the West is a good country, but that Vermont is now the State crammed with resources But the State is only what the people make it. Virginia will be only that which her people choose to make her. Any movement towards the better education of her people in that line, wherein her future prosperity lies, must be hailed with glad welcome.

During the past half century, rich as it has been in great men and great work there has been no better or more fruitful work begun than that which has fallen to those scientists who have devoted themselves to collecting and tabulating the facts which bear upon the origin and development of the human species. The very triteness of the quotation, "noblest study of mankind is man," bears witness to the strength of our instincts in this direction, while the depth and earnestness of the interest shown in all scientific research which may lead to a knowledge of humanity's beginning, prove that it is only truth that will satisfy.

While as yet upon this great all-including question we have reached but the dimmest knowledge, this much, at least, has been established, viz: that in the past the development of the human race has been strictly subjected to laws which are capable of being grasped and formulated by finite intelligences, and that, therefore, it is in the study of these laws that the foundation of all permanently successful work must lie.

In the material world this is universally acknowledged; nobody doubts the invariability of the law of gravitation, or the laws of chemical combinations, or the laws of mathematical relations, and no sane person attempts to run counter to them, but in regard to spiritual or moral conditions, are there not many of us who are still afraid of the truth? Instead of being seekers after truth in its purity and entirety, are we not rather seekers after such half-truths as we think will support us in our pet theories or help us to destroy the pet theories of others? How many of us are there who do not alloy our best work with the prejudices of temperament or education, and befog our vision till the clear rays of truth are broken into the false lights of an ignis fatuus? How many of us are willing to acknowledge failure even when we know that such acknowledgment is the surest stepping-stone to ultimate success, either for ourselves or for others. Is it not certain that we constantly shut our eyes because we are afraid to see, and is it not to this moral cowardice that we must look for the cause of much which is indubitably failure in work which has been done with the distinct purpose of elevating and improving individual members of the human race.

Grand are the sacrifices which man has made, which, thank God, man is making for man, but to ensure that such sacrifices shall bear their best fruit, the fullest sympathy should go hand in hand with the keenest criticism. If there is anything in our religion or in our manhood, it ought surely to make us eager to discover and reject everything which is imperfect in our work, above all in work which we do avowedly and especially for our brothers, in the name of our Father.

It is evident enough that it is only by a full understanding and acknowledgment of past mistakes that we can make any solid progress, and the higher the plane of the work, the more necessary it becomes that all personal considerations should be merged in the endeavor to do it honestly, without pretence or prejudice. It is difficult for a candid mind to study the history of philanthropic effort without being convinced that this inability to confess mistakes, this certainty of being in the right, this unwillingness to submit to criticism, have caused a waste of material which in some of its aspects is most grievous. Of course, on the other hand, it is to be said that it is in this very intensity of conviction that the power of all great reformers has lain, but while this is true, it is true only with very distinct limitations.

The honest convictions of intelligent minds, while sufficiently intense to furnish all necessary motive power, can never be so narrow as to fear criticism, or to shun light, even though it come from the furnace of a chemist or through the lens of a microscope. We can never make men better than they are until we know what they are, and if science has taught us anything in the past fifty years, it has taught us the reason and necessity for literally fulfilling that command of God, "Know thyself."

To do missionary work, to do philantropic work of any kind well, we must first study the material with which we have to deal as a merchant studies his goods, as a broker studies stocks, as a naturalist studies nature. We must know all that other men know of that of which we make a specialty, we must put aside dogmas, banish prejudices, welcome criticism, focus all light upon our work.

If missions (using the word in its most inclusive sense) have wasted material or fallen short of success in the past, because they have been unpractical, because they have ignored the material law, because they have been based on dogmas, because they have been entrusted to enthusiasts, let us confess these mistakes as the first step towards retrieving them.

Let us confess that a knowledge of ethnology might have helped us in Africa or Polynesia, that a keener wit would have saved us in many an encounter with Jesuitism, that a practical acquaintance with business and politics would be valuable to us in dealing with the Indian and the negro, that a knowledge of physiology and hygiene is essential in working among paupers and criminals of all races, and finally let us confess that because we have ignored all this again and again in the past, we have not done what we could. There are those who ridicule or shun, or put aside as meaningless the grand achievements of experimental science, so far as concerns their effect upon the highest development of humanity. Is it not rather true that upon the accurate foundation laid by the supporters of scientific truth, the supporters of spiritual truth may, if they will, build up a fair and shining temple?

EXTRACT.

"Soon, I think, the great difficulty must be met in Mata of teaching the Christian's social and domestic life to people disposed to give up many of their old practices. This is the point at which I suppose most missions have broken down. It is a great blessing indeed to reach it, but the building up of converts is the harder work. Here, for example, is a population of 1,500 people; at present they know all that is necessary for the cultivation of yams, &c., they build houses sufficient for the purpose of their present life, they are giving up fighting, losing faith in their old charms and contrivances for compassing the death of their enemies; they will very likely soon be at peace throughout the whole island. Well, then, they will be very idle, talk infinite scandal, indulge in any amount of gluttany; professing to believe our religion, their whole life will contradict that profession, unless their whole social and domestic life be changed and a new character infused into them. It would be a great mistake to suppose that the English aspect of the Christian's social life is necessarily adapted to such races as these. The Oriental tendencies of their minds, the wholly different circumstances of their lives, limate, absence of all poverty or dependence upon others &c., will prevent them from ever becoming a little English community, but not, I trust, their becoming a Christian community. But how shall I try to teach them to become industrious, persevering, honest, tidy, clean, careful with children, and all the rest of it? What a different thing from just going about and teaching them the first principles of Christianity! The second stage of a mission is the really difficult one.

I think, therefore, that men are needed who have what I may call strong religious common sense to adapt Christianity to the wants of the various nations that live in Melanesia without compromising any truth of doctrine or principle of conduct. Men who can see, in the midst of the errors and superstitions of a people, whatever fragment of truth or symptom of a yearning after something better may exsist among them, and make that the *point d' appui* upon which they may build up the structure of Christian teaching."

BISHOP PATTESON.

We have been encouraged by the responses to our views expressed in a paper rend at Syracuse, N. Y., and published in the December number of the Southern Workman. We have heard from well-educated colored people, in the North and South, from old abolitionists and from ex-slaveholders in a way to assure us there can be a platform of effort for the negro race, on which can unite all whose interest in it is intelligent and wise.

We have been severely scolded for "desertion" of them, and shall lose nothing but the support of talkers. Only the workers in this cause realize fully the necessity of bringing into focus every interest, effort, and resource, and can understand that the work is hopeless unless the good men of the South shall make common cause with them in offering to negro youth a way to the possession of knowledge and to a higher manhood and womanhood.

GOVERNOR F. W. M. HOLLIDAY was formally inaugurated on the first day of January, 1878. For the first time in the history of Virginia her chief magistrate entered upon his duties with a grand demonstration. Ten thousand people were present.

This was not viewed with favor by all. Governor Holliday, after having been introduced by Governor Kemper in an eloquent speech, spoke of the greatness of Virginia and her institutions. Of the war he said:

I know that success is not written upon all their efforts. But success is not needed to make an effort great. Often defeat signalizes more than achievement, and elevates the defeated by the very consciousness of heroic endeavor. Truth and earnestness have more to do with greatness than success or victory. Victory may spring from chance, or overwhelming odds; but earnestness and truth make that character out of which great deeds perennially grow.

This is the crown of Virginia's greatness. Her people were in earnest when they pledged their lives, their fortunes, and their sacred honor, a hundred years ago; they were in earnest when they redeemed that pledge by eight years af war; they were in earnest when they favored the adoption of an instrument by which they agreed to enst their lot with their sister States in the formation of the Union; they were in earnest, when for generations they gave of their jewels to adorn the councils of the republic, and of their territory to enlarge its domain; they were in earnest when no sacrifice was too great, save honor, to uphold the Union that their genius and self-devotion had so aided in framing; they were none the less in earnest, when, in their heart, they believed that honor was of more worth than the Union, and entered upon a long and bloody war to vindicate that opinion. In all, they battled for the Truth. And when prejudice and passion have passed away, history will find as much to admire in their last overwhelming defeat, as in the victories which hitherto crowned their career.

Governor Holliday is sound on finance. He urges the payment of the State debt. As a custodian of the honor of the Commonwealth, he is well chosen. Regarding her ability to pay, he says,

I have an abiding faith. Virginia has tided over greater troubles before. She will triumph now.

He deprecates the formation of new parties. He thinks that there should be no strife between the poor and the rich, and that protection and justice should be adequate and universal. He would have a State militia.

Let us have this citizen soldiery everywhere to be seen on fitting days and times. It is not a show of military power like that of a standing army. It is the ever-present and careful guard of the State's interest and honor; it is the ever-standing sentinel upon its battlements, watching not for pay, but for love, and proving how the safety and glory of a good Commonwealth can be entrusted to its own people.

THE "American Missionary," of New York, printed, last year, at the Hampton Institute, but transferred back to New York by reason of unavoidable difficulties arising from distance from editorial headquarters, appears in a new dress, in the magazine form, decidedly improved in many respects, and, we believe, second in appearance and in matter to none of the organs of the great missionary societies of the country.

THE broom shop of the Hampton Institute is again under way and orders are solicited. It is in charge of Mr. McNeely late of the National Soldier's Home at Dayton, Ohio, whose long experience in broom-making insures a good article. Three students are learning the trade under him.

THE following, from the "Landmark" (Conservative) of Norfolk, Va., is valuable testimony, and could be said of some other cities. Neither custom nor law can prevent a people, so far as they are industrious and provident, from occupying the position, and having the influence to which they are entitled.

THE COLORED ELEMENT.

The happiest people in Portsmouth, for their means, are of the colored element. They seem the best contented, always have work, have, for the most part, good, comfortable homes, live well, and their children enjoy the same schools that the whites do. Their churches and social institutions are as large, numerous and flaurishing as any people could desire. Taken altogether we are inclined to the opinion that the condition of the black element in this community is to be envied by a large number of people who are their superiors in everything except providence.

In his Message to the Legislature of Mississippi, Gov. Stone says: "Frequent complaints have come to me of occasional acts of lawlessness in two or three of the southwestern counties of the State. The better class of the citizens—who are greatly in the majority in these—are opposed to lawlessness, but are powerless to prevent it in many instances The lawless persons operate secretly and at night, and before their deeds have become known to those who might pursue them and bring them to justice, they have disguised, and no trace of them can be found These persons generally act in sparsely settled communities. Although in the minority and composed mostly of irresponsible persons, yet these lawless elements should be made to feel the strong arm of the Government, and the guilty parties should be treated with the utmost severity. A few evil, lawless men can bring reproach upon the Government, and cause more harm to its reputation than the entire law-abiding element can repair. I ask the attention of the Legislature to the complaints from the localities mentioned, and suggest rigorous measures to bring the lawless persons to a sense of their duties. The ordinary remedies have, thus far, been inadequate to meet the emergency. It is due, not only to the State's fair name, but to the people in the immediate neighborhoods—who necessarily suffer in person and property—that the lawless bands be broken up, and that such punishment be admin stered as will force them berenfter to obey the laws and deport themselves as good citizens. It might be well to send a Legislative committee to the south-western tiers of counties, to personally investigate the condition of affairs, and to suggest such legislation as may be necessary in the premises. Unless the courts can punish, I am powerless without additional legislation. The complaints are confined to a few neighborhoods in a particular locality. The laws are enforced elsewhere, all over the State, and order prevails; it is a reproach to the entire State that in even one section the law can be violated with impunity. And men should receive very slight consideration who openly defy the laws, and who are utterly indifferent to the reproach which their lawlessness may bring, not alone to themselves and their counties, but to the people of every portion of the State."

The above is a fair statement of the order of things in some parts of the South, from which the black man is a chief sufferer. A low state of civilization is the curse of such regions. The remedy is the Christian school teacher; the Bible rather than the bayonet; light rather than laws; men who will work "In His Name" rather than in that of the Republican or any other party.

THE LABOR QUESTION SOUTH.

THE *New York Times* says:

The recent discussion regarding the relative prosperity of cotton factories North and South has developed the fact that during the twelve years since the war, under a system of free labar, there were produced in this country 2,772,371 bales of cotton more than during the twelve years before the war under the old system of slave labor. The planters are more independent than they ever were then, their crops are seldom mortgaged as they were formerly, and instead of being dependent upon the farmers of the West for their supplies, they grow a greater part of their corn and bacon at home. That the emancipation of the slaves has been the first great cause of this result, there can be no doubt. The free colored man, having more self-respect, a greater feeling of responsibility, more knowledge, and from the necessities of the case being more industrious and faithful, is much more valuable as a laborer than was the negro slave. Unfortunately, there is a very large class of persons in the South who are not willing to acknowledge these facts, or who are so blinded by prejudice that they cannot regard them as do practical business men in other parts of the country. There are, indeed, in several of the cotton States, notably in South Carolina, Alabama, and Louisiana, a number of so-called leaders who freely express the belief that the negro, to be made useful, must be kept in a state little better than bondage, in short, as nearly in a condition of slavery as is possible under the law.

To bring about this result, the Rifle Clubs of South Carolina and a number of the most prominent Democrats in Alabama and Louisiana are engaged in a determined effort to reorganize the old Labor Leagues, and secure such legislative enactments as will place the unfortunate black laborar absolutely under their control. The demands made by the promoters of the movement are not exactly calculated to find favor in the eyes of the man who call themselves citizens of a free country. They ask, in the first place, that agricultural labor of all kinds shall be performed under contracts to be drawn by individual employers, or drawn by them and approved by the Labor Leagues. The share system, by which the negro receives bacon, meal and implements, and in return gives the white landowner one-half or two-thirds of the entire crop raised by himself and family, is to be continued, but under the laws which it is hoped may be passed every violation by a colored man of such a contract would be considered a misdemeanor, to be punished by imprisonment, forfeiture of crops, or, as is proposed, in Edgefield and other White League strongholds, by the lash. Further than this, it is proposed that all colored men found out of employment or trespassing upon the lands of the whites shall be regarded as vagrants and punished accordingly. Should such laws go into effect, and their advocacy by the powerful Labor Leagues of South Carolina, and the secret organization known as the State Grange of Louisiana, leaves no doubt that there is grave danger of this being the case, the Southern black men would be almost as completely at the mercy of their white masters as they were twenty years ago. Even under Republican Governments, where the State, county, and Judicial officers, were all pledged to do full justice to every class of citizens, the negro laborers who worked on the share system with the land owners were frequently defrauded out of all their earnings. The white men were quick-witted and greedy of gain; the negroes ignorant and easily satisfied; and so at the end of the season, when the crops were harvested and the accounts made up, they were only too often obliged to repeat that verse familiar to all the laborers of the Black Belt:

"Nought's a nought, figure's a figure;
All for de white man—
None for de nigger."

Still, the negroes did not complain; their wants were easily supplied, and if they had enough to eat and a cabin to shelter them, they went on with their work without a murmur. That they should rest quietly under such laws as those proposed, however, is not to be expected. Indeed, we have no doubt that in this new movement of the Labor Leagues is to be found the secret spring which impels so many of the freedmen to listen to the glowing, and, as the result has proved, the delusive, promises of the Liberian emigration swindlers. They certainly have every reason to be alarmed at the prospect before them, for even should the law-makers, who are being appealed to, have the good sense to refuse the demands of the land-owners, the Labor Leagues threaten, as a last resort, to openly take the law into their own hands, as they have already substantially done in secret, and agree among themselves not to rent land or give work to any laborer without the consent of his former master, or to buy corn, cotton, or produce of any kind from any employee without the consent of the proprietor of the land upon which it has been raised. In the same way, that is by an agreement among themselves, it will be a very easy matter for the Labor Leagues to determine what rates of wages they will pay their laborers. It will thus be seen that under the new reconciliation plan which has so effectually broken down the color line, the outlook for the black man is not exactly the rosy one that gentlemen of the Stanley Matthews school of politics would have the country believe.

That there is a large class in some of the Southern States who will attempt, through Vagrant Laws and other measures, to control the movements of both vagrants and non-vagrants, is beyond doubt. Only, however, in the extreme Southern States are the law-makers at all likely to legalize such wild schemes. But as serfdom has not yet been established, since no laws have been passed dispossessing the negro of his freedom, it is hardly fair to claim as does the *Times* that the new reconciliation plan has effectually broken down. A good deal can be said in favor of the present condition of the negro laborer as compared with it five years ago.

What if there had not been "conciliation" whatever have been its disappointments. The *Times* would have howled and Radicals raved in their comfortable homes, and opened a war in which only ink and words would have been poured out, while the freedmen would have been turned over absolutely to the tender mercies of the fiercest and most reactionary element in the South, instead of having as now its best element pledged to his protection and education.

The negro is not now suffering from what may be done, in some sections, by and by; he is suffering from the prejudices of a large class of whites

The "Scientific Summary" of the *Popular* belief that they are assisting the elevation and poor people cannot go to the "high hills and undulating plains," said to be in the interior of

who detest their work system, who curse free negro labor, to whom the negro's normal condition is slavery, and who believe that his future can better be decided at the auction block than by his own free will; he is suffering from the money famine in the South, from the wretched mode of payment by store orders, from sharpers and swindlers of every kind and color, and more than one from his own ignorance and vices which are his misfortunes rather than his faults.

He is suffering terribly from intemperance; rum is doing him more harm than prejudice; immorality is a curse tenfold greater than Rifle Clubs or Labor Leagues. Ignorance enforces his subjection to every form of imposition and creates many a social and political *ignis fatuus*. "Southern hate," so freely referred to in political papers, is a minor factor in the forces that keep the negro down. His outward relations are his secondary, his inward condition is the primary matter.

To accept this fact and the demands involved in it, would compel his political allies to be more or less philanthropic, to which they would object most uncommonly. So they harp away on the minor and ignore the major duties. They can make votes for themselves by showing that the black man is in danger of re-enslavement, but would lose votes rapidly by passing around the hat for funds to relieve the negro from his bondage to ignorance.

The point of the *Times* being to show that President Hayes's policy is not a success, it presents one aspect that in itself is most important but misleads because it implies that the serious aspect of the labor question South, is in the violent schemes of the whites and not in the condition of the laborer himself.

Only as good men North and South accept the true view of the Southern problem and together treat it with Christian intelligence, can there be a prospect of better times or of a peace that will be peace.

[For the Public Ledger.]

THE EMIGRATION TO LIBERIA.

PHILADELPHIA, 11 Mo., 23, 1877.

MR. EDITOR.—The State Department at Washington has lately received what is termed "Official Information" concerning affairs in Liberia.

The writer of that information, whoever he may be, grossly exaggerated the facts, and he has labored hard to paralyze the hopes and prayers of the great and good of every land, who are looking to Liberia as the Christian door to heathen Africa.

The appearance of this incorrect information, just at this time, doubtless is intended by its author to check the present determined exodus of many of our freedmen to Liberia; but the studied effort will fail under both heads, because it will ever remain a truth that while man proposes God disposes.

European Governments are jealous of Liberia's position, and their merchants and traders want to possess the land for, and with a view to, interior trade.

The United States has but one opening, one entrance to the continent of Africa; hence this official information, intended to weaken the hold and interest of our Government in the Republic of Liberia. Certainly no friend to that country and to the negro race ever conceived or wrote that communication. The sharp trader with his gold must have insinuated himself into that extra official information. All the discouraging features of the statement have their qualifications and bright side. Had you the space in your paper I could open to your consideration a volume so full of facts and figures touching Liberia, her past, present and future, as would bury the statements of the author so deep they would never know a resurrection. I know what I say, because I do or can testify of what my eyes have seen and my hands handled.

Permit me to allude to one item of the article in question. He says, "there is not a plow in use in Liberia." He is correct as to this fact; but be it known, Mr. Editor, a man's thumb nail or a stick is all-sufficient to scratch the earth and make it laugh a harvest. The soil of Liberia is its own fertilizer, so rich is it. There is but one difficulty—that of keeping the weeds down; hence "cutlasses, hoes, and bill hooks" are all the tools necessary for agricultural purposes.

Every feature of that official information is as weak and designing as the "no plow in all Liberia."

Liberia to-day can show you a coffee commanding the very highest market price; a coffee indigenous to the soil; a coffee so hardy, robust and productive as to be sought after by planters in every coffee country.

The "Scientific Summary" of the *Popular Science Review*, London, July, 1876, states: "The fame of Liberia coffee is spreading far and wide among coffee planters, especially those of Ceylon. Its introduction there has been regarded as a great boon, and justly so, its qualities surpassing anything hitherto known."

I have seen in Liberia young coffee plants struggling for life on old stumps, on rocks and in crevices where the winds alone had carried just enough of the rich soil to cover the seed.

Mr. Editor, there is but one plow necessary in Liberia, and that is the gospel plow, to root up and destroy the heathen hearts and false pens of such as the author of this "official information." Liberia has but one enemy—the white trader who carries poison (home's worst enemy, rum) to her citizens. So determined is this serpent to destroy nations, as well as the bodies and souls of men, that President Payne has lately asked for special legislation against the biting evil.

Liberia is no failure, and if we compare her with Jamestown, Plymouth and other early settlements in this country, she is not only a success, but in the words of Bishop Gilbert Haven, in the last number of the "North American Review," "a very marvel."

Liberia has in its rear, friends to be counted by the millions, a native population thirsting and hungering for all the arts of civilization and all the sweet influences of Christianity. And so I affirm.

EDWARD S. MORRIS.

No 129 South Front street, Phila.

P. S.—The accompanying communication just received from Rev. James H. Deputie, of the M. E. Church, may prove of interest to your many readers. He emigrated to Liberia with his parents from Hollidaysburg, Pa., twenty-five years ago, and has labored as a missionary in that field up to June last. As an offset to another statement of the "no plow" man, I add that Mr. Deputie states that he has not been confined to his home by sickness ten entire days in all that quarter of a century.

[Copy.]

PHILADA., Nov. 21, 1877.

Mr. Edward S. Morris—My dear Sir: I know you will be pleased to learn that I have just read a letter from one of our leading merchants of Monrovia, Liberia, stating that parties from Brazil are now in our republic buying all the coffee seed they can get for planting in South America. So much, my dear sir, for your timely visit to our country thirteen years ago, when our people knew but little of coffee culture and nothing of its proper hulling.

The coffee-huller is proving a blessing to Liberia, and will soon make Africa a coffee grove, thereby hastening the time when coffee, and not rum drinking, will become the order of the day. I read that Monrovia letter with no little pleasure, and recalled your battle cry, "Plant Coffee!" "Plant Coffee!" so peacefully inaugurated and sounded by you in all the Liberian settlements and up every river. It is one of the livings to our now disappearing cloud thus to see the Kew Gardens, at London, and planters in Brazil, Ceylon and other coffee countries looking to Liberia.

When next month I return to my home in Liberia, and my mission station at Mt. Olive, you shall hear from our people in a practical and substantial manner.

The seed sown has not fallen upon stony ground. The harvest is ripening, and our future citizens, the freedmen of America, are today looking to Liberia.

In the name of our people, permit me to ask you to continue to be the friend of Liberia, and advocate her interests with all the power of your tongue and pen. In this country Liberia has many enemies, and why it is we cannot tell. Here, where we look for sympathy and aid, we find to a great extent nothing but censure and reproof, and this from individuals who know nothing of the country or of the people who inhabit it.

The American merchants of Liberia products tell the freedmen of their natural and peaceful home, viz: "Christian Liberia, the open door to heathen Africa." Let Christian churches in this favored land hear again and again of the many thousands of heathens in Africa, who worship a piece of wood for the god. Say to the rich and good of every land that we need more practical standard-bearers, such as do know the grace of God in Jesus Christ our Saviour.

Very respectfully yours,
(Signed) JAS. H. DEPUTIE.

THE letter replied to in MR. MORRIS's article is one recently addressed to Hon. Wm. M. Evarts, Secretary of State, by Mr. J. Milton Turner, a colored man, for seven years U. S. Minister to Liberia. We give the following extracts from it, which bear upon the point in question.

No. 273.] LEGATION OF THE UNITED STATES,
MONROVIA, Liberia, Sept. 3, 1877.
* * * *

American philanthropists, influenced by the belief that they are assisting the elevation and well-being of an unfortunate class, and at the same time aiding the evangelization and civilization of Africa, contribute of their means to support a scheme which is not alone impolitic, but, in a majority of instances, absolutely injurious in results. This entire enterprise is kept alive in the United States by a few active agents of these societies, who represent, usually, to the more inexperienced of the class they desire to operate upon as emigrants, only what is of a nature best adapted to deceive the unwary into the belief that the abundant wealth which nature has lavished upon Africa is not locked securely within the environs of these deadly climatic influences.

These agents speak the truth when they represent that the emigrants will find the soil fertile; that constant summer prevails; that there are mineral wealth, beautiful landscapes, luxurious vegetation, tropical fruits of every description, &c. But they should add that the most primitive agricultural appliances are used for tilling this most fertile soil, such as cutlasses, hoes, billhooks, &c. Such a thing as a plough is not to be found in use in Liberia. It has been demonstrated that neither horses, mules, nor donkeys can withstand the climate on the sea-coast. Horses are found in the interior, but when brought to the coast they sicken and die. Although constant summer prevails, as to temperature, the miasmatic influence caused by the heavy rain alternating with hot sunshine, causes sickness during six months of the year, and, during the remaining six months of the year, the power of the sun is such that it is almost impossible for any one except a native to work, as it produces inertia, lassitude, want of energy. Indeed, after a man has once had the fever, he never, in Africa, regains the energy he was possessed of before.

It is true there is mineral wealth, but the procuring of this wealth is more than counterbalanced by the sacrifice and difficulty necessary for a people poor in the knowledge of the economy of government, and poor as well in individual competence. Rich as the country is naturally, Liberia has never been independent to loose herself from other countries enough to produce food for her daily home consumption. Although a rice-growing land, rice is imported from England and other countries, and sold for $4 per bushel, when better rice can be grown and sold for half the price. Rice is the principal breadstuff. I have never seen flour of a less price than $14 per barrel; butter at $1 per pound; hams from $5 to $8 each; other provisions proportionably high. In the face of these facts, the American emigrant has to compete with the native for labor. The native is strong and hardy, with very few wants, and able, at fifty cents with very few wants, and able, at fifty cents per day, to perform the labor usually assigned to horses in other countries.

When these agents, by reason of such expert representations, have succeeded, first, in producing discontent, thereby inducing these unsuspecting persons to quit homes and surroundings already known and possessed, and to migrate across an ocean to a land unknown to themselves and the world, impossible hopes are afterwards raised, superinduced by these distorted statements, of empire and national greatness. They are left, at the expiration of six months of (so-called) support, without money or any means of livlihood, with little, if any communication with their former friends and homes, without knowledge of the customs and nature of the country to which they have come, suffering from the despair and discouragement occasioned by the acclimation fever, and, alas! in too many cases, mourning the loss perhaps of their entire families, save the one thus left a mourner; such are only anxious to return from whence they came.

I may here remark, I have never known of the departure of a vessel to America without receiving, frequently, a dozen applications to be sent back. Under the law I am powerless to help them. If, perchance, the children of a family survive, as is frequently the case, the guardians are alarmed when they discover they have left a country where a public-school system prevails, for one where the children will be deprived of this benefit. Thus confronted on every hand by discouragiug circumstances, the emigrant naturally turns to the agent in the United States, whose representations led to this condition of things. I have been sorry, before now, to believe that the agent loses much of his zealous interest in the emigrant with the conclusion of the contract for the provisions for the support of the emigrant for six months. The agent generally replies with the gratuitous advice to the emigrant to push his way as far to the interior of Africa as possible, and there settle.

Travelers to the interior of Africa agree that some distance interiorward from the sea-coast we may reach healthier localities. But when we reflect that there are no roads, only footpaths cut by the natives, and the only means of transporting their goods is on the heads or backs of native carriers, we are not surprised to find that after so long a time as sixty years the emigrant has not penetrated the interior more than four or five hours' travel, especially considering that the forests are almost impregnable, being matted together with a thick undergrowth of vines. The facts show that these poor people cannot go to the "high hills and undulating plains," said to be in the interior of Africa, without means to provide themselves with roads, and without treaties of commerce and friendship with the numerous petty kings, who are, in many instances, either openly or covertly hostile. * * * * *

I have, &c.,
J. MILTON TURNER.
The Hon. W. M. EVARTS.

INSURANCE OF FARM BUILDING.

No farmer can afford to have his homestead or buildings uninsured. To have them burned by accident would be ruinous to him, and a conflagration, which may occur at any moment, might involve the loss of buildings, tools, implements, live stock, and crops. No farmer can afford to run this risk while safe insurance is to be had so cheaply. But unless the insurance is procured in a perfectly safe and honorable company, the policy is hardly to be held as any security. In choosing a company in which to insure, it would be wise to select one which does an extensive business throughout the country, and thus lessens the risk of loss, averaging, as it were, its risks. Those insured are always more watchful and careful of danger. The wise precautions enforced by the insurance company, beget a habit of precaution and carefulness on the part of the insured, particularly when it is known that a want of care, and the reckless use of lights and fire, will vitiate a policy. Then dangerous and explosive oils will be avoided, and only those that are known to be perfectly safe to use, will be burned. There will be no smoking in the barn, nor matches left loosely on the girts or sills. It is a peculiarity of mankind that they will more readily obey any regulations made for them, than follow their own knowledge of what ought to be done. Men would rather be governed than govern themselves, and very readily submit to reasonable control. Thus it is always found that greater neatness, carefulness, and caution are found about farm buildings when they are insured. No careful business man will run the risk of loosing his property by fire, and every farmer should be a business man.—*American Agriculturist.*

Complaints are frequently made by those farmers along the coast, who are just beginning to use sea-weed, that it will not rot. This is probably true of dry eel grass as it is sometimes used. We have known it to be sometimes plowed into a rather dry, sandy soil, and remain for a year without much change. But even this dry sea-weed can be utilized and made to help the manure heap in several ways In the absence of straw or sawdust, it makes a fair bedding for the stables and sty. We have used it constantly for the last five years in the horse stable, and where rye straw is worth fifteen dollars a ton, and sea-weed can be had for the carting or scowing, it is good economy to make bedding of sea-weed. It takes more of it than of straw to keep the horses clean, but it serves the same purpose, and the larger addition to the manure heap is an advantage. It becomes saturated with urine and manure, and is reduced very fine in the fermentation of the manure heap. It is worked up quite as effectually in the pig sty. A very large and profitable addition may be made to the compost heap by either of these processes, when there are good facilities for gathering the dry eel-grass. But most shore farmers prefer to gather this and other sea-weeds in the green or wet state, in a mixed mass, as they are thrown up by the storms and tides upon the shores. In many localities the coves and tidal streams are raked, and the gathered weed and mud is scowed to some convenient landing-place, and then carted to the farm, sometimes to a distance of six or eight miles It goes into the barn-yard or sties, and is mixed with other manures, and readily ferments. Sometimes this material, gathered in the summer and fall, is carted directly to the fields where it is to be used, and is composted with headlands or peat. The sea wrack, gathered later, and made up principally of kelp, rock-weed, and the finer algæ, is often spread directly upon the land as a top dressing, or to be plowed in. These weeds are rich in nitrogen, decay rapidly, and make excellent manure. Capital and labor spent in gathering this harvest of the sea are well invested. CONNECTICUT.—*American Agri.*

LETTERS FROM GRADUATES.

The readers and charts that you sent gave new life to my scholars who could not read. I

ternoon I give my scholars spelling-matches, singing, gymnastics, and a little talk on physi-

to me, as the sailors had told me so much about the people and their habits, and had described

LETTERS FROM GRADUATES.

———VA., *Nov.* 19*th*, 1877.

Miss H.—My dear friend:

It seems as if I nm in n channel of tronhle for the last two months. Gen. Armstrong said to me, "It' is n new field." I tell you it is a new one. The school-house had not a pane of glass in, and it was about nine feet square. It has not a hand ful of mortar on it. So I held school there for a week until they had church here. Then I asked them to let me hold school in the church. I went all round to the hend men and asked them to help me, which some of them did. I left my boarding-place Sunday morning for church. I got there about 10 o'clock. Preaching began at two. I stayed nntil preaching was over, and two marriages. They marry here on Sunday. I got the minister to ask the people for the church, nnd he explained it very well indeed.

The first voice I heard was, "Yon shan't hnve no school in this church. I want to come here to worship my God." My henrt jumped into my mouth. I said to myself I will have to go back into that miserahle hole. My written speech was useless; I just asked the Lord to he with me. After the minister was through, I got up and began by saying,

"Ladies and gentlemen, you all know that I hnve hecn sent here for n teachcr. Wcll gentlemen, if a mnn goes to the woods to cut wood, he must take with him an axe or he *cannot* cut wood. And it is the same way with me; if you want me to work, you must give me n house to work in. This is hut the beginning I tell you." When I was done, I had silenced every mnn's and woman's mouth in that house. I did not think I could talk so. After I left they cast n vote on it. Not a mnn voted ngainst me. So I shall hnve a good-sized church for my school-house.

I stood my examination splendid. Mathematics I was perfect in, and he gave me a long exnminntion.

I have a large Sunday school here. I only have two or three Bibles, and one Sankey and Moody hymn-hook. Miss H., will you and Miss M. please send me about one dozen of the hymn-books and a dozen Bibles, nnd I will pay yon for them myself. The people here hnve not heard of Sankey and Moody; not the minister himself. I hnve been singing the songs here, and the people think that I am n singer. All the children now are singing "Ho' the fort for I am coming."

The church is named "Turkey-cock church." I will write and tell you all about it as soon as I can. This is one of the dark spots of Virginia.

I have eight scholars thnt I am preparing for the Junior class (nt Humpton). The reason I want to get the scholars there is becanse there is not one educated person in thie whole place. Dr. W. said that I am the best colored mnn he ever examined. I thought to myself, *Lord help the poorest.*

There is one girl here. She is the best girl in school. She is a good Christinn, hnt so poor she can hnrdly come to school. She attdies so hard. Hcr father was sun-struck, and is pnralyzed. Miss H., if yon cnn send her any old clothes, will you please do it? Last Sunday, n lot of little children followed me crying to go to Sundny-school, hut their garments would not permit.

Will you please send me thirty or forty of your Sunday-school papers? Send all the time, and let me know the price of them.

The place where I nm boarding, I have prayer every night and read the Bihle.

Can you send me nny old picture papers, or nny old hooks, readers, arithmetics or geographies? I hope I shall not put yon to too much trouble. And will you send me thirty lead yencils nnd crayon slate pencils?

Please excuse this poor letter. I am in n country where things are scarce.

Good-hye, Miss H. Please write soon.

Yours Respectfully,

S.

THE following is an old letter but a good one. The young man who writes it is still teaching in the same school, and doing good work there.

My kind friend:

I received your heart-cheering letter in good time. It strengthened my faith so much, I know not how to tell you. You know thnt we are so frail, thnt we forget so soon thnt God sometimes sends His mercies in afflictions; and your letter was like a beantiful enn-rise to my soul.

I was really disappointed hy not getting thn school that i npplied for, hut i truly belinve that it was no ordained providentinl disspointment, for I hnve the same school now that I taught last year and my influnnce among the people has no comparison. This school was a common elonmntary school, hut I havn worked and lectored the peopln until they are really interested in the education of thnir children.

I have had all of this month over onn hundred scholars present daily. The trnstees of thn district have visited and nxamined my school. They made it a graded school, and gave me an assistant teacher. I feel as if I am doing more good here thnn I could in thn city school.

The readers and charts thnt yon sent gave new life to my scholars who could not read. I did juet as yon told me, and of all my teaching and hard thonghts to improve my school, I hnve never had anything so good as the chart.

I hnve made grent improvonent in my school by using the Bible readers. I open my school by reading one verse and all the scholars with my assistant-teacher will read the next in unison, then we eing one of the sweet songs from the Moody and Sankey book and pray to our heavenly Father for protection, patience, grace, &c., to lead ns through the day, and lastly esy the Lord's Prayer together.

The General hae jnet sent me some maps (old ones that had been nsed, hnt they answer all purposes), He also sent me some papers which I put with those sent through your kindness.

Now, I am going to have a kind of little reading-room for my school which will add greatly to the elevation of my scholars. The trustees are going to make my school-house larger next week. So the Bible readers, charts, maps, papers, and the change from an elementary to a graded school are the hlessings of God felling upon me and the children among whom I am working.

Oh how thankful I am to God for giving me such friends, and thankful to you and General Armstrong for being such friends. I nm not quite well, hnt the good Lord has given me strength enough to carry on my school. I cannot tell you how much good you have done me and my scholars. I am too poor to pay you, but I have a rich Father, He will pay you for what you hnvn done for me.

I am yours truly. T.

THE following letter was received too late for our last number, which contained a brief mention of the death more fully recorded below.

LYNCHBURG, VA., *Dec 25th*, 1877.

My dear teacher:

Thie is to inform you that Robert Andrew Thompson died at the age of twenty-six, in Appomattox Co., Va., on the 13th inet., where he had been teaching school from the first of October until the 19th inet., without interruption, though under physical disadvantages He was stricken down while nt his post at nooo on the 10th inet., and conducted to hie room to which he was confined until hie "Deliverer came to take hie servant home." His parents reached him on Tuesday and found him so unconscious ne not to recognize them until Thursdny, when his mind came to him, and for an hour he remained conscious. Patient and serene, without a struggle he passed off like one asleep. It is needless for me to say more than herald his death to his dear teachers, classmates and friends, for they know of his protracted illness while in school, and of bie confession of faith in Christ while confined to hie room. I visited him during vacation and was interested in his animated conversation about Christ, religion and its enjoyment. He often told me that though he was in thn room alone during the day, hie communion with Jesus afforded him the greatest comfort. He was fond of teaching, and wherever he taught the little folks loved him, and he won the respect and admiration of both classes. He taught by the consent of his physician and was hopeful of gaining his strength that he might help nlavate our race.

I am yonrs sincerely,

LINDSEY HAYDEN.

The most practical and simple instruction in the laws of health and decent living is of first importance in all efforts for the elevation of a race. To train teachers with this idea is the purpose of the school. How far they are appreciating its importance and carrying it out is suggested by the following letters.

BEDFORD, CO., VA., *Jan 16th*, 1877.

My dear Miss L.:

After spending n pleasant vacation at home, I started for my loog desired work. The people at home wanted me to take a school there for the winter, but I preferred teaching from homn.

I succeeded in getting a school in thie Co., which opened in November. Owing to bad weather I have not had a full school until this nod the last two weeks. I have thirty-seven on roll now, and new ones are coming every day. I think I shall have forty-five or fifty after a while. Several of my scholars could enter the Junior class at Hampton now.

My school was formerly taught by a Hampton graduate: John H. Carter; he worked very faithfully up here, and is spoken highly of by parents and childreo. Nearly all the teachers they have had in their County, were from Hampton, and the superiotendent told me that they had all proved to be very acceptable ones, which you know I was truly glad to hear. My school is situated in n pretty place near the peake of Otter. It is pleasant to look at the peake from n distance, and I imagine it is more so to visit them, which I have not done yet on account of the cold weather—but if I live to see the spring, I hope to.

The house in which I teach is a church of pretty good eize—In it are two stoves, one blackboard and four windows which give us a plenty of light and pure air. My dear Miss L., yon do not know how much I enjoy putting into practice thn lessons which I learned at my dearly beloved home, Hampton. On Friday afternoon I give my scholars spelling-matches, singing, gymnastics, and a little talk on physiology. They seem very anxious to learn and I am trying to make myself useful and discharge my duty faithfully, both to my Father in Heaven and to men.

I shall ever look back to thnt place with the warmest of love, for it was there I learned the all-important lesson—Love for the Saviour. My dear Miss L., please remember me in your prayers. I hope I shall hear from you soon and I will try and write again before long. With much love I am yours devotedly.

J.

———, VA.

My dear Miss L.:

I am just out of school, all tired out, so I know you will excuso thie dull letter.

I received the two parcels of papers you sent me lately. Dear Miss L., you don't know how *very, very* thankful I nm for the papers and books that you have been so kind to send me. It really does a person's heart good to see how much the scholars enjoy the papers you send. Thie is a kind of out of the way piece, so they never had enything of the kind given them before.

It is very gratifying to meet one of my scholars Sunday afternoons and see in his hands either a tract, paper, or one of Moody's books, talking and reading to a friend of his who was too lazy to go to Sabbath-school in the morning. I am sorry that my time is so ocer out nnd I shall have to leave them. Time has flown very swiftly notwithstanding how hard I have labored with these people. I would like to do a grent deal more for them than I have, but I have done all thet I possibly could for the length of time I have been among them. The trustees and parents want me to promise that I will come back next fall. I cannot give them n decided answer yet.

The salary is so small, if I can get better wages I shall take another school. Now, Miss L., the money alone is not my object, but I am poor and have a mother to help take care of, therefore I most work where I can get the best pay and at the same time help to make my people better.

The girls around here know little or nothing about cutting and sewing. I have been trying to teach them by word and example how very important it is for girls to know how to do everything. I cut, fit and make my own clothes and do everything else for myself except washing—that I can't do because I have had a bone felon for three years and it is no oerrer being well to-day than it was two years ago. It is a grent trial to me. The first thing the girls think about round here when they get fifteen years old is getting married. They get married without knowing anything about housekeeping. I tell them that any womnn is worthless matter on a man's hands who has not got some idea of a well-kept house.

I thank you for your kind advice.

Your friend, L.

OUR Graduate Missionary, Ackrel E. White, has arrived out, and sends back to us the following interesting letter.

MENDI MISSION, GOOD HOPE STATION, NEAR FREETOWN, SIERRA LEONE, WEST AFRICA, *Dec 1st*, 1877.

Dear friend:

We arrived at Freetown on the 19th, after a voyage of fifty seven days, and remained there till the 29th, and then took the steamer for Good Hope, at which place we arrived yesterday afternoon, (Nov. 30). We had a long and also a hard passage. In five hours all our party were sick except the Doctor and me, after we left the docks in New York, and they were sick for four weeks. At times it looked as if some of them would never be able to see land again. We had some very hard weather; the Captain said he never saw any harder. And all the storms and blows we had, none of them were in our favor, but all seemed to drive us off from the place we wanted to go. The Captain of the vessel was very kind to us, he is a nice quiet man (Mr. Henry Forsett). But we are happy to say that we had no trouble with any of the crew, but we believe that we have gained their best wishes. During the four weeks of sickness of our party we were unable to have any religious eervices, but after we were all better we used to have family prayers every evening, and on Sundny, Sundny-school in the forenoon, and prayer-meeting in the evening. The sailors used to come in to both during the week and on Sunday. They were noon Christians, hnt they were the finest set of seamen I ever saw. After prayers, I used to go to their room and talk with them about a better life, and they said that they wanted to live a better life, hnt it was more than they could do while going to sea. I told them that God was able to keep even a seaman in faith, and if they thought that they could not please God and go to sea at the same time, to leave off going to sea and serve God with their whole heart. They promised to do so. I dont think that my isbor with them has been lost, for one of them with whom I talked the most scent me a note the other morning (last Sonday) saying that he had given his heart to God, and was praying to Him to give him more faith, and me to help him. He came the next evening and told me all about it, and any one who has ever seen him can see a change in him. I am still praying for the rest. When we arrived at Freetown, Mr. Kirk met us with his boat to take our things down, and the next day we went ashore for the first time to behold the people and the place. Nothing seemed strange to me, as the sailors had told me so much about the people and their habits, and had described them so well, till it seemed as if I had been there before. We came ashore Tuesday morning and went to the market and saw the African style. Some of them go very well dressed, and others only wear a small piece of cloth around them. The ladies here theirs larger than the men so they can carry their children in them at their back. The little ones look as happy as can be, and they do look lovely.

We went to the market and saw many things which we were unable to tell what they were, and I am unable to describe. The people seem very kind to us and tried to tell us what things were. Some we could understand (those who talked broken English) and others we could not, neither could we make them understand us. They said that they were glad to have us come and open this mission again, and after we had got to the mission house in Freetown they would call on us from time to time, and give us each knowledge as we need in regard to health and other things. We have been kindly received everywhere we have been. We were invited ont to tea Thanksgiving evening, after which we went to the entertainment given by the Temperance Society. We were introduced to a good many of the leading men and all seem to be glad that we have come to take that mission. Sunday, Bro. Sneleon was invited to preach at the Episcopalian church, and he did so. He preached from Matt. x: 21, "Fear ye not therefore, for ye are of more value than many sparrows." In the afternoon we went to the Sunday-school, and they called on each of us to give a little talk to the little folks, which I enjoyed very much. At 7 P. M. we went back to partake of the Lord's Supper and had quite a pleasant time. We were indeed kindly received. But I cannot tell what the end will be. Thursday, the 29th, we left Freetown, and arrived here the 30th and found Mrs. Mair here and very busy trying to get things aright by the time we got here. We are all well pleased with our new home so far, and I hope will get to work in a few days. After we have gotten fully at work, I hope to write you all about the school. Our church is very small, but we hope to be able to build another before long. With thie I can only send you best wishes and ask you to remember me in your prayers.

Yours truly,

A. E. WHITE.

SINCE the above was in type a member of the school received a later and interesting letter from Mr. White, from which we make the following extracts. The young man referred to in them is the one mentioned in the first letter as the subject of prayers, and their speedy answer seems to give the first fruits of this mission.

DEC. 8TH.

After I had been on ehore but a few days, I received a note from one of them saying that he had given himself to God and was trusting in his mercies, and wanted me to pray for him. He asked me when I first talked with him on the subject, to pray for him, and I did, and the Lord heard me and answered my prayer. And this young man's brother was on the ship with him, and he fell in love with me, and I with him. So he left the ship and is now with me, and will go to school to me when the school starts. He is a fine boy, and reminds me of McNeil very much, only he is some larger than Mack. He is from the same place that Reese came from. His name is Joseph S. Allen.

We took with us from N. Y. one of Wntera and Sons' Organs, and I played in the church last Sunday to those who never heard one before. It is a fine one, price $160. But they gave us half, making it cost $80, Bro. S. one half and I the other. Tuesday we went down the river about three miles to a school house that the mission had once, and we saw the real condition of some of the people. If there is one place where missionary labor is needed, that place is Africa. The people who have not been in the mission schools are in a bad condition. They are prond and high minded as can be, and are a hard set to take them any way you may. We need more faith and I want you to pray for me that I may be strong in faith, ever trusting in the Lord.

We are all very well satisfied with our new home, and all the things around it.

If you are at Hampton give my love to all the teachers and scholars, and ask them to remember me in your prayers.

Your brother in Christ,

A. E. WHITE.

TO THE HAMPTON GRADUATES.

My dear friends:

My thoughts have very frequently turned towards you, and I hoped to give you in the January number of the South ern Workmnn a visible proof of my continued interest in your welfare. Thie intention I was unable to accomplish, but it is not too late to offer you my sincere wishes for your happiness. May the year upon which we have just entered be the happiest you have yet known! Whatever may be your outward circumstances, it will be the happiest if you are more closely than ever united to the Head of the church, each member faithfully performing the duty allotted to him. May you not only sing

"Nearer my God, to Thne;"

And some with thankful love are filled. Hate us not for all our blindness: Or, to put the question in another form, have

hnt, throngh a living nolon with a living, life-giving Savionr, derive strongth and support from Him continnally!

One elemeot of happloess is contentment, which, St. Paul tells us, is "great gain," when associated "with godliness;" and there is a proverb thet says, "A contented mind ie e continnal feast." In the Middle Ages there was e class of phllosophers, called Alchemists, who believed that all the inferior metals could be changed into gold by being mixed with a mineral which they supposed could be fouod, and which they named "The Philosopher's Stone." They devoted many yearo and expended large fortnnes in the useless endeovor to moke this mineral, for it never existed in neture, aod it is impossible by artificial means to form e substance possessing the power they attrihuted to it. Probably the world would not be happier, if their hopes hed been realized. Gold, useful as it is, does not hestow happiness. Contentment, without hringing wealth, may be called the true Philosopher's Stone, for it is capable of chenging discomfort into ease and trials lnto hlessings. I am not advocating a sort of cootentment thet springs from apathy and encourages idleness. We should never be cootent with the emount of knowledge we possess, hut should continually endeavor to increase it by study, reflection, observotion, and

And some with thankful love are filled,
If but one gleam of light,
One ray of God's good mercy, gild
The darkness of their night.

True contentment springs from filial submission to the will of God in all the arrangements of His providence; it is found in committing ourselves and those we love to the care of the Good Shepherd, following His guidance and trusting in His protection.

"It is content of heart
Gives nature power to please;
The mind that feels no smart,
Enlivens all it sees;
Can make a w ntry sky
Seem bright as smiling May,
And evening's closing eye
As peep of early day."

Hoping that a wise contentment may hrighten your hearts and homes,

I am your sincere friend,

M. A. L.

Teacher's Table.

THE PRAYER OF THE CHILDREN.

BY MARY HOWITT.

[The following poem is copied from a hook just published in Rome in memory of Emily Bliss Gonld, who died the 31st of August last. She devoted herself with much success to securing means of edncntion for poor Italian.

BEAUTIFUL the children's faces
Spite of all that mars and scars,
To my inmost heart appealing,
Calling forth love's tenderest feeling,
Steeping all my soul in tears!

Eloqnent the children's faces,—
Poverty's lean look which saith,
"Evil circumstance has bound us;
Sin and ignorance surround us;
Life is oftimes worse than death!"

"Look into our childish faces—
See ye not our willing heart?
Only love us, only lead us,
Only let us know you need us,
And we all will do our part!

"We ere thonsands—tens of thousands;
Every day our ranks increase;
Let us march beneath your hnnner—
We, the legion of true honor,
Combeting for love of peace!

"Train us, try us! days slide onward—
They con ne'er he ours again.
Save us! save from our undoing,
Save from ignorance and ruin,
Make us worthy to he men!

"Give us light to cheer our darkness;
Let us know the good from ill;
Hnte us not for all our bliodness;
Love us, lead us, shew us kindness!—
You can make us whet you will!

"Raise us hy your Christion knowledge,
Consecrnte to man our powers,
Let us take our proper station,—
We, the rising generation;
Let us stamp the age as ours!

"We shnll he whete'er you make us—
Make us wise, end make us good,
Make us strong for time of trial,
Teach us temperance, self-deniel,
Petience, kindness, fortitude!

"Send us to our weeping mothers
Angel-stamped on heort and hrow.
We may he our fathers' teachers,—
We mny be the mightiest preachers,
In the day that dawneth now!"

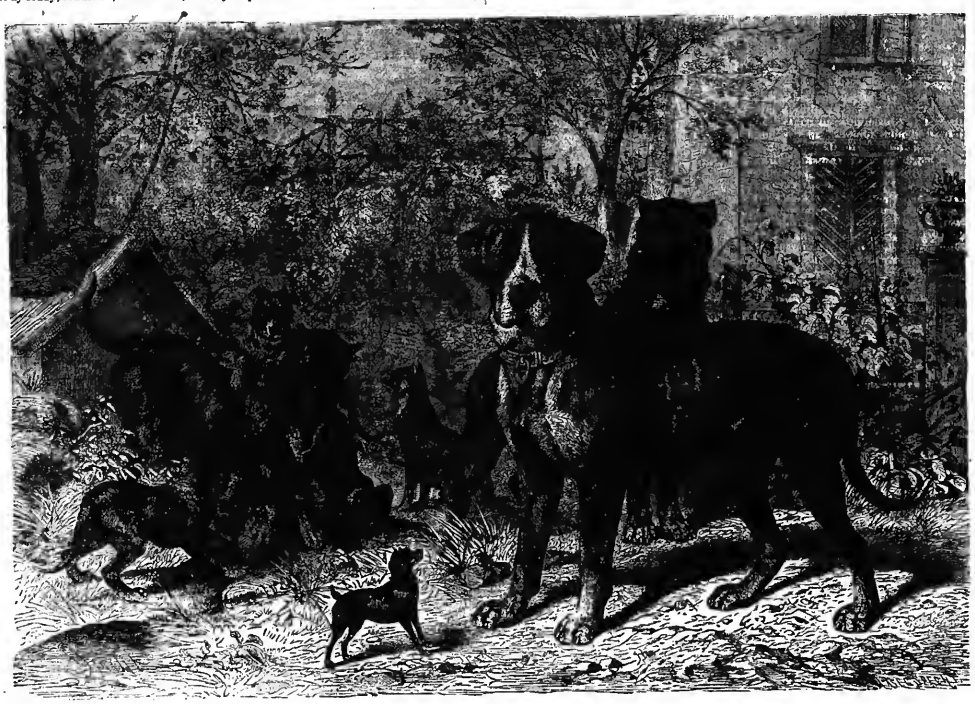
Such the children's mute appealing;—
All my inmnst soul was stirred,
And my heart was howed with sadness,—
When a voice like summer's gladness,
Said, "The children'e prayer is heord!"

—*Christian Union.*

Or, to pnt the question in another form, have you ever had occasinn, as I have had more than once, to seek for n reader for nn invalid or n hlind person? If you have, yon will, I am sure, admit what I have said—that for the great mass of our school-children (and you may even include the High Schools), the teaching of reading as nn art, is a failure. The true test is not the ahility to read a set piece with rhetorical effect, hnt the power to read nt sight and continnously, without effort, prose or verse within the cnpacity of the reader's understanding. We are not likely to mend our ways in this respect until the reading can he made the means of mental development—not a parrot-like imitation of any teacher however skilled in elocution.

REV. C. M. HYDE, lately appointed to the charge of the North Pacific Theological Seminary at the Hnwaiian Islands, in a letter to the *Missionary Herald* writes as follows from those islnnds

"I was very much interested in Miss Bingham's school, end the character, deportment,



WHICH FEELS BIGGEST?

interconrse with those who are wiser than onrselves. Still less onght we to be satisfied with our attainments in virtue,—by which I mean the practice of those things which are true end honest, just and pure, lovely and of good report. We must strive to bring forth more and more abnodently the fruits of the Spirit, which are the evidences of having been grafted into the true Vine. We should, also, endeavor within certain limits to improve our condition in meterial things. If "the men who makes two blades of grass grow where only one grew before, is a benefactor to mankind," we ought to be contented without using the talents our Creator has given us to add to the comforts of our homes, to locrease their beanty, and in every right way elevate our condition.

But there is in many persons a restless longing for the unattainable, a dissatisfaction with the position in which God has placed them, a persistency in looking for the thorns and disregarding the flowers in their path. How many make themselves miserable by fretfully repining at the troubles they can not remove! It is well to remember

"Two things you wont fret at, if you're a wise man;
The thing you can't help, and the thing that you can."

How many permit their happiness to be destroyed hy n vain ambition to outshine their neighbors in ornamental dress and style of living, merely for the sake of surpassing them!

"Some murmur when their sky is clear
And wholly oright to view,
If one small speck of dark appear
In their great heaven of blue;

GOVERNMENT OF CHILDREN.

1.—Never give in to disohedience, and never threaten what yon are not prepared to carry ont. 2—Never lose your temper. I do not say never be angry. Anger is sometimes indispensable, especially where there has been anything mean, dishonest, or cruel. But anger is very different from lnes of temper. 3—Of all things, never sneer at them; end he careful even how yon rally them. 4.—Do not often try to work on their feelings. 5.—Never show that yon douht nnless yon are able to convict. To douht an honest child, is to do all you can to make a liar of him; and to believe a liar, if he is not altogether shemeless, is to shame him. 6.—Instil no religious doctrine apart from its duty. If it have no duty as its necessary embodiment, the doctrine may well he regarded as doubtful. 7—Do not he hard on mere quarreling, which, like e storm in neture, is often helpful in clearing the moral atmosphere. Stop it hy a judgment hetween the parties. Bnt he severe as to the kind of quarreling, and the temper shown in it. Especially give no querter to any unfairness arising from greed or spite. Use your strongest language with regard to thnt.

WHAT IS THE ART OF READING?

How many hoys and girls of fifteen and under, do we each know, who could read at sight intelligently and agreeably, for an hour, one of Scott'a novels, or the last "Atlantic," or the leading editorial in the morning paper? and recitations of the young ladies who took part in the public examination, on Tuesday, June 12th, in the Stone Church. They did well as far as they weot, in Reading, Geography, and Arithmetic through Reduction. It may be an unwise impotience thet would demand at this time something higher, but there are a few ambitions to go beyond this. Educate the boys and girls beyond the mere rudiments, awaken the higher powers, and they will not be content to keep at work in the fields, with no prospect of rising above the condition of a field hand. But if the way to social elevation is barred, the stimulus to effort for higher advancement is taken away. These social problems are the questions of the day here. Is Christianity as competent to hring about social reg- neration as it is to effect individual reg-neration?"

The question is pertinent to other countries. Race instincts, differences and the difficulties or necessities arising therefrom are, owing to the spread of universal snffrage, becoming practical questions of the first importance.

"PROF. R. H. MATTHEWS, a graduate of the Hampton Normal and Agricultural Institute of Va., has been elected Superintendent of the Colored Public Schools of the City of Pensacola, Fla., and will leave to-day for his new charge. He was once a principal of the Colored Public School in this city."

HAMPTON SCHOLARSHIP LETTERS.

So now mny the grace of God he with you, is the Prayer of M.

got a school near Bedford Co., Virginia. There I was a stranger in a strenge land, among strangers, with the exception of two

of the month. I never received any money in cash but twice, then it was at a discount once of $5.00 on the $30, and again of $3.00 on the

HAMPTON SCHOLARSHIP LETTERS.

Once in a year every Hampton student, boy and girl—except only those known as State students—writes a letter to some patron of the school who has given it as much as $70 to meet the estimated cost of one year's tuition of one pupil These letters are sent as they are written, without correction, and have been found a pleasant and efficient means of bringing the donors of scholarships into more intimate relations with those who receive their aid, adding a direct personal interest to their benevolence. For the first letter the student is asked to write some account of his life and efforts to obtain an education; the other two or three he may write are about his vacation experiences of work or school-teaching; his plans for the future, or ideas as to the condition and needs of his people.

These letters are short and simple annals of an interesting period of a race, written by the only ones who could write them. Their character is of course changing from year to year. Six years ago and before that, personal experiences of slave-life and the war were the most frequent topics; now these are occasionally given as family history, but have given place chiefly to the story of the freedman's struggle for a living and education, and pictures of his present condition. As such, they are as valuable as the others were, and will continue to be so.

And all together, giving the lights and shadows of negro life in slavery and freedom, they form a literature of the race which is worth preserving.

As such, we give some of them to our readers, a sample from each class, Preparatory, Junior, Middler and Senior, selected for their general interest, and in respect to composition, good specimens of their respective sections. We might call the first one, Bread cast upon the waters. It claims to be a true fairy tale.

DEAR FRIEND:

Having heard of your kindness I think it no more than right that I should drop you a few lines thanking you for your kindness in lending a helping hand in the education of us colored people, and also give you a short history of my life. My life has been one of sorrow. I was born the year 1857 near Winchester, Va. My parents were the yoke of slavery until God saw best to call them away from this world, and since that time I have been like the Bread cast upon the water, after many days I was found, that is, I went to live with a very intelligent family which be come very fond of me and took a great deal of pains to teach me good morals, but the best of all, they taught me to serve the Lord; the gentleman who raised me was a good Christian and he and his wife spent a great deal of time in trying to make me the same. After a long time I thank God they succeeded and I now feel like spending all my days in the service of the Lord. I have been studying for the ministery for some time but I find what I most need is a education, and I intend to do all I can while I am at school to not only gain book knowledge but also learn the true Will of God. When I look back over my past life I can scarcely help weeping, my mother died when I was nine and I was separated from my friends doing the war and it has been nearly fourteen years, since I have seen any of my relations, accept my sister, and of corse this has a tenancy to make me feel sad, but I try to forget the pass and look forward to a bright future. I read a verce in the bible where it says we must work out our soul salvation with fear and trembling, and I think I can apply it to myself in too different ways, for I hafter work out my soul salvation with fear and trimbling and also work my way through school with fear, for I am now in the preparatory class and I am certain that I will hafter do a great deal of head work before I will be able to get my deploma, but my financial matters are in such a condition that I am afraie that I will not be able to finish my education, but God moves in a mysterious way his wonders to perform, and as I have united myself to him, I feel that he will prepare a way for me to succeed, althou we are tought that faith without works is dead, so I intend to do all I can and trust God for the rest, and I hope the time will soon come when I will be able to do a great work for Jesus. I could tell you a great deal more about myself but my life has been so much like a Fairy tale that I am afraie that if I say much more that it will cause you to doubt what I have already said. I think if I would write the hole history of my life that it would make a good size book. So now I think I had better draw my letter to a close.

So now may the grace of God be with you, is the Prayer of M.

A common experience of the freedman was to find the coveted blessing of freedom making "very little change in his life," in its experience of hard work and privation. Education into an appreciation of its real significance is as important for this race as for that which slavishly mourned for the flesh pots of the land of bondage and asked "were there no graves in Egypt?".

HAMPTON, VA., *Jan. 10th.*, 1878.

DEAR FRIEND:

I will try to write you the history of my life. I was born in Newbern, Va., Feb. 22, 1854. I have had a rough time through life.

First I will tell you of my parents. They live in the place I was born. They belonged to different masters. I am the oldest amongst six children. I never knew much of a mother's care until after the Emancipation of slavery. The man that I belonged to was a very hard master. He always kept my mother hired away from me. My father would try to get my master to let me go along with my mother and offered to pay what he would hire me for. I was kept home to drive the stock from and to the farm, run errands, pull my young masters about in their little wagons. That was not very hard. I had to live on half rations.

I recolect very well what it was they allowed me, it was a half pint of milk three times a day in Summer and twice in Winter. They never clothed me any. I never knew what having a pair of shoes was until I got able to get them myself. My mother would send me something every once and a while of what she could get, and being sometimes from a distance from me you can imagine the difficulty. She used to send me what she could get. I could get along very well in summer but when winter came then I had a very hard time. I had to go two or three miles after the stock in the snow barefooted. I have been frost-biten several times in my life. It was a very common thing to see my back covered over with sores from being whiped so much.

My master was not as hard on me as my mistress. He would see that his slaves got something to eat when he was at home, but being in the war he could not see to it.

After I become free there was very little change in my life except in a few cases. My father went to drinking very hard. I could not go to school for that reason, for I had to help my mother get something to eat for her children. I commenced reading newspapers and learned my Alphabet from them and have been reading them ever since.

I was all ways desireous of geting a little Education for I know that I am in need of it. I know also that my mother has a hard time for the reason that I am not there to help her.

I came here in a very poor condition to get learning. I have been here three months and paid for them, but I don't know where the next is coming from. But when I cannot go any longer I expect to go to work and see if I cannot make the money to come.

To elevate and build up my race will be my motto and greatest ambition. All I want is a chance to do something for my race. Please excuse all mistakes.

May God protect you from all harm.

Yours Gratefully, H.

Its graduates are not the only teachers Hampton sends out. Many of the undergraduates spend their vacations in teaching, and with much courage and success, though they are confroated sometimes by such problems as How shall we educate families who live thirteen in two rooms? That is a problem for missionaries to reflect upon.

DEAR FRIEND:

I was born in Beaufort, S. C., Dec. 5th, 1856. I came here to school in '73 with the intention of preparing myself for a teacher so that I could be one of the number to go out among my race and help to educate them and bring them into the fold of educated civilization. I entered the Junior class, and the next year was promoted to the Middle class. I came back again in '74, after my summer's vacation, or rather *workation*, for I worked very hard during vacation time, having secured a good place of employment. But owing to the scarcity of my means I could not go through. So I had to leave school (though I regretted it very much) and go out into the world and seek my fortune first. Thus you see, I was called upon to go out into the field of labor sooner than I expected.

But, nevertheless, I went out with a willing mind and ready hande. At first I did not know really how to begin. I felt weak and very incompetent to teach any one, for I felt so much in need of being taught myself.

Through General Armstrong's influence I got a school near Bedford Co., Virginia. There I was a stranger in a strange land, among strangers, with the exception of two other students who went out at the same time but were situated in different counties. I taught there seven months. The term was only five months, but they gave me a private or pay school as they call it, for two months.

My school was about three miles from the town. I started out there to hunt up a boarding place one Sunday afternoon, got there about 8.30 in the evening. It was a very cold afternoon, and a very discouraging journey, but I tried to forget it and kept on. Imagine my surprise after nightfall, to find myself out in the woods, with here and there a log cabin; and the first one that I was taken to was a small one of one room below and one above, and there was a family of *thirteen* in number. Of course I could not board there, though they would have taken me if they could. I would have liked to board there too, for it was the nearest house to the school house.

Next I went to a married daughter of the same family; that was the house that was chosen for me. So there I expected to make my home for five or seven months. There I was also introduced into a large family of ten, the oldest child being fifteen years old, down to the youngest only a few months. I felt out of place there, but still I saw some room for improvement, so I decided to stay, for this was the next nearest house to the school.

Walking all that afternoon in the cold to my boarding place, gave me a good appetite, but my hunger was appeased when I saw what was set before me. It was not the variety of food but the manner in which it was prepared. It was enough to disgust a pig. Finally supper was over and after a long talk and thawing out by a nice blazing fire, I retired to bed. That house had a little more accommodation, there being two rooms up and down stairs. I had a very good bed, and a nice fire-place, but I cannot say much for my room. But I was content with my lot, or at least I tried to be.

On the morrow I made the final arrangements about my board and sent for my trunk. I felt more at home when I got my trunk and had fixed up my room a little. Then the next day I took another cold tramp of three miles to see my school house, but what was my disappointment to find a little log cabin, one single little room occupying the whole of the house, with a clay and wood chimney, five long benches of very thick plank with two round logs in each end, without backs. And the floor had three holes in it about an inch wide. The door was about three feet high. I shall never forget that door, for it caused my head to ache many days by bumping it against the upper ledge. Discouragement was staring me in the face on every side, but I determined to go on and not look back, for I felt it *my* duty to work for my race, as well as the rest of them.

The people had never had a school there before, and did not know what was required. Some of the children had never seen a book, or been in a school-room before in their lives. They wondered that a mere girl like myself would come out there in the woods to teach them. Many thought it best for me to go back, seeing I was so small, but seeing the energy and spirit I went about my work, they began lending a helping hand. I suffered everything almost but death. In that school-house I caught fearful colds, for I never knew what it was to go to a fire. I had to keep moving to keep alive. My school-room caught fire five times during my first two months, and it smoked fearfully. It had us all crying nearly every day, but for all that I kept on. Many days during the winter I taught school out of doors. So you can imagine what kind of a school-house it was.

My Superintendent did not like for me to stay there, and threatened to take me away if they did not make the place more comfortable. But how could they when they did not know how? I taught in that house two months and a-half. I had to appeal to them to build a better house. So they began during the time of my two months, and had it finished by the middle of January. I moved into it then with pleasure. It was more comfortable, but not as comfortable as I could wish. This had two windows and a good-sized door, a stove, and a very small platform, which was a great improvement to the room. I had a black-board made at my own expense. This house was also nearer to my boarding place. I taught every day during my term there, but one and a-half days when sickness prevented me. I then really enjoyed my school.

I then started a Sabbath-school. I had to take some of my older scholars to help me tench the smaller ones. Then I soon after started a weekly prayer-meeting, and now and then I got a minister to come and preach for us. They had neither schools, meeting, nor any kind of improvement before I went there.

My salary per month was $30, my board, $10, or, I may say, $13, for, having to furnish myself with kerosene, soap, starch and other small articles, amounted to $12 at the end of the month. I never received any money in cash but twice, then it was at a discount once of $5.00 on the $30, and again of $3.00 on the $30. I got the other money in *orders* that I had to use on different stores, so that I had to pay almost twice the value of articles. I lost more than I gained. The people really were so poor that they just made out to board me on what I provided.

I could tell you more interesting tales about my schools but it would take too long a time.

This is my second year at this Inst. and I like it even better than before. I am in the Middle class, and if I am fortunate enough to be promoted to the Senior class, and be enabled to come back, next term, I will prove my gratitude to the school by canceling my debt as soon as I can after I go out. I hope to get a place somewhere again this vacation and to work very hard and save all I can so that I may be able to come back.

My mind often wanders back to my log school-house in the woods. They named the school after me. I opened the first school there.

Knowing how kind you friends in the North are to us, I cannot but send my most sincere thanks. Trusting that you may never feel that your kindness to our trodden down race is thrown away. May God's blessing rest on you and yours.

I am yours Gratefully,

G.

The writer of the following letter thinks less of herself than her teachers think of her, and its style speaks better for her than its humble declarations. They prove at least that these people's heads are not always turned as some think by a little schooling.

DEAR FRIEND:

I once more seat myself to write to you as it is the General's request and my heart's delight. It affords me great pleasure to write to you Northern friends, and more particularly to those that are interested in my welfare. This is my fourth year, and it is the last. I am in the Senior class, *but* I do not feel worthy to be called a Senior.

I am sorry to say that I am very poor in my studies. I have worked very hard these four years that I have been here, and I really feel discouraged to think that my time has come so soon to leave school, and I am going out into the wide world knowing so little. I have tried to do my duty, it is not natural that everybody should have faculties alike. I am sure that my dear teachers have done their best. I am sorry to say that it is *my* misfortune, but I am going forth in the wide world to try and do my very best.

I have not been home for nearly two years. My parents are very poor, and I could not look to them for my help. I spent my summer here at the school. I worked in the Institute. I had a very pleasant summer though. I had to work very hard from four o'clock in the morning until three o'clock in the afternoon. I would stop then and fix my machine for the next day.

Perhaps you would like to know what kind of machine it was. It was a knitting machine to knit mittens on. My regular number were forty pairs a day. When my day's work was over, I would take a fresh bath, and put on a neat dress and go out for a walk in the fresh summer air. There were ten other girls that stayed to do the same work that I did. It was very pleasant, but the pleasantest of all was that we were here to meet all of our dear teachers. They seemed just as happy as we were. We tried to make them happy by doing all we could for their comfort. You can imagine how happy we were to meet all of our dear old schoolmates.

I never thought the first term I came here that I would he where I am to-day. I did not see any way that I could possibly pay my way. I was not a Christian and I felt just as if I had not a friend in the world.

The first year passed and the second year came on. For that term my father paid twenty-five dollars for my schooling. That was the first and it was the last. I had to work very hard to make all I could. While doing this, I thought to myself that if I were a Christian I could get on better. I knew that I could not do anything within myself, so I went to my dear teacher. She taught me the way that I could become a Christian.

From that time up until the present, I have been a follower of Christ. I found my work much easier, and where it used to be dark, the sun now shining. I never shall be able to pay my dear teachers for all they have done for me, but I shall try to do all I can to help others and to do by them as I have been done by. When my school days are over here, I shall go out in the wide world still bearing in mind the dear friends of the Hampton school, and I will do all I can to help keep her name up. I would rather die now than to prove false to my profession when I leave this school; after all the trouble the teachers have put themselves to for my benefit.

Respectfully yours, S.

At Home.

A HOLIDAY SPEECH.

WRITTEN BY MR. THOS. D. MURRAY OF NEW YORK FOR HIS LITTLE GRANDSON TO SPEAK.

Our Teacher trusts I'll make a speech,
Appropriate and pleasing,
To show you that your boys, to teach,
His tries, with care unceasing.

Though diffident, I'll do my best,
A pupil reverential,
Hoping you'll not too strictly test
My effort eloquential.

My subject, Boys; good subjects, they,
Neath Love and Wisdom's ruling,
Though some become Old Satan's prey;
Alas! despite all schooling.

The grammar calls them, "common nouns"
With Person, Case and Gender;
To get its knowledge, neath their crowns,
Costs lots of legal tender.

With active verbs, boys, all, agree,
Are passive, while in slumber,
Singular boys, you, sometimes, see,
But plural boys, you number.

A school-boy's mind, at times, contains
Queer thoughts, in odd relations;
His pocket's store, to you, explains
His plays, or his temptations.

What's in boys, minds, when 'tis let out,
Rarely receives a thanking;
What's in their pockets, would, no doubt,
If known, get sons a spanking.

The girls, with tact and taste endowed,
Serenely wait there chances,
But boys, impulsive, forward crowd,
Obliged to make advances.

What wonder that they oft offend
The rules of rigid breeding,
Their manners, like their clothes to mend,
Their watchful mothers needing.

The school of life, what lessons there,
In tears and smiles, they're learning,
How Good and Evil, False and Fair,
They, daily, are discerning.

CURE FOR CHRONIC RHEUMATISM.—Dr. Bonnet of Grenilhet, France, recommends and prescribes for chronic rheumatism the use of the essential oil of turpentine by friction.

BUILDING FIRES ON COLD MORNINGS.

If we will go into many a farmer's kitchen, about five o'clock on a cold winter morning, we shall too often see the woman of the house sitting by the stove whittling shavings with a dull knife, with which to start the fire. Now, as one's happiness for the day depends, in a great measure, on how the day is begun, you will easily see what an annoyance it is to whittle shavings in a temperature down to zero. This unpleasant task can be easily avoided by two hours' work in the fall, before the ground is covered by snow. Let the farmer and his hired man take a team, with rakes and baskets into the woods, and rake together fifty bushels of pine needles, and haul them home, and stow in some dry place under cover. These are among the best kindlings there are for starting a fire quickly. I have used them for twelve years, and should not know how to do without them. I adopted the practice, when I first began using them, of arranging my stove the night previous, so that, in the morning, I had nothing to do but to light the fire and get back into bed again, all which I can accomplish in ten seconds. In fifteen minutes, the room will be comfortably warm, so that we can begin the day without any drawback.

EXETER.

N. H., October, 1877.

THE USES OF THE LEMON.

Few people know the value of lemon-juice. A piece of lemon bound upon a corn will cure it in a few days; it should be renewed night and morning. A free use of lemon-juice and sugar will always relieve a cough. Most people feel poorly in the spring, but if they would eat a lemon before breakfast every day for a week—with or without sugar, as they like,—they would find it better than any medicine. Lemon-juice, used according to this recipe, will sometimes cure consumption: Put a dozen lemons into cold water and slowly bring to a boil; boil slowly until the lemons are soft, then squeeze until all the juice is extracted; add sugar to your taste and drink. In this way use one dozen lemons a day. If they cause pain, lessen the quantity, and use only five or six a day until you are better, and then begin again with a dozen a day. After using five or six dozen the patient will begin to gain flesh and enjoy food. Hold as to the lemons, and still use them very freely for several weeks more. Another use for lemons is for a refreshing drink in summer, or in sickness at any time. Prepare as directed above, and add water and sugar. But in order to have this keep well, after boiling the lemons, squeeze and strain carefully; then, to every half-pint of juice, add one pound of loaf or crushed sugar, boil and stir a few minutes more until the sugar is dissolved, skim carefully and bottle. You will get more juice from the lemons by boiling them, and the preparation keeps better.—*London Lancet*,

SAN JOSE, CAL., *Dec.* 27, 1877.

Dear friends of the Hampton School:

When I enjoy any great pleasure, I feel like sharing it with you, and so for months I have been planning to tell you all about an excursion which I took last summer, to Mt. Shasta, the great extinct volcano of Northern California, and one of the highest mountains in the United States.

Our party originally consisted of four teachers of the State Normal School—two gentlemen and two ladies, the Principal of the school being the leader in the enterprise. One more lady and several gentlemen joined us, so that our party was of just the right size for the wild camp life we enjoyed.

Mt. Shasta is a giant sentinel, standing between the great ranks of the Sierra Nevada and Coast ranges. From its position at the extreme northern end of the State, it overlooks, between these lofty piles, the whole west central plain of California. The extreme heat of last June, when the thermometer stood for days at 105° in the shade, made us dread the long journey over that burning plain, but it made yet more impressive the sight of the majestic mass of eternal snow when we reached it at last.

I should like to tell you of our camping excursions from our head-quarters at the home-like little hotel, known as "Sisson's," to the lakes and rivers and mountain fastnesses of this wild region; to describe the long rides over the mountain trails on our knowing, tough little ponies, or the tramps of from seven to ten miles a day which the ladies, even, learned to take without special fatigue; the hunting, fishing, sketching, botanizing, climbing—the camp-fires, and the sweet sleep under the open sky. But as I must not stretch the columns of the Southern Workman too much, I will come directly to the final ascent of the great mountain.

People had done their best to frighten us, with tales of travellers who had bled from nose and even from lungs in the thin air of that extreme height—of strong men who had sunk down with fatigue and abandoned the attempt even within an hour's climb of the summit. We were told about this intense cold and strong winds; the snow blindness and nausea, and the danger of slipping on the icy snow. To our rejoinder that ladies had done it before, they said it was at a later season, when the smaller amount of snow made it possible to ride farther on horseback, and so have less climbing on foot. But hardy and in good training as we were, we were determined to make the effort. Difficulties multiplied. A long storm came on, unusual at that time of the year, and what was rain below was snow above, so that although we waited patiently for this new snow to melt away, it still impeded our progress when we finally made the ascent, the fourth and fifth of July. We had planned to celebrate the Fourth on the summit; but the signs of another storm delayed us a day, and as it proved we should have waited longer. But our time was limited, and our desire to carry out our programme strong, so on the Fourth of July, our cavalcade started up the mountain. I should like to tell you of that fifteen-mile ride on our sure-footed ponies, slowly winding up the trail, through forests of immense pines and firs, said to be among the finest of the world, over wildernesses of lava blocks, some of them polished by glaciers. It was strange to think of those great ice-plows which for ages cut their way down this enormous heap of lava, once poured out hot from the earth-furnace. But I must pass quickly over this day's journey. Late in the afternoon we camped in the last timber this side of the eternal snow, at a height of about eight thousand feet above the sea. Our principal insisted on snow-balling me, saying it was the only chance I would ever have to be snow-balled on the Fourth of July. A glorious sunset made a picture never to be forgotten. Then we lay down to rest beside our camp-fires. Such a place to sleep! Again and again I awoke, the wild, cold wind whistling under the edge of my blankets, to see our leader throwing great logs on the camp-fire, then to see the light flash up more brightly on the dark fir branches overhead. We were to start upward at four o'clock, so at half-past three, in the starlight, we were breaking the ice in our water buckets, and preparing hot coffee for our hasty meal. But the lowering clouds made us hesitate. It would have been well if we had postponed our ascent, but having no provisions for ourselves or our horses, we decided to go on, and at five o'clock, leaving our horses behind, we had started up the long snow slope.

I must describe the mountain a little more fully, that you may understand what lay before us. Mt. Shasta, like most volcanoes, is cone-like in shape. It is, indeed, an immense heap of lava, which has been poured out, and built up in layers. The surrounding plateau averages 3,000 feet in height above the sea level. As Shasta itself rises to a height of 14,500 ft. (or two and three-fourths miles) above the sea, there is one great swell of eleven thousand feet, or two miles of vertical height. Of course it is many more miles from the base to the summit, toward the bottom the slope being gentle, toward the top, steep. We had ridden fifteen miles on horseback and climbed 8,000 feet. We had now to make an elevation of 6,500 feet, a mile and a quarter; and to do it to walk six and a-half miles. It was actually more than this, as we had to zigzag over the steepest portions. The first four and a-half miles over the snow is one long, smooth slope, at first gentle, but growing steeper and steeper, between great buttresses of cliffs. Then we turn, and follow up sharp ridges, from which the snow is largely blown away.

The snow crust was hard, during the morning. It would have been impossible to climb it without slipping down to sure destruction, but for our sharp, iron-pointed staffs, or Alpenstocks, and the nails in our shoes. As it was, it would have made a dizzy-headed person giddy to look downward over the long slope; especially after seeing one or two bundles which we dropped go bounding, sliding, whizzing, for miles, till lost to sight. So when we stopped for rest we carefully braced ourselves against our firmly planted Alpinstocks. Taking this route, there were no precipices to climb; all that was needed was a clear head, sound lungs and stomach, and nerves and muscles of steel to endue the long exertion, so much greater in the constantly thinning atmosphere. None of us experienced the common difficulty of bleeding from the nostrils, though our skins grew very dark with the blood, which seemed desirous to force its way out. The guides continually cautioned us to go slowly, taking short steps, and to stop often for rest, as our only chance of holding out to the end.

The view was increasingly grand. It was very strange to see from our snowy height the great yellow wheat plain of Central California, stretching away for hundreds of miles. About nine o'clock, the clouds which had been growing thicker, settled around us. I have been in clouds upon mountain sides before, but never like this. The white snow under our feet and the white cloud around were so impenetrably joined that we seemed to be walking on the cloud as well as in it. For two hours the cloud was so dense that we could not see the members of our own party who were a few rods away. Then it would grow a little clearer and we would see their forms emerge from the mists, and the peak overhead for which we were aiming would shine out for a moment. By the time we had taken our bearings so as to be sure which way to go, the cloud would again shut us into a world of soft whiteness. At noon, when we had reached a height of over twelve thousand feet, and had gained the crest of a great buttress of the mountain, the sun suddenly broke through the clouds, and gave us the grandest view I have ever seen—perhaps the grandest view I shall ever see. We had been climbing up the most regular side of the mountain. On the other side, which we could now see, inaccessible precipices descended thousands of feet. Soft cloud banners clung to their rugged crags, waving and changing at every moment. Below was a wide landscape, the rolling plain at our feet, the snowy Sierras beyond, all seen by glimpses through a vast curtain of shining clouds, shifting, breaking, tossing like waves. But soon the clouds gathered closer around us again, and we went on; now along a ridge of rock, which the wind had swept mostly clean of snow. It had grown colder every hour. At every halt, we had beaten our benumbed hands and feet. Now the wind began to blow fiercely. We wrapped our faces and ears more closely, and struggled on.

At length we reached the last hard climb, known as the "Black Hill," a steep ascent, a thousand feet high, so named from the color of the lava of which it is composed, for it is so steep that the snow does not collect on it. Here the courage which has carried travelers to a height of thirteen thousand feet often gives out. The bitter winter storm was now raging around us; it seemed foolish to go on, but we could not bear to give up, and without a word we silently climbed upward, staggering a few feet, then waiting for strength and breath for a few feet farther. Twenty times or more I flung myself down flat to rest, covering my face, rubbing nose and ears, beating hands and feet to keep from freezing. One of the party froze an ear, and another a toe, in spite of all efforts. Finally we stood on the summit of the dreaded Black Hill, at a height of over fourteen thousand feet. The central and highest summit was a cone rising about three hundred feet higher than that on which we stood, and separated from us by a nearly level ridge about half a mile long. We were congratulating ourselves that the struggle was just about finished, when our guides turned around and refused to lead us further, declaring that the storm would sweep us like leaves from that narrow ridge. It was too hard to give it up. We begged, and the leader of our party with one guide, started out on the ridge, but returned almost immediately, saying that even if we succeeded in crossing, any increase in the storm would prevent us from returning. We knew that the two most famous mountaineers of California had once been prevented by a storm from returning over that ridge, and compelled to pass the night on the summit. They were only saved from perishing by a hot spring, the sole remains of the former activity of this crater. In Harper's Magazine for last September, you will find a vivid account of this sight in a Snow Storm on Mt. Shasta, by Mr. John Muir, the great mountaineer and geologist of California. He has since told us that we were very unwise to go as far as we did.

So, sadly turning backward, down we went as best we could, careful to escape the glacier on our left, till the Black Hill and the rocky ridge safely passed, we came once more to our long, unbroken snow slope. But it was not now so fearful as when we went up, for the July day, though largely a cloudy one, had softened the surface, so that we sunk into it several inches at every step. In this state of the snow we might venture on a slide. Coming down into denser air and more to our long, unbroken snow slope. But it was not now so fearful as when we went up, for the July day, though largely a cloudy one, had softened the surface, so that we sunk into it several inches at every step. In this state of the snow we might venture on a slide. Coming down into denser air and refreshed us wonderfully. The sun, too, had come out, though clouds still veiled the summit. All our memories of coasting down hill in New York State urged us to try this finest of slides. We sat down in the snow, gathered our clothing tightly about us, took our Alpenstocks under our arms, and away we went. It was not dangerous, for we could stop ourselves by digging our heels into the soft snow. Each lady at first slipped her arm into that of one of the guides, or one of the gentlemen of the party. But I soon decided that I could slide more successfully by myself. All the practice of my childhood in "steering" a sled came to my aid—the guide gave me a push, and I went down the long slope alone. Such glee! Shouts and laughter had taken the place of the stoical silence on the mountain top. I never expect another slide three miles long, unless I climb Shasta again.

And so, tired but merry, we reached our camping ground. Mounting at once our waiting horses, after fifteen miles of riding, we reached Sisson's at about eight o'clock. That aggravating mountain looked lovely in the sunset—we could not see a trace of cloud left on its summit. If the leader of our party could have remained, we should have tried the ascent again, sure now that we could accomplish it in any favorable weather. But business called him away, and we followed, glad, after all, to hide our blistered faces and sore eyes in our own homes. The snow-light and the alternate heat and cold, with the piercing wind, had burnt us as if with fire. After bandaging our faces a week, however, we came out with new skins, as good as ever, and none of us felt any bad effects from the exertion we had made. Indeed, our vigor was such us to astonish all our friends, and give us new energy for the next year's school work. We had enjoyed a month of intense and unalloyed pleasure, which will be wealth to us in memory as long as we live.

LUCY M. WASHBURN.

NEWS OF THE MONTH.

A LETTER to the N. Y. Observer, from Selma, Alabama, says: Everybody is busy night and day with the splendid cotton crop. This town has received twenty thousand bales more this season than last, and one farmer told me last week, he had bought fifty thousand bales.

AM. COLONIZATION SOCIETY.

The American Colonization Society held its sixty-first annual meeting in Washington on Tuesday evening, the 15th inst. The meeting was opened with a prayer by the Rev. Dr. Matthews, and addresses were made by Dr. W. R. Allen, President of Girard College, and the Secretary of the Navy, Hon. R. W. Thompson. The report submitted by the Secretary stated that the receipts for the year amounted to $12,9 3; disbursements, $10,639; balance in the treasury January 1, 18'8, $1,414.

An expedition sailed in the bark Liberia, from New York, January 2d, 1878, with fifty-two emigrants on board well provided for at sea and for six months after landing. They were from all parts of our country, and represented every trade and profession. Three were graduates from the college for the education of red youths. A large portion of them paid a part of their passage and incidental expenses. For the past fifty-seven years the exodus has been increasing. The number that has colonized since the war is 3,188, and from the beginning of the colonization 13,227, exclusive of 5,722 recaptured Africans that the society induced the United States government to send to Liberia. The total number that the society has supplied with homes in Africa is 308,991.

It is stated that organizations to promote emigration to Liberia are forming in North Carolina, Georgia, Alabama, Mississippi, Florida and other states, some of which represent 5,000 persons, which does not include the Liberian Association of South Carolina, which reports that 100,000 persons have signified a desire to emigrate to Liberia, nor the Colonization Council of Louisiana, which has enrol ed 71,000 names.

We see it stated also that extensive frauds upon the colored people are committed by persons in the South, who obtain their money under a promise of securing for them passage to Liberia, and that when the emigrants arrive at the port or ports named, they find it is all a

sham. The friends of the colored race, and especially the friends of the Colonization cause, should guard them against such imposition.

POLITICAL.

BOTH houses of Congress re-assembled on the 10th. Senator Edmunds submitted a joint resolution proposing an amendment to the Constitution of the United States, prohibiting the States from making appropriations for sectarian purposes. Referred to the Committee on the Judiciary. The Senate resumed the consideration of the Matthews resolution declaring the right of the government to pay the bonds in silver. Senator

Rome was declared the capital in Dec. 1870. The long contest between the civil government and the clerical authority in Italy is a matter of history. The Pope, who had excommunicated the King many years since, on account of his course on this question, appears to have retracted it in the latter's last hours, as he sent him the Papal benedic ion. The eldest son of Victor Emanuel succeeds him as Humbert I. He is in his 34th year, and is believed to be a man of considerable ability.

sham. The friends of the colored race, and especially the friends of the Colonization cause, should guard them against such imposition.

POLITICAL.

Both houses of Congress re-assembled on the 10th. Senator Edmunds submitted a joint resolution proposing an amendment to the Constitution of the United States, prohibiting the States from making appropriations for sectarian purposes. Referred to the Committee on the Judiciary. The Senate resumed the consideration of the Matthews resolution declaring the right of the government to pay the bonds in silver. Senator Sargeant, of California, offered a joint resolution proposing a sixteenth Amendment to the Constitution, prohibiting the States from disfranchising persons on account of sex.

The House on the 11th, by a vote of 111 to 107, passed Mr. Wood's resolution authorizing unlimited investigations by the several Congressional committees. Jan. 21, a bill was introduced in the Senate by Senator Dawes, directing the Secretary of the Treasury to purchase the Freedmen's Bank building and adjacent property owned by the Freedmen's Saving and Trust company in Washington, for distribution of the proceeds among its creditors. A compromise silver bill was introduced in both Houses providing for the coinage of silver dollars, and making silver legal tender only when paid jointly with gold, in equal portions, unless otherwise specified by contract.

In the Senate, January 14, Mr. Edmunds (Republican), of Vermont, offered a substitute for the Matthews silver resolution. The substitute declares that the silver dollar of the United States had been long obsolete when the existing loans of the United States were authorized; that gold coin had been the only lawful coin, and that Congress should not legislate to make money at the expense of its creditors; that it is the highest obligation of the United States to pay its debts in such coin as its creditors expected they would be paid in, and that it would be unjust to compel them, or any one else, to receive silver dollars worth ninety-two cents, or any debased money. In the House, a resolution offered by Mr. Kelley permitting the advocates of woman suffrage to present their arguments to the House on the 19th, was defeated by a vote of 107 to 140. The Senate, on the 15th, adopted a resolution requesting the Secretary of the Treasury to report in relation to the sales of bondsince March 4, 1861, payments to the Syndicate, etc. In the House, Mr. Springer, of Illinois, introduced a bill to prevent further contraction of the currency below $350,000,000.—On the 16th, the Senate by a vote of 18 to 31, refused to refer to the Judiciary Committee the Matthews resolution in favor of paying the bonds in silver. —The House, on the 17th, amended and passed the bill to enable accused persons to testify in their own behalf. Senator Howe, of Wisconsin, introduced a bill for the prevention of strikes.

President Hayes thus replied to a colored man's request for his advice as to a colored emigration to San Domingo:

"I have given some consideration to your question as to the emigration of colored people from Florida to San Domingo. I am not well informed as to the advantages offered by San Domingo to immigrants, but my impression is that your people should not be hasty in deciding to leave this country. The mere difference in climate is a very serious objection to removal. The first generation in all such removals suffers greatly. It is my opinion, also, that the evils which affect you are likely steadily, and I hope rapidly, to diminish. My advice is, therefore, against the proposed immigration."

FOREIGN.

The Cuban rebellion appears to be not quite "crushed out." If the statement of a recent writer can be relied on, the rebels number about 70,000, of whom 25,000 are well armed, and it requires 168,850 Spanish soldiers to garrison the Cuban cities, and 40,000 men in the field.

Negotiations of a peace between Russia and Turkey are being considered between the Grand Duke Nicholas and the Turkish delegates at Adrianople, which has been evacuated by the Turkish armies. An armistice of six weeks for the purpose, has been consented to by Russia, but it is doubted whether this is not only to gain time and prepare for a future march on Constantinople, which the capture of the Shipka pass through the Balkans has rendered quite possible for the Russian troops when the roads are better and the Danube free from ice. Meanwhile Constantinople is filling up with wretched refugees from the seat of war, whose sufferings pass description—mothers having been known in a phrensy to actually throw away their freezing, starving infants rather than see their dying agonies.

Queen Victoria opened the English Parliament on the 13th. Her opening speech promised neutrality in the Russian-Turkish conflict unless British interests should be directly assailed.

In Greece there is a strong popular feeling for war to reclaim from Turkey its Northern provinces of Thessaly and Epirus, but the Ministry will await the action of England.

King Alphonso, of Spain, was married to a Spanish princess, on the 23d of Jan.

The famine in China exceeds, if possible, that which India has just suffered from. People are actually living upon the corpses of those who die from starvation, and the strong are killing the weak. The Chinese government and foreign residents are doing all they can for the relief of the sufferers, but cannot supply the need.

King Victor Emanuel of Italy died on the 9th of January, with only four days' illness, aged nearly 58 years. He was the first sovereign of "United Italy." He succeeded, to the throne of Sardinia in 1849, by the abdication of his father, Charles Albert, during a war with Austria. Peace was made soon after, and the king, with the aid of able counsellors, promoted many improvements, political and financial. After another war with Austria in 1859, Lombardy was added to his dominions, Savoy and Nice being ceded to France. Subsequently Parma, Tuscany, Modena, the greater part of the Papal States, the kingdom of Naples, and finally Venetia, were also incorporated with Sardinia, and in 1861 the Parliament proclaimed him King of Italy. Rome was declared the capital in Dec. 1870. The long contest between the civil government and the clerical authority in Italy is a matter of history. The Pope, who had excommunicated the King many years since, on account of his course on this question, appears to have retracted it in the latter's last hours, as he sent him the Papal benediction. The eldest son of Victor Emanuel succeeds him as Humbert I. He is in his 34th year, and is believed to be a man of considerable ability.

DOMESTIC.

Samuel Bowles, editor of the Springfield Republican, died Jan. 16, after a lingering illness.

Mr. McCormick, the Commissioner General, reports 619 applications from the United States for space in the Paris Exposition.

Progress of Fish Culture.—There are now twenty-seven States whose Commissioners of fisheries receive, hatch and distribute the eggs of fishes furnished by the United States fish commission. About 1,000,000 eggs of California salmon were thus distributed in October.

Free labor in the South has increased the cotton crop. For the past eight years it has been greater than ever before. Since 1869 the aggregate production has been 31,575,312 bales, while for the eight years immediately preceding the war it was only 28,797,841.

The financial condition of the Old South Church, Boston, is reported to be this: There is a debt of $225,000, and it is expected that the fair will pay off one-quarter or floating debt, and leave this amount to be provided. There are $25,000 pledged, which is ready when wanted, thus leaving $200,000 yet to be raised.

Bishop Haven has issued a call for volunteer missionaries to go to Africa. He wants to send two men out at once—one to take charge of the Monrovia Seminary and another to take charge of the interior work.

The Murphy Temperance movement has been making great progress in Northern New York. Over 70,000 signed the pledge in two months, 300 saloons were closed and the work is still going on.

Gov. Holliday was inaugurated Governor of Virginia on the first of January. In his inaugural address he thus speaks of the public debt of the State:

"It ought now to be settled; and this Legislature, fresh from its discussion, has promised that it shall be settled. Let that promise be kept. There is time enough in the present session. But woe to the man who in that settlement betrays the trust or sells the honor of Virginia. It were better for that man had he not been born.

"Our duty then is to pay the debt, not to find ways to avoid it."

The Modocs. A Texas paper is informed by a gentleman who has just returned from a tour through the Indian Territory, that the once murderous Modocs have advanced rapidly toward civilization since being placed on their reservation by the Government in 1873. They own 4,000 acres of good land, on which they have built comfortable houses, and have fenced in and have under cultivation over eight acres of land to each person in the colony. They had 120 acres of wheat, 175 of corn, 300 head of cattle, and cut 140 tons of hay. Besides, they have plenty of poultry, etc. Fifty-nine of their children attend school. After this year they will be able to get along without any assistance of any kind from the Government. This is certainly a very gratifying evidence of the capacity of the Indian for the pursuits of civilized life, when he is once put to them in earnest.

On New Year's Day the colored citizens of Philadelphia assembled in convention to celebrate the fifteenth anniversary of the proclamation of emancipation, and to pay tribute to the memory of Arraham Lincoln. Several addresses were delivered on the occasion. Isaiah Wears, the well-known Philadelphia colored orator, spoke eloquently of the past and present condition of the negro race, and uttered truths worthy of the attention and study of those of his people elsewhere. I extract the se phrases:—

"Suffrage and the exercise of it is valuable to us, and we should cling to it with unflinching tenacity; so also is education a valuable auxiliary in our advancement; but neither the one nor the other, nor both, can supply the place of industry and labor in the process and potency of our elevation. Let us look to the industrial avenues of life as the rough which we must pass to elevation and success. Work, work, is what we want. Let us besiege every department of industry, whether in private or in public hands, and importune for employment."

The entertainment given by the teachers of Hampton Normal School for the benefit of the sufferers from the James River flood, and largely attended by Hampton citizens, netted $83.40, which was made up by the teachers to $100 and the amount forwarded.

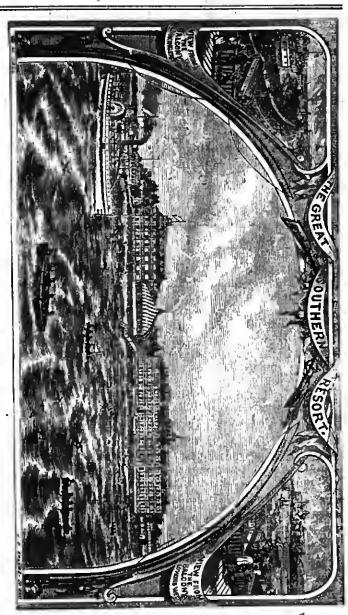
Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of Boschee's German Syrup to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

BOSCHEE'S GERMAN SYRUP

OLD POINT COMFORT, VA.

THE HYGEIA HOTEL,

H. PHOEBUS, PROPRIETOR.



This Hotel, thoroughly built and elegantly furnished, is situated upon the bank of the finest of the healing waters of the Chesapeake Bay, at the point of the junction of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

Its table is supplied with the best the markets of Norfolk, Baltimore, and the Northern Cities afford, and the Home, National Cemetery, and the tower of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the months of December, January, February and March is unsurpassed for salubrity, the mean of the thermometer for the past 10 years during these months having been 50°, 46°, 48°, for December; 46°, 44°, 48°, for January; 50°, 48°, 50°, for February, and 48°, 52°, 58°, for the Spring months.

—Open for guests all the year.

THE OZAR OF RUSSIA.

The eyes of the world are turned upon Russia, and Turkey which seems now to lie at her mercy. In Asia, Kars fallen, and Erzeroum on the point of surrender. In Europe, Plevna taken, the passes of the Balkans captured, and Constantinople itself threatened, the powers of Europe are looking anxiously for the result of peace negotiations now going on at Adrianople, between the Russian Grand Duke Nicholas and the Turkish plenipotentiaries. Upon those results may hang the horrors of a general war in Europe. England especially watches with solicitude the effect upon her interests in the Black sea and in India.

The one man upon whose action thus seems to depend the fate of nations, Alexander II, Czar of Russia, is a man of extraordinary mental vigor and personal power. He is thus described:

The Emperor himself is the great and sole foundation of military honor. He watches all personally. The theory is that no act escapes his eye. Certainly to see how his every word and gestura is followed by those around him he would appear the earthly incarnation of supreme power. And his personal bearing enhonces the reward in every case. A generous word, a friendly look, the well-chosen expression of praise to suit the individual, go home to the heart of the recipient as much as the highly-cherished reward itself.

In no army in the world are greater pains taken to recognise and stimulate individual enterprise. Crosses, decorations, swords, and sashes of honor are distributed with a lavish hand, and, better still, they are given on the spot, and not, as with us, when the recollection of the brilliant deed has nearly died away.

Two hundred officers of all ranks breakfast and dine daily at his table. From the youngest to the oldest every eye is fixed on him. Before the meal, in the assembled circle, as the Czar appears, it is seen one day that an aide-de-camp behind him carries a cushion with crosses on it, and, perhaps, half a dozen sword knots of honor—the ribband of St. George, orange and black—to be worn attached to the sword hilt. Instantly expectation is at its height. The Czar's voice calls the chosen name, all make room for the envied man to pass, he comes blushing and flushed, receives the prize, bends low to kiss the imperial hand, and retires bowing at every step, a made man for life, the admired and courted of all beholders. Then he has to go through the usual embracing and kissing on both cheeks from his friends.

The effect of the system is like magic; it is to concentrate all power and authority absolutely in one centre. The Czar is the earthly Providence of the soldier and officer, as well as the embodiment of the military power and glory of his country. I have seen old officers so overcome with this mark of distinction that they went about for ten minutes after like children, weeping with the prized decoration in their hands, showing it round, half dazed. No system can be imagined more calculated to stimulate individual efforts to the utmost. Yet, with all this spurring there is something wanting. It is the individuality and the habit of spontaneous action, which only the education and modes of thought of a free people can supply. Whether it be the long-standing taint of serfdom, whether it be too much imperialism, the initiative is wholly absent. You tell the Russian what to do, and he will spring to it like an obedient child. In a year it never would have occurred to him to do it himself.—*London Times' Bucharest Correspondence.*

LETTERS OF RECOMMENDATION.

A gentleman advertised for a boy to assist him in his office; and nearly fifty applicants presented themselves to him. Out of the whole number, he, in a short time, selected one and dismissed the rest. "I should like to know," said a friend, "on what ground you selected that boy, who had not a single recommendation."

"You are mistaken," said the gentleman, "he had a great many. He wiped his feet when he came in, and closed the door after him, showing that he was careful; he gave up his seat instantly to that lame old man, showing that he was kind and thoughtful. He took off his cap when he came in, and answered my questions promptly and respectfully, showing that he was polite and gentlemanly. He picked up the book which I had purposely laid down on the floor, and replaced it on the table, while all the rest stepped over it, or shoved it aside; and he waited quietly for his turn, instead of pushing and crowding, showing that he was honest and orderly. When I talked with him, I noticed that his clothes were carefully brushed, his hair in nice order, and his teeth as white as milk; and, when he wrote his name, I noticed that his finger-nails were clean, instead of being tipped with jet, like that handsome little fellow's in the blue jacket. Don't you call those letters of recommendation? I do, and would give more for what I can tell about a boy by using my eyes ten minutes, than all the fine letters he can bring me."
The Well-Spring.

Whatever you are, be brave, boys!
The liar's a coward and slave, boys,
Though clever at ruses,
And sharp at excuses,
He's a sneaking and pitiful knave, boys.

Whatever you are, be frank, boys!
'Tis better than money and rank, boys;
Still cleave to the right,
Be lovers of light,
Be open, above-board, and frank, boys.

Whatever you are, be kind, boys!
Be gentle in manners and mind, boys;
The man gentle in mien,
Words, and temper, I ween,
Is the gentleman truly refined, boys.

But, whatever you are, be true, boys!
Be visible through and through, boys;
Leave to others the shamming,
The "greening" and "cramming,"
In fun and in earnest, be true, boys!
Henry Downton, in Leisure Hours.

THE TWO NEWSBOYS.

While passing along Washington street one evening, my attention was arrested by a little newsboy, who said to his companion:

"Say, Charlie, how much money have you made to-day?"

"Twenty-five cents."

"Jolly! is that so? Don't tell your mother how much you have made; keep part of it yourself."

The little fellow straightened up, and with a great earnestness exclaimed:

"Do you think I would tell my mother a lie?"

Turning to the little fellow with an approving smile, I said, "That is right my little boy; always tell the truth."

Noble little fellow! If he abides by that principle of truth, he may rise from his humble position to one of usefulness and honor. Honest boys make honest men, and honest men make happy homes, good citizens, fair dealers, true Christians, and just legislators; while dishonesty fills the land with suffering and wickedness, and peoples jails and prisons with both young and old. Could granite walls and iron bars speak to us, they would tell us the sad fate of thousands who began their downward career by deceiving and lying. This is a wicked and perverse generation, and honest men are hard to find. Children, if you wish to shun the downward road to ruin; if you wish to be successful and respected; if you wish to make glad the hearts of your parents; and above all, if you wish to please your heavenly Father, tell the truth, for "lying lips are an abomination to the Lord; but they that deal truly are His delight."

CAN YOU FIND HIM?

"What book is that?" inquired a merchant of a youth from the country, who, while searching his bag for a letter of recommendation, had let a book fall on the floor.

"My Bible, sir."

"Your Bible! What are you going to do with your Bible here in the city?"

"Read it, sir. I promised my mother I would read it every day; and I shall do it, sir."

The firm tone and flashing eye told the merchant that he had a boy of principle and grit before him. He felt that a boy who loved his Bible after this fashion could be trusted. He was right. Mark the point, and tell me if you can find a Bible-hating boy who can be trusted. Isn't it a fact that boys who hate the Bible are not trustworthy? If, therefore, you wish to be true, trusty, and trusted, you must love your Bible. With the Bible as the rule and guide of your life, every duty will be performed in a manner pleasing to God.—*Sunday-school Messenger.*

A GOOD RECOMMENDATION.

"Sir," said a lad, coming down to one of the wharves in Boston, and addressing a well-known merchant, "Sir, have you any berth for me on your ship? I want to earn something."

"What can you do?" asked the gentleman.

"I can try my best to do whatever I am put to," answered the boy.

"What have you done?"

"I have sawed and split all mother's wood for nigh two years."

"What have you not done?" asked the gentleman, who was a queer sort of a questioner.

"Well, sir" answered the boy, after a moment's pause, "I have not whispered once in school for a whole year."

"That's enough," said the gentleman; "you may ship aboard this vessel, and I hope to see you the master of her, some day. A boy who can master a wood-pile, and bridle his tongue, must be of good stuff. —*The Life Boat.*

DEVLIN & Co.,

LEADING

CLOTHING

HOUSE.

THE

Leading Clothing House

OF THE

UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing

FOR MEN'S WEAR,
FOR YOUTH'S WEAR,
FOR BOY'S WEAR.

Our stock is always

THE NEWEST,
THE LARGEST,
THE FINEST,
THE CHEAPEST.

When visiting New York do not fail to examine our goods.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, *is known and popularly used in every section of the United States, and by every class of citizens,* representing all shades of political opinion and religious belief.

The series is *complete,* covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent.* Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece

AS NUMBERS of this issne will be sent out as specimen copies, we repeat, in effect, the statement in the previous number, that the force of contributors to this paper has heen strongly re-enforced; that a two-page supplement will accompany each iesue, except in the months of July, August and September; and that fresh efforts will be made to render the WORKMAN a fair exponent of the condition of the laboring classes of the South, and a just critic of the treatment of the negro queetion hy all who have to do with it.

ONE OF the ahlest and best known gentlemen of Virginia recently seid to us that he considered that the greatest danger from the ignornnt negro vote was in the future, when, with the white voters and leaders divided, the balance of power would be held by the blacks, whose votes would be eegerly sought hy demagogues on both sides.

The division of the white vote is, in the nature of things, inevitable. There are Bourbons and Progressives in every great community There are, in Virginia, two large classes; one that looks to the past, grumhles about the present and ie hopeless as to the future; and one that lets the past go, is cheerful about the present and resolute and hopeful for the future. They will not always keep together. The State debt question may create a division.

At present the solid white vote neutralizes that of the negroes; it ie solid only to that end, and has succeeded so well that the game is no longer exciting. The negro hae nearly ceased to vote for State officers; his party has ceased to nominate them. Conservative candidates walk the track. Political warriors will not always be content with this. Newspapers find harder things to say of the candidates on their own side than of the party that has no champion; and come out with a refreshing freedom of expression.

The element of struggle in politics ie sure to reappear. The present Republican party will not rise, hut their ideas, so far as they are sound and progressive, will, embodied in vigorous, wide-awake sons of Virginia soil. In the division these will be, no douht, equal honesty on both sides. Among the crookers there will be many fine gentlemen; the Bourbons are eminent in talent, respectability and influence; hut the Progressives, equally respectful of the grand traditions of ths commonwealth, nnd of equal ahility and standing, will be likely to win, hy their enthusiasm and clearness of aim, and hy the force of sound, aggressive ideas.

Ignorant voters, both white end colored, will be the danger. They ere now indifferent. We believe that less than hslf of this entire class went to the polls at the last State election. Sure of freedom and of an unmolested life, the negroes are beyond the rench of the eppeals that formerly drew them in crowds to vote, and, like ths whitee in a similar condition, they neither think nor care beyond their visihle horizon. From the statements of intelligent colored teachers in msny places, we ere assured that a sordid view of the right to vote ie increasing among the negroes.

Men who a few years ego would lose their places and be turned adrift with families on their hands rather than yield to threets or bribes, will now, since, to them, the crisis has passed, remein at home or sell their votes for a trifle. To expect a just understanding of their duties as citizens, which they never had the means of knowing, is absurd. A stream cannot rise higher than its source. Intelligent, conscientious action cannot proceed from mental and moral weakness. The negro does not and cannot, ae he is, do his whole duty as a voter.

He will vote with the utmost fidelity for whet he thinks are hie own iuteresta; hut for the interests, his own or others', that lie beyond his comprehension, he does not care, he will not act. He will turn his vote to the best account from his own standpoint, which means that when he sees nothing elee to be gained he will negotiate with the man who will give him the most for it.

The vast majority of hlacks in the South are still sturdy Republicans, hut are falling away from party ranks into indifferentism as rapidly as toleration and fair treatment will let them.

Only the most vigorous and wise educational work, only an active interest in their mental and moral welfare, on the part of good men of all sections, will save Virginia and other States from being pushed, by nearly a million well-meaning hut hlind and incapahle negro voters, to say nothing of a host of equally incompetent whites, into fatal political hlunders.

The era of good feeling between the faces hae its dangers as well as that of ill feeling. The former ie hut a surface thing; a calm does not mean that the watere are pure.

"Let us have peace," is the first prayer. Even more important ie the second, "Deliver us from the cvils of ignorance."

AN INTELLIGENT colored minister, feeling his deficienciee, has asked admiseion to Hampton, and for instruction to fit him hetter for his work. The school's first object is to prepare teachers and give industrial training, and ae fast as its accommodatione can he enlarged they are sought hy an eager crowd of epplicants. For evident reasone, also, it would he injurious to its progress and discipline to make up its claeses of pupils of widely differing ages. But it is hoped that special provision may be made before long, for a separate class for such applicants. Their case appeals strongly to our sympathies. The colored preacher finds hie flock outgrowing him, his young people getting to be better educated than he ie, beyond hie help, and more critical than if they knew etill more than they do. One great need of the freedmen is an intelligent and better educated ministry, which would strengthen the hands of the teachers instead of often hindering their work. The fact that some of the ministers themselves nre awakening to a sense of thie, is a most hopeful sign. The epirit which leads them to ask the privilege of sitting with children to learn, ie an admirehle one. Shall it not be encouraged?

THE relations of proper food and home life to national growth is now eo far appreciated that the study of Household and Social Science is attracting much of the best thonght of the civilized world.

The great question is how to get the results of the thought before the minds and into the lives of the masses of the people. Till this is done, of course nothing ie done. The denseet ignorance of the eimplest laws of hesith snd life prevail among them, end not only in the lowest classes, though sadly aggravating and aggravated hy poverty. In this cause, pre-eminently, love for our neighhors is love for ourselves. The ignorant class cannot suffer alone. The fifth of the alleys and tenement houses hreeds the yellow fever and typhus that ravage a whole city. The inuocent perieh with the guilty thousands of helpless children are sleughtered every year in a wholeeale murder of the innocents hy nothiug hut ignorance—or far worse, grow up to lives of misery and crime—stunted and deformed in soul as well as body.

Every effort made to spread e knowledge of the laws of living among the people, and awnken a sense of their importance, so far advances civilization and morality.

Such an effort has heen in successful operation for a year past in New York city, in the Cooking School, and popular tracts on cooking, of Miss Juliet Corson, a lady who is giving her whole time, without profit, to training cooks, teaching workingmen's wivee to feed their families on workingmen'e wages. One of her admirable little tracts, called "Fifteen-Cent Dinners for Workingmen," we hegin in this number to publish hy permission, and call our readers' special attention to the "At Home" column in which it appears.

SINCE the war, Southern farmers and land-owners have, generally, looked to the hone, muscle and money of the emigrant as a quick and sufficient eolution of the financial difficulties of the times. Why they should, ecattered, as they are, over a vast extent of territory, and without preconcerted action, turn as a unit to foreign parts for aid, we shall not now discuss, hut merely note the fact and its significance, as a piece of evidence showing the anomalous financial and social condition of the South before and after the war. The offers, inducements, and flattering promises made by the Southern land-owners have been eagerly considered hy one element, at least, in the Northern States; the element made up of the restless, the unlucky, the broken-down fiuancially, the wildly speculative; the class that is ready to supply schemes, possihle or impossihle, with everything hut money, hand labor and good judgment. The petty organizers of thie class, ecattered through the Northern citiee, sadly destitute of means, credit or character, came herc, as the ehips of the olden time cleared from Boston, "for Havre nnd a market." People here readily called them "carpethaggers." But that class is now nearly extinct, and make no factor in the problem.

The South is left to deal with three classes of emigrants—the poor emigrant from the over-crowded countries of Europe, the capital holding class of Northern men, and the Northern farming body, lying between the first two classes. So far, there has been great disappointment on every side. The South, especially, has heen grievously mietaken in its hopes, in spite of almost frantic efforts to get men and money. The espital holding class of Northern men have not, end will not, move Southward. Money holders are conservative. It is not the man with ahundant income, anxious nhout the educatioh and wants of a growing family, eurrounded with the friendship of many years' standing, ahle to command the luxuries of life, and good things generally, at his own door, who ls ready to go out into a strange land, or undertake whst is essentially a pioneer's life. The Sonth has always claimed to possese the fineet social advantages. Whether the claim is just or not ie of no moment here. It is certain that the money holding class of the North will ignore the claim, and only in exceptional ceses make a change of hase.

It is the reckless, the enthusiastic, who move on new lines of enterprise. New England hankrupts made up the early settlement of Minnesota. Gamhlers, and rash men made up in general, the early society of California. Just now there is no inducement for this class to try their luck at the South. Nor will the vast hordes of laborers, the Irish, the Germans, the Swedes, settle here. These muet go only where land is cheap. They carry little or no money. So Virginia land at ten dollars per acre is dear for them, and they push on to the vast regions lying beyond, where homesteads can he taken hy occupation only. It is possihle that the South may yet be populeted hy this ignorant class. It will be a long time before it fairly works itself into the country.

The third class, available for a new population here, is that made up of the native American farmers of the Northern States, who may be willing to exchange eterile soil and a hard climate for hetter land and a genial climate. We do not refer here to the English colouists who have settled here. They are few in number and their movements are determined hy causes epecial to the present state of English society.

The social differences of the North and the South are greatly in the way of a rapid settlement of the South hy Northern farmers. We do not refer to political differences. Such we wholly ignore. It is the difference of social life, resulting from two opposite modes of life in the past. The sterility of Northern eoil, the hard peremptory demaud for long and exhausting lahor, forethought and economy, the want of opportunity for anything more than rudimentary education in early life, have, unfortunately, dwarfed the social life of the Northern farmer. He is honest, serious, utterly committed against holidays and amusements, jealoue of any influences which interrupt lahor. His pleasures are limited to the tedious patriotic demonstratione of the Fourth of July, and he believes himself verging on hecchanalian ritee, in indulging in excessive consumption of chicken-pie on Thanksgiving day. His literary culture begins with the Bihle and ends with a religious and secular newspaper. Ho has good native eense and shrewdness, generally correct ideas about politics and religion, and has inherited traits which make him a good citizen. But he is utterly without eocial culture. He knows nothing ahout it, and caree nothing about it. Life is a serious husiness for him, and so he regards all matters relating to exterior culture as mere frivolitiee, for which he has neither time nor inclination.

On the other hand, the Southerner has

developed largely, and perhaps unduly, the social side of life. With slavery as

"catechists, schoolmastere and the press.' "From these extracts tho immediate ob-

an; that it is idle to talk of civilization nnd Christianity as distinct forces, the

THE Hampton Institute in its efforts to provide the best possihle teachers for the colored race, has eometimes been taken to

developed largely, and perhaps unduly, the social side of life. With slavery as the base, everything tended to such a development. Untrammelled by the necessity of daily manual toil, occupying a position of command, he was left free to make his culture what he chose. The result was a society of "ladies" and "gentlemen"; a class who had leisure for reading, travel, and conversation; quite proficient in the "habits of good society," and whose chief occupation was to make things pleasant for each other. Their public men were masters of the art of controlling and governing men, far superior to their Northern compeers; while the women, trained, if not gifted, in pleasant ways, in voice and manner, were far above the average women of the North, in social power. But this easy, elegant mode of life was roughly swept away by the war. The abundant hospitality of the great plantations, the expensive feastings of the winter months, the brilliant gatherings at the summer watering places, are now ended, with a painful reaction to the other and reverse side of life. The present generation are still inclined to make social culture a standard of merit. The Southerner welcomes honestly the Northern emigrant, if he is a "gentleman," and has not come down to rob the country, and for him will dispense with a free hand the scanty resources of hospitality left by this all-devouring war. He is glad to get his money and return an equivalent in land, and accepts him as a neighbor, provided he knows how to make himself sociable and neighborly in Southern fashion. But, as we have said, the Southerner will be disappointed in his attempts to get this "gentlemanly" class from the North. And the Northern farmer, for the present, will be disappointed, because his simple ways and crude social culture do not bring him the warmth and welcome of a society like that from which he came. He has only himself to blame for it. It is better for him to go back to his own kind, or to remain with them, if he thinks of moving. This is the testimony of many fair minded men who have tried the experiment.

The land owner of the South finds that these marked differences in thought and habit will prevent any rapid settlement of this vast territory, until by the pressure of similar conditions of labor, of education, of political experience, all the old lines are obliterated, and a general assimilation takes place. It is certain that it will come, but not speedily.

We refer, in this discussion, to the social aspect of the case only. Much time and money have been wasted here in trying to do what cannot be done. Our people are too poor to waste ammunition. It is better to know the true condition of things. Then we shall become self-reliant and move rightly.

IN REPLY to the assertion that a certain mission had been radically unsuccessful in its treatment of the heathen among whom it had been established.

"It is less than twenty years since "Christianity was first introduced among "these people, and in that time almost nothing has *been even attempted directly for "their civilization*. The civilization of "this nation as the term is commonly understood is not and, never has been, a primary object of the American mission. "To impart a knowledge of the arts and "sciences, to reform the policy of the government, to develop sources of wealth, "although it was confidently hoped and "expected that such inestimable benefits "would result from our labors if successful, was, nevertheless, not the *direct* object for which the missionaries left the "homes of their fathers. It was not for "such objects primarily that the A. B. C. "F. M. was organized and chartered, as "all the world may know from published "documents. In the language of its charter, that Board was established 'for the "purpose of propagating the gospel in "heathen lands by supporting missionaries and diffusing a knowledge of the "holy Scriptures.'

"Of the same import is the first article "in the laws and regulations of the Board: "'The object of the Board is to propagate "the gospel among uncivilized nations "and communities by means of preachers "catechists, schoolmasters and the press.' "From these extracts the immediate ob"ject of the Board's organization, and, of "course, this primary object for which "missionaries were sent out by them, is "manifest. It cannot be mistaken. *It is "to evangelize, not to civilize the heathen*, "although, as we have intimated, the lat"ter was not left out of view, but was ex"pected to follow as a secondary result of "our labors. This single, holy, sublime "object of making known the true God "and the great salvation, not only accords "with the last command of Christ to his "disciples, but is an emanation from it. "Whatever is implied in the words, 'Go "ye into all the world and preach the gos"pel to every creature,' is contained in "the missionary's commission, and nothing more or less. Where this command "is fulfilled, our work is done whether the "people are civilized or not. The salva"tion of the soul is the primary and all-"absorbing object; and every department "of our work, whether it be education, "the press, or secular labors, has been es"timated only as it stands related to the "leading design. . . . Civilization is "not, therefore, the first and great object "to be aimed at in conducting missions "to barbarous nations."

The above quotation we take word for word from the sermon of a man who devoted his life to mission work and died in the harness, and who, while living and dying with unshaken faith in the creed which for him included all truth, was yet rather more than less liberal than his fellows. It was written forty-five years ago, after several years' experience of an undertaking which confessedly required much labor, much self-sacrifice and a complete singleness of purpose, but which was, for several reasons, especially open to and within reach of criticism. In view of these facts, we believe that the testimony, direct and indirect, collected from the fast fading pages of such sermons as this, furnish a valuable landmark in the history of missions.

At the present day most people who think at all on this point have become aware that the methods of science are the methods of philanthropy, that let the creed be what it may, the fundamental facts in any attempt to elevate humanity are the same. Huxley works for the paupers and criminals of London in the name of scientific truth, Livingstone suffers and dies for the African negro, in the name of Christ; but wherever we find either to have been successful, we find that the principles on which they have based their work have been identical. And the more closely we study the work which has been done by such men as these, the more evident it becomes that the two classes, whom we may divide broadly into humanitarians and Christians, have arrived at their present standpoint by processes which, while apparently different, have, in reality, an inherent similarity. That is, the methods of both have been experimental and based upon a close study of human nature; and to deny this is to put the Christian religion and those who believe in it at a disadvantage. Fifty years ago men were declaring, as we see from the sermon before us, that Christianity was not able to overcome barbarism, and the reply of Christians to this, of those Christians at least, who understood practically what they were talking about, was to a certain extent a begging of the question. They said: "Our application of Christianity does not overcome barbarism, for the reason that the overcoming of barbarism *per se*, is not necessary to our scheme of salvation." And when these brave and unselfish men and women failed to reach the goal which they set before themselves, it is hardly to be wondered at that they did not suspect that the cause lay in the narrowness of their own methods. Even now, in the stronger light which we of to-day are able to throw upon their work, the fairest criticism seems in one sense unjust, and indeed is only justifiable, just so far as it is helpful to those who are following in their footsteps.

The work attempted and the work accomplished in this last half century has taught us that men are not Christians until the barbaric element has been taken out of them; that it is impossible to make a man a Christian and leave him a barbarian; that it is idle to talk of civilization and Christianity as distinct forces, the alliance is too close, the inter-dependence too complete. When we talk of separating their influences we become as a house divided against itself, our right hand takes up arms against our left, and the result is directly hurtful to both, as was, we believe, undeniably the case in the instance which forms the text for this article.

In this case, as in many others, noble and resolute men failed to realize that Christianity was greater than Christians, and made the mistake of refusing to acknowledge frankly and openly that certain special and individual methods of applying Christianity had failed. They did not do this, because they did not see that for them, for any of us, to say this, means that we have failed, not Christ. It means that we and our fathers before us, and our children who are to come after us, have not touched and shall not quickly reach the depth and the height of Christ's teaching or of God's methods. It does not mean that Christianity does not include civilization; it does not mean that to civilize is one thing, and to evangelize another, and to Christianize still another.

When we take what we call the Christian religion into a heathen land and in our own fashion attempt to create an active faith in it among a race of degraded, unintelligent, almost inhuman beings, why should we hesitate to acknowledge, at the outset, that our methods like ourselves are fallible, and that success can come only through a series of partially unsuccessful experiments? And is it wise to claim for such attempts any success which is in the least doubtful, to publish statements which show only one side, to draw conclusions which the facts do not completely warrant?

That this has been done and is still being done, is undeniable, and the apparent causes for it lie, first, in the enthusiastic, one-ideal tendency of those who undertake such work, secondly, in their misconception of the nature of the work, and thirdly, in their unfortunate belief that to confess their own mistakes is to attribute inherent weakness to the Christianity which they represent.

There can be little doubt that these are all serious obstacles in the way of honest and lasting mission work. Enthusiasm is a powerful and, in certain aspects, a grand emotion, but it is inevitably spasmodic and self-limited; the dead level of cool and reasonable determination being safer ground to trust to.

Misconception of the nature of the work is usually fatal, for nothing permanent can be built upon a false foundation, as the men have found who have attempted to make savages into Christians by the mere re-iteration of dogmas. But perhaps the greatest obstacle of all, in the past at least, has been an inability to recognize that all mission work is experimental—that each new mission is an experiment whose issue is uncertain because the work is left in the hands of fallible men and women.

The Divine command which sends us forth to the help of our fellows does not in any sense shield us or them from the consequences of our mistakes, and there is no Divine promise which ensures success except as it comes through comprehension of, and obedience to, the law which humanitarians call natural and Christians call divine.

The lesson of all failures, and, indeed, of all successes, in mission work, is that the noblest motives and the purest faith are not in themselves sufficient; that to acknowledge mistakes is merely to acknowledge our own fallibility and in no way touches the righteousness of the cause, and, finally, that it is upon this path, as upon every other, through night to light, the experiments which fail that make possible the experiment which succeeds.

In this spirit, it is not only our right, but our duty, to study and criticize closely the methods of those who have gone before us, and for this reason we believe that a careful comparison of the various missions which have been established in this century may be eminently useful, provided, always, that such comparison is made, on the one hand, without carping, and on the other, without pretense.

THE Hampton Institute in its efforts to provide the best possible teachers for the colored race, has sometimes been taken to task for not giving to its students a higher range of study. To transform most illiterate and imperfect beings into earnest, practical and intelligent men and women, has been thought unworthy of elaborate facilities. Greek and Latin in bot haste should have followed the spelling-book; Law and Theology should have entered minds where English Grammar was not well seated. Undisciplined field hands or town boys without the advantage of having lived in an atmosphere of culture, should have been driven into the lists to disprove race inferiority. Literati should have been produced; as far above their humble relatives in knowledge as they would have been in tastes, aspirations and sympathies.

To such objections we would say, that this Institution will advance its standards as rapidly as preparatory schools shall furnish better material. The graduate of last year has more book-knowledge and a far better general culture than did the graduate six years since. But whatever the advance has been, and however encouraging the prospect, we doubt whether the next fifty years will bring the time when high scholarship will help to make the average colored school a congenial field intellectually. The work has never been one for carpet knights to engage in. The weakness and poverty of the people, and their moral defects, make the conditions of life for the teacher in many ways rugged and uninviting. Keeping our object steadily in view, viz: to do the most for the improvement of the race where it is most needed, we cannot but believe that we are right in not attempting to be more than half a century in advance of the age; and that the development of manliness, the imparting of thorough practical knowledge, rather than extensive and really useless knowledge, and the fostering in our graduates of their sympathies for their less favored kinsfolk, the wisest policy we can adopt.

THE statements of the author of a letter against emmigration to Liberia, which was published in the last number of the "Workman," are, we now believe, not entitled to confidence. Attention is invited to the following facts, supplied by Mr. Wm Coppinger, Secretary of the Colonization Society.

Rev. Abraham Hanson, formerly Minister Resident of the United States to the African Republic, remarked in a public address delivered in Washington city. "I have resided in Liberia about three years. I have made several visits along the coast and up the rivers, going from farm to farm and from house to house, and thus, from verbal statements and personal observations, have acquired a knowledge of the industrious habits and domestic comforts of the citizens. In every direction new plantations have been commenced, and old ones materially enlarged and developed. The condition of the people is encouraging. On every hand I have seen proofs of useful industry. The bamboo hut, the log cabin, and sometimes the farm-house, begin to give way for the commodious stone or brick edifice. Were I a member of the African race, with my knowledge of the tremendous weight that still oppresses them, and of the illimitable field which invites them to Liberia, with its innumerable facilities for comfort, independence and usefulness, I would gather my family around me and embark on board the first vessel bound for that distant shore."

Commodore R. W. Shufeldt, who has twice visited Liberia, in a communication from Monrovia to the Navy Department, says, "I am fully convinced that immigration, with a moderate amount of capital, is all that is now required to place Liberia upon a permanent footing, and insure an increasing prosperity. This young nation, weak by virtue of its birth and inheritance, is essentially an American outpost upon the confines of barbarism, and deserves, on this account, the fostering care of the American people."

Bishop Gilbert Haven, who lately returned from an official examination of the Methodist Episcopal Church mission in Western Africa, concludes an article in the *North American Review* for July-August last, as follows: "What was any English colony in America fifty years after its settlement? In 1670, Massachusetts had hardly penetrated beyond the seaboard. A few towns on the Connecticut had been planted, as they have today on the St. Paul's river, the Connecticut of Liberia, but the country a dozen miles back from the coast was practically a wilderness inhabited

by savages. Equally unsettled were New York and Virginia in 1660 and 1670. The little colonies were dependant entirely on the home government for protection and even for preservation. It took a hundred years more before the address of Mr. Ficklin, of Rockingham, delivered last night, and by his satirical hits brought down the House more than once.

Peter said—"I have a scheme to submit. I don't claim to be a Daniel, but I do claim that when I shall make my scheme known no

and, for that reason, they should know whom, and just how many, to expect. Those who come without giving the proper notice must provide for themselves after coming, as best they can.

There are also two classes in Mental Arithmetic. The school is opened nearly every morning with reading the Scripture, prayer and singing. Occasionally a plain talk is given on such topics as Dew, Frost, Rain, Snow, Electricity, &c. The moral character of every pu-

by savages. Equally unsettled were New York and Virginia in 1660 and 1670. The little colonies were dependent entirely on the home government for protection and even for preservation. It took a hundred years more before they were strong enough to stand alone and to resist Indian and French attacks, and even these were not repelled without the aid of troops from the motherland. Let not, then, Liberia be lightly esteemed if at the end of fifty years she is no farther advanced than Plymouth and Connecticut and Virginia were in the same lapse of time. If she is equal to these, she is superior, for if with her far inferior advantages she has attained an equal condition, she is entitled to the greater honor."

A VIRGIN MARKET.

The annual message of the President of Liberia, sent to the Legislature of that republic December 17, 1877, and printed at the "Government Printing Office, Monrovia," is a well-written document, discussing, among other matters of public concern, the subjects of agriculture and education, the establishment of an Interior Department and a Commissioner of Immigration, and recommends the opening of more ports of entry, changes to increase the collection of the customs, and a compilation and codification of the laws. The message indicates that the country is becoming prosperous and strong, and the citizens are united and happy.

[We shall have more to say on this subject in the next number.]

THE "*Freedman's Friend*" for January, 1878, published by the Friends' Freedman's Association of Philadelphia, is before us. It is full of accounts of the good work being done by that Society, which contributes about ten thousand dollars, yearly, of the relief extended to the needy. Its statements as to the condition of the poor at some points are startling; as for instance:—

As the season advances, the wide-spread and extreme destitution among the masses of the poor is becoming more and more painfully apparent. We are giving out meal to keep the perishing from starvation, and they are thankful for a cake of meal, and eat it dry and alone with gratitude, not asking for butter, or meat. The white citizens are becoming alarmed for the poor among them, and are by committees looking up the distressed, and calling on the benevolent to contribute for their relief money, rations, or clothing.

I will send thee the two last daily papers with some account of the terrible state of things which are being unearthed by investigation.

The following is an extract from the *Danville Daily News* of First mo. 17th:

"There is great suffering now even in this small city for the necessaries, not to say comforts, of life. Friends, citizens, readers, are you aware that here in Danville are human beings actually starving? We were called upon but a few days ago to help in buying something to eat for two white women who were perishing, and but for the timely attention of members of this Association, these women would have died. This is only an instance. There are hundreds of similar ones. Let us help them all we can."

WE begin in this number of the paper, a series of articles on the Rights and Duties of Citizens. It is an important part of the duty of every respectable newspaper to instruct its readers as well as to give them news, and we believe that this department of the Workman will make it of greater interest and value to the class for whom it is especially designed.

WE are pleased to acknowledge the receipt of a "New Champion Mower," for the agricultural department of this Institution, the gift of the manufacturers, Messrs. Whiteley, Fassler & Kelley, Springfield, Ohio, through their agents at Baltimore, Messrs. L. H. Lee & Bro., and to return our most sincere thanks for the same. We shall say more about this machine in a future number.

WE would acknowledge the receipt from Hon. John W. Johnston, U. S. Senator from Virginia, of a copy of his speech on the Silver question.

A COLORED ORATOR.

The Richmond correspondent of the Alexandria *Gazette* writes as follows: Peter J. Carter, the colored member from Northampton, spoke against the Barbour bill. Peter is the smartest negro that ever spoke in our legislative halls, and he is the only colored man I have ever known who could make a really witty speech. His sarcasm and hits are admirable, while his illustrations are all decidedly fresh. In his speech to-night Peter ridiculed the address of Mr. Ficklin, of Rockingham, delivered last night, and by his satirical hits brought down the House more than once.

Peter said:—"I have a scheme to submit. I don't claim to be a Daniel, but I do claim that when I shall make my scheme known no gentleman will controvert it." Their necks were stretched and everybody waited eagerly to hear what his schema was. Peter then went on:—"My scheme is to increase taxes high enough to do everything. They all will allow that this is the only practical scheme by which the obligations of Virginia can be met; come right square up and grasp the bull by the horns and increase the taxes." Peter then went on to laugh at the idea that taxes could not be increased, and took the ground that an increase was necessary to keep what we have. Said he: "If I had a son who was not willing to pay one dollar for the saving of the ninety-nine, I would take away all he had and give it to somebody more worthy to have it." He further contended that there was much that could yet be taxed. He was for taxing the luxuries of Virginia—the privilege of selling tobacco. Peter also defended Mr. Coghill, of Amherst, against the charge of inconsistency, and said if that gentleman had changed, "did not the good book say that the wise man changes, but the fool never changes."

Peter also ridiculed Mr. Ficklin for lugging in so much history and poetry in his speech, and said, "why one would suppose that the gentleman has never associated with anybody but historians and poets all his life," and then laughed at the idea of Mr. Ficklin bringing into the debate "King Charles and Cromwell, and the massacre under St. Bartholomew." At the last mentioned hit, Mr. Ficklin turned pale, and though the rest of the house roared, he never smiled again that evening, unless, indeed, it was at the little mechanical figure of Dr. Moffet explaining the register, which figure is in a certain room at the Exchange Hotel.

Mr. Carter received his education at the Hampton Institute, and is the only one of its graduates who has devoted himself to politics. His course has been most commendable.

In the Norfolk *Landmark* we find the following:

Mr. Carter referred to the fact that his constituency (Northampton), which was willing to be taxed for the payment of this debt, never derived any benefits from the works of internal improvement for which it was created, and their representatives in the General Assembly had always voted and protested against the creation of this debt.

TO HAMPTON GRADUATES.

At a meeting of a number of the graduates of the Hampton Normal and Agricultural Institute, held at Saratoga Springs, N. Y., August 20, 1877, the following preamble and resolutions were adopted:

"As in the providence of God, our *Alma Mater* will have been in successful operation ten years at the close of the present session, and as it is the custom of the graduates of all well established schools and colleges to assemble within the walls of their *Alma Mater*, we think it will be fitting to hold a Re-union in this decennial year, composed of all the graduates, or as many as can make it convenient to be present at that time, for the purpose of forming the ALUMNI ASSOCIATION, of the Hampton Normal and Agricultural Institute. Therefore,

Resolved, I. That there be a letter published in the *Southern Workman* for March, inviting the graduates of the different classes to attend such a Reunion.

Resolved, II. That the faculty be requested to appoint the time for holding it.

Resolved, III. That the committee of arrangements be composed of a lady and gentleman from each class.

Those present at the Saratoga meeting were David Evans, Geo. J. Davis, L. B. Phillips, R. B. Jackson, W. T. Greenhow, W. L. Coleman, G. W. Lattimore, A. M. Hodges, R. H. Hamilton. N. B. Clark, *Chairman.* O. M. McAdoo, *Secretary.*"

In accordance with the above preamble and resolutions, it has been decided to call the Reunion on the 22d day of May, 1878, which will be the day preceding the Anniversary day.

It is very important that all those who expect to be present on that occasion should so inform the committee, at least one month beforehand, that is, by the 22d day of April. The school buildings being very much crowded, the committee will have to make arrangements outside of the school for the accommodation of many, and, for that reason, they should know whom, and just how many, to expect. Those who come without giving the proper notice must provide for themselves after coming, as best they can.

As the class-rooms are always crowded on Anniversary days, it is recommended that the Alumni visit the classes on Wednesday, and give way on Thursday to those who are here for that day only.

The first business of the meeting will be the organization of the *Alumni Association.* After this, there will be one or two addresses of not more than fifteen minutes each; the remainder of the time will be occupied by three or five minutes speeches from those who may desire to relate any of their experiences as teachers, or make any suggestions as to the best methods of conducting common and primary schools. The meeting will continue about two and a half hours, the rest of the afternoon will be spent in a social way.

We again *urge* the necessity of a speedy response from all whom this call may concern.

Address, R. H. HAMILTON, Chairman of Committee, *Normal School, Hampton, Va.*

Hampton, Va., *Feb.*, 1878.

OUR valued correspondent, M. A. L., writes us: "I shall not be able to prepare a letter for the March number of the WORKMAN, but send instead a letter from Walter J. Lewis, the earnest Principal of the Spartanburg colored High School. Three or four months ago, the account of the beginning of that school was published in the WORKMAN, and you may think the account of its success worthy of insertion."

We are very glad to have the interesting account of its success, and would be much obliged to any of our readers for similar reports from colored schools.

The following is Mr. Lewis's letter:—

SPARTANBURG, S. C., *Dec. 4th*, 1877.

Miss M. A. L., Dear Friend:—

You will find enclosed two clips from the newspapers of our town. I frequently acquaint the public of my work in this way.

The school continues to grow in numbers and in progress. I shall have to begin the painful duty of denying very soon. This being the only opportunity for the farmers and persons living in the country districts, our school will necessarily be very large. We are now having a comfortable school-room fitted up—the basement of a brick church. This will give all desired comfort, and then we aim to enter more fully upon our work even than we have. I greatly admire the good the "Bible Readers" are doing in the school. They are just the hooks needed. My assistant teacher follows the directions given, and makes the exercise interesting.

Our school observed Thanksgiving Day in singing, prayer, reading the Scripture, and an address by myself. The occasion was one of true joy and thanksgiving. It is cheering to know that several of the pupils in our school are Christians.

I now give short talks on Physiology and Hygiene.

I hope to write again soon.

Respectfully, WALTER I. LEWIS.

"THE COLORED SCHOOL OF SPARTANBURG.

"DEAR SPARTAN:—After the many hard efforts to establish a permanent training school for ourselves in this town, we deem it proper to inform our friends and the public generally of the quantity and quality of the work done. By the patrons drawing upon their almost penniless purses, and the timely and benevolent assistance of our white friends, we have assumed that the conditions of the Peabody Educational Fund, if the generosity of friends do not cease, will surely be complied with.

"The school has been in session now nearly five months, and has an enrollment of 106 pupils, giving an average of 80. There are two teachers employed in the school—Walter J. Lewis, principal, and Miss Emma R. Johnson. At first the pupils were poorly supplied with text books, but now nearly every pupil is about sufficiently equipped with necessary books and other articles. A good friend of Philadelphia recently sent a handsome lot of books as a donation to the school. This good lady has assisted the school in other respects, and manifests a continued interest, as do others of those who have assisted in our work. The school is in a progressive condition. The classes in the school are as follows: One class in Davies' Practical Arithmetic; two classes in English Grammar; two classes in Davies' Written Arithmetic; two classes in Intermediate Geography; one class in Primary Geography; one class in Universal History; one class in History of the United States; one class in Third Reader; one class in Second Reader; two classes in First Reader. Nearly all of the school take lessons in writing and spelling. There are also two classes in Mental Arithmetic. The school is opened nearly every morning with reading the Scripture, prayer and singing. Occasionally a plain talk is given on such topics as Dew, Frost, Rain, Snow, Electricity, &c. The moral character of every pupil is looked after, and especial efforts are made to improve in this great essential to human happiness. Owing to the frail condition of the present school-room—the Bureau School-House—the school will be taught in the basement of the Silvar Hill Church, during the winter.

"We give many thanks to those of our white friends who have come to our aid in this the most important of all our interests. And as we shall continue to present ourselves for further assistance, we hope to find all others ready to assist us. Most respectfully,

WALTER J. LEWIS."

"We are pleased to find that the colored graded school is prospering, and sincerely hope that our people will continue their assistance, as we believe it is fully deserved."—"*Spartan.*"

THE painful intelligence has reached us of the death on February 17th, by typhoid fever, after a four week's illness, of Mr. Marmaduke C. Kimber of Germantown, Pa., aged nearly twenty-four years.

The son of one of the valued friends and trustees of Hampton Institute, Mr. Kimber, when just out of college in 1872, gave his services to the school for two years as a volunteer teacher. Since then, he has been professor in a Western college, and after a year of travel in Europe, he took charge of the Friends' Academy in Germantown, which position he held at the time of his death.

He is remembered with sincerest esteem by the officers of the school and teachers who were associated with him at Hampton, and the students who were under his instruction; with deep sympathy for his family so suddenly called to mourn and deep regret for the loss to the world of a young man of such high promise, and talents consecrated to the service of God, and his fellow men.

FOR A MEMORIAL.

BY FITZ HUGH LUDLOW.

Gone — gone! in his brave youth!
His ear yet musical with prophecy
Of high achievements in the time to be,
For God, and God's great Truth.

Leaving the purple twilight
Of a noble soul that dieth nevermore,
Pure thoughts and deeds that marked his life, before
It grew into the more glorious sky light.

I know that he hath kissed
For the last time, our lips, with lips of earth,
His vanished smile left in our hearts a dearth,
Over our eyes a mist.

I know we grasp the empty spaces,
And feel our hands fall chilled, not finding his:
And no more melody or footfall is
In his old echoing places.

Out of the stricken tent,
Wherein he dwelt by us a little time,
His soul hath passed, out on its march sublime
Because the night is spent.

"He is not here, he hath risen"—
Thus spoke the angels who once watched his Lord;
Christ and his brethren, by the self-same word
Are called to burst their prison.

Ye marble snows, lie deep,
Making one stainless monument o'er all God's dead;
Hide in you the stopped heart, the movsless head—
He doth not tire nor sleep!

But on great missions sent,
He speeds for God—forever unincumbered
Of fleshly clogs whereby our powers are numbered—
In glory excellent!

No darkness cometh near him,
No heaviness of feet, or hands, or eyes;
His hymns, by Heaven's clear air made wondrous, rise
Where God, and angels, hear him.

Nor they alone,—for we,
Lying tearful at that threshold — in the night—
O'er which he passed into the quenchless light,
Catch strains of melody.

And he is near us still—
Time hath no stays for Spirit; Place, no bars—
Set Heaven beyond our dimmest outposters—
He's with us when he will.

LETTERS FROM HAMPTON GRADUATES.

FROM OUR MISSIONARY IN AFRICA.

LIGHTS AND SHADOWS IN LOG SCHOOL-HOUSES. "NO RIGHT TO COMPLAIN."

ing all the men came to the door (those that are engaged by the Mission) to ask for their Merry Christmas, and I gave them ten shillings to buy them a goat, and gave them three bushels of rice to make them a breakfast. The people have been coming in all day asking for Christmas presents, and I have given them all something. Yesterday I gave a feast to the children of the Mission, and to-day I have had a feast for the people of the town. I have had a busy time, but I enjoy it very much. I am very glad to hear that you are all well, and hope you will write me soon.

Your affectionate friend,

[Mr. Wilson is a graduate of the class of 1875, and is now in Africa, under the auspices of the Presbyterian Board of Missions.]

Mr. Wilson's letter is full of interest, and we wish we had room for it all. We are glad to know that he is so much beloved by the people among whom he is living, and that he is doing so much good. We hope to hear from him often.

them. The children have been blessed in this vicinity, for when the public school is not going on, their parents employ teachers themselves. Jennie gave me her public school last term (four miles from here) and she taught a private one here. We have no five-months schools here. Our trustees think it best to have school ten

We may expect the next generation of the colored race to take the newspaper,—if the pickaninnies are beginning to study the Eastern question.

It is really something for the little ones to get accustomed to the sight of a newspaper,

LETTERS FROM HAMPTON GRADUATES.

FROM OUR MISSIONARY IN AFRICA. LIGHTS AND SHADOWS IN LOG SCHOOL-HOUSES. "NO RIGHT TO COMPLAIN." IMPROVISED DESKS. HUNGRY FOR NEWSPAPERS. A PICKANINNY ON THE EASTERN QUESTION. SEEING THE SKY THROUGH THE ROOF. FROST IN FLORIDA.

WITH two hundred reporters in the field, all personally interested in finding out the real needs of their race, and personally familiar with many of them, we believe ourselves peculiarly well situated to study the condition of the colored people in the South, and the work that is doing for them. And in publishing so many of these graduates' letters from month to month, we are giving our readers the same opportunity.

Our young missionary to Africa has gone right to work in his new field. The following is the latest letter we have received from him.

MENDI MISSION, AVERT STATION,
WEST AFRICA, *Dec. 24th*, 1877.

Miss H.—My Dear friend:

After a hard day's work, I feel that I cannot sleep till I say a few words to you, though it will be in '78 before you get it. I wrote the General while we were in Freetown, and promised to write him again and send an account of our voyage. But I have been so busy since I got settled that when I was through work I wanted to rest. We were in Freetown nine days, and left there Nov. 29th, and got to the other Station on the 30th. While we were in F. we were treated very kindly by the people, and visited many places of interest. We were known as "the strangers," and everybody seemed to know us wherever they saw us. When we arrived at the Station, we met many of the natives who expressed their joy for having seen us arrive, they said that they heard that we were coming, and had been looking for us for three months. On Sunday, Dec. 2nd, Bro. Snelson preached to them from Prov. iii: 17. And that afternoon we had Sunday-school, and in the evening prayer-meeting, and I know you would have been surprised to have heard those people there pray. They have been shut out of the church there at Good Hope since June, and Mr. Kirk told them that they were not to have any more meetings there and they were very sorry to give up their church. This church was established about twenty-three years ago, and after Mr. Root's death (in June) they closed the Station with the hope of selling it. The committee sent Mr. Smith over here to examine the Mission and to see if the Stations were to be sold or not, and he told them to sell Good Hope. But they left it to us whether we thought it ought to be sold or not, and after we got there we thought best to keep it, and open School as soon as we could. So we opened school two weeks ago today, with forty-three children, and they were coming in all the week, and last Monday a good many new ones came in. Tuesday I had to give up my school at Good Hope and come here to Avery, the other Station (about forty miles), to take charge of the place till the Doctor comes. He was to come the same time I did, but his little girl was so ill that he could not bring her, and he could not leave her, therefore it fell on me to come.

December 25.

I had to give up to sleep last night and will spend a part of this evening in finishing this letter. I got here on the 17th and went around to see some of the people around the place and to look at the place. Mr. Kirk the man who has charge of the place is very sick, and so I could not take a list of the things as I was to do. But Thursday he got better and went around with me some. But now he is very ill.

I must tell you that Sunday was my first time that I had to go into the pulpit to talk to the people. This place has a very nice little church, and the one that has charge has to preach, and that fell to my lot on Sunday, the 23d. So I made up my mind to do whatever falls to me; and I took Eccl. xi: c., 13—"Hear the conclusion of the whole matter, Fear God and keep his commandments, for this is the whole duty of man." After I had spoken for some time, I had one of the men to turn the words (as they call it) and I talked to those that could not understand English from Isa. lv: 6, and this man told it to them in Mendi. We had meeting to-day, but I worked so hard taking stock this morning that my head ached so badly that I could not hold it; and I got Mr. Davis to hold it. This morning all the men came to the door (those that are engaged by the Mission) to ask for their Merry Christmas, and I gave them ten shillings to buy them a goat, and gave them three bushels of rice to make them a breakfast. This people have been coming in all day asking for Christmas. We have had a good many excursions going by here to-day, the natives going by in their little canoes, with their drums, singing and beating the drums. They seem to enjoy Christmas as well as anybody, and more so than I, for it has not seemed like Christmas once to me.

December 27.

I have to write a little and stop. I have been hard at work trying to get some lumber off to the other station to repair the schoolhouse. And now I shall have to stop to hold prayer-meeting, as this is our meeting night, and the first bell has rung.

I am just out of prayer-meeting and while we were in there, I wished that you and some of the other teachers could have been in and heard them pray in Mendi. The most of the members can speak English, but they pray in Mendi for those who do not understand English.

I have written before of one of the sailors on board the Jasper, George Allen, who was converted a few days after we got to Freetown and came and told me all about it. He is a very nice boy indeed, and he and his brother (Joseph Allen) fell in love with me and I hope my work with them has been blessed. Joseph left the ship in Freetown to come and live with me. I am trying to send him to school and clothe him with what work he can do. His board costs me $10 per month and I will have to find his clothes; he is a very smart boy. I went to ask you if you know of any one that will help me to clothe and school such a boy. His people are a long way from here; they live on the same island that Thomas Reese came from (Jamaica), and I have taken him to take care of and I ask help. The Mission is not like what I thought it would be. I thought that they had a boarding school and the children worked, but not so. Now, if you can find any one that will help me with Joseph, please let me know.

Remember me kindly to all the teachers and scholars, and to any of the old ones to whom you may write.

With a great desire for your prayers, I am
Your boy,
A. E. WHITE.

A happy New Year.

THE Educational Journal of Virginia conducted by Hon. W. H. Ruffner, Supt. of Public Instruction, is sent by the Hampton Institute to eighty of its graduate teachers. Many letters of thanks and appreciation have been received from them. They are thus under the direct counsels of the Head of the School System and work much more intelligently and with increasing confidence in those who employ them.

HALIFAX CO., VA., *Jan. 7th*, 1878.

Dear Sir:—

Your card came duly to hand, many thanks to you for the Educational Journal. I received the Dec. No., like it ever so much. I know it will help me in many ways of teaching as well as in my studies. Well, General, I guess you will be glad to know what we are doing, and how we are getting on with our school. Jennie and I opened school at White Oak Grove church Sept. 10th, with forty pupils; it has been increasing ever since. We have on roll at present one hundred and thirty with an average daily attendance of ninety-two.

We have just finished up the fourth month and have six more before our school will close. I must tell you something about the Christmas tree and exhibition that we had Christmas eve. We had the school-room all trimmed up with cedar, pictures &c. The house was crowded. There were a great many of our white friends present. They were perfectly delighted with the way the children went through with their exercises. And especially a piece called "Education our Own Work," by one of the boys, and another (recited) by one of the girls, and various other pieces, such as "The Boy stood on the burning deck," "Horatius at the Bridge." We also had some very good temperance dialogues. One of the trustees made quite a long speech about the good order, and highly approved the way we are training the children under our charge; he calls our school his pet school. There were some of the teachers present too, I have had a conversation with one of them since, about our school; he said he was highly entertained indeed. Both white and colored are wide awake here about the schools. We have pupils coming five and six miles (daily), and you would be astonished to see them in the school-room after such a walk. They seem as fresh and bright as they can be, and as a general thing are first in their places. We have two boys that could enter the Middle Class at Hampton, and seven others, three boys and four girls, that could enter the Junior Class. But their great misfortune is that their parents are not able to send them. The children have been blessed in this vicinity, for when the public school is not going on, their parents employ teachers, themselves. Jennie gave me her public school last term (four miles from here) and she taught a private one here. We have no five-months schools here. Our trustees think it best to have school ten months in a place and change the next into other parts of the district, as they are not able to carry them all on at once."

We always feel proud to get the Southern Workman, for it is in and through that that we can hear from Hampton and many of our co-workers. We look for the letters from Hampton graduates the first thing. I see in the last number, letters from teachers complaining of low wages and hard times. But I am happy to say that we have no right to complain. I get $35 a month for ten months. Our Sunday-school too is very interesting. We have on roll one hundred and ninety pupils. Both old and young attend it. We try to make it as interesting as possible, and to encourage the children, we hold a Sabbath-school district mass-meeting every fifth Sunday.

Jennie joins me in love to you and all the rest of our kind teachers.

We are, as ever, yours,
J. AND J. D——.

MD., *Jan. 6th*, 1878.

Dear General:

Your postal came duly, and you don't know how much I was pleased. I did not really feel as though I had merited the favor that you have bestowed upon me, the Journal or any such compliment from you. You also very kindly sent me a large collection of papers and books. I feel so grateful to you for them all. I had felt as though I was so far behind the times, but now I feel as though I am catching up through your kind efforts.

I have on my roll now nineteen pupils and it is said by the people that I shall have more now the holidays are over. The children have been to work in the fields all the fall, husking corn. My children are all Roman Catholics, and they have an idea that it makes little or no difference about their education. I have a few Protestants, but they are in proportion to the Catholics six to eleven. I find them more ignorant than most children of their ages.

I have no desks or blackboards and I have had one blackboard made in Baltimore and I am to see it to-morrow. There are some broken benches in the room and I mean to have tall legs put under them for desks. The poor children have never had any and have been accustomed to kneeling on the floor and resting their slates and books on the seats to write. I have engaged a man to do it for me next week.

They are very wild but I think they are beginning to understand a little what I should like to have them do. If I can succeed in teaching the children anything I shall feel amply repaid.

I have glanced over the Journal, it came yesterday, and I have found a lot of new ideas already.

Your very grateful friend,
N.

——, VA., *Jan. 5th*, 1878.

Dear Sir:

Yesterday I received your card requesting me to inform you whether or not I got the Educational Journal which you have ordered for me. On the 25th of Dec. I received the Journal; but did not know who had been so kind as to send me such a valuable book. Last Saturday I got another number of the Journal. I found both of them to be full of matter that will be useful in the school-room. You could not have done me a greater favor than you did by sending me the organ of education in Virginia. And in return for the kindness shown me, I shall make the *best* use of it, by reading and digesting the contents of each number. Since I've been here it has seemed as though I were in some distant place where newspapers come only once a year. I couldn't tell what was going on in the world. The first papers I got from Hampton added little to my knowledge for I had read nearly every one of them. But the ones you sent me last week poured floods of information upon my mind. Since reading them, I have felt ten per cent. better. Within the last month and a half, I have had such sore afflictions that I have sometimes almost given up the idea of finishing my course at Hampton. But I've shaken off that feeling now, and for my motto have taken that of Kossuth's.

"There is nothing difficult for him who wills."

I am getting on better than I thought I should with my school. I have thirty-three pupils on roll. The children seem to have been very well taught by the teacher who was here before I came. When I go to my school-house, and go through the exercise of the day; and as I look at my scholars, I think that upon them and me, and the rising generation, hangs the destiny of our people. Indeed the children in the school-room present a glorious future for us. But to come to this very same school-house when the people's meetings are being held; and witness the same children that I have in school and try to civilize, jumping and uttering yells as though they had never seen a school-room, gives one a good idea of what their destiny will be if this state of things lasts for many years.

Yours as ever,
D.

We may expect the next generation of the colored race to take the newspaper,—if the pickaninnies are beginning to study the Eastern question.

It is really something for the little ones to get accustomed to the sight of a newspaper, or a magazine. It is not only our graduates who are benefitted—the seed sown multiplies.

THE "Moral Maxims" referred to in this letter is a collection of wise sayings, admirably adapted to common schools by Mr. C. C. Beldwin of Rockbridge Co., Va. The book is urged upon our teachers as adapted to their work.

KING WM. C. H. VA., *Jan. 22d*, 1878.

Miss H.—Dear friend:

The papers which you sent me, and for which you have my heartiest thanks, I considered were not for me exclusively, but were for whatever good use I could put them to, so I read them to the pupils of my school, with some explanation on the various subjects, and lent some of them to be read to their parents. One little fellow did not understand about the Eastern War, and came running up to me after school, exclaiming, "Lor! Mr. W., I thought the war was done ended." I soon set him right on that score.

I think the contents of "Moral Maxims" invaluable, and I have been wanting to use it in the school, but my roll has been increasing so much here lately that I thought I would wait till the school was about all together, then I propose to take one "maxim" at a time and make a few remarks on it, explaining it the best I can. I should like for the scholars to subscribe and buy a number of them, but they are mostly too poor to buy their school books.

I was very much surprised one day last week, while at school, to see Rebecca Wright drive up to the door, on her way to Benlahville. I instructed her how to find Dr. Lewis, and then how to reach Benlahville, etc.

She got the school up there, and I suppose she has commenced teaching. I hear that Mary Christian is doing well, though I have not seen her yet. Sparke and Dungey are both doing very well. I was at Sparks's school a few days ago. He has a nice little school-house, warm and comfortable, and had about sixty pupils.

I hope to hear from you again soon, and will be more prompt in writing in the future.

Yours Respectfully,
W.

THE following letter is from a young girl who has not gone through the Middle class at Hampton, but is showing much energy and tact, and doing good work as teacher in one of the rough places of tha far South.

FLORIDA, *Feb. 5th*, 1878.

Dear Mrs. ——:

Learning that you had written Miss S. concerning the conditions and tha way the colored people in St. Augustine and throughout the State lived, I thought perhaps it might interest you to know the situation of tha colored people out here. I will first say, I am a colored girl; my native home is in St. Augustine. I was raised by kind Northern friends. I am teaching school on the St. John's River, about thirty or forty miles from St. Augustine. In giving my descriptions I will first describe my school-house. It is made entirely of logs, with the exception of the door and windows which were given by Miss M. The skies may be seen in any part of the room. The cracks in the floor are large enough to put your hands through. When it rains it leaks in like water dropping from the trees. There is no fire-place, nor was there any way for keeping warm until the past week, a young man got me a little stove. But the house is so open this does hut little towards heating it up. We have had some cold days, and the only way I had to keep my scholars warm was to build two large fires and have the poor little children sit around them (out of doors). I rubbed their little cold hands and bare feet, and oh! how it made my heart ache to see the tears stand in their eyes when I asked them why they didn't put on shoes and warmer clothes? and the reply would be "I have on all the clothes I got, and I ain't got no shoes." Sometimes when I have on all I can to keep warm, most of my girls have only two garments on, the boys nothing but pants and shirt. Some of my pupils have to come between two and three miles and then cross a creek. I have a sewing school for my girls once a week. I read to them and teach them things to sing while they are sewing. They are to keep what they make. I have been teaching three and a-half months. The age of my scholars are from three and a-half years to the age of twenty-four years. I have enrolled thirty scholars, most of them very good, all anxious to learn. The people are very, very poor, and have real hard times in getting clothing and keeping from starving. They live in log huts, some of which leak and are in a dreadful condition. I don't know how to describe some of them. There are a few white settlers here; some of them when the folks work for them won't pay; this makes it real hard, as tha work they get from them is mostly their entire support. I shall be here about two months and a-half; if I have neglected telling you anything you would like to know, please write me and I shall be happy to give you any information I can that is in my power.

Respectfully yours,
O.

THE SMITHSONIAN INSTITUTE.

The Smithsonian Institute, at Washington, was a gift to this country from James Smithson, one of the first scientific men of his time in England, and a son of the first Duke of Northumberland. "The man of science" he said, "has no country but the world, and all men are his country men." He died in 1828, and carried out this liberal sentiment by bequeathing over five hundred thousand dollars to found in America—a land he had never seen—"the Smithsonian Institute, an establishment for the increase and diffusion of knowledge among men." By act of Congress the President, Vice-President, Cabinet and Chief Justice of the United States, and the Mayor of Washington, were made ex-officio (by virtue of their office) to constitute such establishment. A Board of Regents was also created.

A circular letter was sent to many distinguished men, asking how to increase and diffuse knowledge. "Establish a National University" I said most. "A library," said some; "A museum," "Popular lectures," "Tracts for the million," said others. An act of Congress directed the formation of a library, a museum, a gallery of art, lectures, and a building on a liberal scale to accommodate these objects; one clause also gave the Regents the power, after Washington a scientific centre; it has encouraged research into every branch of knowledge, and it has advanced every science; it has 2300 foreign exchanges, and 1100 libraries in the United States receive its publications; it has published 21 quarto volumes of "Contributions to Knowledge," 12 octavo volumes of "Miscellaneous Collections," 30 octavo volumes of "Annual Reports." It has increased its fund to $650,000, and principally by exchanges has a library of over 70,000 volumes. These exchanges pass post free throughout the world. By its exchanges it has received 30,000 specimens of plants. These are kept in its Department of Agriculture. It has pictures, rare plaster cast copies of the principal statues of Ancient Greek Art, the finest in the world. It has recently received a portfolio of cabinet-sized photographs of the races inhabiting the Russian possessions in Central Asia, sent by the Governor-general of Turkestan to assist American scientific students to solve the question of the possible relationship between the Mongols and the native Indians of America.

The success of the Smithsonian Institute has proved to the world that the broad plan of its generous founder, James Smithson, and its distinguished director, Professor Henry, is the highest and best plan by which to increase and diffuse knowledge.—*N. Y. Observer.*

THE SMITHSONIAN INSTITUTE.

these objects were provided for, to use the remainder of the income in any way they might think fit to carry out the design of the giver.

In accordance with this act—passed in 1846, the beautiful building represented in our picture was erected in the midst of a park filled with ornamental trees and flowers. The main building is 205 x 57 feet. There are nine towers. In the center and west wing is the National Museum which, like the park, is free to the public.

Very fortunately for the interests of the Institute and of the world, the first Director chosen for it was Professor Joseph Henry, then professor of Natural Philosophy in Princeton College, a man of profound scientific knowledge, and noted then for having made several valuable discoveries in electro magnetism. In 1831 he had shown by experiments that sounds could be transmitted through a wire by means of an electro magnet, using a wire a mile in length.

He has ever since continued to be at the head of the Smithsonian Institute, and by the breadth of his views, and energy of his management for thirty years, has made it what it is, the medium of scientific communication for all the world. "Every civilized government, says Professor Henry, has its museum, which it supports with a liberality commensurate with its intelligence and ability, but there is but one Smithsonian Institute. It does not offer the results of its operations to the physical eye, but presents them to the mind in the form of new discoveries derived from new investigations and an extended exchange of new ideas with all parts of the world." It is known wherever civilization exists; it makes

HAWAIIAN LETTER.

Extract from a private correspondence.

New Year's Festival in the Land of Cocoanuts—Theological Students—Happy Sandwich Islanders.

On New Year's day, there was a great pic-nic in the Palace Grounds. Everybody was invited. The evening previous I was invited to take my first dinner in the new year at the table of the Theological Students, at 12 o'clock. So the early morn found me busy with various duties, giving chickens a New Year's breakfast, &c., &c. They came in a flock as usual, to meet me at the door, and followed me to the house. Instead of entering their usual dining-room, they scrambled about in the greedy chicken style, each seeming eager to get a full share as it was scattered on the ground in front of their house. A few stilted-legged turkeys simply gathered what they could get. I have sometimes thought of the eagerness of men for money, and politicians for favor, when the chickens seemed so greedy to gobble up all they could get, regardless of all right or decorum.

Then a loaf of cake was made ready, which *Ah-Kam* baked nicely, and decorated with flowers, and the Celestial carried it over to the Theological table. At 11 o'clock, A. M., a student came to ask me to go over at that time, as they would have a prayer-meeting before dinner. I walked over, fearing that salutes from the heavy guns on *Punch Bowl* might disturb even my old horse's quiet nerves; was received by a Theologue and seated on a cane-seat chair near Rev. Dr. Hyde and his wife and Mr. Bingham. Joseph sat on a platform and conducted the services. He read Scripture, prayed and gave out the hymns. All sang; many talked and prayed. Mr. Bingham and Mr. Hyde offered remarks.

Having been asked to do so, I ventured to speak a few words of cheer to the students. These students have of late been stimulated to new efforts, and however obtuse the material, we will hope that some polishing of the rough stones will be accomplished.

While the long table was receiving its viands, Mr. and Mrs. Hyde and myself called at the several rooms. The house is large, having been built of adobes many years ago by a well-to-do native. It was purchased by Dr. Judd, and by him presented to the A. B. C. F. M. for a Theological Seminary. It is one story, entirely surrounded by a deep verandah, which has protected the walls. The rooms are large, and several have been added for a hospital. The students' rooms have high-post bedsteads in them, mosquito nettings, tables, and some have bureaus. Floors were covered with China mattings, rushes or mats made from the leaves of the screw pine. Timothy, a namesake of the Apostle, had papered his room with his own hands. Several pictures were hung in plain frames—one was set in a broken mirror.

Miss. L——'s trunk, which was so roughly treated on her journey here, and ignored by her, was nicely mended and stood near a partition, seeming to say, "Look at me, as I stand a useful ornament in this school for prophets!"

The rooms were decently whitewashed and all looked comfortable. The rooms were minus chairs, they having been placed by the long table. The large grounds were clean and covered with a bright sprend of grass, which is cut with a knife, hatchet, or spade, when sufficiently long, and sold for horse feed. Some of the algeroba trees had been felled by the strong wind, which will furnish wood for the students, that, if bought, would cost fifteen or twenty dollars per cord.

We were called to the feast, which was spread on a long table extended through two rooms, with forty plates (hired from a crockery store) set in a long row on each side. The tables from students' rooms joined together made one long one, covered with clean white cotton cloth. Mr. Hyde sat at one end, his wife on his right and I on his left. Pork *kaluaed* (baked in the ground) was cut in pieces of three or four pounds perhaps and put on plates not far apart, also chicken and beef, with sweet and Irish potatoes. Bread and butter and *poi* were abundant. The plates were soup-plates; one native said, "Where is the soup?" There were pitchers of water, coffee in coffee-pots.

Timothy, Joseph, and several others were waiters; not tha Joseph who wore a coat of many colors, but *Kanaka* Joseph. A few of their near friends were invited. There were numerous bowls of *poi* which were often replenished from a barrel of *poi* which stood close by. The skill and dexterity with which they would scoop out with their fingers *poi* from a bowl into the one nearly emptied on the table, was marvelous. A waiter came close to the table with a bowl full and, seemingly, in a second of time, he tossed its contents into the empty bowl, a distance of some three feet, and never missed his aim. Time and time again we would see a stream of *poi* and it was gone. Fingers and tongues were all active. Knives were not plenty, but fingers did better execution. Mr. H. managed with a dull knife to demolish a chicken, and with another succeeded in carving some pork. Everything looked clean and all were jolly and bright. Waiters were active and at the proper time they came along with clean baskets filled with cake or bread and laid some by the side of each plate. Then fine oranges were passed around. On my left sat a student and his lady love—a spruce looking young man, as neatly dressed as could be. He has worked the last four years in a tailor's shop. Now he goes to the school of prophets mornings, and works in the shop afternoons. The girl is a member of Miss Bingham's school, was nicely dressed, with ruffles, &c., but not profuse in ornaments. They were quite a nice looking couple, and ere long they hope to go as missionaries to the Gilbert islands. We talked pleasantly and chaffed him about his name, *Hookano* (pride). Another student's affianced was there. Both were well and neatly dressed, and, with others, played croquet—a game in which native art expert. The King plays it quite well, I believe.

Dinner over, and with the parting salutation "*Aloha*," we left a happy company, having enjoyed the time with them exceedingly.

MISSIONARIES TO AFRICA.

"Nashville, February 18.—One of the most important events in the history of the Fisk University occurred to-night in the departure of four of its students as missionaries to Sherbro Island, off the coast of Africa. They were called ten days ago by the American Missionary Association. Albert P. Miller and Andrew E. Jackson, members of the Congregationalist Church, were ordained before a large assemblage of students yesterday afternoon. This morning Miller was married at the University chapel to Miss Ada J. Roberts, and Jackson to Miss Ella M. Hilldridge. A farewell meeting was held at St. John's Church this afternoon, in which the clergy of the city participated. The party left to-night for New York; they sail for Africa next Saturday."

The call of the Association was sent also to Hampton, and two of its best young men promptly offered themselves to the work to which they have long been anxious to devote themselves. As Hampton already had a missionary in the field, and Fisk also offered candidates, the Association thought best to give the latter its turn. We wish the young missionaries God-speed.

SCHOLARSHIP LETTERS.

THE letters written every year by the students of Hampton to the patrons of the school in return for the generous aid which makes this educational advantages free, are known by them as Scholarship letters. There has been a general improvement in the character of these letters, which is especially marked this year, showing a good use of the privileges of the school, and also some advance in the standard of preparation before entering. In connection with the letters of the graduate teachers they furnish a fair record of each step of the students' progress, and as such, we believe, will interest our readers. We print them in the natural order, from Preparatory to Senior class. The Senior's letter is not strictly a Scholarship letter, but of the same character.

A LETTER published in the last number of the SOUTHERN WORKMAN, signed "H.," and giving an account of the hardships of a student who was raised in the vicinity of Newbern, Va., has been identified by a gentleman of that town, Mr. W. W. Waysop, Superintendent of County schools, well known to us as a gentleman of the highest standing and as an earnest advocate of and worker for the education of all classes, and been flatly contradicted by him as to its assertione of cruel or harsh treatment. His statements are based on his personal knowledge of the circumstances of the case. He declaree that the young man whose experience of slavery ended with hie eighth year was in every reasonable way provided for, and that he had received the advantages of the public free schools of Newbern every winter but one since their establishment.

We are glad to throw the light of truth on any misstatement that may appear in these columne. No good to any cnuee comee from injury to the fair fame of good and true men and women.

HAMPTON, VA., *Jan.* 12*th*, 1878.

Mrs. ——, *Dear Friend:*

I was requested to write the history of my life and I shall endeavor to do my best. I was born in Norfolk Co., Virginia, in the year 1858, Oct. 16. My mother and father were both slaves, mother and brother and myself were sold away from father when I was quite small and I don't remember anything about him a long time after mother was sold I remember the gentleman who bought her hired her out to another family twelve miles from me and I couldn't see her any more. The people I belong to were cruel to me but I was there until the colored people were freed then they all left and took me with them to ——— and I stayed there two months, during that time I suffered especially from hunger. I have been a whole day at a time without a mouthful of food.

Mother heard of my being there so she sent for me; she was living twenty-five miles from me. On my way I walked part of the way and rodo part of the way on the train. I walked so much that I became founded in my feet and who obliged to stop on my way until I got better I reached home after a while, mother was very glad to see me but I didn't recognize her at all I had been away so long that I had forgotten her. Well we stayed there awhile mother worked out hy the month and I stayed home and took care of the house at the same time she learned me how to work which I am thankful for to-day. After a while mother took a notion to come back to be with her relations, she found some of them and some of them she has never heard from. We lived a while with my aunt until we could get a house then the rent was pretty high and everything else for that matter for shortly after the war everything was dear. All this time I never had a chance to go to school for I had to work hard to help mother pay house rent and buy clothes and other things as far as we were able. I used to watch the children every day as they went to school and wish that I could go, mother learned me my alphabet and from that I learned to read but that was not all I wanted to know. So I asked the lady that I lived with if she wouldn't give me a lesson every night after I was through with my work and she said she would I was so glad I almost shouted with joy for then I thought I would learn something, I didn't have much time to study so I used to take my book and fasten it on my wash tub and got my lessons that way and often when I was cooking around the stove I would peep now and then in my book. But after a time she got tired of hearing my lessons and said she had something else to do but by this time I had learned to make my letters so I was thankful to her for that. After a while mother moved in the country about three miles from the city for she thought we could get along better than in the city, for we wouldn't have any wood to buy and not so much house rent to pay, and there was a small piece of land, too. We got along very well from the first I lived out by the month to cook wash and iron for the family who owned the house we lived in. Mother went to market and sometimes worked out by the day I had a good home I stayed there four years at the end of that time mother was taken sick so I had to leave and go home for she had no one to help her but me, I stayed at home until she got better and then I went to live with another family I stayed there twelve months. During that time there was a nice school house built in that county for the colored children, here I thought was another chance for me to learn something though I wouldn't dare to speak of it for I thought I was too large to go to school. My brother went every day they had a splendid teacher one of the Hampton siugers Mr Joseph B. Towe, brother thought so much of him that he insisted on mother letting me go just one term. Which was right months for he thought I would learn a good deal even in that time. But mother said she was not able to send us both but early in the fall of 1876 Mr. Towe the teacher was going around collecting the children to come to school and he came to our house and asked mother to try and send me a while but she said I couldn't go the term out. so I started the middle of Oct. and went until Christmas hard work too it was for I had to do all the work at home just the same as if I didn't go at all. Well after Christmas mother said I couldn't go any longer for I need clothes and she wasn't able to buy them herself so I would have have to go to work. This was a hitter pill for me for I was getting on so well in school I hated to stop, for by this time I had learned to write with pen and ink something I thought I never would learn. So I begged mother to let me go until the spring that I would try and make out with what clothes I had then, she said I might go till then. During that time Mr Towe ask me if I wouldn't like to come to the Hampton Normal School the next term I told him I would like very much to come but it would be impossible for mother wasn't able to pay the money that it would cost to come here and not only that I didn't think I knew enough to enter any class here but he said mother wouldn't have all the money to pay that some kind person at the north paid half of it and that would leave only half for mother to pay I was very glad to hear that. So I told mother about it but she said I couldn't go anyway for we wasn't able but I didn't think of it at all I went to work as soon as school was out to cook wash and iron hard work too in summer but I didn't care I thought there was a chance for me to get an education if I worked hard for it. Late in the fall Mr. Towe came to see if mother would let me go she said yes I could go but she thought I would have to come back home on the account of my money but said she would do the best she could, so I got ready and came in Oct. entered the Preparatory Class where I am trying to do my best to make the junior class next term I have to work a day out of school to help pay for my board and I am thankful to you for for your kindness in helping me to get an education. I also feel thankful to my mother and teacher for their kindness in sending me here. My chief desire is to get an education that I may be a help to my race. I am now in the first section of preparatory with about sixteen members and we are studying in long division

respectfully, G.

THE writer of the following letter is a girl whose crippled back has not proved a misfortune sufficient to daunt her purpose to get a home and an education. Has Anglo-Saxon grit any better quality than is shown in the following record?

HAMPTON, VA., 1878.

My dear friend: I was born a slave in 1853. At the death of our owner, my mother was to have been hired out, till the youngest of the white children should become of age, Then we were to be divided.

My mother had five children but they were all hired out except one, that died, and we two small ones I was helpless and had to walk on crutches at that time, so one hundred dollars was allowed my young master every year from the estate, for him to allow me to remain with my mother.

He drew mother and two of her children when he became of age. But before he was of age, mother was allowed to hire herself, by getting some one to stand for her or hire her.

In Jan. 1858 mother got an old white lady to stand for her. I had got right well by this time and was able to go any where I had a mind to. She felt attached to me from the very first, and seeing I had a great desire for learning offered to teach me.

So I offered, after I had got instated in her estimation, to pick up chips for her, and in the Summer I used to help her cut asparagus, She was much pleased with my offer. And I used to go to her room every day to get my lessons. She loaned me a book but could not allow me to take it to my mother's room. She said it might give my little Brothers a desire for learning which would have been a very dangerous thing in those days, as colored people were not allowed to learn. She said she wanted to learn me enough so that I could read the Bible, which she said would be a great comfort to me.

After I could spell and read a little, my teacher gave me up, then my Father bought me a little New York primer, that is, he got a white youngster to buy it for him.

And I studied my little Primer without any assistance till I could recite every lesson in it correctly. I entered school for the first time in my life the year 1863. It was taught by a colored lady.

I remain at this school in all about 7 or 8 months. I did not go to school again after that, till the year 1864 when I entered a school taught in the old court house.

But before I got a chance to do much at this school, my Father moved in the country and I had to leave school again. I was too sickly to board, so I was away from school about five years.

But I was not idle during this time. There were a good many Familys in the Neighborhood where we lived, and I opened a private school and taught for ten cents per week for each scholar. I opened a Sunday School also, which was largely attended every sundsy.

The year 1870 I started to school again, it was taught at 10 cts. per week, by the same lady I had been teaching for, so I boarded in Hampton with an aunt of mine that was living near this school and attended this school till the year 1872.

After the death of my Father which took place Dec. the 7th 1872, I had to stop going to school again, we were in very reduced circumstances at this time so my mother sent for my Brother who was in Boston and the following year he tried to farm as my Father had done.

I presumed my little school again but as it paid such a little I found I had to do better than that, so the Superintendent (Co. Supt. of schools) about this time seeing my desire to help myself gave me a job, as teacher of a Public School, known as the Public School No. 3. The first term he gave me $15.00 a moath, for thirty scholars and as my school increased so fast and we did so well, the next term he gave me $20.00 per month.

I thought I would soon be able to get to school again if I could keep on in this way, But I wanted a homestead. I had never had one in all of my life. So I bought two acres of land in the country for $61.00, but we had to wait so long for our money, before I could buy any more it went up from $30.00 to $50.00 per acre. So I sold the two acres in the country and engaged a lot in the town for $125.00.

Then we engaged $128.00 worth of lumber, and had a house put up. I only got $55.00 for the two acres I sold. I sold it to pay for my lot, to the gentleman I engaged the lot from.

I was keeping a little shop during the time I was teaching. I started keeping store, by getting twenty-five cts worth of soap, and I sold it very redily, then I drew an order for some money and paid off some of my debts, and took the rest and got me in some few things and put them in my mother's shed room, and with two barrels and a plank for my counter, I commenced keeping store. I borrowed a pair of scales and mother used to attend to my shop till I let out school.

Saturdays were my main selling days. When I used to trust out any of my groceries, those I trusted would have to pay up in a week's time as I would have to get in all the cash I could to replenish my shop for Saturdays.

Sometimes I used to have to replenish my shop two or three times a week. In this way I kept from drawing my money, so I could get it in a larger sum.

So when I had to move from where we were living, I drew all the money I could and nearly paid off all of our hill. I had to make up store keeping So I got a job as agent for the "Bible Looking Glass," for a company in Philadelphia. After I had paid for my homestead, all to a little, we moved in Town.

And I would have finished paying for my home long ago, but I went on an excursion Sept. the 1st 1876, and as I did not get back in time to attend an examination that was held for all of the teachers, I lost my school, and having spent all my money I was quite destitute again.

So I took in some sewing and I got some work from a Taylor I worked on in this way for some time and as I had nothing to do at the present

I entered the Normal School, Oct. the 1st 1877. It had been my desire for a long time, so I had been disappointed so many times in trying to enter the Normal School. I was much pleased on being received with so much kindness.

And if I am allowed to remain till I finish I hope to graduate with honor. My chance as you see has always been very limited, my means also, but I had a persevering mind and although my homestead and other debts dreamed me dry, I am in good hopes of making more money, and a home for myself too.

My Homestead building and all included, except the interest, was $313.00 and I managed to pay up all of that hill, to $60.00 before I lost my school. And this would have been paid but the interest enlargens it every year. But I have cut it down with interest and all to about $30.00. As my health is so poor I am going to get a good education and make my living by my head.

I forgot to tell you that mother when she used to hire herself used to pay $15.00 a year. The reason Mother's hire was so cheap, she had two small children with her to feed and clothe. My oldest sister was sold when the property was divided up among the children. As she made an odd one they sold her and divided the money. Your obliged friend, S.

HAMPTON, VA.

Dear Friend:

I am pleased to have you know my past life, and future ideas. I was born in Virginia in 1858.

I will give you an account of my first steps towards an education; I was eight years old when I took the first book into my hands to begin life's work: the first instruction was given me by my Father who was a slave and by his own perseverance had gotten a little knowledge of books; he always said to me "Boy whatever you do, try to get an education." Those words were never forgotten, I took perseverance and tried, and found that where there is a will there is a way. My second instruction was from a respectable Gentleman of Virginia, who would take me into his residence and between him and his wife taught me to read very well; and as I grew larger I was forgotten for a while as I had to work.

My father still lived, and is living now with the same Gentleman he lived with before the emancipation: he always urged me to go to school. I went to a primary school near home, two terms of five months each; nearly a year, and about two years before the question of public schools arose. When the public schools were opened I had the opportunity of going two years, at the end of which I commenced to teach school, which was in the year 1874 in the cold season of winter, too cold for boys of my size to do much at farm work; so my Father asked me could I teach my brothers and sisters (five in number) I told him I would try, so asking the same gentleman for a small building about one mile distant, which he had built for the benefit of schools, the Gentleman agreeing I entered the School Room with my brothers and sisters, and commenced the work which I soon liked very well, during a week or two I had five other scholars, and during a month's time I had five more making altogether fifteen, and a tuition fee of fifty cents each. I taught two months as private school during which time I had a visit by the Co. Superintendent of schools, who examined my scholars and was so much pleased with their progress in studying, that he gave me a public school, and a tuition fee of Twelve dollars per month; my number increased very fast and it was my delight to teach them.

I taught school again the following year, and had a very large attendance and got on much better this time than I did the first. I taught school a third time in the year 1876 during which time I found by experience that I had improved in teaching and also learned a great deal myself.

During the time I was engaged in this work, I was very careful with my funds, thinking that I would need it some day; that day did come; it was the day I entered the Hampton Normal School. I had made two attempts before this to come to the Normal school but failed. I can hardly express how well pleased I am with this School, it rules and regulations and its teachers also, and I am happy to say that I have found just such a place as I was looking for.

If the attention of our minds, especially, when we are young, can be brought to take an interest in studying, a point of very great importance is gained, the human mind is of such a nature, that it must be of necessity occupied in the pursuits of some object; if it has no taste for those objects which tend to elevate man, it will seek its pleasures in those which tend to degrade and brutalize.
